THE ETUDE

JANUARY, 1924 Single Copies 25 Cents VOL. XLII, No. 1

The Greatest Question

We were just about to wish all our readers and our musical friends, for the fortieth time,

"A Joyous, Prosperous, Happy New Year,"

when we realized that the greatest material question of man is "how can I obtain the most real happiness?"

It was no mere rhetorical climax when Thomas Jefferson wrote into the declaration of independence his list of inalienable rights, "Life, Liberty, and the Pursuit of Happiness."

The pursuit of happiness is the basis of all true thrift, industry, ambition and much of our good behavior.

In sincerely wishing you who hold this new year copy of the Etude in your hand *a happy and successful new year*, we are certain that you, as a music lover, realize that you possess one of the greatest instruments for happiness—*music*. You are blessed more than ordinary mortals with the fairy wand to bring gladness and consolation to others.

Your own joy in music, your success in the art, your success in life, must depend very largely upon how much genuine happiness you can carry to others with your music.

If you can bring the joy of tears and the joy of laughter to multitudes, the world will discover that you are a great musician, whether you are Harry Lauder, Jan Ignace Paderewski or just plain Susie Smith.

Many Happy Returns

The Etude has had its Fortieth Birthday. We have eaten our cake that we baked in the October Anniversary issue and have recovered from the consequent indigestion. It was quite a *Party*, judging from the vast number of letters that reached us from delighted friends.

We are grateful to the very large number who have written to us anent the October issue and wish that we might print all of the wonderful letters that have come to us from old friends, telling us how much the Etude has meant to them for ten, twenty, thirty, forty years. We thank you all for your cordial good wishes.

We resolved to print the first letter of congratulations that came to us as a type of the many, many greetings. Strangely enough it came in advance of the *Anniversary* itself and from our overseas contemporary, *The Musical Standard* of London.

"We note with great interest the announcement of the 40th anniversary of the founding of 'The Etude' and venture to congratulate our contemporary upon forty years of splendid work on behalf of the lovely Art of Music.

"The Etude, in its great work of encouragement to the American Composer and Artist, while ignoring no phase, no development of musical progress abroad, follows a policy we have tried to adhere to in our own Journal.

"The Musical press of any country should be the patron of native composers and executants, altho' unhappily enough this is not always so. It should be the earnest desire of all thinking American and British musicians to seek in every way to advance and assist each other, since in many senses the music of these two great English-speaking nations does not occupy the strong world position it undoubtedly should.

"The Etude seems ever ready to publish the views and teachings of English as well as American creative musical artists. It is of much importance that this is so in a magazine which by virtue of its extremely high aims and its splendid literary quality must penetrate into American home life and thus disseminate the ideals of its editors and proprietors. We wish The Etude continued prosperity and success." H. A. Dean, Mgr.

The Musical Mark of a Gentleman

John Wesley is quoted as saying "The Welsh are as ignorant as Cherokee Indians." Like many pulpit utterances this was flagrantly erroneous. The Welsh in Wesley's day may have been short on the kind of book learning that he deemed necessary; but in folklore, husbandry and in other ways they showed a wisdom which their English brothers often missed.

While the Englishman considered his sword the mark of a gentleman the Welshman considered the harp the mark of a gentleman. It remained for a Welshman, Lloyd George, to have the supreme position in Great Britian during the greatest of wars. It was a case of the gentleman with the harp directing the policies of the sword holders. In ancient Wales no one could be considered a gentleman who could not play upon the harp. For this reason it was expressly forbidden to teach slaves to play the harp. Only the King's musicians and gentlemen were allowed to own harps. Moreover it was illegal to seize a gentleman's harp for debt, because that would have reduced him to the rank of a slave.

Musicians and Tobacco

Musicians are accused of inordinate use of tobacco. Many are inveterate smokers; but many more are total abstainers. The use of smoking tobacco in various forms has increased prodigiously during the last few years. The anti-tobacco crusaders attack the use of the weed with Volstedian ferocity. Are their attacks well founded or necessary? We purpose discussing this question, not determining it in this short editorial.

America is responsible for the weed and the habit. How long it had been used by our native Indians before Columbus discovered them smoking it wrapped in cigarettes of corn husks, no one knows. In less than a century its use spread all over Europe and parts of Asia. Its consumption has always increased, never decreased. The plant is a first cousin of the Irish potato, the egg plant, the jimson weed and the tomato. It gets its generic name, *Nicotiana*, from Jean Nicot, French Ambassador to Portugal, who, in 1560, sent seeds of this popular member of the nightshade family to Paris.

Tobacco is a sedative and a narcotic. Our interest in it at present is to give our musician readers a means of judging for themselves whether its moderate use is likely to injure them in their professional work. Medical opinion in the past has been varied. For instance, many years ago some Dr. Richardson, in the London *Lancet*, said of it: "It is innocent, compared with alcohol; it does indefinitely less harm than opium; it is in no sense worse than tea; and by the side of high living it contrasts most favorably." Nevertheless, it is a drug; and the enormous increase in its consumption makes careful attention at this time desirable.

The best work we have ever seen upon the subject is the recently published volume, *Tobacco and Mental Efficiency*, by M. V. O'Shea (The Macmillan Company). The author is professor of education at the University of Wisconsin. He has for years been carefully collecting statements from physicians, university presidents, psychologists, scientists, literary men, artists, musicians, presidents, judges, schoolmen, financiers, military and naval officers, and other public men. Ninety-five per cent of the men of distinction thus consulted say that they have been unable to detect any mental or physical injury from the use of tobacco. All, however, seem to take a positive stand in the matter of smoking in youth, which they concede to be very injurious.

Now, let us look at the reports of delicately contrived scientific apparatus which, with the faithfulness and veracity of all machines, tells the actual facts. Prof. O'Shea, who cannot be accused of being illiberal, devotes the second half of his book to this subject.

The reports of investigations made by public school teachers among students have indicated that the advantage is overwhelmingly in favor of the non-smoker. He stands higher in his class, is more healthy, more energetic, has better memory, better reasoning powers, is braver, more obedient, more truthful, more attentive, less irritable; and, in fact, is in every way a superior individual. University statistics also show a great superiority of the non-smoker. At Columbia University, New York, one hundred per cent more smokers failed than non-smokers. Indeed, in schools and in high schools, as well as universities, the cold facts show that the student who has maintained a good average when a non-smoker has gone down steadily and infallibly when he has become a smoker.

The results of all the laboratory tests, conducted with scientific apparatus with mature persons, show that, taking a large number of individuals (mature), tobacco will slow down and disturb the intellectual processes in a majority of them. More particularly, for the musician, the pianist and violinist—whose executive ability at the instrument is of greatest importance in rapidity of tapping, muscular fatigue, steadiness of motor control, memory span and facility in learning—tobacco shows detrimental effects, reducing the efficiency of the individual from .35 to 42.12 per cent. Therefore, it is obvious that, for the musician and the music student, smoking is a hindrance to progress.

Because some of the great musicians and performers of the past have been inveterate smokers does not mean that they might not have been even greater if they had not smoked.

Pre-digested Music

ARE we having an era of too much pre-digested music?

By pre-digested music we mean pieces and editions in which all suggestions of difficulties are so carefully screened out that the student has as little work as possible in assimilating the piece.

Expert dieticians have found that some of our many bodily ailments are due, without question, to the too great refinement of foodstuffs. Foods are clarified and purified and beautified until the food value is gone. We require the valuable bran and mineral salts in wheat, for instance; and there are thousands now who demand whole wheat and bran bread, who were brought up to believe that the whiter bread was the better it was.

In music the student often selects pieces in which there is so little to do in the way of fingering or in difficulties of any kind that the pieces "play themselves." Publishers all know that such pieces "sell best." The teacher and the student call for them "pre-digested." In this way much extremely delightful music is side-tracked. Very often just a little more earnest practice would master certain apparently intricate pieces and put the performer in possession of many interesting additions to the repertoire. If the performer does not do this he is likely to go on playing pieces that have been worn threadbare, just because they are pre-digested.

Take, for instance, the delightful *Valse Christine* by Rudolf Friml, which appeared as the first number in the July ETUDE. Here is a piece which is comparatively simple; but it does not "fall under the hands" as it might if Gustave Lange had developed the theme in conventional style. It contains slightly different chords and passages; and, because the performer has not played them over and over again thousands of times, they do unquestionably present difficulties to some students. However, none of these difficulties are such that they cannot be readily mastered by a little earnest practice. Two or three hours may be needed by some; but at the end, instead of having a piece that sounds like everything that everybody else has played for years and years, you have a piece with the kind of freshness that comes with unconventionality.

Much of the music of Schumann, Brahms, Debussy, Mrs. Beach, Schütt, and some others, strikes into unconventional and wholly delightful lanes. In the masterly set of pianoforte pieces by Mrs. Beach, called "In Grandma's Garden," as in the delightful *Nocturne in F Sharp Minor* of Josef Hofmann, there are passages that do not immediately fall under the fingers. They require a little work but they amply repay the student for all such labor.

The editor recently played through the Brahms Album just issued. There are few measures in Brahms that do not contain unconventional hand positions. Brahms composed with his brains and not with his fingers, despite the fact that he was a pianist of ability and often performed in public. Because the fingers balk at certain passages some lazy students are done with them at once. For this reason many of the works of Brahms have been very slow in securing world popularity.

Just as the athlete grows by seeking new opposition to his muscles, new weights to lift, new tests of strength and agility, so the musician will grow, not by dodging difficulty but by courting it and mastering it.

What's the Matter With Jazz?

FIRST, Jazz, at its worst, is an unforgivable orgy of noise, a riot of discord, usually perpetrated by players of scant musical training who believe that their random whoops, blasts, crashes and aboriginal tomtoming is something akin to genius.

Second, Jazz, at its worst, is often associated with vile surroundings, filthy words, unmentionable dances and obscene plays with which respectable Americans are so disgusted that they turn with dismay at the mere mention of "Jazz," which they naturally blame for the whole fearful caravan of vice and near-vice.

Yet, in the music itself there is often much that is charming and genuinely fascinating when written and played effectively. There is no more harm in well written Jazz than there is in a Liszt Rhapsody. Some of the tunes employed in Jazz could be manipulated by a master into a composition of world currency and permanence. On the other hand, many of the Jazz arrangements made especially for the talking machine records are among the most ingenious and fresh bits of original orchestrating we have heard in years. Surely there is no harm in such things. They provide rhythmic and melodic stimulation for thousands of people to whom such a musical prod is a real god-send. What a humdrum life this would be without inspiriting music. True, you and we may get it from the Rimsky-Korsakoff *Schéhérazade*, the Chabrier *Spanish Rhapsody*, or the Dukas *Sorcerer's Apprentice;* but there are others whose musical taste may demand a more primitive form of syncopation and fantastic orchestration. We have no quarrel with "Jazz" when it is artistically worked out, effectively played and done among decent surroundings.

Along in September, the Mayor of Philadelphia, Hon. J. Hampton Moore, one of the finest executives the city has ever had, revoked the license of a leading theater playing a musical review based largely upon "Jazz" extravaganza. The performance was so objectionable in its intent that even the calloused noses of the hardened theatrical critics turned up with disgust. Naturally Jazz was blamed. The money loss of the producers was reported to be immense—possibly $75,000. Some theatrical managers are never brought to their senses until they get a good stiff kick in the pocket-book.

If the makers of Jazz desire to continue their success and provide musical entertainment that is inspiriting without being offensive, they may take a lesson from experiences like this which are likely to increase in number with the accumulating public indignation over the evils of Jazz.

Good Jazz can be a wholesome tonic; bad Jazz is always a dangerous drug.

Rhythm, even before melody is the basis of music. Certain African tribes carry the mastery of rhythm so far that they have been known to communicate with each other for great distances by means of various rhythms beat out upon their drums.

The Thresholds of Vocal Art

An Interview Secured Expressly for THE ETUDE with the World-Famous Diva

MME. AMELITA GALLI-CURCI

Biographical

The success of Galli-Curci has often been described as "meteoric," but familiarity with her biography reveals that, as in the case with all really great artists, it is the result of long and hard work combined with extraordinary gifts. She was born in Milan. Her early ambition was to become a pianist. After her graduation from the Milan Conservatorio, with the first prize and diploma, she made many very successful concert appearances as a virtuoso pianist. Her repertoire was comprehensive, her technic brilliant and her tonal coloring brought high encomiums from the critics. After hearing Busoni at a concert, however, she was so overcome by the enormity of his technical skill that she went home, closed her piano and decided to abandon her musical career. It was then that she "discovered" her voice. It is more truthful to say that it was discovered by Pietro Mascagni the famous composer who was a friend of her family. Exactly six years after her debut as a piano virtuoso in Milan she appeared as Gilda in "Rigoletto" at the Teatro Costanzi in Rome with pronounced success. The marvel of it was that she had received no vocal instruction but had studied everything by herself. True, she had attended opera since childhood, and her family was musical; but what she achieved by herself is one of the startling instances of self-instruction in music. After her successes in Italy, Spain, South America and Cuba, she came to America. still a comparatively unknown singer in this country. When she was brought to the attention of Campanini, then impressario of the Chicago Opera Company, he immediately recognized her immense possibilities. Her debut in Chicago, November 18, 1916, as Gilda, was one of the most sensational appearances in American history. Since then her successes have been a continual procession of triumphs. Mme. Galli-Curci is a woman of exceptionally broad culture, remarkably well read, possessing a library in various languages (with which she has an uncanny familiarity) which would be the envy of many a college. Her husband, who accompanies her at all her concerts, is Mr. Homer Samuels, a well-known American composer of Welsh ancestry. Mme. Galli-Curci spends her summers at her palatial home in the Catskills, hard at work every day with Mr. Samuels and her mentor, Franz Proschowsky, continually endeavoring to expand and develop her art. Note that Mme. Galli-Curci speaks as an American, as she is very proud of her American citizenship. Demand for records of her voice is world-wide.

Are Singers Born, Not Made?

"It has always been my very decided impression that while only hard, long, unremitting work can make an artist, singers are unquestionably born with certain throat formations and certain mental and emotional endowments which are the essential basis for the superstructure of labor and persistence which in the end brings success.

"It would seem silly to me to think otherwise. One can never make a crow sing like a thrush although they are both birds, both have throats and both make noises. You can never make a bass sing like a soprano nor a tenor sing like an alto. Their throat formation makes it impossible. In a less degree the throat of every human being differs just as the features of everyone is slightly different from others.

"Singing teachers, pointing to some singer with a poor natural vocal equipment but with great mentality, great soul and great persistance, who by dint of unremitting labor, attains success, preach, 'voices are made not born.' Naturally it brings them pupils; but it has been also the source of the cruelest kind of disappointment to thousands of students who, after years of study realize that they have spent their time and money chasing an *ignis fatuus*—a will-o-the-wisp through the swamps of musical despair.

"Probably every voice can be improved by sensible, skillful instruction in the hands of a real vocal master, but every voice has its limitations that came to it with birth; and no singer and no teacher can pass beyond those limitations. If this were not true there would be a hundred thousand prima donnas in America now instead of a very few. The honest teachers know this and do not hesitate to state the truth to their pupils.

"A musical and vocal ancestry does not always insure vocal success. Patti's parents were opera singers, as were Malibran's. My own mother was a singer but not a professional. My grandmother, Carolnia Galli-Rota, was a well-known opera singer, but her husband, Giovanni Galli, was an operatic conductor of note. I was eleven when I last heard my grandmother. Her voice is still in my ears. I heard her sing once the famous aria from *"Il Barbiere di Siviglia" Una Voce poco Fa,* and the smoothness and brilliance with which she sang was unforgetable. I am sure that I absorbed a great deal sub-consciously through hearing my grandmother and other singers at the opera and at our home.

Language and Singing

"Italy has produced a great many singers of world renown. Some have attributed this to the climate, some to the diet, some to the open air life. These may have helped; but it seems to me that the most important element in the success of the Italian-born singer is the Italian language itself. Its lovely open vowels, *Ah, ay, ee, oh, oo,* emitted from a perfectly open throat, tend to avoid from birth the obstacles with which many singers of other lands have to struggle. I often wonder why, on the threshold of vocal art, the voice teachers do not teach their pupils to read aloud sonorous sonnets and beautiful prose, giving each vowel its most beautiful quality. I am sure that a half hour or an hour a day, spent in cultivating a sense of vowel beauty, would be quite as valuable for many singers as time spent in so-called vocal exercises which are worthless because the vowel sense has not been developed. I would even urge them to learn the beautiful Italian language for this purpose; because the Italian poets and authors make a conscious effort ot have all of their sentences rich and beautiful in sound.

"Of course poets in other tongues, Tennyson, Heine, Racine, Lowell, all strove to have their verses musical; but there is something about the Italian language that lends itself to the free emission of vowels so that the mere recitation of some of the Italian verse is as beautiful as a song. Mme. Elonora Duse is an instance of this. Her voice is music in itself.

MME. GALLI-CURCI'S LATEST PORTRAIT

672692

American Singers and the Vowel Sense

"America, like Italy, is a land that has produced many lovely voices; but the American singer on the threshold of her art must learn to speak with an open throat. Americans do not realize it, but the observer coming here first from a foreign land notices first of all that many of the people seem to talk with mouths almost closed. The jaws are stiff and there is no other thought than that of expressing oneself forcibly and lucidly. The educated Italian, on the other hand, tries to show his culture by talking beautifully. Such habits have come down to him for centuries. He has very little to overcome. The American, the German and the Englishman, on the contrary, often has to upset his vocal ancestry before he begins his vocal work.

Beauty as the Basis of Singing

"The realization of beauty transmits itself to the voice without question. America is a glorious country and its natural beauties are unsurpassed. On the other hand there is still a great deal that is ugly in its cities. During the last twenty-five years the country has made great strides in beautification. This in time will show itself upon the American voice. In the Italy of Caruso and Gigli and other great masters of singing, the child is taught to love beauty—beauty in nature and beauty in art. Beauty is emphasized everywhere. America, until recent years, has been famed largely for its business prowess. The art instinct has been here as evidenced by the early American painters and by the poets, architects and others. But America had more serious business for its welfare on hand. Its great problem was to build, to utilize its territory, to assimilate the multitudes that were pouring in from all the countries of the world.

The American Renaissance

"Whether you realize it or not, America is now at the period of its Renaissance, its spiritual rebirth. The great war gave us a wonderful national quickening of our ambition to become a cultural as well as a commercial nation. America's attitude toward the unfortunate in other lands, even in enemy lands, has been ennobling. It has commanded the admiration of the world. We still lack in contemplative moods, in serenity, calm and in the observation of the beautiful. There is a conspicious neglect of poetry. Americans do not seem to understand the value, the inspiration, the refreshment that is to be derived from poetry. All these things take time.

"If we are to consider the thresholds of vocal art, it would be absurd to talk learnedly upon the subject and fail to treat upon these principles of life upon which all great ultimate success must depend. All these things have a phychic effect upon the voice and upon the art of singing. They are of vastly more importance to the future of vocal art i our country than are solfeggios and teachers with big names.

The Singer's Musical Knowledge

"The singer's musical knowledge is also fundamental. The time is coming when the vocalist who has the voice of an angel and the musicianship of a poll-parrot will have difficulty in drawing large audience.

"Learn an instrument by all means. The singer cannot well begin vocal work in earnest before the age of eighteen or nineteen; but during the previous years she can perfect herself as the performer upon some instrument and ever after have the great advantages that this will bring her. I began the study of the piano at the age of five. I heard practically all of the notable operatic performances at La Scala until I was seventeen. At first I practiced piano about one and a half hours a day, eventually practicing three hours a day. At the Milan Conservatory I had to learn the major works of Beethoven, Haydn, Mozart, Schumann, Chopin and Bach. I played the Chopin *E Minor Concerto* and all of the "Forty-Eight Fugues of Bach." After graduation, in addition to my work as a concert pianist, I taught pianoforte for four years. This experience, as well as that of having the guidance of musical parents, was of incalcuable value to me. I can well remember my father playing over the score of such an opera as "Tristan and Isolde" before going to his office. In such an atmosphere it was difficult not to be a musician.

This conference will be continued in the next issue of The Etude Music Magazine, in which Mme. Galli-Curci will present some of the very exercises she used in her own work when she was training herself without a teacher for her vocal career.

Berlioz's Pot-Boiling Period

By Lynne Roche

Berlioz's father, himself an eminent physician, was anxious that his son should succeed to his laurels. Hector's precocity in music was discouraged, and for a time he became interested in anatomy. But in his father's library were also scores by Gluck, Haydn, Mozart and others, the reading of which led him almost to revolt.

However, parental resolution won temporarily, and at nineteen he was lodged in the Quartier Latin of Paris to pursue his medical studies. Here visits to the opera so fired his musical propensities that he applied for admission to the conservatoire. Imploring letters, begging his father's consent to the change, brought a cutting off of his allowance.

Admission to the conservatoire was gained by a cantata for voices with orchestra, but poverty stood gaunt at his door. He slept in a bare old garret, slept under scant bedding, and ate his bread and grapes on the Pont Neuf.

After some months a vacancy occurred in the chorus of the Théatre des Noveauteaus. Of his competition for the appointment he gives a racy account which at the same time discloses a view of his musical qualifications at this age.

Butchers, bakers, shop-apprentices and non-de-scripts, each with a roll of music under his arm, made up the unpromising lot.

The manager-ogre of this third-class theatre scanned the raw-boned youth. "Where's your music?" he snarled.

"I don't want any, I can sing anything you can give me at sight," came the reply.

"The devil!" retorted the tyrant, "but we have no music here."

"Well, what do you want? I can sing every note of all the operas of Gluck, Piccini, Salieri, Rameau, Spontini, Grétry, Mozart and Cimarosa, from memory."

At this other applicants slunk away, and the fifty francs a month thus earned greatly relieved Berlioz's situation. Though he sometimes made vague reference to his dramatic career, the truth of this engagement was disclosed only after Berlioz had risen to distinction.

Meyerbeer's Industry

Meyerbeer, a man of large personal resources, received great returns from his operas, and was probably the wealthiest of the master composers. He lived in sumptuous ease, yet worked with intense zeal for a regular period of each day.

To a friend who begged him to take more time for recreation, he replied, "If I should leave work, I should rob myself of my greatest pleasure; for I am so accustomed to work that it has become a necessity."

What a lesson to students who dream of the time when cognition of their achievements is to come!

Chats With Serious Piano Students

By Sidney Silber

General and Special Education

Luckily the day has passed when a person who played a musical instrument acceptably was considered a musician. This notion is no more current than that a person who is able to extract teeth can be considered a dentist. In all of the professions where state control is imposed before the individual is permitted to practice, he is required to have a general education before taking up his specialty. The dentist, for example, must have a knowledge of anatomy, physiology and hygiene before he can intelligently perform his operations in dental surgery. But, even before he takes up the study of anatomy, physiology and hygiene, he is required to have a general literary education. So, too, the musician who would build his musical structure aright will seek to gain a general literary education along with his general muscial education, before launching upon his specialty. One does not become a virtuoso by merely manipulating the keyboard. Nor does the composer gain in creative inspiration by simply studying the traditional rules of harmony, counterpoint, form and composition. In the arts, above all, there is hardly any knowledge pertaining to the intellectual, emotional and spiritual evolution of the race which may not serve to inspire the creative as well as recreative musician and pedagogue.

Building the Musical Structure

The successful and efficient musical life, then, should have architectural features. It must first have a firm and durable foundation to sustain properly a structure which will serve some useful purpose. As there are innumerable buildings conceivable and possible, serving useful ends, so, too, the musical structure has its attributes conforming with well-established rules and traditions. The competent architect begins with a definite conception of his task and builds according to his needs, using his experience and enlightment, adding his original ideas of execution. How grotesque would that piece of architecture appear which contained all styles jumbled together, without any idea of unity, symmetry, balance and proportion? Even though it stood on a firm and durable foundation, it would have no real reason for being. If the architect plans a railway station, every portion should serve the needs of a railway station, and, above all, the first glance should reveal that the structure was intended for a railway station. If a church, or a department store, or a dwelling, the same should hold true.

Foundations of the Pianistic Structure

Briefly stated, they are: Tone, touch and technic. With these, the individual possessed of sufficient intelligence and talent rears his musical edifice, voices the spirit of music and of his personal interpretative needs. His mastery of these foundation stones enables him to invest his interpretations with style; with these he gives what seems to him the proper proportions to the three fundamental elements of the tonal art: rhythm, harmony and melody, in the presentation of which we feel the effects of time and tempo.

Technic

Von Bülow once said, in characteristic terseness, that to make music three things were necessary: Technic, technic, technic. That was indeed an all-inclusive statement, clear enough to those able to interpret, but very vague to those who have not pondered and meditated concerning his inner meaning. Technic is not limited to the business of "finger-wiggling," velocity and clearness. It includes the entire domain of manipulating the keyboard and the pedals. There are as many different kinds of technic as there are means to express the intentions of intellect, emotion and spirituality. Technic is mechanical insofar as it is physical. It becomes automatic insofar as the conscious mental processes merge into the subconscious. In other words, in proportion to the acquiring of habits does the individual attain the power to use his means to express his intentions. Every adequate technic must be conscious before it can become subconcious. Is there any one and only way to attain technical proficiency and mastery? By no means.

An Exploded Theory

For many years, large numbers of instructors have pursued a false theory for the equal development and control of the fingers. They argued that before one could attain mastery of the keyboard, he must make his fingers equally strong and equally independent. The aim was to correct nature which gave us a pair of hands, no two fingers of which are equally strong or independent. Technic was, according to these preceptors, limited to "finger-wiggling." Their philosophy was just as false as that which assumes that a man of great means may be the happiest and most efficient citizen. For, while money is the technic of life (or may become so) and, while each of us must possess enough of it to keep body and soul together, still it does not necessarily follow that the possession of money tends toward the enjoyment of the most abundant life. It is indeed a misspent life which concentrates its entire energy upon the acquiring of money, in the hope that with the advent of old age the individual will be able to enjoy life. The time to enjoy life is NOW. The time to make music is NOW. So, too, with music students there must be some interpretative problems which you can adequately solve with your existing technic, incomplete though it be. This does not mean that you should give no thought concerning additions to your technical equipment. Specialization over extended periods, in the purely gymnastic side of piano playing is sure to blunt the finer sensibilities. Rather carry out the words of Robert Burns: "As we go through life, let us live by the way."

An Ancient Musical Faction

By S. M. Charles

The history of music during the last three hundred years, records a number of rivalries and antagonisms which arose from time to time between composers, singers, or virtuosi. Probably the most familiar is the contest between Handel and Buononcini, in 1720, in which the former scored the victory. About 1780, Gluck and Piccini, both writers of opera, put all Paris into a ferment by their rival schools of composition. Cuzzoni and Bordoni, two vocal favorites brought to England by Handel, engaged in open and disgraceful warfare, which resulted in factions headed by countesses, who exerted such an influence over society that ladies refused to receive visits from adherents of the opposite musical party. In 1836, the pianists, Liszt and Thalberg, contested for popular favor. This rivalry assumed such proportions that, to maintain a standing in society, it was necessary to declare in favor of one or the other. This notable controversy terminated in an overwhelming triumph for Liszt.

An Interesting Rivalry

Ancient history also records an interesting rivalry or faction, namely, that between the Pythagoreans, or Canonists, and the Aristoxenians, or harmonists. Pythagoras, about 600 B. C., made the first attempt to ascertain the relation of the tones of the musical scale with mathematical accuracy. He experimented with strings and weights and discovered that two strings of equal length and thickness produce the octave, when the weights maintaining the tension were in the ratio of 2 to 1. He also found that shortening the string by one-half produces the octave, and that the proportion of the perfect fifth is 3 to 2, and of the perfect fourth. 4 to 3. These ratios, together with that of the whole step, which he fixed at 9 to 8, are recognized at the present day. Pythagoras next tried to ascertain the true place of the tones falling between these intervals, but was unsuccessful. He divided the tones into groups of four, called tetrachords, but not knowing the true ratio of the major third, the result was a scale which to modern ears would be intolerably out of tune.

Aristoxenus, B. C. 300, a pupil of Aristotle, wrote two treatises, one on harmony, and one on rhythm, which serve as the source of the greater part of our knowledge of the Greek musical system. Opposing the theory of Pythagoras, who declared that number is the regulating principle of everything, including music, Aristoxenus asserted that hearing is the sole criterion of tone-relationship. A spirited controversy arose, and musicians divided themselves into two factions, the one clinging to the old theory of Pythagoras, the other accepting that of Aristoxenus.

It remained for the followers of Pythagoras, Ptolemy, the Egyptian astronomer, about 150 A. D., and Euclid, of geometric fame, to give to the world the true ratio of the major third, *i. e.,* 5 to 4. Ptolemy published the determinations of Didymus, of Alexandria, B. C. 63, which gave us the true tuning of the first four tones of the major scale, in much the same manner as we accept them to-day.

What to Teach at the Very First Lessons

By JOHN M. WILLIAMS

Practical Advice for the Young Teacher

Do you want to learn how to teach? Mr. Williams' series, of which this is the first article, will show you.

THOUSANDS of young and aspiring musicians are planning to be teachers. Some, from excellent schools or teachers, perhaps have a good technical foundation and a repertoire of standard and classic concert numbers; but do they know how to give the very first lesson?

Types of Pupils

There is Jenny Jones, nine years old and a beginner. She is taking lessons for no reason whatever except that all the other other children do. Then, Bobby Smith, a rosy-cheeked, healthy, out-of-doors boy, brings his roller skates to his lesson—his music is purely incidental, an annoying interruption of his sports. The adult beginner follows the six-year-old tot—in one case the mind moving faster than the fingers, and in the other just the opposite. The "nervous child;" the sub-deb whose mind is entirely on beaus, movies and dancing; the adolescent boy who is so "difficult" to manage; the foreign child (frequently Jewish) who is learning a new language, going to school, helps at home with the babies and housework, works in the store after school and Saturdays, but finds time to practice two and a half hours a day and brings in the best lessons in the class.

Music and "Service"

The modern cry in all lines is for *service*. A child who has been taking music lessons for three or four years and cannot play a hymn or read at sight an easy accompaniment for his parents, no matter how well he plays his "pieces," is a failure.

The majority of piano pupils are in their first year. Your class is apt to be much larger if you specialize in teaching children. They will lead into more advanced work.

The Musical Education of the Child

Before attempting to understand the workings of any educational system, it is advisable that we ask ourselves. "What is Education?"

Education is a matter of first-hand individual observation.

No one can educate another person. We may assist; but we cannot do the learning any more than we can eat and digest a meal for another.

If we go back to our original question, "What Is Education?" and insert the word "musical," we have, musical education is a matter of first hand individual observation. It follows, naturally, that the child must be trained to *observe*.

How?

By interest.

How shall we arouse this interest?

By attractive material attractively presented.

Can *you* do this?

Yes? . . . . Success!

No? . . . . Failure!

Ponder the foregoing paragraph. Are your pupils interested; or do they "enjoy" a good lesson about as much as having a tooth pulled? Is it a matter of the pupil being nagged every day at home, and a mixture of coaxing and bullying on your part; or is it spontaneous action on the part of the child, engendered through interest.

Duty of the Music Teacher

Ask yourself, then, "What is the first duty of the music teacher?" Answer: "To arouse the interest of the student."

Bartholomew says: "The prerequisite of all education is the interest of the student." Joseph Cook said: "Interest is the mother of attention, and attention is the mother of memory." Our problem, then, is to interest the student—the average child, remember, not the genius. It is the child who should be considered; not the teacher, because a piece of music by Bach interests the teacher is no reason to suppose it will interest the small pupil.

Importance of the First Book

The next thing is, "How shall we arouse this interest?"

In the first place, choose the first instruction book very carefully. Many excellent "beginners' books" are on the market; but there are also antiquated volumes, to survive whose study a child would have to be a music lover indeed.

Human beings, or at least those of us who are musical love "tunes." Choose a book that has an abundance of tunes. The melody arouses the interest of the pupil, sugar-coats the pill, so to speak, and the work is done—but the benefit is derived just the same.

The Test of a Beginners' Book

What is the test of a good instruction book, or of a piece? The child, himself, is the court of last resort. If you are able to arouse his interest in the exercises or "tunes," the book is good; if you cannot, it is bad for him.

The material in the book should be very, very easy. Why? Because we need technically simple material, so that the mind of the pupil may be focused on correct playing conditions instead of on notes, rests, and such details.

How shall we teach these things to a six or eight-year-old child in a lesson of thirty minutes?

The Problem of the First Music Lesson

A child coming to its first music lesson is all excitement and anticipation. He expects to learn "to play a piece" or to "make music" in some fashion or form; and if he leaves the studio the first time, and all he has heard is "lines" and "spaces," "table work," "names of keys" and "hand position," he is going to be disappointed. A disappointed child is very apt to be a rebellious child, and a rebellious child is generally a bad pupil.

Hence the very first lesson is tremendously important, and the teacher cannot put too much time or thought on the preparation of himself or herself to become competent to give this lesson.

Music is the only art which cultivates three senses simultaneously, sight, hearing and touch. On this account it is invaluable for training the facilities, but this also makes the first lesson a difficult proposition for both teacher and pupil.

Let us see what the pupil has to do.

First—Learn the names of the keys.

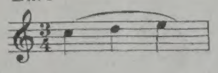
Second—The names of the notes.

Third—The value of the notes (counting).

Fourth—Find the correct fingers on each hand and use them on these notes.

Next, he must correlate these four efforts. In other words, to play even the simplest tune, for instance, requires of the pupil four separate and distinct mental impulses, not to say a word about correct playing conditions.

Ex. 1



Teaching the Keys

Draw the attention of the pupil to the fact that the keys of the piano are of two colors, black and white.

The black keys are divided into groups of twos and threes.

The white keys are named from the first seven letters of the alphabet, A, B, C, D, E, F, G.

Teach the location of the different D's on the keyboard. Explain "high" and "low."

Before D comes C. After D comes E. Teach the group, C, D, E, in different positions on the keyboard, having the pupil name the keys aloud as he plays them.

Next, teach A; then the group, A, B, C; later E and the group, E, F, G. These may be called the "Groups of Three." It is important that the child correlate these and think of them in groups instead of isolated sounds or keys.

Next take the "Groups of Fives," C, D, E, F, G, and A, B, C D, E.

Now the entire seven in rotation, A, B, C, D, E, F, G.

Correlating Sound and Symbol

The teacher should now use a keyboard chart. By this means the pupils grasp the subject much more readily. These charts may be made at home, or they may be obtained from the publisher at so little cost as to render their making an almost useless trouble. To make one, cut a piece of cardboard twenty-nine inches long, outside measurement, and five inches high. From the first note in the bass, low C, to the highest note in the treble, high C, is exactly twenty-six inches, the same as on the keyboard.

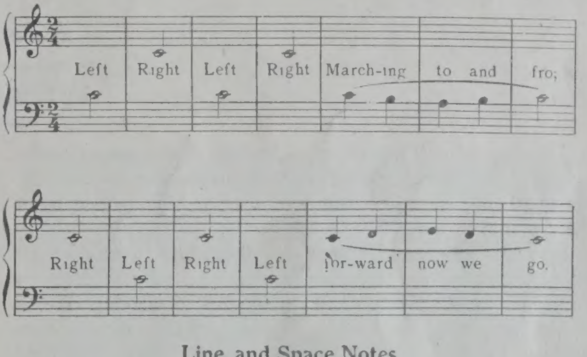
Place this chart directly back of the keys, in the niche between the keys and the name-board, and the notes on the chart will correspond exactly with the keys they represent on the keyboard. The pupil will thus get a correct idea of the grand staff from the very beginning.

Do not try to teach the names of the lines and spaces yet; the pupil learns them later, by absorbtion. However, show the child, in his music book, the different kinds (whole, half and quarter) of notes.

The Grand Staff

Explain the Grand Staff, consisting of eleven lines and the spaces between them. The top five lines belong to Mrs. G. or Treble Clef, who has a numerous family of children (represented by the treble notes). The bottom five notes belong to Mr. F, or Bass Clef, who also has a number of children (represented by the bass notes). But Mr. Bass Clef and Mrs. Treble Clef also have a child (note) Middle C, which sits on an imaginary line between them. Use the following little exercise to help to teach the location of Middle C.

No. 2



Line and Space Notes

Draw attention to the difference between Line notes and Space notes. The line goes directly *through* the middle of a line note, while the space note is *between* the lines.

Place the Chart on the music rack, or directly back of the keys if you prefer. Explain the difference between high and low on the keyboard and show that, as the notes are placed higher on the chart they are higher on the keyboard, and *vice versa*.

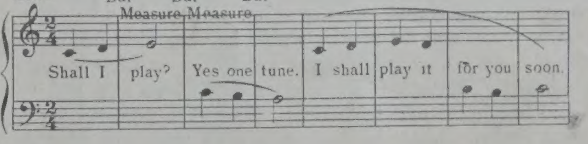
Call attention to the fact that Middle C on the keyboard and the middle line of the Grand Staff are one and the same thing. (The symbol represents the sound.)

It is not necessary to teach the names of the notes on the lines and spaces (F—A—C—E and E—G—B—D—F); nor is it desirable that the pupil study the notes away from the piano. He will absorb this knowledge naturally and easily. He learns by *doing*, not by *telling*.

Teach the numbering of the fingers of the hand. With small children, an excellent idea is to pretend that the fingers of each hand are "five little pigs," and that each little pig has a house in which he *must* stay. They must *not go visiting*.

Now Teach the First Little Tune

Ex. 3



Do not use the notes for this. Teach it by rote. While he watches the keys, play it correctly. Let him imitate you. Do not count—*sing* it. When he can play this, show him the notes he has been playing, either on the chart or in the book. When he can play it easily, watching the notes on the chart or in the book, and getting the general idea of *up* and *down*, and of the relative values of the notes, draw his attention to the fact that he is playing a piece *by note*. He has been led "from the known to the unknown," a sound pedagogical principle.

Note Values, Bars, Measures, Time Signatures

The pupil can now play something correctly by note; but we have yet to explain the *values* of notes, the bars, measures, time signatures, and so forth.

Show how:

Bars divide the Lines into Measures; and

From one Bar to the Next is a Measure.

[NOTE: Here the housewife's measuring cup may be used for illustration. A Measure in music measures off a sufficient number of notes to make up the necessary number of counts.]

In the time Signature $\frac{2}{4}$ the upper number, "2," tells how many counts to a measure; and the lower number, "4," tells what value of note gets one count.

Draw pictures of:

Whole Note (whole apple) is sounded 4 counts.

Half Note (a Hallowe'en apple with a stick in it) is sounded 2 counts.

Quarter Note (with a black face) is sounded two counts.

Play Each Exercise Three Ways.

From now on it is necessary to play each exercise (for at least the first three weeks) three ways:

First way: Play and Count Aloud.

Second way: Play and Names the Notes Aloud.

Third way: Play and Sing.

When the pupil can do this perfectly the teacher should put a gold star on this exercise. The same procedure should be followed with each exercise.

How Much to Practice

This will be sufficient material for the first lesson. If the child will spend, say, five minutes a day on learning the keys and ten minutes for practicing the first exercise—thus learning about Bars, Measures, Time Signatures, The Fingers of the Hand, the Names of the Five Notes (two on either side of Middle C which he learns through *using* them in a little tune, not by studying them away from the piano), and the values of the quarter and half notes, considerable will have been accomplished before the second lesson. This is quite a lot for one lesson; but fifteen minutes a day of practice will easily master it.

Importance of Materials or "Tools"

I truly think I should have to quit music teaching if my No. 4 Dennison's Gold Stars, my red pencil and lesson slips were taken away. Children love a reward—"even as you and I." A gold star properly placed will do more toward getting a good lesson than all the scolding that can be done in a half hour.

"When a piece or exercise can be played perfectly three ways—Counting, Naming the notes aloud, and Singing—place a gold star by its side. Sometimes a number may be passed before it is thoroughly learned; but there is no gold star until it is played perfectly—Three Ways.

On the Lesson Slip write all remarks in regard to the lesson—the things for which to watch, faults to be corrected, the main points to be desired. A pupil learns to play the piano at home, not at the teacher's studio; so it is important that during the practice time he have reminders of the main points to be remembered. Not one or two half-hours with the teacher, but several hours per week of practice at home is where the pupil develops most. *Correct practice* makes perfect; and this is facilitated by the proper use of a note book, or slips, carefully written out and underscored with the invaluable red pencil. Make the note book or lesson slip take the teacher's place during practice periods.

Praise of a Poor Piano

A Paradox

By Eugenio Pirani

To you, fellow artists, who during your summer vacation are condemned to put up with an inferior instrument, let me bring some consolation, singing the praise of a poor piano.

Just this summer I discovered the advantages of such an instrument. In former years it was very difficult to transport an excellent grand piano up to the top of the hill, where my bungalow is located, so this year it was decided to have a small upright instrument. Its tone proved to be as tiny as its appearance and, when touched for the first time, it produced discouragement, yea, dismay.

How was a decent tone to be gotten out of that little "flivver"?

Everybody, of course, is able to produce a voluminous tone with a modern concert grand. He needs only to glide gently over the keyboard. The tone is ready made; the pianist needs only to use it.

But here was a serious problem. Only a considerable amount of pressure could ring out of this kind of instrument a half-way sonorous tone. It was like trying to extract out of a dwarfish little lemon a large quantity of juice. It must be squeezed hard.

Notice the first advantage! Your touch will become more substantial, you have almost to *create* the tone, instead of simply *reproducing* it.

But another problem you will have to face. The comparatively acceptable tone evolved is of a very short duration; it is a *point* instead of a *line*. It ceases as soon as you have struck the key. Here again skill and ingenuity are needed to *sustain* the tone, especially in melodic passages, partly through a very intense pressure, partly through the help of the pedal.

And again, how is a *fortissimo* to be obtained? Here your art is put to a severe test. You may, of course, pound the piano and chastise it, as you would do with a restive mule, but the results would be very unsatisfactory indeed. The quality of tone would be stridulous and offensive. The task is to produce a big tone and still to avoid harshness and roughness. This is a problem for a great artist. It can be done only with a proper mixture of muscular strength and moderation. The tone must be loud and still not transgress the boundaries of beauty. You ought to have fingers of steel, lined with velvet.

No great skill is required to produce a roaring deafening sound with a concert grand; but try to do it on one of these little rattle boxes!

These and other problems go toward sharpening the dexterity of the pianist and are liable to make of him a greater artist than he was before.

And, last, how happy he will feel, when his vacation is ended, and he will return to his favorite grand! The first thing he will do is to play a couple of majestic thundering chords, like a "Jupiter tonans." What difference indeed between the pigmy in his cottage and his superb instrument! It seems almost to play alone without the help of the pianist! He never before appreciated so much its merits. To whom is he indebted for this unprecedented artistic enjoyment? To his humble upright.

The same thing often happens to vocal artists. There are singers who are possessed of a very little voice.

Ludwig Wüllner, a great baritone who toured the whole world, in spite of the fact that his vocal powers were very limited. Somebody called him "the singer without voice." He understood, however, how to use his little, undersized voice with exquisite art and obtained with it artistic effects which other singers, although endowed with a powerful voice, are not able to produce.

Also, Pauline Viardot Garcia, the famous singer, to whom I was introduced in Paris as she was in her eighties. She sang a difficult coloratura aria and I was utterly surprised that at her age, and with the exiguous thread of voice which was left to her, she was able to bring about such charming effects.

No wonder that the millionaire, with his unlimited income, can revel in easiness and luxury. The person who can manage to enjoy life with a diminutive income is the one who commands our admiration.

The following motto should be added to Emerson's "Compensation": "The poorer the piano, the greater the art!"

Let us, therefore, sing a hymn of praise to the poor pianos!

"Your fingers falter on the keys, I know,
  And every little while you strike a chord
  That was not made in Heaven when the Lord
First played the songs we echo here below.

Sometimes the running music does run slow—
  What of it? If perfection of bright sound
  Were all, a needle and a disc spun round
Might give what your hands never could bestow.

The Half-Hour a Day

By Yetta Kay Stoddard

"I'm not doing anything with my music now—I haven't the time!"

Time! If you added up the number of times you've said something of this sort, how many minutes would you now have at your disposal for music? And if these were augmented by the other wasted little fragments of eternity that have been yours, would you not—now, honestly!—have one half-hour out of each twenty-four for the development of that musical talent that was most certainly given the most of us—you included.

Yes, of course. What then shall be your use of that half-hour? Shall you spend it all on scales? All on showy work? All on sight-reading? Well, here is a way which works out very well and which covers a wonderful amount of musical ground.

First, determine to concentrate, to let nothing and nobody interfere with your musical half-hour—so precious, now that you have managed to squeeze it out from between all the other tightly-packed periods of time. Next, find out (and no one can do this so well as you yourself) just how large a part of the week's lesson-work, or work that you have assigned to yourself to get through with, can be practiced away from the instrument. Perhaps it is your thumb agility that needs attention this week. Well, think of speeding up those thumbs as you go back and forth between all sorts of duties. Perhaps it is a tight wrist that is giving trouble. You will find other ways of loosening it than by actually sitting down to the piano and striking octaves, long and hard and noisily. Perhaps it is a baffling passage that you can't read. Why not close your eyes, as you are being whirled along the street in street-car or auto, and *see* that passage? Look at it in imagination so long, so intently, that it reveals its intricacies to you!

Third: During actual practice-time—divide the lesson into thirds. On Monday and Tuesday determine to learn the first third of it. *Learn it,* during that sixty minutes! Don't attack any more of the lesson unless you are satisfied that you actually do know it. Wednesday and Thursday, give to a quick review—merely a mental review, possibly—of the first third and then, catching the spirit of the compositions, the etude, the finger-stretching, pounce upon the second third of the lesson and subdue that. *Get it.* You can, if you are determined enough, if you make sure of the elasticity of that thirty minutes that is yours. So, on Friday and Saturday, you will find your two half-hours sufficient to make the last third of the work wholly your possession.

Practice of this kind is a stimulant. It reacts upon every other task that you undertake. You get the value of a single minute in such a way that months and years are added to you.

If Sunday offers an opportunity for practice, the whole week's work can be reviewed. But Sunday is a good time in which to develop the artistic side, to go over old work from a new angle, to test results and discover how much gain has been made since you began really to have time to practice.

This method of dividing one's work into small bits works wonders. You do not sit in stupefaction before a mountain of new technicalities. You say, "Oh, that little thing! Watch me subjugate it!" A half-hour of this kind of practice—yes, fifteen minutes of it—is, in result, like the growth of plants on a warm, moist tropical night. Your technic, musical feeling, understanding and power, mount higher towards perfection during such periods than during years upon years of undirected, unprepared-for work.

What Is the Signature?

By Caroline V. Wood

It is no exaggeration to say that nine times out of ten, if a teacher should ask a pupil for the signature of the piece he is trying to play, he could not tell. Many pupils start a new piece without ever stopping to consider what the signature is. Frequently the teacher herself does not realize this; but it is a great detriment to a pupil's reading.

Before letting a pupil start to play or read a piece, have him look well at the signature and name over the sharps or flats two or three times without looking at the music, as well as play the scale in that particular key. It is sometimes well also to stop him a time or two while he is playing, if the piece is new, and again ask him in what key the piece is written and to name the sharps or flats in the signature. Gradually he will come to realize the importance of noticing this detail and getting it fixed in his mind before attempting to play.

The Humor of Richard Wagner

Written Expressly for The Etude by the Son of the Great Master

SIEGFRIED WAGNER

Siegfried Wagner was born June 6th, 1869, at Triebschen. His parents wished him to become an architect, and he studied this subject at a Polytechnic School. Later he studied music under Kniese and Humperdinck. He became a concert conductor in 1893 and later became conductor at the Bayreuth Festivals (1896). He has written eleven operas, of which the best known is "Der Bärenhäuter" ("The Bearskins"). Suffering the greatest handicap imaginable by being the son of a musician of transcendent genius, his works were immediately compared with those of his father. As the grandson of Liszt and the son of Wagner he has inherited traits of genius that many in his native land believe will some day entitle him to recognition as a great composer, which critics who insist upon comparing his works with those of his father refuse to give to him at the present. It is his ambition to have his work judged individually and not as the son of a great master. As a conductor Siegfried Wagner has met with wide success. He conducts without score and with his left hand. He is now touring America in the interests of Bayreuth.

SIEGFRIED WAGNER TO-DAY

THE underlying trait of my father's character was a lofty artistic earnestness. Along with this, however, there poured forth an illuminating humor and a sunny happiness which, notwithstanding the difficult life situations and the disappointments, rarely resolved into satire or irony.

How highly he prized that gift of God, a wholesome laugh, is revealed in his advice given in a letter to his old friend, Uhlig:

RICHARD WAGNER AND SIEGFRIED

From a picture made in Naples in 1880. Wagner was then sixty-seven and Siegfried was eleven years old. The father died three years later.

"Rely absolutely upon humor. Cultivate thereby, more and more definitely thy excellent gifts. Do not write another serious word but keep on laughing and laughing. That is the only way to get along in life and prove useful to others."

That Wagner himself was in possession of this Godlike gift and intentionally cultivated it is manifested very beautifully and strikingly in his *Beckmesser* and *Mime*.

The humor of my father was in common with that of all genius. He, for instance, had a very intimate appreciation of the humor of Schiller. As an example of this, he wrote to Mathilde Wesendonck:

"Schiller has a distinctive humor which possesses a geniality and wholesomeness which I have never been able to discover in the works of Goethe."

About Shakespeare he writes:

"These wonderful witty laughs in Shakespeare. This divine scorn. It is really the highest point a human being can attain."

In his remarks about Beethoven he says:

"We cannot fail to see a basic relationship between Shakespeare and Beethoven. Further, it may be said that in the quickness of grasp, in the peculiarity of the humor, we recognize in the expression of the humor of Shakespeare's characters an inexplicable spontaneity, that in an exactly similar manner gives the types of motives of Beethoven the highest ideality; that is, they are the unavoidable melodic forms demanded by the mood."

Later Wagner remarks:

"Never has the art of the world produced any happier or livelier works than Beethoven's symphonies in A major and in F major, and others of the intimate creations of the master written in the time of his complete deafness."

In connection with the A Major Symphony, which was loved by my father above everything, may be given the two following anecdotes of a lighter character:

In the year 1873 Wagner attended a rehearsal of the A Major Symphony which was to be given under the baton of Zumpe. When it came near the end of the third movement, Wagner rushed to the conductor's desk, grasped the bâton from Zumpe, and besought the orchestra to play the movement over again. Little by little Wagner increased the tempo. The orchestra, gradually led by the master into a dancing and fluctuating whirlpool, gladly obeyed his flying baton. The movement closed with a wild whirlpool—the fastest possible tempo. With the last note of the orchestra, Wagner threw the baton on the floor, whirled around joyfully upon the little conductor's stand and then leaped back at least two yards. Turning aroung instantly, he rushed back to the dumfounded musicians, exclaiming, "Do it like that. Mach's nach!"

When Wagner Danced a Beethoven Scherzo

At the last meeting of Wagner with Liszt, in Venice, the latter—my grandfather—played the Beethoven A Major Symphony. My mother, the Princess Hatzfeld, and some others listened. We children sat in the adjoining room. Suddenly, with the beginning of the Scherzo, my father entered and, unnoticed by Liszt and the audience, commenced to dance in the most elegant and graceful manner. He appeared like a youth of twenty years. We children had difficulty in refraining from showing our joy by loud outbursts of laughter. One thing is certain, Beethoven could never have wished to have his Scherzo danced more beautifully.

The admiration of Liszt for my father was so deep and his comprehension of his character, which was so very often misrepresented, so great that little jokes like this were accepted in a friendly spirit.

Once, after my grandfather had played a religious composition, I do not recollect whether it was from his "Christus" or not, my father said:

"Your God makes a great deal of noise." (Dein lieber Gott aber viel Spektakle.")

On All Fours

Most of the time when Liszt played Bach and Beethoven, Wagner listened with prayerful silence. Suddenly he would rise and, going to Liszt, would pet him like a child. This he did quite often; and Liszt used to look at him with a stern glare in his eyes. Once, after Liszt had played, Wagner crept over to him on all fours, saying:

"Franz, to thee, one must creep on all fours."

In the presence of his family and friends, and particularly with artists, happiness and joy always affected his mood. Very often upon the arrival of an unexpected but very welcome guest, upon any joyous occasion, or from mere exuberance of good spirits, he would stand upon his head.

Gustav Adolf Kietz, who was working on a bust of Wagner, relates the following which occurred after a pianoforte rehearsal at Bayreuth, in the year 1875, when Wagner was sixty-two years old:

"Once when I was working upon Wagner's bust and looked over to him to get the proper expression, I was frightened to see his face turned into a horrible grimace, his mouth open at least an inch, his eyes distorted, the veritable countenance of a Leipzig street rowdy."

My sisters received lessons in French daily from my mother, in one of the upper rooms of our house. A spiral stairway led directly to this room. Every now and then my father would appear upon these stairs, unseen by my mother, and make faces and all kinds of fun for my delighted sisters.

At the Bayreuth rehearsals Wagner took the liveliest interest. If all went well, that is if it went as he wanted it, Wagner manifested his thanks in the kindest and most humorous manner. At one of the "Parsifal" rehearsals he addressed himself to the interpreter of *Amfortas,* who had performed the rôle as he wished it done. "To you I have a ten-mark piece. You can accept it in good grace. When Schnorr sang *Tristan* in Munich, I gave him only three marks."

After the rehearsals of "Das Rheingold," Karl Hill, who played *Alberich,* received a bottle of champagne, and the *Rhine Daughters,* because of their courage in trying out the somewhat hazardous apparatus employed to make them appear as though swimming, each received a beautiful bouquet.

SCENE FROM WAGNER'S GLORIFIED COMIC OPERA "DIE MEISTERSINGER"

This humorous work is regarded by many as the composer's masterpiece. Wagner was fifty-four when he completed this momentous composition.

During the time of the rehearsal of the "Nibelungen Ring" in Bayreuth the dog tax of the municipality was considerably increased. The celebrated violinist, Wilhelmj, at that time was our concert-meister. He heard of this and, being a great lover of animals, feared that many owners would find the tax so high that they would let it slip by and permit their animals to be destroyed. To save the poor animals from this fate, he bought about a dozen of the dogs and confined them in a wooden shack next to the theater. With the first pianissimo of the orchestra the whole bunch began to bark and bay and howl in an unbearable manner. Of course, they had to be liberated at once. At the close of Wilhelmj's "Rheingold" solo, Wagner slowly walked down the stage and said to Wilhelmj in the orchestra, "Very beautiful. Very beautiful. You shall have a new dog."

Wagner delighted in sitting down with his artists after rehearsals and engaging in jovial chats. At such times his irrepressible humor was evident. Upon one occasion, when a group of his artists were remaining rather late in a restaurant they were amazed to see Wagner appear in the gallery, with a bear skin over his shoulders, a helmet on his head and a spear in his hand, singing the famous lines of the *Night Watchman, "Hört ihr Leut und Lasst euch sagen."* ("Hear me people and let me say to you.") One who was present reported, "The effect was a riot of laughter and amusement."

Mottl and the ballet master, Fricke, describe in similar manner a garden fest in honor of Mme. Materna, at Wahnfried. This was followed by a satirical play—really a burlesque at the Hotel "Zur Sonne." It was a veritable vaudeville in which Lilli Lehmann danced a two-step (pas de deux) with Fricke, while Mottl played the piano and Hermann Levi accompanied him on the bass drum. Wagner remarked at the end, with extravagant explosions of good humor, "We artists are an irrepressible lot. Such an evening as this is incomprehensible to others and is therefore falsely criticised. Therefore it is best to live to ourselves."

Wagner often discussed himself and his works, in a thoroughly humorous fashion. Thus at an after-dinner speech in Dresden, where he had been Kapellmeister in his youth, he fell into one of his humorous moods. He gave a review of his youth in Dresden, when he was an unknown musician, when he had presented himself at the opera house with a very thick manuscript of "Rienzi." "It was my poor 'Rienzi,' which still every now and then is presented here like a plucked chicken." (Translator's Note:—Wagner here refers to the innumerable cuts made in the usual performance of his very lengthy original manuscript of "Rienzi.")

When "Lohengrin" was being revived in Vienna Wagner sat upon the conductor's stand making remarks to *Elsa* and *Ortrud* about their duet at the end of the second act, permitting the orchestra to continue to play the remainder by themselves. Wagner was amazed at the beautiful warm tone of the Viennese violinists, who of course united to make the ensemble very effective under such conditions. He turned to them and said:

"You have played it much more beautifully than I have composed it."

When he came to the same passage on the evening of the performance he laid down his baton and let the orchestra continue alone, he laughing heartily to himself over his joke, and at the same time indicating his great confidence in their orchestra, to the Viennese public. This was greeted with such stormy applause that Wagner was forced to rise and acknowledge it with a bow. Turning to one of the musicians nearby, he remarked: "It appears that the public is even better pleased when I do not conduct."

Then he laughed heartily and gave the signal to continue the performance.

In his memoirs he comments with keen humor upon his first tragedy, "The plot was really quite remarkable; forty-two of the characters died during the course of the piece, so that it was necessary to bring them back as ghosts in the last act—otherwise I could not have had a last act."

Many anecdotes of this first tragedy have been recounted by Wagner's sisters. In one occult moment, one of the living personages approached one of the ghosts who shouted in caution, "Back! Touch thou not my countenance, because my nose will crumble in dust as soon as one touches it."

A visiting friend once asked the youthful dramatist how far he had proceeded with his drama, and the reply was: "Thus far, I have killed all the characters."

Once with the celebration of his birthday, which fell upon the twenty-second of May, he made the following amusing verse:

"Ja, ja, es war im Mai
Da war ich auch dabei,
Man zog mich bei den Ohren roth,
Drum bin ich musikalisch geworden."

Freely translated:

Yes I was born in May
And I was there they say;
Some one took me by the ear
And made me musical I hear.

On another birthday he wrote:

Im wunderschönen Monat Mai
Kroch Richard Wagner aus dem Ei,
Es wünschen viele, die Ihn lieben,
Er wäre besser drin geblieben.

Freely translated:

Ah 'twas the lovely month of May
That hatched the Wagner egg one day;
They wish, who loved their Wagner best,
The egg had perished in the nest.

Visitors with whom he was unacquainted were not as a rule welcome. Once when he returned from a walk he said:

"Alas, one cannot even walk out in peace. Some one asked me on the street to-day if I was really Wagner.

"'No,' I replied, 'I am not Wagner.'"

Another curious person met him once, just as he was leaving the apartment house in which he lived.

"Does Richard Wagner live here?" asked the sight-seer.

"Certainly," replied Wagner; "Two flights up, go right up," and Wagner went upon his way.

When he purchased the lot on which to build Wahnfried an amusing episode occurred. All points of the sale were settled but one. On the middle of the lot there lay a huge pile of manure which Wagner wanted and which the former owner was loath to give up. Finally it was settled by Wagner sitting at the piano and playing for the seller the *Blue Danube Waltz* of Straus.

An instance of his sarcasm and irony was his brilliant description of the French dramatist Scribe.

"One encounters Scribe, dressed in a most elegant silk dressing gown, sipping a cup of chocolate. He requires this refreshment because he has just left his workdesk after two hours' hard ride in his romantic wonderland where he has laughed at the works of all the great authors. Do not think, however, that he is resting while he is drinking his chocolate. Look you, in every corner of his gorgeous room one may see, upon chairs, settees divans, all the leading authors and composers of Paris. With each one of these worthies Scribe is engaged upon some different piece of business. With one he plans a new play, with another a new opera or a new comedy or a new vaudeville, with this one he invents a brand new intrigue, with another he discusses the effects of a new opera, with another he has planned in a second a double marriage. At the same time he is busy writing a great number of beautifully styled letters, or perchance he has just paid five hundred francs for a dog. During all this he has gathered material for his next production, laughingly studied the characters, welcomed and dismissed various strangers, ordered a frame for himself and made a new drama which no one had hitherto suspected."

Before closing this little sketch of the humor of my father I would like to add by way of an "Epitaph" which he wrote with pessimism but unconstrained sarcasm, shortly before the turn in his life when his fortunes rose:

Hier liegt Wagner, der nichts geworden,
Nicht einmal Ritter vom lumpigsten Orden,
Nicht einen Hund hinter'n Ofen entlockt er
Universitäten nicht 'mal' nen Doktor.

Literal Translation;

Here lies Wagner, who is nothing,
He has not ever received a knighthood of the meanest kind;
He has not been able to coax a cur from behind a stove,
Nor a degree from any University.

Life Helps and Inspiration from Noted Contemporaries

Experience is a servant whose value depends upon her master.—Norman Hapgood, *Editor.*

Throughout my life I have always found that events which seemed at the time disastrous ultimately developed into positive blessings.
—Elizabeth Marbury, *Noted Play Broker.*

Life is pretty bad; at times it is almost unendurable; but its very difficulties and complexities make it fascinating.—Arnold Bennett, *Essayist, Novelist, Dramatist.*

The future lies with the nation that most truly plans for the future.—Karl Pearson, *British Scientist.*

What is good education unless it makes for racial progress, unless it produces a class of men that can bear the burdens of the nation rather than live their own selfish lives!—Charles M. Schwab, *Manufacturer.*

Poor Beethoven!

Beethoven became deaf when he was about twenty-seven years of age; and his malady grew increasingly worse so that most of his later thirty years were spent largely in tonal isolation from the world save for those glorious musical conceptions of his imagination. How he suffered is recorded in a letter quoted below. Like many true geniuses his great accomplishments were done in spite of terrible obstacles which would suffice to discourage the ordinary man.

". . . But health, the envious demon, has thrown an ugly stone into my life; for the last three years my hearing has gradually decreased, and in addition to this defect the state of my stomach which, as you know, was miserable, and which has become worse, is said to be the first cause. Frank wished to give my stomach the 'tone' with strengthening medicine, and apply to my ear oil, but *Prosit!* nothing came of it, my hearing became worse, and my stomach did not become better. That lasted until autumn of last year, when I was sometimes in despair. A medical *asinus* advised a cold bath, a cleverer one the ordinary lukewarm water of the Danube. That accomplished wonders, for my stomach became better, my hearing remained stationary or became still worse. . . . Thus it remained until four weeks ago, when I went to Vering . . . he gave me no medicine, except about four days ago pills for the stomach and a tea for the ear. My ears hum and rush day and night. I may say that I pass my life miserably, for nearly two years I avoid all company, because it is impossible for me to confess to people: I am deaf. If I had another calling, it might be bearable, but with my profession this is a terrible state; and then my enemies, whose number is not small, what would they say to all this?"

Overture Hints

Overtures usually follow the form of the sonata but omit the repetition of the first section.

The variations of the form are numerous. Mozart, in his overture to "The Magic Flute," uses the Sonata Form but develops a fugue on the first subject.

In Beethoven's first "Leonora Overture" to "Fidelio" a slow movement takes the place of the free fantasia.

For Handel's "Messiah" and Mendelssohn's "St. Paul," the overtures are composed of stately, slow introductions followed by well-developed fugues.

von Weber was the first to construct overtures developed systematically from themes which were to follow later in the opera.

Personal Glimpses of the Masters

Mendelssohn was an expert horseman, an expert chess player, an expert billiard player, and an expert swimmer.

Turgeniev wrote that "fifty countesses claimed that Chopin had died in their arms."

Wagner's craving for luxury is shown by the fact that even when he was a virtual pauper he wore silk next to his skin.

Tschaikowski's platonic friendship with Frau von Meck (Nadeschda Falaretovna) is one of the most curious episodes in musical history. She provided Tschaikowsky with an income of $4,500.

When Bach died his salary was $65 a year. His wife died in the almshouse.

Haydn was so dark that he was mistaken by some for a negro.

Gluck used to have his piano placed out of doors so that he could compose in the open air.

Mozart was so sensitive and so nervous on the days when he composed that his wife cut up his meat for him so that the composer would not run the risk of cutting himself.

Beethoven never married but was "always in love"—his love affairs were almost always with persons in high station in life.

Weber was very fond of animals and kept a small-sized menagerie, including a raven, a starling, a monkey, an Angora cat, and a huge dog.

Necessary Points in Gaining Control

By HARRIET BROWER

Many little points in getting a grasp upon the practical phases of pianoforte playing, by adopting sensible devices.

THAT distinguished pianist and pedagogue, Sigismond Stojowski, once remarked: "The most vital point in piano study is learning to think. Has it ever occurred to you what infinite pains people will take to avoid thinking?"

The Polish musician is right, a hundred times right, as teachers of piano everywhere know full well. If they are clear-headed and resourceful themselves, they are ever on the lookout for some such qualities—or a glimmering of them—in their pupils. It is difficult for such teachers to realize the mental density exhibited by some of the students in regard to music study. These students may stand high in school studies. Why do they not use the same mental effort in music?

One of the neglected points, which comes up frequently in my class, is a curiously unthinking one. It is found much oftener among those who have not been trained by me from the beginning, yet it seems to be a common fault with everybody. It might be called, for want of a better term,

Lack of Hand Adjustment

Suppose there is a group of four notes, played as a broken chord. We will illustrate with left hand. The first three keys to be depressed are white, the last, played with the thumb, is a black key. Would it not seem common sense, since the thumb must play on the end of the black key, to place the other fingers in line with that one? But no; nine times out of ten, the other three fingers are used on the ends of the white keys. Then, when the black key is reached, the hand must necessarily be pushed up on the keys, to allow the short thumb to reach its key. By this means the hand is suddenly twisted all out of shape, and there is a corresponding jerk between the tones, preventing any possible smoothness of utterance.

When the player's attention is called to this fact, it seems to be an entirely new idea. Even then the fault is seldom corrected without the most strenuous effort on the part of the teacher, each instance having to be pointed out and corrected various times before any improvement sets in. At the bottom of it all is a lack of thought; thinking along this line seems too much of an effort.

To even the more thoughtful students, who sometimes try to do some thinking, the idea of adjusting the hand to the note forms to be played seems a business wholly foreign to their makeup. One young student, who had already taken piano lessons several years, asserted that she had never been told to play up among the black keys; so how could she possibly have known it was the right thing to do!

The illustration given is only one of many. Suppose the group of four notes begins and ends with a black key, and there are two white keys between. Invariably those two white keys will be played on their tips, the hand being jerked out to do this and pushed back again to reach the final black key. A little thought would correct this evil.

Prolonging Bass Tones

A young girl brought Mendelssohn's *Spring Song*—that free, jubilant pæon of joyousness—to her lesson. But the song did not soar and sing: it was very much held down by earth weights. What was the matter? The left hand was like lead, because it held on to that bass octave which begins each measure, and was, therefore, always late in reaching the little group of notes to be played on the third eighth of the measure. Would you think that anyone advanced enough to study that piece would be so careless about note values and effects? Just a little thought would have prevented this error.

What the student should have done was to play that octave with free-arm movements, lifting after each first beat and bringing the hand and arm into position for the group of notes to follow. Then there would be no hesitation and no stumbling. And it is not only in the piece mentioned that one must take thought, but also in any piece where such examples occur. These little problems of adjustment are constantly coming up to be solved. Surely the student should not ask his teacher to do all his thinking for him.

Some Points of Fingering

Students do not seem to see the connection between fingering and phrasing. A group of legato notes should be conveniently fingered to observe and carry out the desired effect. But the average pupil fails to notice such little things as phrasing marks and fingering, much less the connection between the two.

Let us suppose there are three legato tones in bass, D, G, and G below. The pupil puts the thumb on D; and then, of course, it's all up with the other two notes. If the second finger had been used on the D, all would have been well. Do not be alarmed; we are not going into a subject so deep and wide as that of fingering in general. These illustrations alluded to are culled at random from many which occur in my workshop, and will doubtless be recognized by every teacher.

Speaking of fingering, there is chord fingering, which seems to be a poser for many a pupil. No matter how carefully he is instructed that in four voiced chords, whether broken or not, the fourth finger—*not the third*—is used when there is but one white key between that and the fifth; in spite of all that can be said on the subject, the unthinking pupil, if left to himself, invariably uses the third after the fifth. After he has practiced this form a week, of course it may seem more natural than the weak and unused fourth, which would be the correct one. An example to the point would be the double-chord passage in the *Volkslied* of Mendelssohn. Here both hands have a succession of octaves with one key between, which should be taken by the fourth finger. The careless pupil plays this between-key with the third instead of with the fourth finger, thus cramping the hand and putting it out of shape. If the teacher is easy-going and "doesn't notice such small errors," the false fingering becomes a habit, almost impossible to break. It will remain fixed, unless some other teacher is courageous enough to undertake its correction, when this teacher will have many tribulations. A little forethought in the beginning would have prevented the trouble.

Preparedness

How often the word comes to mind, when teaching the principles of our art! The essence of preparedness is to think before you act. If your hand is lying in your lap, it is not ready to act—it is not prepared to act. Suppose one hand has a few beats of respite—or even a measure or so. That is no reason why it should be entirely inert, with no action until the very instant it is needed. If the player waits till that instant arrives, he will invariably be too late. It is impossible to wait till the very last gasp and then imagine the hand is going to lift, poise, descend on the right key in an easy graceful way, and do it on time. The thing cannot be done. But students who are not very far advanced seem to imagine it can. At least they take no pains to prepare for the attack, and so they are not on the spot at the right time. The whole thing seems so simple, hardly worth mentioning, and yet it is just these little things that make for accuracy and lead to artistic performance. When they are neglected the playing at once becomes uneven, uncertain and inartistic.

THIRD OR FOURTH FINGER—WHICH?

When shall I use my third or my fourth finger between the "outer" notes in four voiced chords. Miss Brower discusses this mooted point. One rule runs: "If the distance between the outer fingers is a fourth use the third finger; if the distance is a third, use the fourth finger." But what about such a chord as B D sharp, F sharp B played with the left hand way down in the bass. Try to put your fourth finger on D sharp and the strain is at once apparent. The best rule is to count the number of intervening white keys. One intervening white key, use the fourth finger; two white keys, use the third.

To remedy this special fault, the unemployed hand must be held up over the key, poised for the fall, drop or spring, as the case may be. Then it is prepared. This, though so simple, is a far reaching point, and applies to passages where hands alternate quickly as well as slowly.

To be prepared for what is coming means to think, to plan for each move before it comes. Careful training in the early stages should fix these principles in the mind, and there need be no errors to undo later on. Suppose one is playing scales extending four octaves, for each hand alone. The left hand begins and travels more or less quickly up the keyboard; the right lies idly in the lap. It should, however, be raised in plenty of time (at least an octave before needed) poised in air, ready to drop on upper C at exactly the right instant, when the left hand has played its B. But is this usually done? Not once in a hundred times, unless the student is thoroughly drilled and carefully watched by an observant and competent teacher. And even if the principle is learned as applied to scales, constant vigilance is necessary to see that it is also used in pieces.

What is the good of a correct principle, unless it is actively applied? Watch the great artists and see with what freedom they move up and down the keyboard. Their fingers are always prepared for the next move, their arms are constantly poised over the keys, or are carrying the hand from place to place. The student may imagine that this freedom is the peculiar possession of the artist—a special gift—and cannot be acquired by amature or pupil. That is where he is in error. Anyone can learn the principle of free movements. Care and thought will see that they are properly applied. A good principle is not learned to be thrown away. A little thinking will teach one how and when to use it. The difference between the artist and the amateur is not entirely one of talent, but rather one of mind. The artist uses his mind, thinks the thing out, applies the principle, and masters the passage.

Remedies

Remedies for these and many other shortcomings ought to be in the piano physician's kit. The one great remedy is the one we started out with—to use the mind—to think! But there are definite aids to this all desirable and vital quality, some special forms which may, through repetition, become automatic, and so smooth the way.

For skips there is a little exercise recommended by Hans von Bülow. It consists in practicing intervals of tenths, first hands alone and then together. Begin with the left hand, taking lower C and then E, ten keys above. Use the fifth finger and thumb, and make the spring from one key to another with loose, free arm, arched hand and firm fingers. Continue up the keyboard and then return. Change hands and exercise the right in the same way. When playing together, it is possible to start in four ways, namely with lower or with upper key; with inner or with outer keys.

To correct lingering too long on initial bass key or octave, when the hand is required elsewhere quickly practice chords, interspersed with single notes, wide intervals apart, making wide, free arm movements, not throwing the hand back from the wrist, as so many inartistic young players try habitually to do, but rather letting the arm and wrist lift the hand from the keys. If the hand is thrown back at the wrist, the arm is apt to remain stationary, which leads to stiffness and lack of ease and effect.

Some such technical stunts as these, and others like them, should help in gaining control. But the fact always remains that the principles must be applied to pieces, if they are to prove of value. How are they to be applied unless thought goes with them directing the result? It is the weight of mentality behind the artist's playing which makes it great. When we learn to think with as much care and attention to detail as the artist, we shall play with some of the same arresting mastery.

Style

By Francesco Berger

THE beginning of all musical interpretations is, of course, *right notes*—and there must be right notes *only*. An admixture of a few wrong ones with many right ones will *not* do.

After right notes come three or four other requisites, all equally important. Pace (tempo) is one; correct fingering (which renders the execution easy for the hand, secures certainty, and leads to correct phrasing) is another; coloring is a third (which includes light and shade, *nuances* of every kind, touch and pedalling). But besides all these, which may be called the *fundamental* essentials, and which we divide roughly into "right" and "wrong," there remains one other ingredient recognized by the word "style." This includes "reading" or "interpretation." The absence or presence of this quality does not amount to so much as "right or wrong," because it is the outcome of personality, and is largely a matter of taste and experience.

We have all agreed long ago that nothing is gained by disputing about matters of "taste." Taste in music is not confined to what the composer has set forth for the performer to do, but consists rather in what the performer is capable of adding to the composer. However crowded a composition may be with instructions and directions from the composer, there is still a margin left for the exercise of the performer's individuality. This margin is the true test of the executor's artistry. It is as easy to overstep it into exaggeration as to completely omit it. Both extremes are to be condemned.

Shakespeare is Shakespeare; but there is a huge gulf between the *Hamlet* of a Macready, and the *Hamlet* of Jenkins. It is scarcely too much to say that to hear the identical Beethoven Sonata played, as I have heard it, by Sterndale Bennett, by Halle, by Rubinstein, by Clara Schumann, or by Paderewski, is like hearing five different sonatas. And, probably, if I heard the same work interpreted by Busoni, by Lamond, by Pachmann, and by Godowsky, I should have to chronicle four more interesting and varying readings.

If asked which of the two extremes, exaggeration or total absence of all personality is the greater offense, one would reply that the rock to be most rigidly avoided is exaggeration. And it is unfortunately but too true that many pianists, whose performance is in other respects commendable, commit this error. They take their quick movements too fast, their slow ones too slow; their *forte* is always *fortissimo*, their *piano* is a mere whisper in which many a note is inaudible.

It should be borne in mind, that since the days of Mendelssohn, the interpretation of *tempi* has become considerably accellerated. The ordinary "allegro" of to-day is much quicker than it was formerly—what we call "allegro" to-day, would have been considered "presto" a century ago. Equally so, our "andante" does not mean the slow pace of other days; what was "andante" to Scarlatti, we should call "adagio" now.

There are certain masters of the so-called "classical school, Mozart, Haydn, Handel, Scarlatti, but *not* Bach, the rendering of whose music has become traditional. No great departure from the printed text of their works is needed. The larger share of what they call for (not equally so in all cases) is provided by the composer himself. It is *there*, on paper. Very little is allowed to the performer's imagination, just as very little elbow room is needed for its performance. But this is not so with composers of the "romantic" school—Beethoven, Mendelssohn, Schubert, Shumann, Weber, Chopin, and (hold up your hands in dismay, ye pedagogues) Bach! In these an amount of personal license is not only permissible, but also desirable. Bach becomes another Bach when his dear, old, dry bones are electrified into breathing life, and surcharged with scintillating color by the genius of a truly gifted executant. But the performer must have himself well in hand; his Pegasus must be "well tempered." Wild bulls are not welcome guests in a china shop. And even Chopin, who is frequently treated as the composer with whom one may "take liberties," is known to have been personally intolerant of too much *a piacere, ad lib., rubato,* on *senza tempo*.

Until quite recently there were artists living who had learned from the great masters themselves how they wished their music to be interpreted. They transmitted these wishes to their pupils, and these have left us a record which should largely guide us to-day. I have had the rare good fortune to hear Moscheles, the friend and pupil of Beethoven, play some of the immortal master's sonatas, and I have little doubt that his readings were such as Beethoven, himself, desired. I have also heard Clara Schumann, in some of her husband's pieces. Some others (probably Hiller and Reinecke) have gloried in the same tradition, which may be summed up as strict adhesion to prescribed text, with a *modicum* (note the expression) of personal liberty.

Not only has each truly great performer his own interpretative "style," but also style of some sort is conspicuous in the works of all truly great composers. In a few cases it has degenerated into mannerism, and such music has very properly died a natural death. But every thinking musician will recognize the style of Beethoven as distinct from that of Schumann, Mendelssohn, as distinct from Chopin, and will rejoice that this is so. There are moments in Sullivan's "Pinafore" absolutely redolent of the British tar, and yet so truly Sullivanesque as to be obvious examples of their composer's "style."

In the fertile fields of our beloved musical art, in her scent-laden gardens, and in her blooming orchards, there are inexhaustible riches for every one who has an atom of individuality, or anything approaching cultured taste. Some may gather life-giving grain, others may call sweet smelling blossoms, others again may pluck refreshing fruits. Music can and should speak from soul to soul, and the speakers "style" can convert even a common-place thought into meaningful eloquence. Language fails in its noble mission if it does not clothe thought in elegant terms, and music is but a cold repetition of somebody else's ideas if not infused with individual "style."

Helping Neglected Muscles

By Leonora Sill Ashton

TECHNIC—the mechanism of playing—in other words, the ability to strike the right note, in the right way, at the right time—what a mountain of careful work must be climbed before this ability may be called our own. And yet the ascent need not weary us; if, like the experienced mountaineer, we learn to achieve by careful, steady, patient steps.

Physical fatigue is the usual cause of depression and discouragement. This exhaustion generally results from attempting too much. The child does not learn to walk, eat and talk, all at the same time. Each little effort, in one particular direction, is attempted singly. How much more simple and effective would practice be, if this child habit were kept in mind. Take one member of the playing apparatus at a time and see how it may be developed.

Begin with the finger-tips—the points that come in direct contact with the keys. Some people are born with the ability to place their finger "on the right spot," in the literal sense of the word. Every pianist should seek this power as one of the first and finest requisites needed. A sure touch! This comes from a good ear, with fine coöperation between brain and fingers. It is acquired and enriched by constant practice; but is it, as often as it should be, a matter of single thought? The "blue notes" of later years, of nervousness and lack of practice, all are the fruits of the neglect of this topic during lesson and practice.

The simple illustration of picking up a needle from a thick carpet, or any other soft, fuzzy material, serves the purpose of explaining how the mind must be concentrated on the finest tip of the fingers, and how sure and certain those tips must be to do the work. The fingers should take the same position over the keys, strike on the middle of the ivory, slowly, surely, as though picking up the key, and then deliberately go on to the next. The greatest artist will tell you that he gains the most from slow practice. What is that but cautiously fixing the mind on the finger-tips and allowing them, instinctively, to do their finest work. The Scotch scale, beginning on G-flat, is an excellent exercise for this special purpose. With its omission of the fourth and seventh tones of our key, it keeps the fingers continuously on the black keys, a more difficult position than when part or all of them fall on the white ones.

Just now we are thinking of the mature student who is trying to "go on" with his music by home-study, but has found the technical equipment very rusty. Devote ten or fifteen minutes a day to this exercise, banishing every other thought from your mind. At the end of a week you will notice a great improvement in your sureness and sensitiveness of touch.

The "vital hinge" in piano playing is the knuckles, the bridge of the hand. Here it is that the musical energy and intelligence, traveling down from the brain, through the shoulder, the upper arm, the fore-arm and the wrist, must disperse itself into five separate fingers. How strong must be the resistance of this bridge; and at the same time how great must be its suppleness and sensitive response. Flexibility and strength upon these two requisites in the bridge of the hand does much of piano playing depend.

How to gain these two ends is a glowing question. Now, again, and again, let us say that the great exercise for strengthening and enlivening the whole hand, and especially this part of it, is the elastic staccato described by Dr. Mason, in *Touch and Technic;* that is, the snapping of the whole finger from the joint, off the keys. I would like every pupil of mine to practice everything in their lessons, from finger exercises to pieces, with this touch. No special, written page need be mentioned. It may be applied to every note struck.

Another gymnastic for the strengthening of this bridge of the hand is to rest on the keys—or on the table, or any other surface—the finger-tips, with the whole weight of the arm, heavy but limp, upon them.

Next comes the wrist. First and foremost, here we must have mental control. *Think* looseness. Avoid rigid wrist muscles in all things. The mental attitude will do more here than days of practice. But, of course, there must be practice of all the technical materials.

Finally, the arm must be considered. Perfection in this, as in wrist control, depends largely upon the mental attitude. Its use is a matter of letting muscles of the arm and hand relax, abolishing all resistance, and allowing the strength of these muscles to slip down—down—until it is concentrated on the finger-tips. Then, merely apply this muscular adjustment to all playing.

To conclude, concentrate the mind upon one part of your playing anatomy at a time. Devote a certain portion of your practice hour to the development of that special organ. Then, one by one, the muscles will become drilled to a firm, dependable technic.

A Community Teachers' Recital and How It Works

By Elsa Eckhardt

MUSIC teachers are always willing to do something for the betterment of their city musically.

In Hamilton, Ohio, the teachers decided that they could do more for their city by working together, so they tried out the experiment first by having a students' joint recital.

Each teacher was represented by one pupil chosen from her class, and each played or sang only one number so that the program would not be too lengthy. This proved such a success and was so much enjoyed by the Hamilton public that it was planned to give another which again met with great approval.

In the meantime the teachers organized the Hamilton Music Teachers' Association, which, even though it is still young, is proving to be a foundation for much good for Hamilton, musically.

The social side is not overlooked; for besides the several meetings the organization has already enjoyed a banquet and an outing thus bringing the teachers closer together and helping all to become acquainted.

Their work is truly proving to be successful and this is written expressly for those who might be contemplating doing the same.

Teachers felt that their art should lift them above the petty prejudices, which are so common.

Benefits of Percentage Grades

By Earl S. Hilton

GIVE a pupil percentage grades and watch what happens! That statement sounds like a command, but its application gives results; for, indeed, a teacher will notice a very pleasing difference after giving a percentage grade according to the pupil's interpretation of his piece.

A good method of arranging percentage degrees follows:

Let 100 per cent. stand for "perfect," and 90 per cent. for "good." All studies that have a grade *below* 90 per cent. must be reviewed. And as soon as the pupil plays them at 90 per cent., or *above*, the study is "good" enough to be passable. All pieces must have a grade of 100 per cent. before they should be passable or substituted with a new one. By letting the pupil understand that these grades must be attained before a study or piece will be "passed," he will make more real effort. The passing grade, 90 per cent., is just the same in quality of merit, as a lower one would be. The higher grade stimulates the *pupil's* pride, and in turn increases his courage. To be accurate in grading, take 3 to 10 points off 100 for every kind of mistake and hesitation.

What Must I Know to Become a Good Accompanist?

An Interview with the Distinguished Conductor, Composer and Teacher

RICHARD HAGEMAN

One of the Most Noted Accompanists of Our Time

Biographical

Mr. Richard Hageman was born at Leewarden, Holland. His father, Maurice Hageman, a Dutchman, was the director of the Amsterdam Conservatory of Music. His mother, Francesca de Majowski, a Russian, was the court singer of Holland. Mr. Hageman was the protege of Queen Wilhelmina, of Holland. He studied music in different European countries. At the age of sixteen he became assistant conductor of the Royal Opera House at Amsterdam and at eighteen was made first conductor. His versatility has proven immense as he has become celebrated in four branches of the profession, as an operatic conductor, as a symphony conductor, as a vocal coach, as an accompanist-pianist and as a composer. No one in the field of accompanying is entitled to speak with more authority upon the subject of accompanying than Mr. Hageman. No one can read this very lucid interview without the desire to try out some of the practical suggestions given by Mr. Hageman.

"I do not play well enough to become a solo pianist, so I though I would study accompanying."

How often have I had pupils tell me this, when I asked why they wanted to take up the study of this most difficult and, it must be said, ungrateful, art. How erroneous the thought that a bad pianist would make a good accompanist. Not only must the good accompanist have a technic brilliant enough to cope with the difficulties of accompaniments, like those of Strauss, Wolf, Debussy or Wagner, to name only a few; but he must do that which the solo pianist never has to do, be able to transpose these accompaniments into different keys, and sometimes without a moment's notice. Many a time, at the last moment, does a singer feel unable to sing an aria in the accustomed key and ask the accompanist to transpose the piece into a lower one. Only with great patience and hard work can this be learned; but it is one of the necessary requirements of the good accompanist and should be mastered.

I always suggest to my pupils that they begin by transposing the easiest kind of songs, preferably songs they know, like "The Last Rose of Summer" or "Annie Laurie," and to gradually increase the difficulties. The human mind accommodates itself to such matters very readily if you work *enough*. Success in this, like in all things, is largely a matter of persistence. Don't give up until you get it.

It is the same with reading music—the good accompanist must be able to play any piece placed before him at first glance. It is doubtful if any accompanist can play all the notes of a difficult modern song when seeing it for the first time, but he or she must be able to read so well and quickly that the principal harmonies and melodies are played, and so sustain the singer. I do not mean to "fake" an accompaniment but to leave out the too great difficulties at the first playing and be able at a glance to see which are the necessary notes and harmonies and play those.

This being able to read well is another matter of the most persistent work, and should be done daily. Instead of going to the "movies," or whatever your favorite pastime is, read everything you can borrow, rent or buy. The public libraries are full of music, there are several musical magazines which print one or more pieces in each copy (The Etude, for one, does this), and there are a number of inexpensive albums of music. One of the most delightful ways of reading is to ask some friend pianist to play four-handed arrangements with you. Not only will the main goal be obtained but you will broaden your musical outlook considerably. Then we come to the languages.

Knowledge of Languages a Necessity

The knowledge of the language in which your artist sings is, in my mind, an absolute necessity. The accompanying of the *word* is the first requisite of the good accompanist. The piano must always underline and illustrate what the singer says; the background of the picture must be in absolute sympathy with the principal object; and it is the accompaniment which must draw the picture's background.

Another reason why you must know the language your singer uses is that it is absolutely necessary for the accompanist to *breathe* with the singer. I mean just that—to *breathe* when the singer breathes, not only physically but mentally as well, and to let the piano breathe with you, so again to underline the dramatic, the poetic, the sarcastic, or whatever feeling there is in the poem, with the accompaniment.

And to really accompany well, to give full value to the musical beauty of the composition, to help your artist find the greatest support in your playing, you must *orchestrate* your accompaniment. The next time you hear an operatic aria accompanied by an orchestra, listen well to the tone color of the different instruments; retain that color in your mind; and then "try it on your piano." You must find different ways of striking the keys to make the piano sound like a horn, a 'cello, a flute, a trumpet, or whatever instrument would play that same phrase, if the orchestra was used. If the piece you play does not exist for orchestra, then orchestrate it yourself to your own taste, but do not merely "play the notes." Use your imagination.

Bain News Service Photo
RICHARD HAGEMAN

When you play the *Erlking*, you must follow the father and his sick child rushing on horseback through the dark woods. You must see them, must feel the agony of the child, the hidden fear of the father, the insinuating sweetness of the *Erlking*. You must see the horse finally stumbling to the house, too late; and the brutal finality of the two closing chords. What a wonderful chance for a poor accompanist to spoil the whole picture by an indifferent "plunk," "plunk," that's "done," instead of holding the dramatic tension to the very last note.

Master Accompanists Rare

Great accompanists are very rare. It is said that only three men of the present day, in the United States, command a fee in excess of $200.00 for accompanying at a recital. Of these three Mr. Hageman is one. He has accompanied many of the great singers of our times, including Alda, Farrar, Homer, Hempel, Ivogun, Melba, Casals, Elman, Kubelik, Kreisler, and many others. His opinions upon accompanying should be invaluable to "Etude" readers.

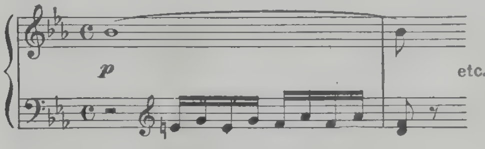
Piano and Orchestra

To go back to the accompanying of operatic arias. Most piano scores of operas give only a faint idea of what the orchestra in reality plays. It is impossible, of course, to execute everything that an orchestra plays, with only ten fingers but it seems that most arrangements of orchestral accompaniments have been made a little too easy and, therefore, have lost all the color the composer had in mind.

Let me give you a few examples:

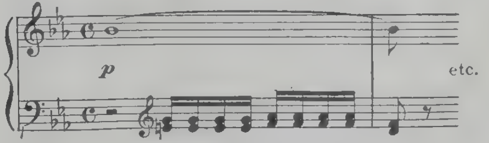
Piano score Aria of *Micaela* from "Carmen:"

Ex. 1



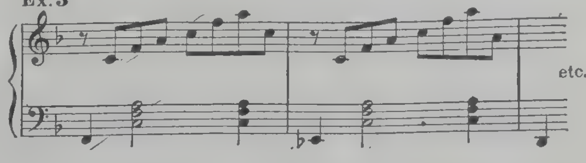
The orchestra really plays

Ex. 2



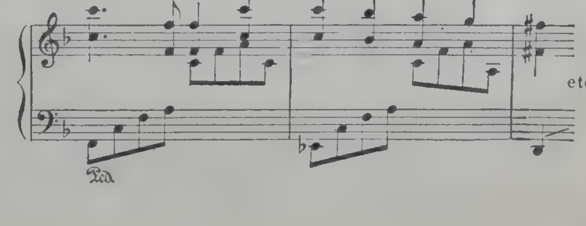
It is only a small change, but how differently it sounds. In "Jean D'Arc," Tschaikowsky, the piano score reads:

Ex. 3



The orchestra plays:

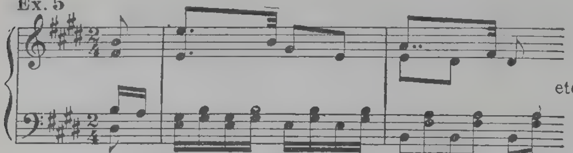
Ex. 4



Quite a different thing, isn't it?

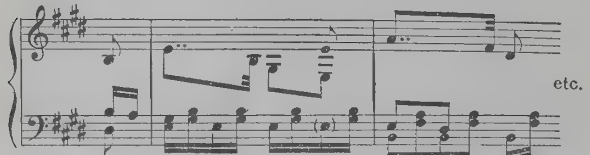
In the Aria of *Leonore*, in "Fidelio," the piano score reads:

Ex. 5



The orchestra plays:

Ex. 6



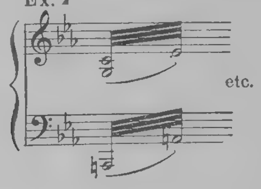
It is a little more difficult to play this way, but that is what Beethoven wrote.

I could quote hundreds of examples along the same line, but space forbids.

Another important thing in playing orchestral accompaniments is the "tremolo." Few accompanists realize that every note in a chord played as a tremolo is begun at the same time.

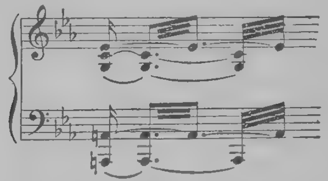
For example, a tremolo written like this

Ex. 7



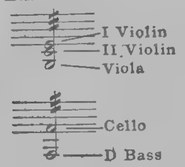
must be executed like this:

Ex. 8



In the orchestra it would probably be divided as follows:

Ex. 9



and every one of these instruments begins to play at the same time, so that the ear hears the entire chord completely at the first attack.

Don't Invite Attention

Avoid attracting attention. The good accompanist learns, among his first principles, not to draw attention to himself. Like Richard Wagner's Verstectes Orchestra (concealed orchestra), the accompanist must be so inconspicuous that the audience virtually forgets about him. The accompanist whose attitude to his art is not subservient to his personal vanity, will never get very far. The best accompanist is the one which the audience forgets until the end of the program, when it realizes that the artistic effects of the soloist were greatly enhanced by a proper accompaniment.

Particularly do I refer to unnecessary movements of the arms or hands or, as I have seen sometimes, a rocking back and forth with the entire body, probably meant to indicate uncontrollable feeling. Remember, once your finger has struck the key, no amount of "vibrato" (a moving or rather rubbing with the finger over the key) is going to change or improve the tone. It is *how* you strike the key that will give you the color you want, *nothing* (except the use of the pedal) can change it afterwards, and no amount of contortions will make an ugly sound beautiful. You only succeed in drawing the attention of the audience away from the singer, which turns the tables and makes you the soloist, which should never happen.

I mention the use of the pedal—what an inexhaustible subject! In a later article I am going to tell you some of the effects that can be obtained with those three pedals of our modern pianos.

Before closing this article I want to say a few words about traditions. What is known as "tradition," is a bugbear to the accompanist, and I have heard of people learning "tradition." The truth is that the traditions are so numerous and so far-reaching that few people can expect to master them all. The accompanist, if he goes to a real master of the art, will learn about these traditional performances of special arias, little by little. If he has experience with many singers, who are familiar with the traditions, he will learn more. There is in print but scant record of many of the traditions. Traditions like folk-lore are passed on from one to another, some traditions surviving and some disappearing with time. Some fine collections of modern oratorio arias have footnotes giving the traditions.

Most so-called traditions find their origin in the fact that the singer who sang the aria or song for the first time, at the initial performance, found it easier or perhaps more effective to change the original score to satisfy his or her personal taste or singing capability, and those that came afterwards did not dare, or care, to go back to the original.

Now, as a last word, play whenever and wherever you can, accompany as many different people as possible, have patience, read all you can, and work, work, work.

Thinking Scales

By G. F. Schwartz

The Musical mind, like many natural forces, has a strong tendency to seek the course of least resistance. This may be good economy, so far as temporary saving of time and effort is concerned, but it is a poor principle upon which to build broad and resourceful mental habits.

The music student need not waste time in laborious and fruitless complexities, but on the other hand he should be on the alert for opportunities to give his mind some real work to do, remembering that the fingers and vocal chords of themselves are not provided with brains and that the thinking processes of a musician become more and more elaborate as the student advances.

One of the most prevalent "sources of least resistance" is the purely mechanical or transpositional method of scale study (scales for themselves alone and not applied to any particular instrument). Many students in fact are likely to be nonplussed if asked to write or play the scale commencing with any note other than "do" or the tonic. Such a state of musicianship (?) is almost hopeless while it lasts. As a means of overcoming this deficiency the two following suggestions are offered:

(1) Construct orally or in writing all the scales which may commence with C: Thus—

c d e f g a b c (c major)
c d e♭ f g a b♭ c (b♭ major)
c d e♭ f g a♭ b♭ c (e♭ major)
c d e♭ f g a♭ b c (c minor)
c d♭ e♭ f g♭ a b♭ c (b♭ minor)
c d e f g♯ a b c (a minor)

etc., etc. C, chromatically raised or lowered, as well as other letters, both natural and chromatic, should also be used as commencing letters (not as "do" or the tonic).

(2) Prepare two sets of cards (about an inch square). The first set of (thirty) cards will have written on each a letter representing a certain key; the keys may extend from C major and A minor up to C♯ and C♭ major, and a♯ and a♭ minor (capital letters may be used for major keys, and small letters for minor keys). The second set of cards, six in number, will have written on each the name or abbreviation of one of the scale degrees (the tonic being unnecessary). From each group a card will be drawn; the combination will indicate a certain scale degree. Suppose the cards drawn to be b SM the letter or scale degree indicated is G, the sub-mediant in the key of b minor. A limited amount of conscientious work with both, but especially the latter of these suggestions, will gradually change the study of scales from puzzling drudgery to not only an interesting task, but also, what is more important, a real working knowledge of the fundamental element upon which subsequent musical understanding must rest.

The "Pay" of the Musician

By W. F. Gates

When one stands outside of the musical profession, looking in, a world of beauty and enjoyment is seen. But from the inside of the profession he sees a world beauty without—and endless hard work within.

But, at that, what is there in life that is worth while but work and love? Of all the vapid, tiresome, unsatisfactory, useless forms of existence one can imagine, it would be a life of all ease and no work. Nor is it work for one's self which produces happiness; work for others, not paid for in dollars, is the corner stone of enjoyment of life. It is only by kindness, work and sacrifice for others that the highest ideals of life may be reached.

While this may be a homily too trite for some, too unselfish for others, to whom can it apply more than to the musician? He can not hope for more than a moderate competence, at best, as the result of his labors. The printer, the policeman, the dressmaker or milliner may earn more than the professional musician; the lawyer, the real estate dealer, far more.

But one form of payment which the musician may take as his own is the knowledge that he has made life broader and happier for many with whom he has come into professional contact. He has helped to mold the lives of young people into channels of appreciation for and joy in one great form of beauty.

He has worked with and for others. The world is better for his life and labors. And in this, the musician must take much of his "pay."

THE ETUDE'S GREATEST SYMPOSIUM

THE ETUDE IS A WORLD FORUM FOR THE DISCUSSION OF MUSICAL QUESTIONS OF WIDE INTEREST. THE FOREMOST MUSICIANS OF ALL COUNTRIES HAVE SHOWN A MAGNIFICENT SPIRIT IN PARTICIPATING. THE ETUDE WILL SHORTLY HAVE THE PRIVILEGE OF PRESENTING WHAT WILL PROVE THE MOST SIGNIFICANT SYMPOSIUM WE HAVE EVER ARRANGED.

Among those who have already Contributed:—

LEOPOLD AUER (New York)
JOHN ALDEN CARPENTER (Chicago)
GEORGE W. CHADWICK (Boston)
CHARLES M. COURBOIN (Philadelphia)
ARTHUR FOOTE (Boston)
MME. GALLI-CURCI (New York)
PERCY GRAINGER (New York)
CLARENCE EDDY (Chicago)
ROBERT FUCHS (Vienna)
EDWIN H. LEMARE (Portland)
JOSEF HOFMANN (New York)
ALBERTO JONAS (New York)
J. LHÉVINNE (New York)
MORITZ MOSZKOWSKI (Paris)
GIACOMO PUCCINI (Milan)
OLGA SAMAROFF (New York)
CYRIL SCOTT (London)
EDUARD SCHUTT (Vienna)
SIEGFRIED WAGNER (Bayreuth)
OWEN WISTER (Philadelphia)

Watch for this Unusual Musical Educational Event

Basic Principles in Pianoforte Playing

SECTION IV

Secured Exclusively for THE ETUDE by Interview with the Famous Virtuoso Pianist

JOSEF LHEVINNE

This Series Began in the "Etude" for October. Each Section May be Read Independently

Acquiring Delicacy and Power

In the last section of this series the all important matter of securing a fine tone was considered. In this the reader will remember that, in addition to the ability to conceive a beautiful tone mentally, attention was called to the fact that richness and singing quality of the tone depends very largely (1) upon the amount of key surface covered with the well-cushioned part of the finger and (2) upon the natural "spring" which accompanies the loose wrist. While the following remarks may be read independently of the foregoing sections, the student will do well to re-read them to fix certain fundamental principles in the mind.

In the matter of delicacy, the student may well give earnest attention to anything which will contribute this exquisite quality to his playing when the composition demands it. To be able to play with the delicious lightness and beauty of Cluny lace should be the ambition of all students. A beautiful lace shawl is the best comparison I know to what I mean by delicacy in playing. There is lightness, fineness, regularity of design, but without weakness or uncertainty.

The Technical Side

The technical side of the problem is not so difficult to explain. In the first place the upper arm and the forearm must feel so light that the player has the impression that they are floating in the air. The mental attitude here is very important. Delicacy is inconceivable with a heavy arm. The least suggestion of tightening or cramping of the muscles is literally fatal to delicacy. One may say "relax" the arm; but if the arm is completely relaxed it will do nothing but flop limply at the side. On the other hand, it can be held in position over the keys with entire absence of nervous tension or stiffening, with the "floating in the air" feeling that makes for the first principle of delicacy.

Before proceeding further it might be well to note that the player can actually think moods and conditions into his arm and fingers. His mental attitude means a great deal in the quality of his playing. Just as the voice immediately reflects in its quality the emotions of great joy, pain, sorrow, scorn, meanness and horror, so do the fingers and the arm in somewhat similar fashion respond to these emotions and represent them in playing for those who have mastered the technic of playing so that they are not concerned with details which should become automatic. Anyone heard Rubinstein play will realize how the emotions can be conveyed to the keyboard in an altogether marvelous manner. No audience is immune to this appeal. The non-musical auditors, in fact, come more for this sensation than for any understanding of pure music. They know instantly when it is present and go away gratified and rewarded. They do not understand the musical niceties; but they do comprehend the communication of human sensations and emotions when sincerely portrayed by the pianist who feels that he has something more to do in his art than merely to play the notes.

Floating in the Air

To return to the matter of delicacy. If the student has mastered the principle of the "arm floating in air" (and it is something to be gained more by the right mental attitude than by any specific practice), the next step is to realize that delicacy does not consist merely of lightness. There are thousands of students who can play with some degree of lightness but who miss or slight so many notes in the course of a composition that their playing is really irritating, even to the non-musical listener. Delicacy must not be secured at the sacrifice of completeness. For this reason, even in the most delicate passages, every key struck, black or white, must go all the way down to key bottom. This is most important. Don't have your lovely lace shawl filled with holes or worn places.

The third principle in the practical matter of securing delicacy is to play with the fingers on the surface of the keys. That is when you raise your fingers you do not take them perceptibly away from the surfaces. This simple matter insures the player against to forceful a stroke and makes the playing more uniform. It is difficult to do, especially with impatient students; but the matter of delicacy should be studied at a slow tempo so that the student can analyze his finger and arm conditions. He should repeatedly interrogate himself:—

JOSEF LHEVINNE

Important Questions

Is my arm floating?

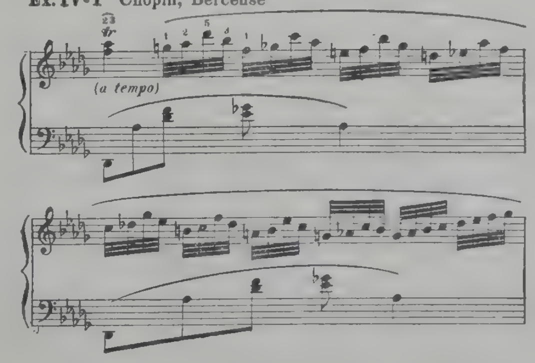
Am I striking each note to "key bottom"?

Am I keeping my fingers on the surface of the keys?

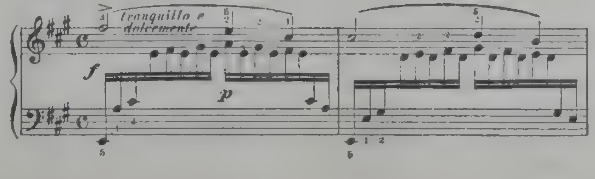
In playing for delicacy the key is struck with the finger tip rather than with the fleshy ball as when producing the full round singing tone. I also notice that when I am trying to secure a "floating arm" condition, my elbow extends very slightly from the side of my body

Practice for delicacy may be accomplished through thousands of pieces and exercises. The following passages are examples of particularly good material for use in this connection.

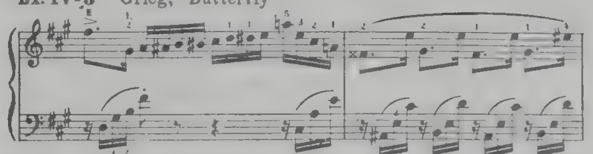
Ex. IV-1 Chopin, Berceuse



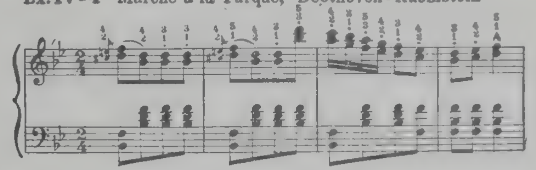
Ex. IV-2 Raff's La Fileuse



Ex. IV-3 Grieg, Butterfly



Ex. IV-4 Marche a la Turque, Beethoven-Rubinstein



Power in Playing and What It Means

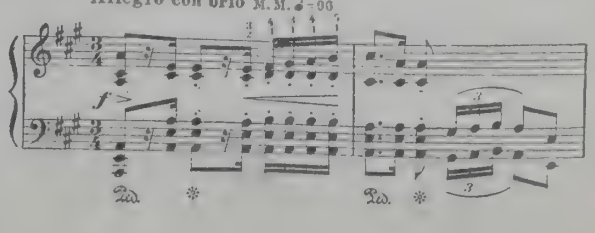
Every teacher encounters pupils who are physically very strong and who can easily produce noise at the keyboard. On the other hand there are pupils who are not particularly strong, but who play with very great power. What is the reason? Of course strength, real physical strength, is required to play many of the great masterpieces demanding a powerful tone; but there is a way of administering this strength to the piano so that the player economizes his force. I know of one famous pianist who has always inclined to the immovable torso or body in playing. He sits like a rock on the piano chair, producing all his effects by means of strokes or blows to the keyboard. Much of the great playing I have heard has been produced by altogether different means. Consider, for instance, the picture of Rubinstein presented herewith. The artist has caught something here which the photographer has missed in most of the portraits of Rubinstein at the keyboard. This was probably because Rubinstein may have posed when he knew he was before the camera. But, this sketch is Rubinstein as I knew him. Notice that instead of sitting bolt upright, as the pictures in most instruction books would have the pupils do, he is inclined decidedly toward the keyboard. In all his forte passages he employed the weight of his body and shoulders. This was most noticeable; and the student should remember that when playing a concerto, Rubinstein could be heard over the entire orchestra playing fortissimo. The piano seemed to peal out gloriously as the King of the entire orchestra; but there was never any suggestion of noise, no disagreeable pounding.

Natural Shock Absorbers

Why no noise? Because Rubinstein's wrists were always free from stiffness in such passages and he took advantage of the natural shock absorber at the wrist which we all possess. He employed in principle the touch we have discussed in previous sections of this series and his playing assumed a power and a grandeur I have never heard since his time, but to which I always aspire as my life Ideal in my public performances. He did not pound down upon the keyboard but communicated his natural arm and shoulder weight to it.

There is a vast difference between the ordinary amateur hammering on the keyboard for force and the more artistic means of drawing the tone from the piano by weight or pressure properly controlled or administered. Take the first movement of the Chopin *Military Polonaise,* for instance.

Ex. IV-5 Military Polonaise
Allegro con brio M.M. ♩=90



Play this first with stiff wrists and forearms, and notice how bangy and disagreeable it sounds. Now play it with the wrists loose, employing the fleshy parts of the fingers and feeling that the weight and power are communicated to the keyboard from the shoulder. This beautiful composition is often ruined by banging, whereas it may be delivered with a lovely tone and rich singing quality. The same is true of the *B-flat Minor Scherzo,* which is another of the musical anvils of the typical conservatory. If Chopin could hear how this is murdered, he would turn in his grave. Instead of being given with nobility and grandeur, its opening passages are banged out with sledge hammer blows that are altogether unforgivable.

There is an acoustical principle involved in striking the keys. If the blow is a sudden, hard, brutal one, the vibrations of the wires seem to be far less pervading than when the hammers are operated so that the wires are "rung" as a bell.

Accuracy in Playing

Because in his later years Rubinstein was now and then inclined to miss a note or so in the course of a recital, indulgent students have assumed that since the message of the master composer is so much more important than the little matters of technical details, they can improve upon Rubinstein and leave out a great many more notes. Rubinstein's playing in his youth was doubtless immaculate from the standpoint of accuracy. In his last years the bigness of his musical conceptions and the greatness of his soul were such that he burst all bonds to give his great message to the public. We can forgive Rubinstein anything; but in these days of keenest competition the student must look upon inaccuracies as unpardonable. The subject of accuracy is so important that we shall require more space for its discussion and it will be taken up in the next Section along with "The Basis of Fine Staccato."

This notable series by Mr. Lhévinne will be continued in the next issue of The ETUDE Music Magazine. We are delighted to inform our readers that we have secured a number of articles of this character from the greatest authorities. Each article sheds new light upon the subject of better pianoforte playing. The ETUDE has for years aspired to be the bridge between the student and the teacher and the great concert artists. Every article has a thoroughly practical bearing.

Magnifying the Memory

By E. Constance Ward

To be able to perform from memory the works that have been studied certainly should be the ambition of every musical executant. Frequently the lack of ability in this line is because of insufficient self-confidence; but an even more common reason is the want of training.

To look upon memory as a matter of chance is too discouraging for those who feel themselves to be in the class without the "gift." Memory is a living part of the brain of every human being, and its state of development depends very largely upon whether we foster and nourish or neglect and starve it. Let us consider how the average, earnest-minded, keen student may cultivate it to the point where performing from memory becomes as second nature.

Suppose we wish to memorize a musical work with a view to its performance. If possible, hear it played or sung by a proficient executant, so that the first impression shall be an aural one, and this as perfect as can be. Then, at leisure, try to recall its general form and any striking phrases which attracted attention. Try to hear it again, mentally. Now get the printed copy and traverse it visually, at the same time making an effort to hear it mentally. This will be found to be excellent practice and will doubtless restore some of the faded portions of the first impression. It now remains for us to go through with it again, applying our technic as far as we have mastered the instrument being used.

Absolute concentration is necessary whilst memorizing. Weak points must be strengthened till all are equally good. Test your memory often; but as soon as it fails, refer to the printed page. Do not waste time in guessing at what the music might be; for memory has a nasty trick of recording faults just as strongly as the right thing. If a measure is played once incorrectly, once correctly, and then again incorrectly, the incorrect impression will be much the more vivid. This is but natural; so the only safe method is to have the proportion at least six to one in favor of correct executions.

How to Think Intervals

By Lawrence D. Andrews

Here are some intervals: G-D, F-B flat, E-G sharp, A-C, D-E, F sharp-G. We shall assume that you understand why they are called a perfect fifth, perfect fourth, large (or major) third, small (or minor) third, large second, and small second. Now try to hear these intervals mentally. Do not go to the piano and play them. Listen mentally. Probably the process you use is somewhat as follows: "Let's see. The first interval is G to D—a perfect fifth. That reminds me of the key or G, (G what? G whiz, G haw, G major or G minor? when you mean G major, say so). These tones are 1 and 5 in G major. (Singing mentally) Do, re, mi, fa, sol—do, sol—do, sol. There! I hear that interval." If you are not familiar with syllables, perhaps you simply hum the scale tones, using numbers, or a neutral syllable.

Then you probably follow a similar plan with the other intervals. You think the interval in the key of the lower tone, or, if the upper tone of the interval is not in the key of the lower tone, you think it in relation to the diatonic tone of the same name. For instance, the interval A-C is thought first as A-C sharp— 1 to 3 of A major—and then the C sharp made natural or possibly you think this interval as 6 to 8 of C major.

Now all this is good, for you are able thus to hear the interval. But the trouble with the plan is that it makes you think the interval in one certain relationship, whereas several relationships are possible. For instance, the third interval above, E-G sharp, is not only 1-3 of E Major, but it is also 4-6 of B Major, 5-7 of A Major, 3-5 of C sharp Minor, 5-7 of A Minor, 6-8 of G sharp Minor.

Considered as a separate interval in itself it is as much in one of these keys as another. But the process of thinking the interval, say as 5-7 of A Minor, is considerably different from thinking it as 1-3 of E Major. In the former case, one feels a desire to have the interval resolve thus: sol, si, *do,* or 5, 7, 8. But in the latter case, the interval does not create a demand for something to follow—unless one feels the second tone coming on a weak beat rhythmically, in which case it is the rhythm that creates the demand, and not the interval itself. The reason for all this different feeling is a matter which we are not going to discuss in this article. But anyone with musical feeling will recognize these demands.

We should be able to think intervals without putting them in key; that is, without thinking them as belonging to some particular key. It is true that they are generally used in key; but in much modern music they are not used with reference to any tone center. They are simply intervals without any definite key-relationship. If we would think and hear modern music mentally, we must be able to think intervals without resorting to key-relationship.

This can be done by *sensation* and *feeling* rather than by calculation.

Following is a list of the above types of intervals, with the sensation which they produce when heard as isolated intervals:

Perfect fifth: Hollow sounding. It will absorb another tone within itself. G-D suggests and will absorb B or B flat.

Perfect fourth: Also hollow sounding. But though it can absorb another tone, it most naturally suggests another tone outside the interval. F-B flat suggests D or D-flat. The fact that the perfect fourth can absorb another tone within itself—A flat, in this instance—does not lessen the force of the fact that most naturally the additional tone is felt outside the interval. What we want is the most natural sensation.

Large (major) third: This interval has a *bright color.*

Small (minor) third: *Dark color.*

Large second: Dissonant; that is, "sounding apart."

Small second: Also dissonant, but more so than the large second. Some would say discordant.

If you will play these intervals you will feel the effects which are mentioned. Play the intervals from many different pitches, and listen to the effects. Then practice singing them, using feeling to judge the interval in advance, and testing yourself with the piano.

Here is a suggestive plan of practice. Choose some tone, using the syllable "loo." Decide what interval you are going to sing, say a small third. Having played a number of small thirds before beginning this singing drill, and having come to feel the dark color which they suggest, you call up in your mind this feeling, and hear mentally the tone which you are going to sing. In this instance it will be G. *Do not sing until you can hear the tone mentally in advance.* Then sing the small third above E while sustaining the E with your finger or with the pedal. Then test out your answer by playing the small third, G. Use the same plan with the other intervals, remembering always to judge by feeling, and to hear mentally before singing. You will in time acquire the ability to hear these intervals without reference to any key, and this ability will be very valuable to you. It will also help you in the many cases where the intervals are in key to begin with.

No mention has been made of other intervals—sixths, sevenths, and the diminished and augmented intervals—because you should not bother about them until these that have been described can be felt with ease and accuracy. When you have acquired this ability, you can learn to feel the other kinds of intervals by playing them as isolated intervals, and analyzing their effect. To do this, you must listen—really listen, not simply hear. One example will suffice. Play a diminished fifth, say the interval E-B flat. This interval is dissonant, but very pleasing. It wants to contract. It seems to call for and suggest another interval which is within itself: the interval F-A, or possibly F-A flat. Do you feel this call of the diminished fifth? It is true that it does not always do this in music, but the tendency is there just the same. It is not necessary that you should know what tones are demanded by a diminished fifth, though that is a valuable aid. The important thing is to feel the effect of the interval and to use this feeling as a means of judging and hearing the interval in your head. You may follow the same plan with other intervals, but do not try to do it all at once. If you do, you will become confused, and you will then think that this idea is no good. But it is some good if you will *use* it. At first it may seem to work rather stiffly, like a new automobile, and you may make many mistakes in judgment. But if you keep at it you will be rewarded.

Do You Give Lessons or "Hear" Them?

By Marion G. Osgood

Of course, giving a lesson implies hearing it. Does hearing it imply that the lesson is really given? Not by any means. Nine times out of ten, the teacher whose custom, in speaking of his pupils' lessons, is to say, "I hear" instead of "I give" such and such lessons today," uses his profession as a mere makeshift.

I was present while two lessons were in progress, each under a different teacher. The first teacher spoke of his business of teaching thus: "Oh dear! Four lessons I must hear this afternoon. How I dread it! Teaching is a bore, a nuisance. I take it as easily as I can, of course, yet pupils are such impostors, you know, with their foolish questions. Believe me, half the time I feel like a wreck when I'm through."

I observed this man's first lesson. Throughout, the teacher sat back in his chair, listless, uninterested. He "heard" scales, etudes, a piece played through, as he sat, frequently consulting his watch, making few comments, and these few were vague, non-helpful, non-constructive ones.

"That goes badly; practice it another week," or "This is pretty good; take the following page for your lesson *next* week."

The "piece" he played through for the pupil's benefit, telling her in an indifferent tone to practice it till it sounded "so," then, glancing again at his watch, he dismissed her and perfunctorily greeted the next pupil.

The next day I observed the method of another teacher. It happened that this lesson was the fifth consecutive one, yet no trace of fatigue or nerve fag was visible. I could not but admire the genial, encouraging atmosphere created between teacher and pupil. I marked the skill, the tact, the resourcefulness shown during the entire lesson. The pupil was not especially musical; she was shy, afraid to do her best. With what kindness and interest this teacher gently pointed out errors and the best and quickest way to overcome them. Praise he gave, too, where praise could aid or could stimulate. In a word this lesson was constructive, a lesson *given,* not *heard.*

"Are you through for today?" I asked this teacher.

"Two more lessons," he replied, cheerfully, "this next one is a little late."

"You seem unfatigued," I remarked, "yet teaching must be hard work."

"Why so?" he asked quickly. "No work so vitally interesting, so constructive as teaching seems hard to the lover of his calling, the true teacher."

"Are not the pupils' many questions wearing?"

"The more questions the better," he answered promptly. "I encourage them. Questions mean desire for knowledge; they mean also a sure approach to the mind of a pupil I look upon a pupil's questions as a mutual asset, helpful to them, interesting to myself."

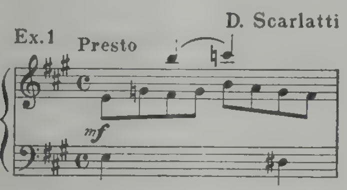
"Well," thought I, as I left the studio, "here is a teacher who really *gives* lessons."

Crossing the Hands on the Piano

By CLEMENT ANTROBUS HARRIS

An Interesting Phase of Piano Playing Discussed in Interesting Manner

Probably we shall never be able to determine definitely just which composer was the first to write clavier music which called for the crossing of the hands. Certainly Domenico Scarlatti (1685-1757) was the earliest to acquire fame for the extent to which he practiced the device, so the following extract from his *Sonata in A* is in all likelihood among those instances which have the best claim to priority.

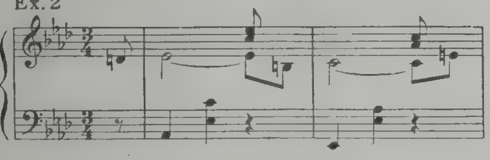


Ex. 1

This expedient is continued for eleven measures in succession.

Whoever the inventor was, the pianist owes to him a great debt; for he vastly increased the resources of the instrument, by a means at once graceful, useful and easy. His originality has rendered possible movements consisting of a compact passage in the middle of the keyboard, with an attendant part alternately below and above it; and either or both of these outer parts may be at a wide interval from the central section.

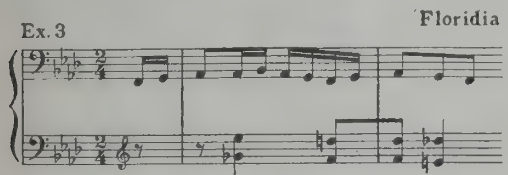
When the structure of the piece is either purely harmonic or somewhat contrapuntal in character, as in the quotation from Scarlatti first given, both parts are, of course, of equal importance. But in the case of an accompanied melody they are not so, and in such instances the compact middle portion may be either the integral or the attendant part. In Raff's *Waltz in C Major,* second movement, the melody is assigned to the right hand.



Ex. 2

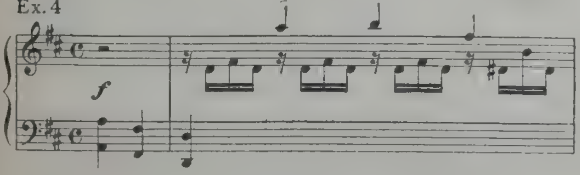
In the writer's opinion the quarter rest in the bass should have been omitted and an eighth rest have been placed after the eighth-note chord in the treble staff. The treble-clef passage can be played entirely by the right hand, but it would need a hand large enough to stretch an eleventh in some measures, and such a method is extremely awkward.

The melody is given to the right hand also in Floridia's captivating *Passage de la Caravane dans le Desert,* while the left hand plays a highly original and beautiful accompaniment in sixths. These sixths extend for eight measures and, with one exception, from the longest unbroken passage—that is, one without rest—for either hand over the other that is at present recalled. Perhaps it should be added that the right hand part is not confined to the middle of the instrument but begins the little melody at a low octave, then ascends, and afterwards descends, an octave with repetition.



Ex. 3

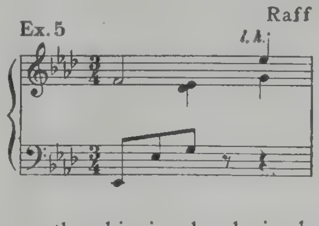
There are, of course, many instances of accompanying a melody in this way; and perhaps the most familiar is in Roubier's *Marche des Troubadours.* Conversely, the stationary hand may have the accompaniment and the skipping hand the melody. Mozart gives us an example of this in the *Tema con Variazioni* from his *Sonata in D.*



Ex. 4

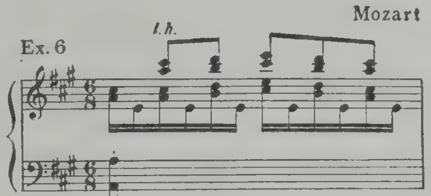
Elementary students sharp enough to notice that, there being no rests in the bass-staff, the time is incorrect, should have it explained to them that this is intentional, since the left hand is not resting but playing notes written on the treble staff.

Sometimes the harmony is divided between the two hands, as in the following ingenious example from Raff's *Bolero,* in E-flat.



Ex. 5

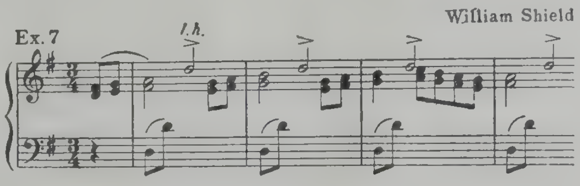
In other cases the skipping hand simply duplicates a melody played by the stationary one. Of this, one of the best known of Mozart's sonatas Key of A gives an interesting instance.



Ex. 6

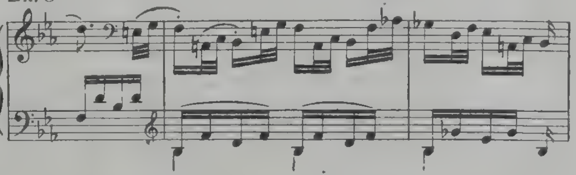
Dussek's *L'Adieu* affords another case very familiar to a former generation.

However, more frequently the superimposed part is independent, as in all the examples preceding the last one. To make this upper part consist of a single note repeated several times, somewhat after the manner of an inverted pedal-point, and thus give a bell-like effect, is such a favorite device that special mention must be made of it. Domenico Scarlatti does it in the sonata already quoted, repeating the dominant (B) of the key (E) six times. And the eighteenth century English composer, William Shield (1758-1829) makes good use of the device in his minuet, *The Countess of Westmoreland's Delight.*



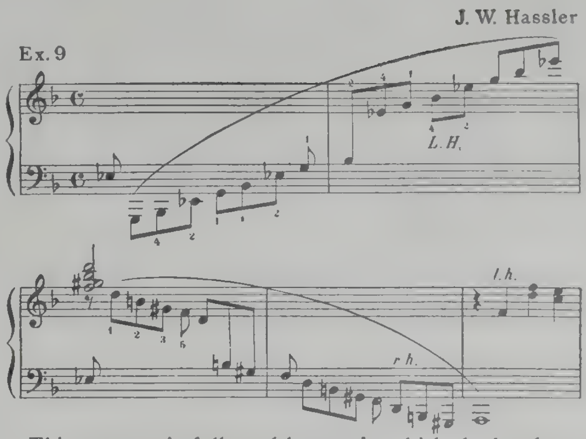
Ex. 7

It can hardly have escaped the reader's notice that in all the examples so far given the left hand crosses over the right, not the reverse. This is the case in the great majority of instances. A little reflection will show the reason; a characteristic feature in the left hand part of pianoforte music is a single bass note (though it may be in octave form, on the first beat of the measure, followed by chords, or broken chords (Alberti bass), on the less accented beats. The note on the strong beat gives the harmonic foundation. Often the chords can be dispensed with or taken by the right hand, and the left hand spared to cross the right and play notes in the higher octaves of the keyboard. So great is the preponderance of left-over-right as to make instances of the converse action interesting. Observe the following striking example from von Weber's *Rondo Brillante.*



Ex. 8

An entirely different class of passage which often occasions a crossing of hands is that which may be described as the cascade type. This consists of a series of groups of notes proceeding in one direction (more often down than upwards), in which the hands take alternate groups, thus, by appearing to tumble over one another, adding a visual to the aural effect of a cascade. The best known of J. W. Hassler's pieces, his *Gigue in D Minor,* affords a good and fairly early example—he was born in 1747.

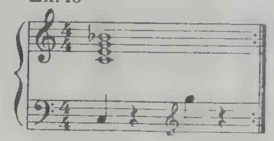


Ex. 9

This passage is followed by one in which the hands remain crossed without a break, counting from the last measure above, for nine measures, thus exceeding the example quoted from Pietro Floridia. The purpose of the crossing of hands in these nine measures is difficult to see, unless it is to give a chromatic scale to the right hand and a much easier part to the left one. Lovers, if there still are any, of that indispensable of our grandmothers, Thalberg's *Home Sweet Home,* will find several examples of this method of hand-crossing therein.

When a passage in single notes is divided between the hands, it is usual to turn upwards the stems of notes to be played by the right hand and downwards those intended for the left hand. In the case of eighth-notes or shorter ones, this grouping is often at cross purposes with the rhythm and creates a pitfall for the unwary. At first sight, for instance, anyone might accent the quotation just given from Hassler in groups of three. This is not, however, what was intended; rhythmically it is in groups of four.

By way of practical comment, perhaps it should be added that the hand which crosses over the other should rise well above it, describing approximately a half-circle, rainbow fashion. There are three reasons for this: It avoids the danger of one hand colliding with the other; it enables the moving hand to descend vertically upon its key instead of striking it sideways; and it is more graceful. Indeed, the movement, if well done, is one of the most attractive to the eye in pianoforte playing. A good exercise is to hold a chord down with one hand for a length of time and play notes alternately below and above it, with the other.



Ex. 10

The sustained chord should be played at first by the right hand, and afterwards by the left while the right one crosses over it. The distance of the extreme notes should be extended as the study proceeds.

A Double-Acting Question Box

By Rena I. Carver

Most question boxes are receptacles into which the curious place their queries to be answered by some human oracle.

Did you ever think of a box full of questions from which members of the class may draw slips at random? It is one of the best and fairest ways of conducting tests.

Write the questions in theory, history and harmony upon separate cards. Let each pupil draw six. Give a count for each question correctly answered. When a pupil can not answer a question correctly, let the neighbor to her right try; and keep going around the circle of the club or class until the question is answered or discarded (in which case the teacher or leader gives the proper answer). If one of the pupils, however answers the query properly, she takes the slip or card from the one who could not answer it.

At the end of the game the student having the largest number of cards wins the prize.

The game may be made a little more inviting if the teacher decorates the question box with paper with musical designs or musical pictures.

Russia in Music

By Wilson G. Smith

To fully appreciate and understand the music of a country whose nationalism forms the basic principle of its art, as does that of Russia, it is necessary to become familiar with its intimate life. Geographic situation, social conditions, religious influences, and political tendencies, are potent factors in molding the trend of popular thought, aspiration and endeavor.

Art evolution, like the cosmic forces, requires years of ceaseless working to formulate a solid basis upon which the superstructure of artistic achievement is erected. It is a question open to argument as to the real value of nationalism in musical art.

Nationalism is circumscribed by geographic limitations, and at best represents but a segment of the universal circle of art. It is much like a dialect as compared with a language of universal import. For this reason an art that has a universal significance and appeal is more far-reaching in its influences.

Inspirational Cosmopolitanism

The older classics—Beethoven, Mozart, Haydn, Schubert—while tinged to an extent with nationalism, nevertheless possesses a certain inspirational cosmopolitanism that appeals to all nationalities alike, presupposing, of course, a certain amount of artistic culture. Racial types and customs are the outgrowth of environment and are amenable to change when surrounding conditions change. History tells us of distinct nationalities being lost through the dominating influence of conquering hordes. Customs that prevailed for centuries were so modified by invading influences that even the purity of language became dialectic and of mongrel type. The invading barbaric hordes of the north changed at one time the map of Europe, and resulted in the degeneration of Greece and Rome. The language of Homer and Virgil became in time an extinct tongue, and the art of Praxitiles a relic and survival of the once golden age of art's supremacy.

I mention this to show the uncertainty of nationalism in art. True, it survives as historic records, but once the protecting walls of environment are broken, the mighty influence of alien forces soon disintegrate and dissipate, until what was once a distinct nationalism becomes either a shadow, or a stronger cosmopolitanism. It is another instance of the survival of the fittest.

Strong Racial Characteristics

Among existing nationalities there is perhaps none with stronger racial characteristics than Russia. With the Czech, Pole, Moravian, Serbian and Bulgarian, Russia belongs to the great Slavonian family of languages. These in turn, with the Scandanavo-Saxon and Latin families belong to the Indo-European branch of the Aryan race, which had its origin in Asia Minor—the cradle of humanity. It is in Southern and Western Russia that the Folklore, with its tinge of oriental imagery, and the folk songs with their exotic colored melodies, are most dominant. Nomadic Tartars brought to the further north in fable and in song the traditions of their people. Oral transmission of these, colored by local environment and tradition, worked in many modifications, but the fundamental ideas and basic elements recall their common oriental origin. The far-reaching steppes with their almost illimitable monotony of space, impress the mind with the same imaginative stimulus as did, to the oriental, the trackless Sahara. Elemental forces suggest to the human mind the presence of unseen folk; and forests, streams, mountains and valleys are peopled with creatures of the imagination. The Russian peasant mind is full of images of strange things. Desolate steppes, sombre pine forests, the parching sun in summer, and the dread white monotony of snow and ice in winter—all these are stimulants to the imagination. Lives that pass in the empty monotony of ceaseless labor, days that succeed days in toilsome slavery, days without hope of betterment and without one bright ray of aspiration.

Can we wonder that Russian literature is based upon tales of hopeless agony, and Russian music echoes the despairing cry of endless grief? This elemental life is one of mere animalism enslaved by ignorance and superstition. Little wonder, then, that the peasant mind is a rich soil for weird and uncanny imaginings. The Russian peasant, brutalized by his animal existence and drunk with vodka, reels home to his hut, making, through force of superstition, the sign of the cross to ward off the evil influences that his imagination pictures as besetting his path.

The condition of the Russian peasant is a survival of the dark ages when feudalism made might right, and the strong arm of force overpowered the gentle hand of justice. This, then, is why the folk tale and song took for its theme the unutterable sorrow of the oppressed, and the impenetrable gloom of crushing and hopeless despair. For literature and song are but the reflection of prevailing conditions. Freedom of speech being denied them, the poor folk sang their grief in heart-broken melodies. Siberia—that modern Nemesis—hung over their heads like a pall of darkness—a living exemplification of Dante's inferno.

There is a fable that passes current among the Russian peasants that seems to typify the lowly life of serfdom, and permeates the life, literature and art of the great nation. It shows, too, how orientalism has penetrated the Slavic character.

A Flower of Subtle Fragrance

Somewhere out in the illimitable steppes there grows a flower of subtle fragrance and exotic bloom. It knows neither fading nor decay, it is deathless. Its presence is hidden by overgrowing vegetation and remains unseen until the sear breath of autumn with its blighting, chills all else but it. Then, when the seeker wanders in search of it, he may discover this flower of wondrous beauty. Its fragrance is unlike any other flower—ineffably delicate and odorous. Its delicate efflorescence is quite in keeping with its exotic perfume. And to one who finds this flower and breaths its enchanting fragrance, behold the secrets of life are open to him.

The stars commune with him in visible language, sermons he finds in trees and running brooks, elemental forces reveal to him the secrets of unending creation, the murmuring trees and singing birds commune with him; he learns the mystery of good and evil; he fathoms the depths of bitter woe and anguish, the wings of inspiration are his; hypocrisy, with its thin veneer of pretense, becomes an open book. Wealth with its delusive vanities, and poverty with its servitude—all the good and ills of life he understands.

But the finder of this flower, although he becomes superman when he breathes the fragrance of it, becomes a man of sorrow. He knows the tragedy of living. This fragrant flower is not one of happiness—this perfumed song of universal knowledge—it is the song of pessimism—the national song of Russia.

Beethoven's Program Music

By Sidné Taiz

In most of his writings there is such a skillful balance of form and spirit that many music students have been content to look upon Beethoven as a pure classicist. Probably the fact that his works almost invariably fill the classic mold of his immediate predecessors has had much to do with the formation of this opinion. And yet we have many proofs, and some of them from his own lips, that he at times had in mind more than the expression of pure, formal beauty.

Among his thirty-two piano sonatas, the *Sonata Pathetique, Op. 13,* and the *Sonata in E flat Major, Op. 81,* the three movements of which are designated *Farewell, Absence* and *Return,* certainly have unmistakable emotionality.

Among his larger works for orchestra which have a "story to tell," are the *Eroica* and the *Pastorale* symphonies. To these might be added the Op. 91, often known as the *"Battle" Symphony,* the four overtures to "Fidelio" ("Leonore"); the overtures to "Egmont," "Coriolanus," "The Ruins of Athens," "King Stephen," and the ballet, "Prometheus," and others less well known.

The superscription, "The hard-made decision," of the last division of the *String Quartet, Op. 135,* indicates the attitude of mind of the composer toward the work.

Schindler asked Beethoven as to his poetic intent in the *Sonata, Op. 31, No. 2, in D minor,* and the *Sonata, Op. 57,* in F minor, and received the reply, "Read Shakespeare's 'Tempest.'" To a query about the *Lichnowsky Sonata, Op. 90, in E minor,* Beethoven responded that he intended it to picture the love story of the Count and his wife.

Beethoven told his friend Amenda that, when composing the *Quartet in F major, Op. 18, No. 1,* he had in mind *Romeo* and *Juliet* in the Tomb Scene.

Intimate acquaintance with the works of Beethoven but emphasize the impression that in them there is usually a rather definite meaning, though this often cannot be put aptly into words. One of the secrets of the greater artistic and permanent value of Beethoven's compositions is that their emotional element is not so obvious as in such composers as Berlioz and Liszt, thus having in themselves greater universality.

How to Increase the Practice Time

By Grace White

MUCH has been said about the benefits or harm of a certain number of hours of practice. But how to make the most of whatever time is given to it is the point.

Occasionally a student, increasing his practice time an extra hour, is perplexed to find that it is irksome and mechanical and that consequently very little additional benefit is derived from the increase. The student has been accustomed to a certain routine in practicing and is at a loss to know how to use any additional time wisely. The question of physical endurance is, of course, a matter of individual decision. Anything is easier to do when we have a definite aim in doing it. The aim in practicing should always be kept uppermost.

Many musicians, with much concert discipline behind them, do first the thing they least like to do. Some days this is scales and technic, other times it is the concerto they have played for years. But they do it bravely and then go on to whatever interests them more. Others devote the first hour to memorizing, feeling that they will develop more sureness when mind and fingers are fresh.

Alternating Exercise

I know a musician who plays about five minutes of technical exercises, then a difficult page from a piece; another five minutes technic and again the difficult page, keeping up this alternating until the stubborn page has been played ten times without a mistake. This occupies an hour or two. Then at the next practice period the things best known are played, first slowly with the music, then from memory with the metronome, and finally as in concert. Another day this same musician will specialize on some one point in everything studied—picking out all the scales and passage work or all the chords in a number of pieces and will work the first two hours that way, afterwards playing the compositions through with special attention to the difficulties worked out. Again, the day will start with the heaviest composition; the performer plays through slowly with the music; repeats each difficult passage ten times; then plays the whole work from memory. This is followed with purely technical exercises, the lighter numbers are merely played through once.

The number of ways of arranging one's practice is unlimited. The same music may be used every day, but if the order of practice is changed and a definite aim for each minute's work kept uppermost, one will have the satisfaction of not merely using so much time for practice, but of making actual progress.

The Littlest Pupil in Recital

By Ruth L. F. Barnett

I ONCE knew a little girl who, when asked to play would always answer: "My teacher says I musn't. You see I an just just beginning; but when I really know how, I'll love to play for you."

Years afterwards I saw her again; and this time she played, but with apologies, for she was still painfully conscious of her shortcomings.

Now it is all very well for a teacher to strive for perfection, and from a business standpoint many teachers would rather be represented by their advanced pupils; but from a professional standpoint it is not the way to make players.

The pupil who must not play to Mother's callers, is getting no enjoyment out of what she has accomplished and is giving no pleasure to others, which after all should be the aim of those who undertake the study of an art.

There must be always something unattained, but let that be a goal to strive for, not a stumblingblock in the way of progress.

See that your little pupils have something memorized to play for their friends; and when you plan a recital, by all means look up some tiny tune for the littlest one of all to play. If you choose material within the pupil's grasp and insist upon thorough preparation, you need not fear for the success of the performance. The audience will be delighted and you will have made a profitable investment in good will. Then when your pupil is able to do more ambitious things she will not be overcome by that awkward shyness that so often forces a capable player to make a very poor impression.

ART is the child of feeling and imagination; science, the child of reason.

—MOORE.

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M. A.

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered department. Full name and address must accompany all inquiries.

Arthritis and the Pianist

A young lady of twenty-two writes in part as follows:

> During the past ten years I have taken lessons for six seasons. Have had arthritis for a year and a half, and my left hand has become very stiff, so that I am unable to straighten or raise my middle or fourth fingers. Also I cannot bend the left hand back from the wrist. The other fingers are, however, O. K., and my right hand is in good condition. I feel that I have advanced considerably during the past year, although I cannot play rapidly. How much do you think I can accomplish with these handicaps?—E. F. F.

Most of us who attempt to play the piano labor under some sort of handicap—fingers too limber, too stiff, too short, too long, and other deficiencies. But let us learn of Demosthenes, who triumphed over apparently insurmountable physical obstacles and became the greatest of all Greek orators. After all, it is not mere technic that counts, but genuine musical temperament and enthusiasm. Fortunately, the range of piano compositions is very large, and by choosing those that are best fitted to one's own pecularities, one can find plenty of excellent music to play.

If your left hand is so limited, for instance, learn pieces such as Schubert's Impromptus, which depend mainly on the right hand. In other words, fix your attention on compositions which you can do well, and leave the others to those who are better fitted for them. Many people make themselves miserable by hankering after the unattainable when they might have a happy time applying their special abilities to the best advantage.

Of course you can hardly hope to become a virtuoso unless your hand recovers from its stiffness. But you ought to be able to play in a manner that will give much pleasure to yourself and your friends. Also, if your talent lies in that direction, you may become a good teacher. Meanwhile, try in every possible way to minimize your limitations. Exercises for relaxing hand and arm should be continually practiced, for such relaxation is the first condition toward fluent playing. Do not worry over mere rapidity, since the ability to scamper over the keys is not of primary importance. But strive to put meaning into your music, and to bring out its hidden beauties, together with the inspiration which prompted the composer to write it and your playing will make up in significance what it may lack in technical expertness.

In regard to other questions which you ask, I suggest the following answers:

1. Grieg's *To Spring* is of about the fifth grade.
2. Mason's *Touch and Technic* is an excellent book for finger work. Any good five-finger exercises, properly applied, will strengthen the finger joints.
3. So far as I know, Leschetizky did not himself publish any book on technic, although expositions of his "method" have been put out by some of his pupils.
4. Purely technical studies, such as those of Czerny, may profitably be alternated with modern interpretation studies, such as Foote's *Nine Études*, Op. 27, or MacDowell's *Twelve Studies*, Op. 39.

The Stammering Habit

Two letters ask for advice about that pernicious evil, the stammering habit. Here is number one:

> I have a pupil who was at first painstaking, but as time went on and she paused wherever a difficulty presented itself I realized that something must be done to break up this habit. I have tried everything I know, even telling her to make mistakes rather than retard the time, playing on a higher octave to keep her steady, and other devices, but she still stumbles and stops. Do you think her trouble is temperamental and incurable?—W. H.

The other letter is as follows:

> A number of my pupils are in the habit of playing carelessly. They will strike the note above or below the correct one and then immediately shift to the right one. What am I to do?—M. K.

Stammering in speech is the result of a nervous attempt to talk faster than the person can properly adjust his vocal organs. Just so, stammering on the piano means an attempt to go faster than one can formulate the proper finger motions. And the cure for both is found in slow and distinct utterance. Calm the pupil down, and set for her a tempo so slow that there is plenty of time to think out each movement before it is produced. Have her practice a new assignment for at least a week with one hand at a time, counting slowly and evenly. Then, in putting the hands together, have her play each measure by itself—four or eight times—until it can be perfectly rendered. Have it understood, too, that if she should "stutter" over a note she must play the measure in which it occurs at least four times correctly, in succession.

Supplement such work by playing each week with her some duets that are well within her ability, insisting on absolutely strict time, even if it is very slow. And in general, be careful to assign music that is not too difficult, keeping her on easy music until she learns to "watch her step."

Classic Teaching Pieces

> Please give a list of a few teaching pieces in grades 1, 2 and 3 by the great composers, such as Schumann and Chopin.—M. K.

Except in simplified editions, the compositions of the great masters are mostly in the advanced grades. Chopin, for instance, has written practically nothing in the grades you mention. I suggest the following, however:

	Grade
Bach—*Twelve Little Preludes*	2-4
Beethoven—*Sonatines* in F and G	2
Minuet from *Sonata, Op. 49, No. 2*	3
Mozart—*First Three Compositions*	2
Schumann—*Melodie, Op. 68, No. 1*	1
Soldiers' March, Op. 68 No. 2	1
Hunting Song, Op. 68, 7	2
Wild Horseman, Op. 68, No. 8	2
Curious Story, and *Happy Enough,* from *Op. 15*	3

Counting Time

> Is it necessary to count aloud if the rhythm is very simple or after a piece has been practiced a while? My pupils, especially the older ones, lose interest if required to count continually.

A pupil should always *be able* to count everything aloud, and should be required to do so as long as his tempo is fitful or irregular. Otherwise, the continual droning of *1-and-2-and-3-and-4-and* is distressing to both performer and neighbors. Teach the student to realize the time-beat by proper phrasing and accent, and he will need no further artificial stimulation.

Studying Without a Teacher

A lady writes that she has advanced as far as local teachers can carry her, and asks for advice as to continuing by herself. She says further:

> I have finished the Twenty-nine Selected Studies from Clementi's *Gradus ad Parnassum*, which I am able to play fluently and in rapid tempo, and am now studying Henselt's *Characteristic Concert Studies*, Op. 2. Would like to take up some pieces that are not more difficult than the last-named studies. Can you suggest a selection?—A. M.

In his *Memories and Milestones*, John Jay Chapman gives this keen definition of what constitutes an artist:

"An artist is a man who has had the good fortune to receive sufficient instruction at one time, and to be sufficiently left to himself at another. Severe training and utter neglect—he must have had both. Depth of feeling, accuracy of intellect, experience in the vehicle—all these things go together, and there is no royal road to them. And behind them is the force that somehow works its will and releases a new personality into the world."

If you have had this "sufficient instruction," it is perhaps a streak of good luck that you are now left to your own devices, so that you may acquire self-reliance and may develop individuality of expression. But to succeed, you must pin yourself down to system. Plan out and observe your hours of practice just as carefully as though you were preparing lessons for a teacher. Set yourself certain stunts of learning new pieces, memorizing portions of them, reviewing and perfecting material formerly studied. In this way build up a program of pieces, and when these are learned, play them somewhat formally to a group of friends in a little recital. Before this last event, if possible, go to some experienced teacher and get him to criticize your program. Or, if this be not a practical plan, have some frank and sincere musical friend pull your performance to pieces; and profit by his suggestions.

I append a short list of compositions for you to start on. The first five furnish good program material, and the last two are for more extended study:

Alabieff-Liszt—*The Nightingale.*
Chopin—*Nocturne in C sharp minor, Op. 27, No. 2.*
MacDowell—*Polonaise in E minor.*
Paderewski—*Theme and Variations.*
Rubinstein—*Fifth Barcarolle, in A minor.*
Bach—*Chromatic Fantasy and Fugue.*
Beethoven—*Third Concerto, in C minor.*

The una corda Pedal

> In the August issue of THE ETUDE you state that the soft pedal in the grand piano shifts the action along so that the hammers each strike on *two*, instead of three things. I have always understood that the action-shift causes the hammers to strike on *one*, not *two* strings, as you state. Please explain.—M. B.

In early grand pianos the soft pedal had an attachment which made it possible for the player to shift the action so that the hammer struck either two strings (*due corde*) or only one (*una corda*), instead of the regular three. This shifting pedal was introduced by Johann Andreas Stein (1728-1792), the "founder of German pianoforte-making," who first used it in his *Saitenharmonica*, in 1789. He called the one-string attachment the *Spinettchen* (little spinet). In some of Beethoven's later works he specified minutely whether the *una corda* or the *due corde* are to be employed.

For some time, however, the real *una corda* has been relegated to the limbo of other obsolete devices, such as the *bassoon pedal*, the *céleste pedal* and the *drum pedal*. But the term *una corda* has illogically still been retained, notwithstanding that the hammers now strike *two* instead of three strings, when the soft pedal is depressed. For further details, I refer you to the *History of the Pianoforte*, by A. J. Hipkins.

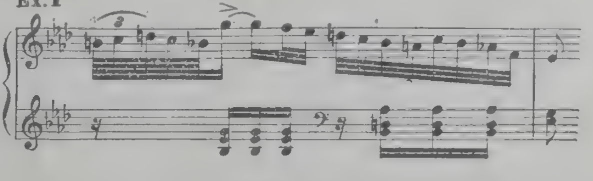
The Sonata Pathetique

> (1) Please explain how to play the 22nd measure in the second movement of Beethoven's *Sonata, Op. 13*. Also (2) should the part beginning in measure 37 be played at a faster tempo than the first part? F. C.

(2) Taking the first part of the metronome pace ♪ =60, this rate may be quickened during measures 37-50 to ♪ =66, or possibly ♪=72. The prevalent tendency to play this restful *adagio* movement too rapidly should be carefully avoided. We are prone, in these hectic days, to hurry up the leisurely pace of the classic epoch until it becomes a travesty on the composer's original idea.

(1) Measure 22 should be played by beginning the first of the three grace notes directly on beat 1, thus:

Ex. 1



Do You Know?

THAT the bagpipe dates from classical Greece and Rome? Irish bagpipes are known to date from the fifth century.

That the first form of bars were not straight lines drawn across the staff but V-shaped marks? This was followed later by oblique lines drawn across the staff. It was not until the middle of the seventeenth century that bars appeared in music issued in England.

That the word burden, so often found in old literature relating to song, was really the nonsense syllables used as a kind of chorus, such as "Hey, trolly, trolly, "Hey Nonny, Nonny?" It has no connection with the word burden meaning to carry, but is derived from the French Bourdon (late Latin *Burdo* a drone bee), the drone of the bagpipe. Our ancestors used to sing "Het, trolly, trolly," little dreaming of the twentieth-century meaning of the word.

The Musical Scrap Book

Anything and Everything as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

WHAT GOETHE WROTE OF MENDELSSOHN

MENDELSSOHN visited Goethe, the great German poet, for the last time in 1830, when he was in his twenty-second year. He stayed a fortnight. After the visit, Goethe wrote to Zelter, Mendelssohn's teacher, and said, as reported by M. E. von Glehn in his book, *Goethe and Mendelssohn:* "His (Mendelssohn's) coming did me a great deal of good, for my feelings about music are unchanged; I hear it with pleasure, interest and reflection; I love its history, for who can understand any subject without thoroughly initiating himself into its origin and progress? It is a great thing that Felix fully recognizes the value of going through its successive stages, and happily his memory is so good as to furnish him with any number of examples of all kinds. From the Bach period downwards he has brought Haydn, Mozart and Gluck to life for me, has given me clear ideas of the great modern masters of *technic,* and lastly has made me understand his own productions, and left me plenty to think about in himself. He took away with him my warmest blessing."

It is significant that Goethe omits the name of Beethoven as among those whom Mendelssohn "brought to life" for him. Mendelssohn tried hard to make Goethe love Beethoven's music, but the good German poet found Beethoven puzzling and even terrifying. Beethoven and Goethe had met, but no friendship followed. Beethoven had been three years dead when the above letter was written, and the greatness of his genius was no longer open to question.

Fortune is not on the side of the faint-hearted. Sophocles.

BACH'S KEYBOARD TECHNIC

"JOHANN SEBASTIAN BACH is called the greatest clavier-player of his time, perhaps of future times as well," wrote Adolph Kullak in *The Aesthetics of Pianoforte-Playing.* "The chief characteristic of his style is said to have been extreme distinctness of touch. This was attained through the following method. Bach held the five fingers so bent that their tips were brought into a straight line, each finger being held in this position over its key, ready for striking. The method of touch accompanying this position, (according to Forkel) was that no finger fell, or was thrown upon the key, but must be borne down with a certain sense of power and mastery over the movement. This power, bearing upon the key, or the degree of pressure, must be sustained in equal strength, namely by not lifting the finger directly up from the key, but causing it to slip away from the front end of the key by gradually drawing in the finger-tip towards the palm of the hand.

"In passing on from one key to another, this degree of power or pressure bearing on the first tone is thrown, by this slipping away, with extreme swiftness upon the following finger. This method, by means of which Forkel seeks to explain the great precision of Bach's touch, stands in direct opposition to our modern style, which founds the principle of touch upon the movement of the whole finger (not as Bach did upon the finger-tip alone) requires a distinct lift, and allows a drawing-in of the finger-tip only in special cases. The further statement that Bach played with so easy and slight a movement of the fingers that it was hardly perceptible, can be explained only from the light action of the instruments then built. . . . Bach's method likewise developed all the fingers to perfect equality. All were alike in strength and usefulness, so that double-notes, and runs, simple and double trills, even trills with accompanying melody in the same hand, were executed with equal ease."

THE IMPORTANCE OF SIGHT-READING

READING music at sight would seem to be as necessary for the musician as reading literature at sight is for anybody; yet many pianists make little effort to develop this important branch of their training. No doubt much more effort is involved. A pianistic sight-reader has to solve riddles of fingering, rhythm and chord-structure, such as we do not meet with in reading prose. But it can be done by far more pianists than is thought. "Reading (at sight) is of no less importance than execution, especially for the amateur," says H. Parent, in *The Study of the Piano.* "A time comes, indeed, when there is no longer leisure to devote several hours a day to an accomplishment.

"If once the repertory is exhausted, if reading instead of being a pleasure is only a laborious study, music is given up, and the piano closed not to be reopened.

"The good reader, on the other hand, can keep up his music all his life. He may have only a few minutes daily to give to his instrument, but they are sufficient for him to understand a new work, to recall the symphony heard the previous night, or to give him beforehand a taste of the opera to be heard on the morrow. A good reader is always prepared to take part, without previous study, in ensemble playing; he can accompany a song, he is always ready under all circumstnces.

"It is only by work that we can attain this end. No doubt a pupil's natural ability must enter in a great or less degree into the results obtained; but without work, the ability, however promising it may be, will produce nothing serious or lasting."

Half an hour a day, given to reading new music not too difficult, will work wonders. Also practice with an orchestra or choral society, even with a singer or violinist, will provide excellent routine drill in keeping time. Try it.

MEYERBEER'S INSPIRATION

"THERE is music in the growling of the gale," wrote W. S. Gilbert in "the Mikado" and apparently Meyerbeer, composer of "Les Huguenots" and many other notable operas agreed with him. From a press clipping we learn that "Meyerbeer gathered his thoughts amid the rumble of thunder, the flash of lightning and downpour of rain. In order more fully to expose himself to the stimulating effects of the elements he had constructed for himself at the top of his house a room whose sides were entirely of glass, and here he would hasten at the approach of a storm and amid its fury would have a rush of musical thoughts.

"There is a story about him to the effect that once when entertaining friends at dinner he heard a distant rumble of thunder just as the soup course was served, and to the astonishment of his guests he hastened from the room to his musical chamber and left them to take care of themselves for the rest of the evening."

It reminds us that Beethoven was also tremendously influenced by storms and loved to walk bare-headed in the rain. He even "invented" the rain upon occasion and was in the habit while composing of pouring cold water over his wrists and head from a pitcher regardless of where it fell. From this arose much of his trouble with his landladies, no doubt. But we who listen to his music have reaped the benefit of it in his "Pastoral Symphony" and in many other works. Beethoven loved nature in all her moods. Chopin is said to have written the *Raindrop Prelude* as the direct result of being storm-bound by rain.

SH-SH! CATS!

IN his highly entertaining volume of reminiscences, *A Quaker Singer's Recollections,* the late David Bispham tells the following: "During the autumn and winter of 1895 I gave a number of concerts of old English music with Arnold Dolmetsch, accompanied by the old-fashioned instruments, the harpsichord, the lute and the viola da gamba. . . . It happened that once while Dolmetsch was accompanying me on the harpsichord, as I sang Henry Purcell's remarkable 'Let the Dreadful Engines,' I observed a cat quietly walking across the back of the hall. He glanced up the middle aisle and caught sight of me, in whom he doubtless recognized a sympathetic friend, for I am fond of animals. A dog has come upon the stage to me, two rats have played at my feet for a considerable time in the glare of the footlights, and at a concert a bat kept flying about my head—much to my discomfiture, for to that sort of creature I am not partial. But at this concert the cat walked up the aisle, leapt upon the stage, arched his back, rubbed his fur against my leg, elevated his tail, and purred with great satisfaction as he made a series of figures of eight between my feet.

"Dolmetsch, seated with his back to me, saw nothing of what was going on. I had to continue with my song, but when a young girl burst into a giggle of merriment, the whole audience went into shrieks of laughter.

"Presently the distinguished Belgian harpsichordist, turning to see the cause of the disturbance and catching sight of the cat, hastily snatched from the piano-desk the whole volume of music and hurled it at the beast, which with a savage yowl sprang into the air, almost into my face, and dashed away. The laughter of the audience continued so long and loud that we performers were obliged to leave the stage, not to return for many minutes."

Among the vast number of readers of THE ETUDE there must be thousands who come across clippings which should make very interesting reading for this department. Why not assist Mr. Garbett by sending them in—always stating their source—*Editor's Note.*

THE MENTAL DISCIPLINE OF MUSIC

MUSIC teachers who occasionally confront the parent who asks scornfully, "What's the Use of Music?" may find interest in some remarks made by W. J. Fay in a speech to the New York State Teachers' Association. Mr. Fay is supervisor of instrumental music in the schools of Rochester, but has also taught Latin and algebra, the last and admittedly "useful" study. "As a mental discipline, music is invaluable," he says, "and in my opinion, the most effective of any subject in the curriculum, without exception. . . . In no subject taught in our schools is there required such promptness and accuracy in the solution of a given problem as in instrumental music. Take a violinist reading an orchestral part at a moderately rapid tempo. The pitch, duration and intensity of a note, together with its particular expression, must be determined in the fraction of a second and the solution of the problem given almost instantaneously, or the opportunity has passed and will not return. And all of this with a nicety of muscular co-ordination and a precision of bow-arm and finger that shames the finest of the manual arts. Compare the results which we all see attained every day with the solution of a problem in Latin or algebra. Having taught both, I delicately draw a veil over the contrast."

There is great truth in this—a truth that should be brought home to more parents and school teachers. It would be untrue to say that musicians as a class are "more intelligent" than any other trained and educated people; but quickness of perception, and quick mental adjustment, are perhaps the most common attributes of well-trained musicians. A musician who is slow-witted is rarely met.

WHAT natural qualifications must a song-accompanist possess? Firstly, he must be earnestly musical; secondly, *earnestly musical;* thirdly, EARNESTLY MUSICAL!—CARL REINECKE.

MUSICAL NOTES AND NEWS

"WE may do without many things; we may deny ourselves much of the comfort of life; but music we must have or shrivel up," says "Uncle" Joe Cannon, the veteran politician.

The *Scientific American* says that almost the first parlor car used on American lines was especially built for Jenny Lind, when she made her tour into the wilds of the United States under the management of P. T. Barnum. She jokingly called it her "parlor car," and the name has stuck. The seats of an ordinary car were removed and replaced by chairs, tables and other furniture.

The Department of Phonetics at University College, England, has discovered a window cleaner named Strathie Mackay, who can sing the ordinary C in the treble clef, while also singing the C in the bass. Professor Jones says he makes one of his vocal cords vibrate at half, a third, a fourth or fifth the rate of the other, at will. He ought to get a vaudeville job singing duets with himself.

The New York *Times* reports an instrument has been invented to arrange perfumes in an order corresponding to the musical scale. The instrument is called an "odophone." The heavy odors such as vanilla represent the lower notes. The higher notes are peppermint and citronella. "A harmonious blend, for instance, would be the chord of C." Fine! Now tell us, what would the smell of a diminished seventh be like?

Truthfulness is an indispensable requisite in every artistic mind, as in every upright disposition. Wagner.

Facts About French Composers

When Lully (born Italian, 1633-1687) was dying, his father confessor forced him to put the scores of his opera "Achille et Polyxene" in the flames because if its voluptousness. Later when he thought he was recovering he said to a friend "S-h-h-h, I only burned a copy."

When the musicians of the orchestra burned Rousseau (1712-1778) in effigy, after the performance of his opera "Le Devin du Village," the composer said, "I don't wonder that they should hang me now after having so long put me to torture."

Gretry (1741-1813) said of his teacher of music, "What made us tremble with fear was to see him knock down a pupil and beat him; for then we were sure he would treat some others in the same manner, one victim being insufficient to gratify his ferocity."

Cherubini (born Italy, 1760-1842) lived most of his artistic life in Paris. In his advanced years he devoted himself to painting, and great painters lauded his efforts.

Halévy (1799-1862) so indulged his fancy for fortissimo climaxes that they became the butt of many jokes among the German critics. "Punch" of Vienna said that "Halévy made the brass play so loudly that the French Horns were actually blown out straight."

Auber (1782-1871), master more especially of Opera Comique, and idol of the audiences of his day, was absolutely indifferent to renown. He never attended the performance of his own pieces, and disdained applause. The highest and most valued distinctions were showered upon him; orders, jeweled swords, diamond snuffboxes, were poured in from all the courts of Europe. Innumerable invitations urged him to visit other capitals and receive honors from all the courts of Europe. But Auber was a true Parisian and could not be induced to leave his beloved Paris.

By Experience I Have Found That

By Nell V. Mellichamp

The few minutes spent in waiting for the preceding pupil to finish at the piano, may be profitably spent by the child. Copies of the Etude, with articles of special interest marked, make interesting reading. A box of musical puzzles affords much pleasure to the little ones; while some task such as marking off music into measures, or writing a line each of 4/4, 2/4, 3/4 time, pleases all beginners. They will soon form the habit of looking for something to do when they arrive at the Studio.

Hymn study is splendid preparation for Bach. Have the pupil play each voice, Soprano, Alto, Tenor, and Bass separately and carefully. Explain part singing. Then when Bach Inventions come, followed by the fugues, they will not seem so formidable to the young student.

To offer a prize to the student who can play the greatest number of pieces from memory when the school term begins in the fall, will do much to stimulate summer practice; and if patriotic songs and hymns are included in the list, the children will do a good bit of helpful sight reading during the holidays, and there will be less lost technic in September.

In preparation for two piano work, have pupils play scales, arpeggies, and Czerny studies at compainion pianos, with or without metronome rates. This accustoms them to the sound of the other piano and helps them to keep strict time.

A welcome change in the lesson routine is to put aside the regular work and ask the child to give you a concert. He may pretend—and children love to make believe—that he is one of the great pianists, and is giving a concert to a large audience. His childish repertoire will be greatly strengthened by an occasional concert lesson.

The Etude Monthly Test Questions

Musical Questions You Can Answer Through This Issue of The Etude

The answers will be found on the pages given in parenthesis.

What is the most important element in the success of the Italian-born singer? (7)

What operas did Berlioz know from memory when he entered the Paris Conservatoire? (8)

What are the Foundations of Piano Playing? (8)

What is the test of a Beginners' Instruction Book? (9)

Who was the first to construct Overtures from themes to appear later in the opera? (12)

What composer was so fond of working in the open air that he would have a piano moved out of doors for the purpose? (12)

How shall we learn the principle of free moments? (13)

What are the differences in the limitations placed on the interpreter of Classic and of Romantic music? (14)

What is one absolute necessity for the professional accompanist? (15)

What composer was the first to make notable use of the crossing of the hands in playing the piano? (19)

Did Beethoven ever write "Program Music"? (20)

Which is the *Una Corda* pedal of the piano? (21)

Have you achieved proper delicacy in your piano playing? (17)

What are the chief causes of vocal fatigue? (52)

What length of study is necessary to become a professional musician? (55)

How are the pedals best used in hymn playing? (56)

How shall we prevent slipping of violin pegs? (60)

How shall musical phrases be inflected? (62)

IVERS & POND PIANOS

An Ideal Home Grand

The satisfying simplicity of early American work, depending solely on beauty of line, material and finish for artistic effect marks the *Five Foot* Colonial Grand shown above.

Smaller grands are built, but at a sacrifice of tone, touch and line incompatible with *Ivers & Pond* standards. Larger grands involve an expense in money and space your needs may not call for. Let us mail you a catalog of this attractive piano.

Ivers & Pond PIANOS

are built in all desirable types and sizes, but in **one quality only—the highest.** Their acknowledged position in the musical world is evidenced by their use in more than 500 Conservatories and Schools and 70,000 discriminating homes.

How to Buy

Where no dealer sells IVERS & POND pianos we quote lowest prices and ship from the factory tho' your home be in the most remote village in the United States. Attractive, easy payment plans. Liberal allowance for old pianos in exchange. Every intending buyer should have our new catalog. *Write for it.*

Ivers & Pond Piano Co.

141 Boylston Street Boston, Mass.

The Singer's Etude

Edited by Vocal Experts

It is the Ambition of THE ETUDE to Make This Voice Department
"A Vocalist's Magazine Complete in Itself"

"When the Voice Gets Tired"

What Causes Tired Voice. How to Remedy It. The Physiology of Vocal Fatigue

By Frederic Warren

(From a Lecture Delivered Before the New York Singing Teachers' Association.)

VOCAL fatigue is a lethargic, lifeless, relaxed condition of the muscles which produce voice. In its incipient stage it causes the singer to work a little harder for the amount of voice usually to be had by normal efforts. In its advanced stage it approaches a state of *aphonia,* which means absolute loss of voice for the singer unless a long period of rest is taken followed by very careful voice training to be done only when the individual is physically fresh and rested.

The object of this paper is to establish the fundamental causes of vocal fatigue and to suggest sane and practical ways of avoiding it and of curing it. There is no desire to lay down pedantic rules that *must* be followed by each and every student, but rather to approach an old and vexatious subject from a new angle. In other words, I attribute many of the failures in singing (and, for teachers, of their failures with students) to the fact of the student not keeping in physical condition for his task. I do not refer here to the hygiene of the voice or throat, nor to the abstract or spiritual side of singing, but purely to the physical side.

Obviously, the first and outstanding cause of vocal fatigue is a wrong way of singing. That, however, is what I call a *local* cause, in most cases; for a wrong way of singing is so very often the result of the poor physical condition of the student, who gradually becomes accustomed to that veiled tone, to that slightly hoarse tone, to that unnecessary pressure, to that difficulty in sounding the head tones; and thinking it part of his burden fails to search out why he sings so well and easily to-day, and so poorly to-morrow.

However, leaving aside the obvious causes of vocal fatigue, such as over practice, the heavy strain of a long recital or operatic rôle or fatigue which results from singing under such adverse circumstances as at the end of a tiring journey, on a cold, or for instance, after the dance of the seven veils in "Salome," let us examine specifically the source of all these possibilities of fatigue.

Blood Tells

The singer, before all other human beings, reflects first the kind of physical condition he is in; for on the *quality* of the blood that feeds his vocal chords depends so much the quality of the tone. The singer's vocal chords act for him as a sort of barometer, registering, instead of atmospheric pressure, *blood quality!* When a person speaks with a clear, ringing voice that person is, at the time, reasonably sure to be in pretty good physical condition. I have heard that in Italy the singers often take a little carbonate of magnesium from time to time during the day to lighten the blood and thus insure a clear voice for the performance of the evening. That might be a dangerous practice in northern climes; for by thinning the blood we lay ourselves open to chills; but we can have recourse to physical exercise which is the very best means of elimination of blood impurities, and at the same time develops strength and endurance. The idea conveyed here is, then, that to sing well we need good clear, red blood, and that the singer must so arrange his habits as to be in that condition when he sings. For example, one should never sing directly after physical exercise such as tennis, golf, swimming, or a brisk long walk. The reason is that the modifications taking place in the blood make it almost impossible for the singer to do his usually good work; and he unconsciously resorts to other means to get results. Hence he induces a state of vocal fatigue which may last from two days to two weeks; and, if he makes a practice of this, he will be singing in a state of vocal fatigue more or less all the time.

After a certain amount of bodily exercise the blood is in a thick and sluggish state caused by the waste materials of broken down tissue. As the blood is busy for a period of from two to four hours, and after prolonged exercise much longer, in carrying away this waste, and rebuilding new tissue, it is the least favorable time in which to sing.

This sluggish state of the blood, which is equivalent to a state of bodily fatigue, can also be induced by intellectual work, worry and nervous strain. Take the singer at the end of a song recital or after singing an operatic rôle; take the teacher after a day's teaching; take the student, unhappy and discouraged in his work; take the singer at the moment of making an audition the favorable outcome of which may mean his daily bread; they are all in a state of nervous exhaustion almost comparable to that of a football player at the end of a hard game.

To sing, then, while in this condition, can superinduce a state of vocal fatigue, due to overwork; for, as the individual is already in a state of bodily fatigue, it requires an extra effort to sing, and he overworks. In the case of the student singing for his audition it is the nervous strain of anticipation and uncertainty that puts him in this condition, while on the other hand, if he is accepted he disdains the earth, treads on air and sings well at his first rehearsal.

The ordinary actions of life require a less expenditure of nervous energy, as they are habitual and more automatic; but the singer has to perform an extraordinary action, one requiring a voluntary and powerful effort of the will, for to sing he must use intellectual force as well as muscular force and exercises requiring both of these forces are the most fatiguing.

Physical and Moral Training

To sum up thus far, then, vocal fatigue is caused by wrong ways of voice production which revert back to the fundamental cause, that of the individual singing when already in a state of bodily fatigue, the latter being the result of either physical or nervous strain, and the extra effort thus induced brings about a condition of overwork which produces vocal fatigue.

Now let us see what the poor, hard working singing teacher has to face. He is no longer, if he ever was, *just* a singing teacher. He is expected to train his pupils not only vocally, but physically and morally. He automatically becomes their guide, mentor, agent and manager. Entirely too much is expected of him. The time for a social visit is certainly not at the lesson time. However, I feel that the subject of this paper is one that the teacher should take up with the student. I am convinced that many of the vocal troubles against which we blindly battle could be eliminated if we could depend upon the student arriving at his lesson, most of the time, instead of so rarely, in the most favorable condition to sing. Probably most teachers do speak to pupils regarding a regular normal life, such as sufficient sleep, steady application to practice, and diet. But I imagine in general terms only. It is my frank opinion that the singing teacher is blamed for a great many ills for which he is in no way responsible. After all, he can but advise and direct the student; he cannot *force* the student to do things! In these days, especially in America, when the teacher must fight against the "get-method-quick" students, who cannot be persuaded, nor indeed coerced, to study the basic forms of tone production long enough before they rush to coaching difficult songs and arias, straining the voice before it is well grounded; when the teacher is met on every hand with prematurely tired voices, what I call "poisoned voices," the owners of which go from teacher to teacher, looking for a "cure-all" to make them sing like angels! Also, when the teacher is called upon for help by cases of legitimate vocal fatigue resulting from a wearying recital, too many rehearsals, or a strenuous tour, he may be able to give the most valuable "First Aid" to all of these by having a simple knowledge of the modifications taking place in muscles when exercised. Then, the application of the usual singing exercises will be doubly effective, freshening up wonderfully the tired voice, through the teacher's skill in assisting the individual to be first in a right physical state.

Lame Throats

Vocal fatigue is equivalent to a condition of overwork and can be instanced by the old illustration of the man told to hold out his arm on a horizontal plane for five minutes. The modifications taking place in the muscles is just the same as when we sing too long in one way, or sing when we are already fatigued, as already seen. The blood rushes to the deltoid muscles more and more as the position becomes more and more fatiguing; it requires an ever increasing effort of the will to maintain the position, until finally the maximum of will power and blood having gone to the muscles, which through having had no period of rest, have not had time to throw off the waste materials from the rapid combustion taking place, find themselves in a state of overwork, or nervous exhaustion, and the arm falls. This single illustration will show what takes place in the muscles of the voice when overtaxed. They are thrown, for the time being, into a state of lameness and soreness which endures until by means of more exercise or rest the blood has restored the aching muscles to a normal condition.

The student or singer who practices intermittently, failing to keep the muscles of breathing and those of the throat in proper training by regular daily work, suffers from these conditions; for during the period of inactivity the muscles, just as when they are overworked, store up quantities of waste materials which the action of the muscles must burn up and which the blood must eliminate. Thus we see the importance of regular work for the muscles, sufficient, in fact, to enable them to be kept in that fine condition meant by athletes when they say they are in "good training." Muscles kept in training can stand a greater quantity of hard work without the fatigue which inevitably follows the sudden use of muscles not in good training.

To try to sing, then, whilst the muscles are suffering from the stiffness of fatigue, whilst they are in the process of disposing of these waste products, similar to a kind of auto-intoxication, is distinctly injurious to the voice.

"Driving" the Voice

One of the common mistakes productive of fatigue of the voice is to torture it by singing too long in one way. I mean by that when a difficult phrase or a high note is sung repeatedly in the effort to get it right, or to sing an aria through several times in succession. By this *driving* of the voice too long in the same vowel forms, thus using over and over the same set of muscles, just as shown by the example of the held out arm, the muscles become overworked, and instead of the effort becoming more easy, it becomes increasingly more difficult, as the muscles have not had time to recover. Variety is spice to the voice, and the singer should reverse the proverb, "never put off until to-morrow what you can do to-day" to "put off until to-morrow what you cannot do to-day" and save the voice.

It is not necessary here to refer much to the minor and well known causes of temporary fatigue of the whole voice such as the last instance given, or faulty production of the voice, but rather, as already indicated, to dwell upon the principle that these very causes would be reduced to a minimum if the student could be in good physical condition when the lesson is taken, and likewise the singer for rehearsal or public appearance. The teacher, student or singer, by the observance of the main thing, that of keeping the body in a state of physical fitness, will find the muscles able to resist the increased demands made upon them for singing.

If all the elevators in Carnegie Hall should fail to operate one day and the students of singing having lessons there should be obliged to walk up, the physical fitness to sing of those who would have to climb to the higher floors would be much impaired; and the teacher would not have an easy time of it. The result of this unusual amount of exercise just before singing would bring about, in a small way, the effects already noted. The blood would be busy eliminating from the muscles of the legs the results of the work of climbing, leaving the throat inadequately supplied with calm, clear blood, besides all of which the individual would be in a partial state of breathlessness, with a rapidly beating heart. Such a condition is not a favorable one in which to sing well, but nevertheless, students and singers only too often subject themselves to such a strain as this in some way or other.

I think a great deal can be done for the development and preservation of the singing voice by the use of judicious physical exercise and an avoidance of the strain put upon the voice caused by using it under unfavorable circumstances.

The effect of exercise upon the breathing of the singer is most salutary. The lungs themselves and the muscles of the chest can be kept in a far better state of elasticity and resiliency by means of exercises which cause the chest to expand than by singing alone. Please note that it is "by means of exercises which cause the chest to expand" that the results are obtained. There is no greater fallacy than the idea of voluntary deep breathing. Voluntary deep breathing, when practiced for any length of time, defeats its own purpose by over-oxygenating the blood and thus causing congestion. But by performing some bodily movement which causes the breath to be taken quicker and deeper, the lungs, the chest muscles and the diaphragm are given real exercise which makes them work, and they become developed.

Clear the Head

I do not mean to say that it is unwise to take a few deep breaths now and then to "clear the head," as one says; but I do wish to point out carefully that, to strengthen the breathing powers, exercises must be performed *which cause the breathing muscles to work.*

Thus it is seen that physical exercise in general can be of the greatest assistance to singers in keeping the local sets of muscles used in the act of voice production in such good condition that they will respond much more readily to the big demands made upon them and will thus afford the singer a certain amount of immunity to the usual fatigue; and this in turn would be conducive to the singer doing his work most of the time under favorable conditions which would engender self-confidence and sureness in his vocal efforts and help enormously to kill that very great defect—*self-consciousness!*

As already indicated, I cannot possibly embody within the limits of this short paper all of the vocal sins which may contribute to fatigue of the voice. Individually they are well known; and I shall be happy if I have succeeded in showing that they can, by comparatively simple means, be prevented at their source.

To enjoy the beneficent and inspiring effects of singing most of the time with a voice that is fresh and rested, vital and capable of resisting fatigue, the observance, in general, of the following rules will help profoundly:

Rules for Singers

1. In addition to the usual normal care of the body, such as bathing and dieting, the singer should practice in moderation some agreeable form of physical exercise. If the exercise is in the form of tennis, golf, prolonged swimming or walking, it should be done a sufficient number of hours before any amount of important singing takes place, to give the body time to readjust itself to normal. In other words, major forms of exercises should be done between important times of singing, not just before.

2. Some minor form of exercise, such as the Swedish exercise, or some bodily movement including bending and twisting, should be done daily at home. These minor exercises need not take more than ten or fifteen minutes, can be done at any time, and will help the breathing.

(The Swedish exercise is done as follows: Stand erect without rigidity, take a deep, full inhalation until the lungs are completely filled with air (being sure to start the breath at the base of the lungs) then, whilst holding the breath, draw the abdomen inwards and upwards strongly and let it out again five times in succession; release the breath, rest a moment and recommence. This exercise should be done about ten times at one standing, or five times twice a day. NOTE: While the abdomen should be drawn inwards and upwards with a powerful and steady movement, it should be let out gently.)

3. A fairly regular practice of these major and minor exercises will tend to keep the muscles in an elastic and lithe condition and keep the body free from those poisonous waste products which it readily stores up following periods of inaction or overwork, which in turn causes that lameness and stiffness when new work is undertaken.

As we do best, then, those movements which we are accustomed to do, it is of vital importance to cultivate, by an effort of the will, the habit of a calm, poised way of performing the daily actions of life so that the nervous impulses engendered by thought will have a normal receptive field in which to operate, without the antagonisms created by tension and lack of poise.

4. With both the beginner and the tired out singer the teacher can help enormously by remembering that *muscular education leads to an economy of force.* Therefore the teacher must skillfully encourage the practice of vocal exercises in such a manner that the desired results are obtained with the least possible expenditure of muscular and nervous force; "a maximum of effect with a minimum of effort." Well trained muscles, relaxed and poised for effort, does not mean that flabby collapse so often thought of when the word "relax" is used, otherwise, in the language of Weber and Fields, it would be: "You sing, and you sing, and you sing, and noddings comes out!"

5. *Never* sing directly after any considerable amount of physical exercise. Muscular movements demand an increased supply of blood, and just before singing the blood should be quiet and equally distributed in the body, quickly available for the demands to be made upon it by the throat. Therefore, do not walk to the lesson; take the *walk* after the lesson.

6. If in a state of good training, the throat will not tire very quickly, but should it do so during practice, the only thing to do is to take a short rest. Freshness of voice and a long career is much more certain by avoiding the habit of "singing away a cold" than by using the voice at all during a "cold."

7. It is advisable to give the throat and lungs a "fresh air bath" of ten or fifteen minutes every day before using the voice. This can be done by taking a short walk out of doors, or by doing a few exercises in a room, the air of which has been cleared by an open window.

8. Be careful to have a wide variety of exercises for the voice. Avoid "driving" at top-notes, and avoid singing a difficult operatic aria, or any one thing too many times over at one practice, thus using one set of muscles to the point of fatigue.

9. There is a normal fatigue and an abnormal fatigue following work. As already seen, normal fatigue is a condition which promotes growth of the muscles used; abnormal fatigue is a condition resulting from overwork. It is an everyday occurrence to hear young artists finish song recitals with voices congested, forced, thin and weak. They rush through a recital as if the devil were at their heels. A little knowledge of the action of exercise upon the muscles would show them that just a slightly longer pause between groups, and an intermission of six or eight minutes would give the muscles time to recover, allowing the blood to recede from the congested throat and the breathing to become more normal.

10. Aside from fundamental conditions being right, I will here bring to mind a last and most effective means of avoiding local fatigue of the muscles which produce voice. It is a very simple device, but one which goes back again to the keeping of the muscles of breathing in an elastic and well trained state. A common fault of singers is to take in more breath at the end of each phrase, forgetting to let out any breath excepting that which was used up in singing, thus gradually inducing a state of congestion. The remedy is to let a little of the old breath inaudibly escape at the end of the last note of a phrase, or even push it

"Aren't you going to invite that Mr. Johnson who plays so well to our anniversary party? A good piano player certainly 'makes' a party."

"Yes, that's just why I'm afraid to invite him. Imagine how awful it would be when he started to play on that piano of ours."

She hadn't the courage to invite him

Oh, the disappointment and embarrassment a poor piano can cause. But in the homes where there are Weaver Pianos assurance, satisfaction and enjoyment abound. For the tone of the Weaver Piano is unsurpassed. Its mechanism is so perfect that it removes all thought of mechanics. And these wonderful qualities of the Weaver give a lifetime of splendid service.

Write us for the name of the Weaver dealer in your locality, and ask for the Weaver catalog. Convenient terms are easily arranged, and a liberal allowance made on your former piano.

WEAVER
PIANOS

A WORD FROM HATCH

To the Piano Teacher Who Always Selects the Best for the Young Beginner or Adult Beginner

FIRST MELODY LESSONS *by Mathilde Bilbro*
One of the most practical Beginner's Books ever published, Contains short and melodious studies that are as interesting as pieces and pieces that are instructive as well as entertaining. Engraved with LARGE NOTES. *Price 1.00*

SECOND MELODY LESSONS *by Mathilde Bilbro*
Answers that question so frequently asked "What Book Will BE the BEST TO USE NEXT". Contains sixteen charming pieces and many concise studies through the keys new to the young pianist. Decidedly Grade Two. . *Price 1.00*

TWENTY MELODIES for ADULT BEGINNERS *by Bilbro*
With the tremendous interest in a Musical America, there seems to be an increasing tendency toward ADULT BEGINNERS IN PIANO PLAYING. In this work the author presents excellent lesson material FREE from childish limitations both of title and musical substance.................................*Price 1.00*

PRIMER OF EYE TRAINING *by M. S. Morris*
Helpful in teaching Beginners to read the notes with certainty and to confirm his eye-impression by the copying of examples ....*Price .40*

"MUSIC TEACHER'S ORDER GUIDE" free upon request

HATCH MUSIC CO.
(Formerly of Philadelphia, Pa.)
611 Washington St.
BOSTON-11, MASS.

Teachers—let me give you a regular 30c size tube of Kondon's— J.W. Kenyon

✓ We want school teachers to know and value Kondon's and to advise this healthy habit to their boys and girls. 3100 teachers accepted this offer last season

✓ Keep nose and head clear with Kondon's. It prevents infection, colds and catarrh. Just as important as cleaning the teeth.

✓ Send the names of 20 or more parents of your pupils. We will send you, not a sample, but a regular size 30c tube of Kondon's.

✓ Clip this ad. Mail it at once with the 20 or more names and addresses to Kondon Mfg. Co. Minneapolis, Minn.

Take these four steps for pupils' health

KONDON'S CATARRHAL JELLY SOLD BY ALL DEALERS

EIGHT NEW PIANO PIECES

By WALTER ROLFE

IN A MOONLIT GARDEN - - - - Gr. IV. Pr. 60c.
A standard composition full of beautiful melody.

STOLEN KISSES—*Waltz* - - - - - Gr. IV. Pr. 60c.
Destined to become as popular as the same composer's "Kiss of Spring."

HONEYMOON DANCE - - - - Gr. III½. Pr. 50c.
Already a big hit. Known on the "Victor" and "Edison" talking machines as "Sunbeam Dance."

ELFIN DREAMS - - - - - - Gr. II. Pr. 50c.
A dreamy tuneful little piece that will live.

CANDLE-GLOW - - - - - - Gr. IV. Pr. 60c.
A song-like composition, already becoming a big success.

HOLLYHOCKS - - - - - - Gr. III½. Pr. 60c.
A brilliant teaching number on the order of the famous "Edelweiss Glide."

LONGING - - - - - - - Gr. IV. Pr. 60c.
Time only will prove the intrinsic value of this beautiful composition.

WATER-NYMPHS - - - - - - - Gr. II½.
One of the best teaching pieces of this grade ever written. Fluent and melodious.

The above eight compositions were selected by Mr. Rolfe as representing his very best work. Carefully edited and fingered by him personally.

A special discount of ½ off the above prices will be allowed to introduce them. A sample copy of all eight numbers will be mailed (to legitimate teachers only) upon receipt of $1.00.

Thematics free. Very special rates to teachers ordering direct. Ask about our terms of consignment. Get on our mailing list; we are in the business to stay. This is only our small beginning.

COLLECTIVE VOICE TRAINING
By D. A. CLIPPINGER

Designed for teaching the principles of voice culture in classes, choirs, choruses, high schools, etc. Price $1.00
A Revised edition of SYSTEMATIC VOICE TRAINING, Price $1.25, with additional exercises and songs.
THE HEAD VOICE AND OTHER PROBLEMS, Price $1.25.
The clearest discussion of voice training in modern times.
These books will be sent postpaid on receipt of price.
Mr. Clippinger's success as a voice builder is bringing to him singers from all parts of the country.

Address D. A. CLIPPINGER, 617-618 Kimball Hall, Chicago, Ill.

SUMMY'S CORNER

The importance of Sight Reading is acknowledged by all teachers. But only recently have teachers agreed that good Sight Reading depends as much on getting a quick concept of the RHYTHM PATTERN as on a correct reading of the notes. Only a few minutes of the lesson time may be allotted to Sight Reading. Therefore the teacher must have exactly the right material to work with.

Sight-Reading Material should consist of a collection of pieces, short in length, definite in rhythms, interesting in content, with variety of keys. *All* these points are met in the following collections:**

SKIPS AND RHYTHMIC ACTIVITIES....*Buckingham* $1.00
THIRTY IMPROVISATIONS (all keys)....*Mrs. Crosby Adams*....$1.00

NOTE:—In using these books for Sight Reading, a point which insures success, is *first* to teach the Rhythm Pattern away from the piano, either by clapping, tapping or Dalcroze.

out, so that on the rebound new, fresh air rushes into the lungs. This interchange of the breath, done quickly and deeply by the breathing muscles, gives the throat muscles an instant's relief frequently throughout the song; and each time this is done it not only prevents the piling up of old used breath in the lungs, but also allows the congestion of blood at the throat to recede, re-oxygenates the blood, and thus keeps the singer comparatively fresh to the end of the song.

"Off with the old breath before taking on the new."

The outstanding fact to be remembered by teachers and singers is that the function of a muscle is modified by exercise, and that the changes which take place in the body in general and in the muscles in particular when habituated to regular work, increase their strength in resisting fatigue, and develop them according to the class of exercise given them to do.

The singer should, then, realize that muscular movements, and especially those requiring a large amount of nervous control, as in the act of singing, demand a certain length of time for rehabilitation before they will again be in a fresh and rested state for new work, and that care should be taken to avoid using the voice when the muscles are already in a fatigued condition. This simple fact ought to help the singer to so plan out his activities as to be in the best possible physical condition when he sings.

Circles of Resonance

By Charles Tamme

The singer can only reach mechanical and muscular perfection through processes of the imagination. Therefore it is not essential for him to possess a great deal of physiological data. In fact, knowledge of this kind often tends to cause undue sensitiveness and self-consciousness in the singer.

On the other hand, the vocal teacher can never amass too much scientific information. The more he knows about the anatomy and physiology of the vocal mechanism the more he knows about its workings, its tendencies and its capabilities, the more competent is he to lead his pupil towards artistic perfection. In other words, the vocal teacher depends very much for his results on a thorough scientific knowledge; but he succeeds best when he can translate that knowledge to imaginative appeal, in the mind of his pupil. For instance, there may be a passage to be sung, of light-hearted joy. Physiologically speaking, the passage ought to be sung "dans la masque"; that is, in the anterior portion of the nasal cavity. But the artistic result is most readily obtained by getting that passage sung through mental interpretation. The actual placing of tone will be the same in either case, provided the passage is sung correctly; but nine times out of ten the imaginative way will be simpler to do, as well as more beautiful as to result. However, so many vocal students pick up stray scraps and bits of the physiology of voice mechanism, that it is often necessary, for their intellectual satisfaction, to enter into some of the details of the physical aspect of singing.

There is, for example, the eternal question of tone coloring. Tones can be colored entirely through the working of a vivid imagination; but the mechanics of tone coloring can also be taught technically—that is, through the use of the various resonators. The resonators are the hollow spaces in the mouth, the nose and the throat, roughly speaking, which amplify the overtones of pitch vibrations. It may be that the muscles, the bones, and possibly the bloodstream, influence, to some degree, the resonance of the overtones of pitch vibration; but, so far, there is no definite knowledge that they do.

The air in a resonator is normally passive. It only becomes active when a column of air passes over its opening; if there is an overtone in that column of air which is in tune with the space of the resonator, this overtone is then amplified.

It is convenient, for the present purpose, to divide the known resonators into four groups and to call them circles, or zones of resonance. The word "circles" best conveys what is meant because it is approximately descriptive and therefore easily comprehended. Furthermore, it suggests to some extent, the way in which pitch vibrations travel.

The first circle of resonance is in the hollow spaces in the anterior portion of the nose. Herein are the higher vibrations or overtones of the voice, and the quality which these overtones give is a bright, so-called, white-timbre. These overtones can be intensified to the extreme by muscular tension, forced breath pressure, and by a very close focusing of the vibrations. This is done by pronouncing a vowel sound brightly and with considerable energy. The French "in" illustrates the timbre of the first circle of resonance. The first circle is controlled by the forming of the vowel sound at the base of the nose and by the action of the soft palate.

The space at the posterior portion of the nose—that part which gives us so much trouble when we have a cold in the head—is the second circle of resonance. It is approximately three or four times the size of the first circle. Herein lie overtones farther down in the series and they are fuller and richer in quality than those of the first circle. This second circle is controlled, too, by the soft palate.

The second circle of resonance cannot be used by itself, but must be added to the first circle. It can be emphasized to sound louder than the first.

The third circle of resonance is represented by the buccal cavity. Added to the first and second circles, it gives a still richer tone, somewhat darker in quality. This third circle is controlled by lowering the jaw, arching the soft palate, cupping the tongue and opening the entire posterior portion of the mouth. When it is added to the first and second circles, it produces full voice.

The fourth circle of resonance is in the throat. Added to the other three, it gives the voice a deep, sonorous and dark quality. This circle is governed, mainly, by lowering the larynx.

Although all voices can use these circles without fear or danger, extremes must be avoided. They can also be used on any note of the scale, but it is not advisable to use the fourth circle persistently on high notes, or it will destroy the elasticity of the throat and cause what is known in the profession as carrying the chest voice too high. The first and second circles lend themselves very readily to the high tones; and the third circle, to the middle tones of the voice.

The circles of resonance can be used in a mechanical way to illustrate the technic of expression. If one wishes to convey the idea of joy or brilliancy, the first circle would suggest the quality of tone to be used; the second circle would lend itself to the expression of greater fervency of the same idea; the third circle would indicate the quality of tone required for a more forceful expression of this idea; and the fourth circle would clothe it with profound dignity.

"The preservation of my voice I attribute to never having sung when tired, nor ever straining for high tones."

—Patti.

Question and Answer Department

Conducted by ARTHUR DE GUICHARD

Always send your full name and address. No questions will be answered when this has been neglected.

Only your initials or a chosen nom de plume will be printed.

Make your questions short and to the point.

Questions regarding particular pieces, metronomic markings, etc., not likely to be of interest to the greater number of ETUDE readers will not be considered.

A Caudal Appendage!

Q. *What is the real signification of "coda?"*—BYNG, London, Eng.

A. "Thereby hangs a tail!" Coda (Italian, from the Latin, cauda, a tail) is applied to concluding measures of certain instrumental compositions, in which there have been repeats. After the repeat, by way of conclusion, a coda, or tail-piece is added. The name is also given to chords or notes which are added at the close of a regular canon, but of which they do not form an integral part. A short movement, bearing the designation of "coda," is often found at the close of a sonata or symphony.

Questioner is Referred to Text Books.

Q. *Please answer the following questions, which concern the orchestra score of the "Don Juan" tone poem, by Richard Strauss.*—H. L. G., Chicago, Ill.

A. All these questions (five in number), with but little exception, are of a nature which resents very little of interest to the music-student, seeing that they are so elementary that an up-to-date text book on instrumentation will supply all the information desired. Consult the following works: "Orchestration," Cecil Forsyth (Macmillan), "Practical Instrumentation," Richard Hofmann (G. Schirmer). Question excepted: "Why has the Viola the C clef? Answer: For greater convenience in writing, by reducing the number of leger lines which would be otherwise required. This also answers the third question.

Stereotypes in Music Printing.

Q. *Who was the first to use stereotypes in the printing of music?*—J. E., Hoboken, N. J.

A. Francois Reinhardt, an Alsatian music-printer of Strasburg, in Alsace, France, was the first to make use of stereotypes for music-printing about the year 1800.

A Case of Malpractice.

Q. *I have been studying voice for three years under one teacher; six months ago I made a change, the new teacher saying I have a "lovely voice, but not placed right." It is now being placed high, but with such a feeling in my throat of rawness, soreness and hoarseness! Both teachers are considered good, charging five dollars for thirty minutes Will you give me some advice and tell me what teacher to go to in ——————?* KATHRYN T.

A. Consult a good throat doctor. If he tells you there is nothing the matter physically, there can be no doubt that you are either practicing or being taught incorrectly. You ought to get a competent teacher for the price you give. For obvious reasons, THE ETUDE cannot recommend any teachers in any branch of musical instruction.

How Long to Become a "Professional?

Q. *i. How long does it take one of average ability and general education to become a professional artistic (sic) pianist, taking up the study of the instrument at the age of sixteen? ii Would dumbell exercises hinder one in acquiring a perfect technic in piano playing?*—MICHAEL N., Hardy Street, Salem, Mass.

A. i. Beginning piano study at the age of sixteen, it would require at least ten years (and up) to begin to be a professional performer. ii. Dumbell exercises and any other manual work which tends to stiffen the fingers, hands or wrists must be avoided.

Time, Tempo; Rhythm, Meter.

Q. *How do these differ from one another: time, tempo, rhythm, meter?*—IGNORANT, Mt. Vernon, N. Y.

A. Time is the division of music into regular portions with regard to the value of the notes, having the whole-note ( ) for the standard. The term "time" is also applied to the pace of a movement. *Tempo* is the Italian for time, having the aforementioned applications and meanings. *A tempo* signifies a return to the regular movement of the piece as indicated by the time-signature together with such qualifying words as *allegro, andante, presto.* Rhythm is, with harmony, the most important factor of musical form. It determines the mode of succession of the durations by means of unities of times, whose different groupings give rise to formulas of higher order. Differences of accentuation and their importance for the structure of a musical phrase form what we know as meter.

Use of Word Trio.

Q. *Does not "trio" mean three? If so, why are parts of instrumental pieces labelled thus, when there are any number of notes in a chord?*—M. M., Portland, Maine.

A. Yes; trio means three, but not necessarily in the restricted sense of three vocal parts, that is, single notes in each part. It might designate a trio of three violins, or of three other string instruments, or of three pianos, where each instrument might have three, four, or more notes to play. In the usual acceptation, a trio is a composition for three performers, or for three parts. In some dance movements and in marches the term "Trio" is applied to a movement of a more melodious nature and, usually, somewhat slower pace. It seems that this term originated with Lully, who wrote a movement of a character different from the rest of the piece and had it performed by a trio composed of two hautbois and one bassoon.

Absolute Pitch.

Q. *Is it possible for one to identify a note correctly merely from hearing its sound? Does not the fact that some instruments are tuned higher than others make more absolute identification a mere approximation?*—R. E. E., St. Louis, Mo.

A. It is not only possible but is a well-known fact. It is termed "having the sense of absolute pitch." Many musicians have it. It makes no difference that some instruments are not in tune with the recognized pitch of 435 double vibrations per second for the note *la* (second space, treble). The person possessing absolute pitch has this *la* fixed in mind and is able to recognize any deviation from it. He is right and is able to determine any departure from it, either on the part of the instrument or of the performer. The idea of "mere approximation," therefore, does not apply. A pound in weight is sixteen ounces, whether the scales be true or not.

Yawning—Cause and Cure.

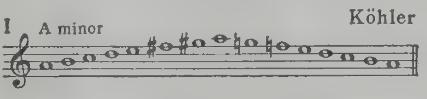
Q. *Why do I yawn continually after having sung for a few minutes? I experience the same embarrassment after reading aloud for a short time.. Can it be overcome?*—L. A. D., Allentown, Pa.

A. This tendency to yawn when, or after, singing or speaking, is caused by a certain stiffness of the muscles of the jaws, near the ears, sometimes also by stiffness of the larynx from pressure by the root of the tongue. To correct it, keep a loose jaw *at all times*, and do not allow the tongue to slip back; it should lightly touch the lower front teeth at all times, except when articulating consonants.

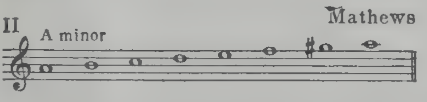
Minor Scales.

Q. *Please tell me which of these two scales is correct for A minor.*—HAZEL H. H., Toledo, O.

I



II



A. They are both correct: (i) the Melodic minor of A; (ii) the Harmonic minor of A. The latter is the most modern form of minor scale and the most beautiful. It is easily recognized as having a minor third and a minor sixth; the interval from the minor sixth to the major seventh forming an augmented second (three semitones).

"The Sands of the Desert."

Q. *Can you tell me, please, of what composition "The Sands of the Desert" is an imitation? I refer to the style of the music.*—E. I. M., Syracuse, N. Y.

A. The Bolero.

The Whole-tone Scale.

Q. *i. How would you explain the fact that F♯ and G♭, while different in notation, are really the same tone on the piano when the scale is considered as having eight tones? Also, why not continue in sharps, thus: C d e f♯ g♯ a♯ b♯ C, since there are no half-steps? (ii). Where should one write for permission to arrange a piece as a solo for other instruments, or parts?*—L. M. T., Syracuse, Kan.

A. (i). You misuse the word "tone" evidently. The ordinary scale has not "eight tones;" it consists of *seven* different notes and is said to contain five tones (or whole steps) and two semitones (or half-steps). These are included in an octave, the last note bearing the same name as the first. Your interval b♯—C is *less* than a half-step! The *whole-tone scale*, similar to the older scale has *seven* different names (and *six* whole-tone steps) in order to move by conjunct steps, with enharmonic aid—g♯ and a♭ being, on the piano, one and the same sound: C d e f♯ g♯ (a♭) b♭ C. (ii). Address the publisher for permission.

KIMBALL

"The Instrument of Yesterday, Today and Tomorrow"

RENOWNED alike throughout Europe and America among operatic sopranos of her time, LILLIAN NORDICA placed upon the KIMBALL the seal of her highest preference and heartfelt admiration.

MORGAN KINGSTON, one of our favorite living tenors, voices his delight with the KIMBALL Piano in a single emphatic phrase: "One of the best toned instruments I have heard."

The past and the present, foreshadowing the future, hold in their verdict ample assurance of continued achievements by the KIMBALL—the piano of imperishable fame.

Pianologues

The clever pianologue merits a place on every entertainment program. For either platform or parlor use, we especially recommend the following as readings or as vocal solos:

DREAMIN' IN DE TWILIGHT	(Negro)
HATS	(Humorous)
KEEP A SMILIN'	(Inspirational)
THE LADIES' AID	(Humorous)
MIA CARLOTTA	(Italian dial.)
A PERFECT LITTLE LADY	(Humorous juvenile)
SPEAK FOR YURESELF, YOHN	(Swede dial.)
SPIRIT OF '76	(Patriotic)
THE STORY OF A SONG	(Dramatic)
THE YOUNGEST IN THE FAMILY	(Humorous juvenile)

In full sheet music form—price, postpaid, each, **35c.** The set of ten "ETUDE 1924 COLLECTION," **$3.00.** Complete list of entertainment material on request.

The Organist's Etude

It is the Ambition of THE ETUDE to make this Organ Department
"An Organist's Magazine Complete in Itself"

Edited by Noted Specialists

The Accompaniment of a Church Service

With a Few Hints for Young Organists

By George F. Austen

MUCH has been written on this subject, but the experienced organist who has had opportunities of visiting churches, other than his own, will probably agree that there is still much room for improvement in this important department of a church musician's work and that, although in the past twenty years progress has been made, there is still a long way to travel before refined and inspiring accompaniment is the general rule, rather than the exception as it is at present.

Probably the chief cause of so much poor work is because many organ teachers devote too little time to accompaniment in their pupils' lessons. The playing of voluntaries and recitals, though very desirable, is not essential. Congregations can and frequently do avail themselves of the opportunity to retire at the earliest possible moment, and, if there is an organ solo at the offertory, or elsewhere in the service, the piece chosen is usually of a simple character not making serious demands on the player's technic, and better so, as this is hardly the place to show off a performer's skill.

A further reason for poor accompaniments is probably that so many pianists take church positions, without sufficient training. Not that one would decry the capable pianist, their technic should stand them in good stead, but, as the idiom of the organ is so different from the piano and because a correct pedal technic is absolutely necessary, no pianist ought to accept a church position, however badly the extra money may be needed, without first placing himself for some time with a good organ teacher.

For a clever pianist, the preparatory training need not be long, given a good teacher and daily practice on the organ (short practice daily is always far more valuable than one or two long practices in a week), the earnest student will usually be sufficiently prepared in a few months to play an ordinary service tastefully, provided that accompaniment has been systematically taught, though to gain a real mastery and to play moderately difficult standard works well, the course of study must extend over years rather than months.

Noisy Playing

Now a few words with regard to some of the more frequent indiscretions, which suggest themselves as a result of hearing many services in the United States, Canada and England.

1. Perhaps the most common mistake is noisy, coarse playing, and this notwithstanding the fact that so much has been written condemning the practice. Congregations are much to blame for this, or rather individual members. People as a rule are entirely ignorant about the organ, and are apt to judge a player from the amount of noise he can produce from his instrument. The more he gets out of it (a frequent quotation), the greater player he is. A young player requires a stiff back to resist this and many other suggestions that will almost certainly come to him.

2. The next abuse of the instrument is the excessive use of the tremulant. What a relief it has been more than once to visit a church where the organ did not possess this hardworked accessory.

3. Third in order comes the tiresome and incorrect alterations of the four-part harmony of hymns and chants, including also under this heading the practice of giving undue prominence to the melody, which one often hears soloed on stops of acute pitch (4 feet and 2 feet), and, what is perhaps even worse, the making prominent of some ery uninteresting middle part.

4. The last weakness to be mentioned is the treatment so often given to the pedals, buzzing and booming throughout, without ceasing; the practice of playing the bass of hymns, chants and other set pieces in the octave that best suits the player, and the habit of dabbing at the pedals with the left toe, leaving the keys in order to find the next one, as if they were red hot. Under this heading might also be included the tiresome habit of putting the pedal note down long before the hands get to work and leaving the pedal note down between verses, no matter how long a rest is made on the manuals.

Eliminating Weaknesses

Now a few words of advice as to the correction of the above faults.

1. Noisy playing. Adopt the habit of reading the words of hymns and psalms through before service. Note the opportunities for a climax; the effect will be more lasting if it is short. Study your instrument well. Do not work up your climaxes with the crescendo pedal; save this for an emergency. This method is the lazy one and tends to make one's playing monotonous, as the stops must always come on in the same rotation. Learn to work up a climax with diapason tone only. Do the same with reeds, flute or string toned stops. (It must be said, however, that lucky is the man whose organ permits all this.) In other words, discover how to get variety and how to make a joyful noise in different ways.

2. The tremulant should be used sparingly, never with a loud organ, the opportunities for its artistic use in psalms and hymns are few and far between. This fault can be cured at once, the remedy being, of course, don't do it. But, after all, what the student most needs to learn is to care less for the approbation of the musically ignorant and to be guided only by his own artistic instincts. If these do not serve him aright, the only cure is to try some other profession to which he may be better suited.

It is of interest to note that the late Henry Willis, England's greatest organ builder of the last century, refused to introduce tremulants into his organs, excepting only to work on the Vox Humana. He would not go so far to-day; but you can have too much of them. We all agree in this.

3. To play the notes of hymns and chants exactly as written, throughout the service, would perhaps be very monotonous; although a good deal of variety can be obtained by the judicious management of the stops, with an earnest attempt to give effect to the words. No student, however gifted, should vary the part writing, or reharmonize a tune for unison singing without a course of Harmony and Counterpoint. Get down to hard work on these and kindred subjects as soon as possible and note the rapid improvement that invariably comes, in the practical work as well, if the studies are pursued sufficiently.

The effect of an occasional verse in unison with a varied accompaniment is good and assists congregational singing, if the harmonies are not of the sickly chromatic type. Every young player is strongly urged to write out these and other variations from the text, that he intends to make. If preferred, they can be memorized, but to attempt them on the spur of the moment is only safe to the fully trained, mature organist.

Picking out the melody with stops of acute pitch is tiresome, and even with an 8-ft. stop, be moderate. A prominent tenor part is seldom satisfactory, only, in fact, when that part has the chief melody, as in a few Anglican chants. This fault seems rather popular, presumably because it usually is the easiest change that can be made. Above all, do not do this kind of thing when playing the tune over.

Sometimes the alto part, superimposed above the soprano, sounds well; but the best effect of this kind is gained by creating a new melody from the treble, alto and tenor, with the assistance of any notes of the chord that may not actually occur.

All these devices, however nicely done, should be used sparingly, and seldom with a loud organ. Congregations need encouragement to take their part, and the organist should do all he can to help them. If he has a real desire to hear the people sing, he will be very careful not to introduce any element into his playing that would tend to prevent them.

One other fault, of a kindred nature, is filling in the intervals of the melody with passing notes. Diatonic passing notes are bad enough, but chromatic ones are execrable. Sounds brilliant and sometimes impresses the ignorant, no doubt, but again, don't!

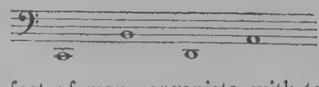
Give the Pedals a Rest

4. Give the pedals a rest sometimes. Soft combinations on the swell or choir are very effective without them. In hymns and chants, play the bass as written. The sixteen-foot stops of the pedal organ transpose the bass one octave lower, and this is enough. Occasionally, perhaps, in loud verses, they may be played an octave lower, if the whole phrase permits the transposition. Such a passage as

Ex. 1

becomes

Ex. 2



at the feet of many organists, with terrible effect.

Then the pedal part must be kept legato and phrased as the manual parts are (or ought to be). One foot will not, as a rule, encompass this, therefore, the right foot must not be glued to the swell pedal. This latter must be left severely alone, unless the pedal part can be looked after satisfactorily as well.

Hymns should be carefully practiced. The most convenient method of pedalling must be chosen and kept if possible. Students will soon realize the easiest way and eventually a bird's-eye view will suffice.

Organ students studying with a view to taking a church position should be introduced to accompanying just as soon as they are able to pedal with some degree of freedom and have mastered a few trios or other exercises for manuals and pedals combined. Stainer does this in his admirable method, though perhaps we have him to thank for the frequent use of soloing the melody, as mentioned above. Note, however, he does not suggest solos with four-foot and two-foot stops. Single and double chants are always easy to play, and if a store of these are memorized in the early days of study, the Episcopalian organist would get the habit of playing these without the book and later on would find his work much lightened when accompanying the psalms, perhaps the most difficult thing he will have to perform.

Registration

Excellent books have recently appeared on stop registration, and among others one by G. B. Nevin. As this subject is too big to tackle seriously in a magazine article, the student should make a point of adding all he can afford to his library, of studying them carefully and refreshing his memory with them from time to time.

The following hints, however, might be of some use to an organist in his early attempts in public. Diapason tone, either soft or loud, always forms a good background for voices, and should enable the choir to sing in tune, and they will not encourage shouting to the extent the more fiery reeds will. If, however, flattening of the voices does appear, try an added four-foot register. This will often correct the fault more quickly than increasing the power by other means.

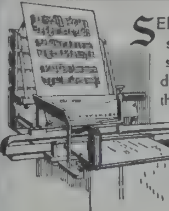
Manual doubles (sixteen feet) should be used sparingly in accompaniment and never on the Great, unless the congregation is singing lustily in a well-known hymn. Take care, when adding the swell reeds, that the box is tightly closed. Keen string toned stops require care. Some singers find it difficult to pick up their leads from them, and celestes leave the question of pitch somewhat indefinite too, so they are better avoided for this, if for no other reason. A splendid effect on some organs can be obtained with the pedal reed. For occasional use there is no need to reserve this stop till the manual reeds are added. Try it with the Great Diapason's of sixteen, eight and four feet coupled to the full swell.

The Pace of Hymns

One of the most vexed questions has been purposely left to the last, and that is the pace of hymns and chants. There is no doubt that the general tendency is to take them much too fast, not only on this side, but in the old country as well. I am convinced that we should be well advised to adopt a more moderate pace, neither rushed nor yet dragging. No matter what one's own personal opinion is regarding congregational singing, we must endeavor to sink our artistic fads and do our utmost to get every member of our congregation to take part at least in the hymns. Pace has a good deal to do with this question. The best singing is heard where the pace is somewhat on the slow side.

The Fatal Piano

A CALLER asked of a friend, "Is this the piano that you bought for your wife? What did it cost you?" The husband, sighing, answered, "My domestic peace."



You Can Make Your Own Music Rolls
~ WITH THE ~
LEABARJAN PERFORATOR

SELECT YOUR favorite sheet music and in your spare time you can produce player rolls. Just think of the many pleasant hours you, your family and friends may enjoy cutting and playing the rolls which you have longed for.

So simple that a child can easily operate it, this wonderful little instrument will enable you to put into each roll the individuality you would give the piece if playing by hand.

The Leabarjan Perforator is used and endorsed by player piano owners the world over. It makes accurate rolls for any style player piano. We furnish all the necessary materials at low cost.

The Leabarjan Perforator is not expensive, and it may be bought on easy monthly payments. Write today for free details.

An organist can do much to encourage the people. Let his playing be firm, decided, and, above all, rhythmical; not necessarily loud, but with a good body of tone, at least until the congregation has the tune well in hand. Study the expression required by the words, on broad lines. Do not be too punctilious about pianissimos. Then, if the hymns (tunes) are chosen with discretion, improvement will be noticeable in a month or so.

Try to gain the confidence of the minister, so that the hymns may be chosen in consultation. Many of our hymns are not really sung and never will be; so make a particular note of those that go well.

If congregational singing is to be general, our choice is somewhat limited. There are perhaps 50 or 60 worth-while tunes that go everywhere. A goodly portion must be chosen from these and new and less familiar tunes used very sparingly, but repeated rather frequently until they also can be added to our list of well known tunes.

Congregational singing is a fine, helpful thing for our people and we organists must do our utmost to foster it. The present writer numbers among his most pleasant recollections the services at a military church in England at which he was privileged to play and at which the singing was entirely in the hands of from 1400 to 1800 Coldstream Guards, singing that taxed the power of a tonally large Organ to support, and when the National Anthem was sung, with a drum roll in addition, the effect was overwhelming and will live long in the memory of those present.

The Church Pianist

Mrs. Robert McConaughy

The problems of the church organist are many; but the difficulties of the church *pianist* are more. The piano is not exactly suited to the church service; yet in hundreds of churches it must be used. Unsuitable selections for preludes and offertories, and poor playing of hymns and anthems are the rule rather than the exception. A pianist may be well trained and efficient in other lines but lack the ability to adapt her skill to the requirements of the church service.

First in importance is the efficient playing of hymns. Here the most common fault is uneven attack. The left hand comes down an instant *before* the right, or the chords are rolled from left to right. The player often does this unconsciously, and one should listen carefully to one's own playing to see that this reprehensible habit has not been formed. "America" and the "Doxology" have been murdered in this way, times without end. The choppy player always comes out strong on the familiar hymns!

Unless there is a director on whom to rely, one can hardly be too careful about *time*. The writer has been a church organist for thirty-five years, yet finds it wise to count inaudibly for all new hymns and many times for the old ones. A common fault is cutting off the last beat of each line. The final note should be held its full time, and the sustained tone can be secured on the piano only by a pressure legato touch and the use of the damper pedal.

Pedaling must receive careful attention, the syncopated form being best adapted to hymns. The knowledge and observance of phrasing is absolutely essential to the church pianist. An unphrased hymn has exactly the effect of a paragraph read with no attention to punctuation marks.

When the sopranos are weak or the congregation is inclined to flat, it is well to play the soprano part in octaves for one verse. Also if volume is desired for support, the bass may be played in octaves—the right hand taking soprano, alto and as much of the tenor as can be reached.

The Advance of Accents

In the matter of accent the pianist has the advantage of the organist. A strong primary accent is necessary and a secondary accent on the six-eight meter hymns is a help to their correct rendition.

When the congregation drags, of course, the choir never does! a sharp staccato playing with pedal *on* not *after*, each note and lifted as the hand is raised, will bring up the time. The pedal must be released as the hands leave the keys, otherwise the desired crisp staccato will not result.

As for accompaniments for solos and anthems the pianist is fortunate. At least one half all sacred solos are written with a piano accompaniment and must be adapted to the organ. Anthem accompaniments should in general be played with the same directions as suggested above for hymns, that is, with due regard for time, accent, phrasing, and pedaling.

The selection of appropriate preludes and offertories should not be difficult. The piano is preëminently the popular instrument for composers; and its vast literature affords unlimited material for use in the church service. Why then the sentimental trivial stuff that one hears played in church? It is suitable only for the movies, and hardly to be commended there.

The following compositions are suggested as worthy and suitable for preludes.

Andante Cantabile from the *String Quartet, Op 9*...............Tschaikowsky
Pilgrim's Chorus from "Tannhauser" Wagner.
Largo .... Handel.
My Heart Ever Faithful......Bach-Heinze
Nachtstücke, No. 4...........Schumann.
Preludes in E Major and C Minor Chopin.
Andante from the "Fifty Symphony" Beethoven.
A. D. 1620, from "Sea Tales". MacDowell.
Contemplation and *Adoration* from "Holy City" .... Gaul.
Nocturne from "Midsummer Night's Dream" ....Mendelssohn
Am Meer ....Schubert-Liszt
Au Matin ....Godard.
By The Sea...............Stephen Emery
Yesterglow.............R. Deane Shure.

Also the slow movements from the Sonatas of Mozart, Haydn and Beethoven.

A very effective number for certain occasions is *Coronach* by Barratt, a Scottish dirge or lament; and the Rachmaninoff *Prelude in C Sharp Minor* may be used similarly. For Christmas, *Yuletide Charm* by Englemann brings in chimes and Christmas hymns with good effect.

Offertories may include parts of some of the Chopin *Nocturnes*, the Liszt *Consolations*, Schubert *Impromptu's*, and many of the shorter compositions of Schumann. The short MacDowell pieces are ideal, *By the Fireside* and *An Old Love Story* being a pleasing change from the much played *To a Wild Rose* and *To a Water Lily*. At a Children's Day service or Flower Day Program appropriate numbers are Mendelssohn's *Spring Song* and Lange's *Flower Song*, also the charming *Echoes of Spring* by Friml. Other suggestions for offertories follow:

Moonlight on the Lagoon..........Friml.
Berceuse .... Spendiarow.
At Evening ....Schytte.
Murmuring Zephyrs .....Jensen-Niemann.
Cradle Song..................... Barili.
Consolation and *Confidence*..Mendelssohn.

. . . "We look for moments when song leads and inspires us."—Thomas Carlyle.

I Have Found Out How to Get Rid of Superfluous Hair At Once

Here's the Secret

I had become utterly discouraged with a heavy growth of hair on my face and lip. I had tried every sort of depilatory and electrolysis and even a razor. But I couldn't get rid of it.

Then I made a wonderful discovery. I found a simple method by which I removed the hair at once and with which I have kept it removed. My face is now as smooth as a baby's, not only free from superfluous hair, but from pimples and blemishes. I have explained this discovery to thousands of women who have had the same experience with it that I had and I will explain it to you if you also have superfluous hair. It isn't like anything you have ever used. It is not a powder, paste, wax or liquid, not a razor, not electricity. It causes no itching or burning and leaves no scars. As easy to use as your comb or brush.

Send for Free Book

A book that tells just how this wonderful method gets rid of superfluous hair is free upon request. Don't send a penny—just a letter or postcard. Address Annette Lanzette, Dept. 812, Care Hygienic Laboratories, 204 S. Peoria Street, Chicago, Ill.

Just for Today (High).*J. T. Wolcott*
ORGAN
Finale in C ....*Harris*

New Music Books

Camille Saint-Saëns, His Life and Art. By Watson Lyle. E. P. Dutton and Co. 210 pages; bound in cloth. Many notation illustrations.

A sympathetic biography introducing much new and interesting material about the famous French composer. A useful list of works is appended to the book. The analyses of the creations of this many-sided man are very excellently and very concisely done.

History and Outlook of the Junior Department of the National Federation of Musical Clubs. By Mrs. William John Hall. Published by the National Bureau for the Advancement of Music. 80 pages; bound in boards.

Annals of Music in America. By Henry C. Lahee. Cloth Bound; 298 pages; price $3.00. Published by Marshall Jones Company, Boston.

The author evidently has gone through the musical records of our country with a fine-toothed comb. Beginning with the landing of the Plymouth colonists, the second publication of their first printing press was a Psalm Book. From this time it would seem that about every musical event of any moment, up to December 31, 1921, has been caught and arranged in chronological order. At the close of the book all compositions mentioned therein are arranged alphabetically, according to composers, with date and place of performance. Noteworthy operas, concerts, conductors, conservatories and schools, debuts, instruments, opera companies and choral societies, also are listed. A most valuable book for the one seeking brief musical history knowledge.

The following marches are excellent for Postludes;

March from Athalie.........Mendelssohn.
March of the Jewish Warriors George Shinn.
Festal March ....Kroeger.
Marche Solenelle ....Ketterer.

It is a mistake to play organ music on the piano or to try to adapt it to that instrument. Use the best in piano literature, but only that which good taste decrees as suitable for a church service. If the congregation does not enjoy classical music, modify the selections somewhat to their liking, but try to include one number of the highest grade each Sunday. It is always wise to "expose" people to good music for it will eventually "take."

Practicing on a Pedal Piano

By Orlando A. Mansfield

A serious difficulty encountered by almost all diligent organ students is the securing of adequate practice on an instrument with a correctly constructed pedal clavier. Practice on church organs are often unobtainable; and, if permitted, is often impossible, either on account of the distance of the instrument from the student's residence or on account of the low temperature of the building during the winter months, a difficulty, by the way, which is very seldom encountered in the milder climate of the South and West of England. Under these circumstances the student has three courses open to him. Provided he possesses sufficient means and space he can have an organ installed in his own house. This, however, is a counsel of perfection. On the other hand, a resort to a reed organ is very much like a counsel of despair, as this instrument ruins the manual touch, and when it is furnished with pedals the latter are generally out of scale and, even if of correct gauge, cannot be correctly used, as at least one foot must be used to supply wind. Resort to a pedal piano, however, is a middle course; and this, according to the old Latin tag, is where we shall go with most safety. But a resort to a pedal piano is something more than a counsel of mere expediency. The pedal piano assists in the formation of a better manual touch and technique, requires no blower or blowing apparatus, is less monotonous in tone than a small organ, and is comparatively inexpensive, as the pedal action can be attached to almost any piano.

In Great Britain these pedal attachments are very popular, almost every concert organist of note possessing one or more of them. Our old friend, Dr. A. L. Peace, the successor of Best at St. George's Hall, Liverpool, possessed several pedal pianos, and did almost all his private organ practice upon them. Fortunately these attachments are becoming better known in America, but at present they are not nearly so popular or so easily procurable as they should be. Some English firms are producing two-manual pianos with pedals. In all cases the pedals are arranged so as to pull down the piano key in the octave below, thus giving the 16-foot pitch; while some pianos have an octave-coupling action which pulls down the 16-foot and 8-foot tone simultaneously. When not in use, or not further required, the pedals can be put out of operation by the movement of a lever or rod. They can then be removed entirely or, being now rigid, can permit the feet of the performer to rest on them and the piano to be used in the ordinary way.

Apart from the simplicity, inexpensiveness, durability and comeliness of these pedal attachments, a pedal piano not only provides the student with the means for accent and expression on both manuals and pedals, but if often prevents him from adopting that excessive use of substitutional fingering (*i. e.,* changing the fingers on a key without repeating it which so effectively cripples a student's execution), preventing him from rendering advanced organ music at anything like a rapid tempo, and causing his best efforts in organ playing to sound "muddy" and indistinct. And as the piano pedal keys have to be struck rather than pressed, this causes the student to cultivate a more brilliant and a much clearer pedal technique, a marked improvement in this respect being noticeable when a return to the organ is made after some considerable amount of work has been done at the pedal piano. Of course "thumbing" can only be practiced on a two-manual piano; but passages in which the hands are playing simultaneonsly on different keyboards, and have to cross each other above or below, can generally be managed on the pedal piano by playing the upper part an octave higher or by transposing the lower part an octave lower, or even by transposing both parts an octave in contrary directions. And although the pedal piano cannot sustain the tone indefinitely, this very lack of *sosenuto* may be converted into a positive advantage, since the student will then have to rely more and more upon his knowledge and proportionately less upon his ear. In other words he will have to learn to walk by faith and not by sight, a most salutary discipline in matters musical as well as in matters moral.—The Choir.

JUST released, Red Seal Victor Record, by Frances Alda of the Metropolitan Opera Co. Clay Smith says in his review of "Memory's Garden," in the "Lyceum Magazine": "There is style-plus, for it teems with vocalistic show places. 'Memory's Garden' is a great concert song and will live for years." Published in three keys, with orchestra accompaniment, Duet for Soprano and Alto, Quartets for Mixed, Male and Women's Voices. Obtainable at all music stores or from the publishers

Pedagogic Don'ts for Teaching

By Henry Nordlin

1. Do not force *against odds* any phrase, technical or otherwise.

2. Do not show any nervousness or displeasure without *real cause, otherwise the pupil takes advantage or becomes possessed* of the same state of mind.

3. Do not "live" in the pupil's brain; if it is to be, it should be in yours.

4. Do not talk morals of any kind.

5. Do not be too prone to answer silly questions.

6. Do not let your pupil scheme or belittle you, or criticize ignorantly, thereby becoming egotistical, thereby lowering you in the pupil's eyes.

7. Do the best you can and do not worry about them; an indolent pupil is not worth the sacrifice.

8. Do not talk too much.

9. Do not neglect to store up dynamic energy for the day's work, so you can meet it smiling.

10. Do not delve into the pupil's private affairs.

11. Do not give too short lessons.

12. Do not allow your profession to be belittled.

Auber and "Tannhaüser"

Several persons were discussing the opera *Tannhäuser*. Some spoke highly of it; others criticized it pitilessly. Old Maestro Auber, who had been listening to them, approached the favorable and unfavorable critics, saying: "Wagner is a composer of great talent, and his score contains many beautiful pages; however, his audience, no matter how much it admires the work, is smothered under so much science; for, like a book without any punctuation, the reader does not know where to take breath." Auber added that Wagner was a Berlioz without the melodic vein.

Farmers and Music

To the Etude:

Few people, especially those living in the city, realize just what music means to the farmer and his family. Nine out of every ten farm homes have some sort of a musical instrument. Many have both a piano and a phonograph.

Country folks certainly enjoy good music just as much as their city cousins, though they do not have so many opportunities to hear real artists. One hears very little "jazz" in our farm homes.

I have in mind a girl living on a small remote farm. She has been studying music with a really good local teacher and is making excellent progress. She is making the best of her few advantages; namely, subscribing to the best musical magazines and reading the best books obtainable on harmony and history. Both her parents are music lovers, and they have what she calls "the concert" every evening. At the concerts she plays only music from The Etude and from collections of the old masters.

Music has become so much a part of the farmer's life that no social gathering, no matter how large or small, is complete without it. Consequently many of the young folks of the farms attend the nearest conservatories. Many return to their home communities to organize music clubs, orchestras and bands, and to promote music in general or on the farm.

Because of the lack of other amusements, the farmer's family gets more real pleasure from music than those living in cities.

—Dessie Stephens, Nebraska.

"Imitation is the means and not the end of art."—Lubbock.

How the Phonograph Came Into Existence

By Sir George Croyden Marks, C. B. E.

There are very few professional men who have a longer or more intimate and detailed knowledge of the growth of the phonograph and gramophone industry than myself. For the past thirty years I have been intimately concerned in one direction or another with all the leading and chief inventions that have converted what was originally a mechanical curiosity into a world-wide industry of primary importance to all interested in promoting the education, entertainment and enjoyment of the people. The phonograph and gramophone were by no means of sudden growth, neither were they the result of accident or a mere chance creation, for in 1779 the Imperial Academy of Science of St. Petersburg offered a prize for the production of a machine that would reproduce speech or vowel sounds. Many attempts were made to win this prize, and subsequently an Austrian devised an apparatus by which with the use of a reed, he was able to get some reproduction of sound.

In 1877, however, a Frenchman conceived and developed an idea for a machine that was to be a talking machine, and he read a paper concerning its possibilities; but it was not until in that same year, singularly enough, that Edison took the matter up seriously to produce a practical machine. He had, when in collaboration with Professor Alexander Bell, while working on the telephone device, devised a toy in which there was a funnel and a diaphragm at its end having a little pawl which moved a ratchet wheel when the diaphragm vibrated, and this wheel, in turn, by a string, moved a paper toy shaped like a man sawing wood, so that when Edison shouted into the funnel, *"Mary had a little lamb,"* the paper man started *sawing wood*. This was the genesis of the phonograph. He then thought if he could only record the movement of that diaphragm he might be able to reproduce the human voice.

He sketched out his idea of a little machine, and gave it to one of his workmen, named Kreuse, to make, marking the price of eighteen dollars on it. It was his habit when having experimental apparatus made, to put the price on it, and, if the man lost, he paid him his time rate, and, if he made more than his time rate he kept it—not a bad system, even for these days. Kreuse asked what the thing was to do when he had made it. Said Edison: "I told him I was going to record talking, and then have the machine talk back." Kreuse did not reply, but simply looked in pity at Edison, and started off to make the machine. When it was finished Edison put tin-foil on the cylinder and, after adjusting the reproducer, shouted what appears to have been a favorite doggerel, *"Mary had a little lamb."* The reproducer was adjusted, and it then reproduced the words perfectly. They were astonished. Kreuse, the workman, was awe-stricken with amazement, and exclaimed, *"Mein Gott im Himmel."* This machine, costing eighteen dollars—the very first practical phonograph—can now be seen in the South Kensington Museum.

Passing the Thumb Under

By Celia F. Smith

In teaching children to pass the thumb under the hand they will sometimes do it more easily if told to make a good arch under the fingers, then think of the thumb as a man going under the arch. He is not to run under, or jump under, but to go under easily and quietly, and be very careful that the arch does not fall down on his head.

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Slipping Pegs

One of the principal reasons for the popularity of the piano, is the fact that it is always ready for business. A well made piano, tuned twice a year, give very little trouble. With the violin, the case is quite different. We have peg trouble, and string trouble, bridge trouble, and all sorts of trouble. There are many mechanical details on the violin which are often going wrong, and which have to be constantly looked after by the player himself I am quite sure that if the violin remained constantly in tune, and gave as little trouble as the piano, the number of violin students would double and quadruple in a comparatively short time. I have known violin students who gave up the study of the instrument, on account of string troubles and the trouble caused by slipping pegs.

Violin students have much trouble with slipping pegs. A southern subscriber of the Etude writes: "What can I do to remedy slipping violin pegs? My pegs are of ebony and appear to be very well fitted, have left the repairer only a few months ago. My strings are put on properly, that is, coiled around the peg next to the cheeks of the string box. Have had no trouble with them for a while, but now they begin to slip in spite of all I can do. I am sure that there is nothing more discouraging to violin students than slipping pegs. I have always been troubled in this way and I have never been able to get a set of pegs adjusted so nicely that strings may be tuned without taking down the violin from the chin, in spite of many books and articles to the contrary.

"Another violin of mine, with rosewood pegs, gave the same trouble and after having a good repairer put in a new set of ebony pegs, I had just about as much trouble with them as the old ones."

Professionals Not Troubled

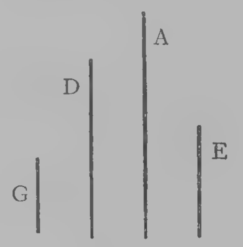
Slipping pegs are among the chief nuisances of the student and amateur violin player. The professional is not troubled in this way. Why? Simply because like a good workman he has learned to keep his tools in order. The expert barber has his razor always sharp, and the saws and planes of the carpenter are always ready for work. The pegs of the professional give him no trouble for three reasons: first, because he has the best pegs perfectly fitted; second, because he knows how to take care of the pegs; third, because he knows how to manipulate the pegs in tuning.

Very few amateur violinists have high class instruments with pegs of the best quality, adjusted perfectly to the violin. It takes a very expert workman to adjust pegs, and such experts are scarce even in our largest cities. The peg must fit the hole in the cheeks of the string box with absolute perfection. It must be a real air-tight fit. The reason why this is so important is that the peg is held in its socket by *friction alone;* and if it does not fit perfectly, there is not enough surface to hold it. It is somewhat expensive to have a first class set of pegs adjusted perfectly, somewhat more than the average amateur is often willing to pay. I consider a good set of well-fitting pegs cheap at any price, from the great convenience they afford the player. They will last for fifteen or twenty years or longer; so that their cost divided up among all these years makes their first cost seem less prohibitive.

Next, we must consider care of the pegs. What we desire is to have the pegs turn easily and gradually without a series of little jerks) and to hold firm when they have reached the desired point, in tuning. This is accomplished by the occasional use of soap and chalk. Many violin players use so much soap that the pegs will not hold and do nothing but slide. A very minute amount of soap applied to the peg will answer. It is a good plan to wet the finger and thumb and rub them lightly over a cake of soap. Then twirl the peg between them so that a very thin film of soap is deposited on the peg. The peg can then be lightly rubbed with a piece of cloth which takes all but a slight film of soap, off the peg. Then apply chalk (the common school blackboard chalk will do) to the peg, and there will be no further trouble. The student will soon learn the relative amounts of soap and chalk to use.

It must be remembered that the state of the weather, as regards the amount of moisture in the air, has a good deal to do with the pegs working well. In wet weather the moisture in the air causes the pegs to swell slightly and to stick. By a little manipulation they can be loosened up, so that they will work smoothly again. In warm weather or in a steam-heated room, the pegs will dry out, and have to be pushed in the holes slightly farther so that they will stick.

Another cause of pegs slipping is the faulty way which some people have of putting on their strings. The E and A strings must wind on the right, close to the right cheek of the string box, and the G and D on the left, close to the left cheek of the string box. If the strings wind in a contrary manner, they have a tendency to pull the pegs out. The following diagram shows how the string should look in the string box. They should be in straight lines and not crossed.



Nine-tenths of the trouble of slipping pegs, when the mechanical details of the violin are correct, comes from the violin player failing to push the pegs in as he tunes. Pegs are held by friction alone, and if *steady pressure* is not applied as the peg is turned in tuning, it is going to slip. If the violin is tuned with the left hand without being taken down from the chin, one or more fingers must be wrapped around the string box, so that the thumb and finger used in tuning can press the peg in while tuning, by squeezing the hand. If the violin is taken down, and both hands used in tuning, one hand must hold the string box firmly while the thumb and finger of the other hand presses the peg in. If the peg is simply turned, without being pressed in, it will not hold at all, but will be constantly slipping.

Many teachers are negligent in instructing their pupils in these mechanical matters. This is a great mistake, as the pupil cannot make proper progress unless he has a violin to play on which is well tuned and has all the mechanical details correct. Thousands of pupils play out of tune incessantly, because they cannot tune their violins correctly on account of pegs which are in bad order and continually slipping.

Music is first of all something to be felt; and it is one of the arts which does not always explain itself.

—Dolores Bacon.

Sight-Reading

"Sight-reading" is the only satisfactory all-around test of an instrumentalist. Most violinists have suffered at the hands of a pianist who needed to try an accompaniment over a few times "just to get the swing of it"—and then forgot something of "the swing" during the solo's performance.

There are many so-called musicians who can play a selection, or sonata, with the accuracy of a mechanical piano when they have "learned it." This signifies: when a teacher has explained how fast or slow the piece should go, what all the signs and words mean, what fingering or bowing should be employed; and when, besides, it has been thoroughly "practiced."

Of course, such a person has no claim to be called a musician.

To read accurately "at sight" denotes that the player understands all the essential things about the music, and has an adequate, ready technic.

The average professional player is no genius; but he is a real musician, because he is, of necessity, a sight-reader.

As he goes to his seat he, usually, has no knowledge of what music will turn up. There may be on his desk an ancient symphony and a new tone-poem, a tranquil sonata and a frantic jazz, and a dozen things bristling with fearful demands on technic.

But it is all sheet music so, of course, he will play it all, familiar and strange alike, as if he had known it for years.

One pianist lately came to my notice. She was an accomplished player, who talked of Bach, and Beethoven, and Interpretation; yet she could not relieve a motion picture pianist, because she "did not know enough pieces" to last through one evening performance. The idea of borrowing half-a-dozen fresh books and playing at sight did not occur to her.

To read well, at sight, requires no special talent; it is an attainment acquired as naturally as any other. The whole secret of it lies in having plenty of fresh music; and doing plenty of work.

Happily, though, the acquirement of this sight-reading ability is not a monotonous, depressing process, like the acquiring of some phases of technic but, on the contrary, an enjoyable, interesting labor.

You may, and should, begin straight away, whatever your grade of proficiency. You, of course, should have a teacher who believes in and emphasizes the value of sight-reading.

It is necessary to have music of all sorts, light and trashy as well as serious and classical stuff.

Buy it by the pile from second-hand shops, if your library and your purse are limited. The important thing is to get variety.

Now put on your stand a jumbled stack of music, excluding from it every piece that you know.

Glance over the first sheet for the things that you need to know at the start: key, time-signature, tempo; and for convenience—changes of key, repeats, expression marks and awkward passages, and then begin to play.

Play straight through—and go on to the next piece.

Whenever possible one should play like this with another violinist, pianist, or other instrumentalist; each will help the other to "keep going."

The most helpful way is to play with a violinist, providing you have the right sort of duets. In playing with a pianist, you have no means of putting yourself right, without consulting him—a troublesome business. What is worse, from the sight-reading standpoint, a good pianist always watches the cue on his music, and adjusts himself to the soloist; thus your errors may pass unsuspected by you.

It is equally inconvenient to play violin duets in which each performer has a separate part. But in many duets the second-violin line is written immediately under that of the first-violin—the two staves coupled together like those of a pianist. This arrangement is ideal for sight-reading, for each player can keep an eye on the part of his companion.

A great variety of styles, in the music played, train one to grasp the salient features of a composition quickly. For this reason "Selections" and "Potpourris" are especially useful. Selections from standard operas are probably best of all, for such contain an infinite variety of expression.

In playing such music special attention must be paid to the Italian, or other words, which signify changes of tempi. The terrible result of omitting to notice a *Largo,* after a *Presto* movement, can well be imagined. And, in such music as the splendid arrangements of Tavan, a couple of *Allegro Marcato* bars may easily be preceded by just three measure of *Andantino Grazioso,* and followed by a movement of *Lento Maestoso.*

For sheer solid work in sight-reading nothing can beat standard overtures—if taken at the proper tempi.

Paganini, it is said, when he was nine years old, played through Kreutzer's forty-two studies at sight, to the delight and amazement of the composer.

So, then, conquer the wretched weakness of having to "learn pieces," and become a real musician—you can, and will, if you work at sight-reading.

—Sid G. Hedges in the London (England) *Strad.*

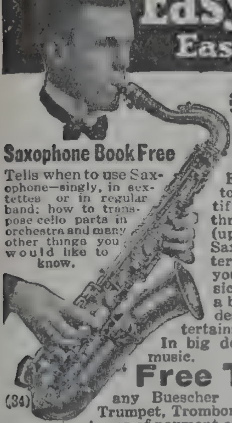
The Eternal Wiggle

A violinist writes the department: "In your June issue of 1918, I read an article, headed, 'When to Use the Vibrato,' and a little discussion took place lately with reference to this matter.

"I understand that there are many teachers who consider that the 'Vibrato' or 'Tremolo' should be used whenever possible, and naturally instruct along those lines. Personally the Etude article referred to expresses my views, but I have been wondering if it would be possible to obtain something more definite, in order to convince those who are apt to abuse this effect. In any case I would like to know if the great artists, such as Elman, Kreisler, Heifetz, Thibaud, Kubelik, Zimbalist, make use of the vibrato differently from what your article would indicate. Any information you can give me on the subject will be gratefully acknowledged."

The acquirement and correct use of a good vibrato is of universal interest to all violinists, and rightly so, since the simplest melody, played with an artistic vibrato acquires a charm which it would otherwise lack. Cesar Thompson, the famous violinist and teacher, has given us the expressive phrase, "life under the fingers," to describe the effect of the vibrato.

Sustained tones played without vibrato are like the wax dummies in the modiste's window, without life or interest. These same tones produced with the vibrato, pulsate with life and emotion. They live



Easy to Play

IT'S REALLY SURPRISING HOW

Stuber's "Instrumental Music Course" has met with the warm approval of supervisors and teachers.

The coming school year will find this course forming the backbone of public school instrumental music in many of the more advanced cities. Its practicability has been proven by four years' use in public schools. Constant revision keeps it up to date in every particular.

We would appreciate the opportunity of sending complete copies on approval to supervisors and teachers.

and affect and move us, while the others are dead.

But the vibrato can be overdone and abused. There is such a thing as an excess of sweets. Even too much honey clogs and sickens. Too much vibrato is as bad as too little. Some violinists having once acquired the technic of the vibrato, use it perpetually. Their left hand seems to have acquired a perpetual "wiggle." Never do we get a single tone, no matter how short, without this "wiggle." Passage work, sixteenths and thirty-seconds, even in rapid tempo, are all "wiggled" through. This is all wrong; the vibrato should be reserved for the longer tones, where emotion is required, or occasionally single, short emphatic tones. Passage work and "velocity" work should be done with a quiet hand.

David, in his famous violin school says on this point, "The player should be able to make the vibrato rapid or slow, but should be on his guard against too frequent or unnecessary use of it."

Singer and Seifritz, in their violin school say: "In passages and quick runs, it is not to be used, and only with great caution in double-stopping and octaves."

Baillot, the famous French violinist says on the subject: "The vibrato, used with discretion, imparts to the tone of the instrument a close likeness to the human voice, deeply moved. Such a means of expression is, in fact, very effective, but it may be used to excess, thereby losing its value and running the danger of destroying the melody and depriving the style of its simplicity, a style to which art always strives to impart the greatest naturalness and crystalline purity.

"At a certain velocity the vibrato becomes unbearable. To be sure it is to be avoided in passages of notes of short duration, for its effect is only good on long-sustained tones, or on the same note consecutively repeated."

Eugene Gruenberg, the well-known writer on violin subjects, says very truly: "Many players make a totally unwarranted use of the vibrato, inasmuch as they keep it up uninterruptedly, through passages and figures of all kinds. Thus they betray a lack of taste which will without any doubt, be offensive to the esthetical judgment of a refined audience."

Spohr, the great violinist, also warns against the improper use of the vibrato. In one of the exercises of his violin school he indicates exactly where the vibrato should be used by placing the following sign 〰〰 above the notes where it should be employed. I have often thought that it would be of much benefit to the violin student, if material were available, marked in a similar manner, so that the student would gradually learn where and to what extent the vibrato should be employed, but it is very seldom that music is so marked.

Very few violinists ever succeed in mastering the vibrato to its fullest perfection, as set forth by Spohr, who divides it into four kinds: first, rapid vibrato, given to notes strongly emphasized; second, slower, appropriate to sustained notes of a passionate cantilena; third, slow beginning, accelerando, in a crescendo; fourth, fast beginning, ritardando in a diminuendo; the last two styles applicable to long notes.

Spohr might have added that remarkable effects in expression can be obtained by increasing or decreasing the width of the swings of the hand, according to the depth of emotion to be portrayed.

In regard to our correspondent's query about the use of the vibrato by Heifetz, Elman, Kreisler, and other well-known violinists, it might be said that each violinist is a law unto himself in regard to the use of the vibrato and other graces in violin playing. Each violinist uses the vibrato to the extent and in the manner which he feels is best in bringing out the beauty of a given composition. It is somewhat analagous to the art of painting. Different great artists use coloring, light and shade, *chiaroscuro*, according to their own theories, and as the laws of effectiveness and beauty appeal to them. Raphael, Murillo, Michaelangelo, Van Dyke, each had their own ideas and theories, and no two of the great artists painted alike.

It is the same with great violin artists. Each employs the vibrato as he feels it, using it where it seems effective and deciding where a rapid and where a slow vibrato should be used. All great artists agree, however, in the fundamental rules of employing the vibrato, as set forth in the above quotations from masters of the art.

Exact rules as to where to use the vibrato, how fast it should be played, how widely the pitch should be affected, can hardly be formulated, because no two performers feel a composition in exactly the same manner. The main point is that emotion is stronger and more intense in one part of a composition than another, so that some passages should be played more emotionally and intensely than others. Listen to a great tragedian in one of Shakespeare's plays. If he should rant every line of the play, even in its quiet moments, it would be manifestly absurd, and no great actor sins against the laws of emotion in this manner. He saves himself for the emotional passages and for the climaxes.

The amount and character of the vibrato to be used is governed by the ideals of the artist interpreting a composition. It is a good deal like the use of the pedal in piano playing. While all pianists follow the basic rules and principles of pedaling, there are probably not two great pianists who use the pedal exactly alike in any given composition. Josef Hoffman, the famous pianist, even assures us that he would do his pedaling somewhat different in a hall which seated 5,000, and one so small it would only seat 500.

Singers, like violinists, are often terrible sinners in the too frequent use of the tremolo. Some singers employ it all the time, to such an extent that it is distressing. Not all these singers are the obscure, little known ones. Some of the famous have this fault. I remember when Materna, the famous Wagnerian soprano, visited this country some years ago, her constant tremolo was mercilessly criticised. She had a remarkable voice, and understood the interpretation of Wagner's operas as few have ever done, but it was all spoiled by the persistent tremolo. Some singers use the tremolo so continuously that their singing has almost the effect of a continuous trill.

The violinist should use judgment and discretion in employing the vibrato, using it only where the emotional effects of the composition would seem to demand it, and his playing will be much more effective than if he used it continuously.

Pithy Periods

By Louis G. Heinze

It is not enough to know; one must make the application. It is not enough to want; one must do.

* * *

All progress in art is necessarily of slow growth.

* * *

The great secret of success consists in being able to await success.

* * *

Always keep the highest goal before your eyes; but for to-day strive only for what you can reach.

Finishing the Violin Phrase

By Pauline Cohen

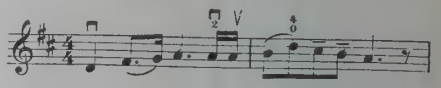
No instrument made by hand so nearly approaches the beauties of the human voice as does the violin. It phrases as the vocalist breathes. Its methods of phrase interpretation should follow rather closely the singer's lead.

Though the best composers frequently depart from its outlines, yet the folk-song type of melody, consisting of four balanced phrases, is the model form, and it serves best for study. These four phrases constitute what is commonly called a Musical Period. The first of these has the inflection of asking a question. The second phrase gives an incomplete answer to this. The third repeats the question introduced by the first, in a more emphatic manner; and the fourth gives a satisfactory answer by a full close.

The inflections at the ends of phrases will be much as the pauses of a good reader. At the end of the first phrase the effect should be as when a reader reaches a question mark. The second should close as at a semicolon; the third would again have the mark of interrogation; and the fourth would be as at a period. The question and answer idea will be suggested not alone in the melody but often even more strongly by the feelings of suspense or satisfaction created in the harmonic movements of which the melody is a part.

Something quite simple and familiar will serve best for illustration. The melody of "Old Black Joe" suits the purpose well.

Let us study the first phrase of the musical period formed by each "verse" of the old folk song. In playing this, various points must be taken into consideration. First, it must be analyzed. In doing so it is found that the opening phrase, being the first of a musical period, must resemble the asking of a question put not too strongly.



Starting in to play, the bow must be applied at the frog to the open "D" string, as lightly as possible, with great care that the tone sings clear and true. As the bow crosses the string the index finger of the right hand must bear down on the stick with gradually greater force (weight). This increase of pressure continued through the next two notes and into the "A" will give the broad sweep of tone which will carry with it a fine *crescendo* effect.

Beginning with the two sixteenth notes which follow, the pressure must be released slowly until the two broad tones, "C" and "B," are reached, where the pressure must be almost entirely released. This gradual decrease furnishes the desired *diminuendo*. The final "A" must find the bow traveling slowly over the string; and the hair should part from the string at the completion of the note's value, with great care that the tone has a neat finish, with neither a scrape nor a jerk noticeable.

By a similar analysis and interpretation of each of the remaining phrases, the composition will be rendered so as to become alive with the real language of music.

Violin Questions Answered

By Mr. Braine

Stradivarius Labels

Adeline S., H. L., T. U. O., G. T. Y., and others. THE ETUDE is swamped with inquiries about violins with Stradivarius labels. There are millions of these imitation Strads. worth from $1 up. It is quite impossible for us to give an opinion on a violin we have never seen. The violins will have to be examined by an expert. Write to some of the dealers who advertise in THE ETUDE, and arrange for an examination.

A Distinguishing Label Mark

A. R.—"I know of no distinguishing mark, by which an amateur can ascertain for himself whether a violin with a Guarnerius label is genuine," which your letter asks for. If there were such a mark, the imitators would use the same mark. You will have to consult an expert about your violin.

The Violinists' Repertoire

W. H. L.—As your letter fails to state whether you are a professional or an amateur, or just how much concert work you do, I am unable to advise you about how large a repertoire you should try to keep up. The size of your repertoire, and the type of pieces which should constitute it, would depend on your technic and how much public playing you do, and the character of these public engagements. Every violinist however, should have a repertoire, even if small, composed of suitable pieces, which he can play from memory at short notice. 2—Heifetz and Kreisler, and artists of that rank, have fully established their technic, and do not practice an exact stated number of hours daily, as is the case with most violinists in their student days. As they are constantly traveling to meet their concert engagements, this would be impossible. They practice as much as they deem sufficient to keep their technic up to the highest standard. Some days they might practice many hours, especially when learning new works, and other days not at all. 3—Both artists named could play practically all of the principal compositions in the literature of the violin, at the age of twenty.

"Conservatory" Labels

F. C.—There are hundreds of thousands of violins with Strad. labels, stamped "Conservatory" on the back. The word "Conservatory" is used by way of a trade mark. It is needless to say that such a violin could not be a genuine Stradivarius, since that master did not stamp his violins on the back with trade marks. 2—The cleats inside the violin were no doubt placed there by the repairer when the two pieces of the back came unglued.

A $700 Violin

R. A. M.—You ought to be able to get an excellent old violin for $700., if you deal with a good reliable firm. You could not get a genuine Stradivarius for that sum, as violins by that master run from $10,000 upwards. Your letter asks whether the "Strad," or the "Cremona," is the better. You are a little mixed in your ideas on the subject. Stradivarius was the greatest maker of Cremona, which is a town in Italy, where many famous violin makers worked. Violins made by Stradivarius, Guarnerius, Amati, Bergonzi, and many other makers who worked in Cremona, are all called "Cremonas," after the name of the town where they were made. 2—The label in your violin indicates that it is a copy of a Stradivarius of 1725. 3—I can tell you nothing of the quality or value of your violin without seeing it.

Guidantus

A. E.—Johann Florenus Guidantus (probably the same person as "Floreno Guidante") was an eighteenth century Italian violin maker of some note. His labels read: "Joannes Florenus Guidantus, Fecit Bononiae Anno 17."

Study Pieces

G. A.—While it is impossible to state definitely what you ought to take up next, without hearing you play, probably the Kreutzer studies would be next in order. These contain many bowing exercises which would give you the technic of the bow. 2—For pieces you might get *Sohn der Haide* by Kelar Bela, *Cavatina* by Raff, *Paust,* arr. by Alard, *Romance* by Svendsen, *Orientale* by Cui, and the *Third Pupil's Concerto* by Seitz.

J. G.—Send 25 cts. for a copy of the September, 1923 ETUDE, containing article; "Hints on Selling a Violin." It is difficult to sell supposed Strads, Maggini's, Amati's, etc., unless you have a certificate from well-konwn experts, pronouncing them genuine, for prospective customers would be afraid to buy. If your violins are real Cremonas you will have no difficulty in selling them to dealers.

Staccato Bowing

F. E. B.—Violin Teaching, and Violin Study, by Eugene Gruenberg, published by Carl Fischer, New York City, is a work which treats at length of the various forms of staccato bowing, martele, sautille, etc.

The Violinist Cello-Teacher

Sr. M. H.—A violinist, who has not studied the cello, cannot teach the latter really correctly (although many try to do so), because there are important differences in the technic of the two instruments, although they have many points in common.

ESSENTIAL WORKS FOR FUNDAMENTAL MUSIC EDUCATION

We have published certain works which are fundamental in the development of a sound musical education. From the numbers sold and the comments received, teachers all over the country have appreciated them at their true value.

BEGINNING MUSIC DESIGNED TO AWAKEN INTEREST AND PLEASURE

Mrs. Crosby Adams:

THE VERY FIRST LESSONS AT THE PIANO 90c

Mrs. Crosby Adams was a prophet of music teaching when she wrote this book. It is as fresh and progressive today as the day she wrote it. Nearly one hundred thousand have been started on the road to music education in this book.

PRELIMINARY STUDIES FOR THE PIANO...... 30c

To familiarize the pupil with the staffs, clefs and keyboard.

HOME STUDY BOOKS—Book I. and II. ....each 40c

Splendid plan for systematic home work.

Meda Zarbelle Steele:

THE CHILD AT THE PIANO........................75c

One of our most successful works presenting the beginnings from those modern concepts of teaching which employ both clefs, and melodies with words.

Phyllis Lucy Keys:

FROM THE VERY BEGINNING 60c

Fanciful pieces, with words and illustrations, using the big clef and progressively arranged. Altho comparatively new, teachers have welcomed it enthusiastically.

Lillian Sara Jackson:

FIRST MELODIES FOR THE PIANO............. 75c

Melodies in duet form with words and illustrations, progressively arranged. Furnishes material for first study of transposition. Exceedingly attractive.

THE "SUMMY EDITION"

is a growing library of music for every type of musical education and includes music for Beginners, Advanced Music, Duets, Technical Studies and Violin. We list a few of the favorite numbers for piano.

FOR BEGINNERS

Florence A. Goodrich:

SYNTHETIC SERIES—PART I 75c
SYNTHETIC SERIES—PART II and III....each, $1.00

This series furnishes a complete plan for progressive teaching.

Ruth Bagley:

THE BOY AND THE BROWNIE 75c

A connected story binds together eighteen pieces each presenting a progressive point in piano beginnings.

Bessie Williams Sherman:

ON THE ROAD TO TONELAND 75c

Tiny bits of pieces with words that satisfy the little beginner's desire for a piece.

Jeannie R. Smeltzer:

GARDEN OF FLOWERS...............................50c

At a recent exhibit of our "Summy Edition" material many teachers spoke of having used this volume with success.

Anna Marion Thompson:

OLD RHYMES WITH NEW MELODIES............50c

The old nursery rhymes clothed in new melodies are made a stepping stone to music education.

PIANO STUDIES FOR EVERY PHASE OF PLAYING

THE GRADED STUDIES—Seven vols..............each $1.00

Compiled by Mrs. Crosby Adams

These volumes for two hands include grades I to V, they are gathered from many sources and designed to cover every point of piano study. There are also three volumes of DUETS, covering Grades I to III.

FOR TECHNICAL WORK

Robert J. Ring:

THE LITTLE HANON $1.00

Furnishes splendid training for finger technic. Introduction to Hanon Virtuoso Pianist.

PREPARATION FOR BACH PLAYING

Florence A. Goodrich:

FIVE CANONIC STUDIES—GRADES 2 and 3.......50c

Adolf Weidig:

CANONS—GRADES 3 and 4........................$1.25

Two volumes that may be used in the order named as a preparation for polyphonic playing.

RECORD THE PROGRESS OF EACH LESSON IN MUSIC STUDENTS' LESSON RECORD—By Leola Arnold 35c

A splendid basis for recording school credits

KEEP YOUR LESSON ACCOUNTS IN THE LOOSE LEAF JOURNAL LEDGER—Binder—Morocco..............$2.25
Imitation $1.25, Cloth 75c, Loose Leaves, Package of 50, 35c

Every teacher of music should know, as a vital experience of music life,

ADOLF WEIDIG'S

new, creative work, **HARMONIC MATERIAL AND ITS USES**, a book that furnishes an intelligent basis for interpretation, and gives an understanding of the meaning of musical literature from Bach to the moderns. Send for Circular. **Price $3.00, plus postage—432 pages.**

CLAYTON F. SUMMY., *Publishers* : 429 S. Wabash Avenue, Chicago, Illinois

Send for "SUMMY EDITION" CATALOG and for Thermatic Catalog, and ask to have the Study Service Sheet for Piano Teachers sent to you FREE.

A System of Harmony

By John A. Broekhoven Flexible Cloth, Price, $1.00

A Harmony Work with Many Individual Points

Broekhoven's Harmony contains many features of special value and information to teachers and students not found in the average book on harmony. Among these are: The short and clear sections numbered for the purpose of ready reference. The questions after each chapter. The explanations of musical examples. The use of the term **Sept chord** for the confusing term **chord of the seventh** found in all books on harmony. The free resolution of collateral Sept chords. The explanation of altered chords. The chord analysis of the six-key group. The presentation of the various phases of suspensions, retardations and anticipations. The exhaustive illustrations of modern modulation. The harmonization of a melody in the soprano, alto, tenor and bass. Four, three and two-part writing. Examples of simple counterpoint and mixed counterpoint. The harmonization of a choral in four, three and parts. Omnitonic harmony, and the application of chromatic chords. This complex of subject matter gives Broekhoven's Harmony a broader scope of material for musical composition than found in the current works on harmony. The complete index of the subjects treated given at the end of the book is an encyclopedia of musical elements most valuable for reference.

Mastering the Scales and Arpeggios

By James Francis Cooke Price, $1.50

Enables the teacher to start scale study with young pupils and carry it on to the highest degree of proficiency.

A work that has been endorsed by many leading teachers and pianists.

Gives full description of the formation of all scales, major and minor, and also a complete, engagingly told, history of the development of scales. This work contains all the standard scale and arpeggio material demanded for leading conservatory examinations in addition to many new and original exercises and features, making it by far the most comprehensive and thorough technical work of its class. May be used with any system or method without interference and makes scale study interesting and a real pleasure.

A Famous Educator writes about the interesting booklet

Betty and the Symphony Orchestra

By Elizabeth A. Gest Price, 10 cents

My dear Miss Gest :— October 6, 1923.

Allow me to thank you for the copy of "Betty and the Symphony Orchestra." Reading of the booklet brought real pleasure and satisfaction. It is a most delightful story for children and invaluable as a part of the preparation for listening to the Symphony Orchestra.

You are to be congratulated on the delightful style of the pamphlet.

Cordially yours,
HOLLIS DANN,
Director of Music.

Time and Money-saving Service to Music Buyers

The average music buyer usually wants only a small number of pieces at a time, but any one who has attempted to obtain even a few of these from the ordinary source of supply must have observed the uncertainty and delay incidental to such purchases; larger users of music are correspondingly inconvenienced owing to conditions for which the dealer generally is not at all responsible. The fact is, the music trade is one demanding greatly complete stocks and a *personnel* prepared to serve a wide variety of wants. Unless the local demand is exceptional the volume of business transacted is rarely sufficient to justify a large investment in stock, fixtures and help. This is unfortunate, as it deprives many musicians of the privilege of examining musical works before purchase and forces them to wait until wanted items are procured. However, there are a limited number of supply houses actually equipped to meet the demands of every description of musical interests and among these the Theo. Presser Company has long held a leading place. This is not merely a music store in the ordinary sense, but a veritable musical service station prepared not only to supply the every-day things in music but also the unusual and even the unprofitable items seldom sold but always likely to be called for. Perhaps ability to furnish things vainly sought elsewhere has had most to do with the upbuilding of this magnificent business. It has taken many years of painstaking management to assemble and classify the company's unrivalled assortment which is being augmented daily. Still, the Presser Company's strength is not chiefly in its material resources, the value of which depends largely upon the volume of business transacted; its main strength is in the good will and cordial support of countless patrons. These patrons are held chiefly by good service—good and prompt service—and (to be considered even in these days) reasonable prices.

The Presser Company aims to make its patrons not merely customers but good friends and to give its friends the best, most prompt, most courteous and most economical service to be had.

What to Play—What to Teach
By Harriette Brower

We take great pleasure in announcing a new work by Harriette Brower, the author of many successful books upon musical subjects. Miss Brower is a teacher with extensive experience here and abroad. She has been acquainted with great numbers of teachers and famous pianists. The scheme of her new book is a most interesting one. It covers the entire field of music of the past by selecting from each epoch numbers of pieces particularly worthy of being developed by the student and by the teacher. These she has grouped into artistic programs in all grades from the elementary to those of the virtuoso. While the book is peculiarly one for the progressive teacher, the self-help student will find it a most useful guide in helping him to select and arrange music of the masters which he should gradually add to his repertoire. Until the book is actually published our patrons may have the opportunity to have their orders registered here by sending 75 cents now. This insures you having your copy as soon as the book is off the press, postpaid.

The Castaways—Operetta For Women's Voices
By Fay Foster

We consider ourselves fortunate in securing this new operetta by Fay Foster and believe it the best and most interesting operetta for women's voices we have seen. The plot is fascinating. A party of women of the most modern types find themselves shipwrecked on an unknown island inhabited by dark-skinned natives. Very amusing situations develop and the discovery of one white girl among the islanders leads to a fitting, happy ending. The music is original and strong, charming to the ear and a delight to sing. Oriental touches are interspersed, including ceremonial dances and rites of the native women. The contrasts in costumes afford lovely stage pictures and the staging, which remains the same throughout the performance, is very easily managed. Our advance of publication price for one copy is 40 cents, postpaid.

Alleluia! Choral Cantata for Easter
By R. M. Stults

The joy of the Resurrection, the gladness of the Eastertide is herein expressed by Mr. Stults' music, most fittingly set about texts from the Scriptures or well-known hymns.

Solo voices will find grateful material, well within the ability of the average singer, and the choir director will find many fine choral passages for interpretation.

Joy is the main theme of this new work and we recommend it to all choirs for this coming Easter.

Our advance of publication price for one copy only is 30 cents, postpaid.

Easter Music

A most successful Christmas season has just passed. Our large and comprehensive stock made adequate selections easy and early decisions as to programs, prevented annoying disappointment.

The Theo. Presser Co. "On Sale" facilities in regard to Easter Music will give choir directors and organists the same excellent service and we urge that requests for approval copies be sent to us promptly.

Many novelties are included in this year's lists. Especial mention is made of a new soprano solo, *He is Risen*, by Paul Ambrose, which will find favor with all singers looking for high class songs.

Mr. R. M. Stults has written a new Easter Cantata entitled *"Alleluia,"* described elsewhere in these notes.

Among the new anthems, we mention Berwald's *Rejoice and be Glad*, Stults' *Sing with all the Sons of Glory*, Kountz's *Today the Lord is Risen.*

A fine list of anthems for men's voices is available and also another group for treble voices in two and three parts.

Among the standard Lenten and Easter Cantatas published by the Theo. Presser Co. are: Stainer's *Cruxifixion*, Wolcott's *Dawn of the Kingdom*, Berge's *Wondrous Cross*, Stults' *Living Christ*, *Immortality*, *From Death Unto Life*, Rossini's *Stabat Mater*, Mark's *Victory Divine.*

Send today for "On Sale" selections of Easter Cantatas, Solos, Anthems and Organ Compositions. You will probably find therein just what you are seeking.

The Amateur Musician
By Russell Snively Gilbert

To give a complete description of the contents of this book would require more space than we usually give. Let us state that the book is written by a thorough musician. It is intended for the various beginners to develop musical feeling and increased appreciation. It is not an instruction book nor theory book, but one that will awaken musical interest. For one illustration, the fifth exercise has the following words, "I can write a tune like this," and the tune begins with *G A* and then the next four words are left blank, to be filled in by the pupil, the final note being *G*. Thus the student creates a portion of the tune, possibly a tune like this, *G A B A G A G* comprised of only three notes. The tune thus made will tend to stimulate musical feeling, and the young pupil will be delighted with the result. This sort of exercise covers a page or so. The next step is to add one note more, having the exercises comprised of four notes, and so it goes on along this line for some time. Then other similar diversions are taken up which require only playing. The book is one that will interest every mother, teacher and pupil and we can recommend it highly to our readers. It takes one out of the beaten track into new fields. So, do not neglect purchasing a copy of this work while it is still on the special offer.

The special price in advance of publication is 30 cents per copy, postpaid.

Twenty-five Selected Studies For the Violin
By H. E. Kayser
Second Violin Part (in Score) Arranged and Edited
By Charles Levenson

In presenting this new Edition of a Standard work, a very valuable addition is being made to the list of Violin Studies. Mr. Charles Levenson has selected twenty-five of the most useful studies from Kayser, Opus 20 and has added a second violin part in score. It is very beneficial to the student to have the teacher play along with him, and it adds greatly to the interest to have otherwise possibly dry exercises made into interesting duets. This book could also be used in class work, having part of the class play the second violin. Progressive violin teachers who know the value of the Kayser studies will welcome this new Edition with the second violin in score, and will not neglect this opportunity to secure a copy at the special introductory price in advance of publication of 40 cents a copy, postpaid.

1924 Musical Calendars For Everybody

A fine musical calendar is one of the things that the teacher and the student can not afford to do without in the music room. We make a special effort every year to have our annual musical calendar better than the previous successes. This year we have "hit it" with a calendar we know is sure to delight every purchaser, because of the following features: 1. Size, 13¼ x 10½, that is, the size of THE ETUDE. 2. Portraits. Twelve portraits of the greatest masters of music are printed on one card, surrounded by a beautiful design. 3. Information. The birth and death dates of the masters are given, also the birth dates of many other composers are given grouped in connection with the months. 4. Convenience. Each month is printed on the face of the calendar (no calendar pads), so that you can refer to past or to future months immediately. 5. Price. 10 cents apiece; $1.00 a dozen, affords us a very little profit but gives thousands of teachers and students a means of securing an inexpensive but extremely attractive Christmas-New Year gift that will be useful for 366 days. The Calendars are ready now. We are sure that there will be a big demand and strongly advise immediate orders so that there may be no chance of disappointment should our supply fail to meet the demand.

Pleased With Our On Sale Plan of Ordering

Are you a subscriber to our New Issue On Sale Service? This service keeps the busy music teacher in touch with the latest and best in teaching material, as the novelties are selected with the utmost care for their educational value and sent in small or large parcels as you desire. We send these novelty On Sale parcels at intervals during the teaching season, from November to April. The New Issue Service embraces not only Piano Music, but also Vocal, Octavo Sacred or Secular, Organ and Violin publications. Thousands and thousands of Teachers and Schools throughout United States and Canada have availed themselves of the On Sale Novelty Plan, and hardly a day passes that we do not receive letters from teachers and customers everywhere commending this service and extolling the educational merits of the material selected, moreover renewing their subscription for the coming year. A postal request will start these packages of new music coming to you and they may be discontinued when you desire. Full return privileges are allowed on this music the same as upon any other material secured according to our On Sale Plan. If you are not familiar with the "On Sale" Plan, ask us for details. You will find it the most helpful service ever offered the music profession.

Rainbow's End Operetta for Children
By Cynthia Dodge

Joan, a little girl, and Peter, her brother, are aided by a mysterious old woman in their search for the pot of gold at the rainbow's end. The Sprites of the Night, Moon-fairies, Snow-fairies, Ocean-fairies, Flame-fairies, Rainbow-fairies help all they can. The story is well told in the dialogue and the contents of the pot of gold which are found to be Stick-to-itiveness, Courage, Honesty and Knowledge bring home a splendid lesson. This operetta is in three scenes of which the third is very short and may be omitted.

The music is for children and is most bright and catchy. The costumes are easy to make and fully described and the staging very simply done.

One copy only may be obtained at our advance of publication price, 40 cents, postpaid.

Descriptive Catalogs

The Theo. Presser Co. will gladly send upon request any of the following descriptive catalogs:

Descriptive Catalog of Piano Collections.
Descriptive Catalog of Vocal Collections.
Descriptive Catalog of Violin Collections.
Descriptive Catalog of Organ Collections.
Descriptive Catalog of Theoretical Works and Musical Literature.

First Lessons in Bach
By Walter Carroll
Book I

This well-known compilation will be added to the Presser Collection. It is a somewhat different book from either the *First Study of Bach* or the *Lighter Compositions of Bach* edited by Kullak. With a few exceptions all of the pieces in this volume are from the *Clavier Book* of Anna Magdalena Bach. These charming little teaching pieces provide elementary material of rare value. Such music as this lies at the very foundation not only of polyphonic playing but of good music in general. Our new edition of this work has been very carefully revised, edited and fingered.

The special introductory price in advance of publication is 20 cents per copy, postpaid.

Scene de Ballet
For Violin and Piano
By Charles de Beriot

There are certain studies and pieces which are considered as standard teaching material, and when a certain piece is thought of simply as a standard teaching number it is liable to be used in that way only and not as a real serious concert solo. Such a number is de Beriot's Scene de Ballet, which when well played is a very showy and musicianly solo. It is a number which will display one's ability in all sorts of violin technic and is sure to please every kind of audience. We are offering a new edition of this very effective number, which we feel will appeal to all serious violin students and soloists. It is being edited by Thaddeus Rich, the distinguished Concert Master of the Philadelphia Orchestra. The special introductory price in advance of publication is 30 cents a copy, postpaid, a truly low price for this best edition of so desirable a violin number.

Thirty-six Studies or Caprices for Violin
By F. Fiorillo

The thirty-six Studies or Caprices of Fiorillo are used by many violin teachers as an introduction to the famous Kreutzer studies. The Kreutzer studies are essentially of a technical nature and for that reason pupils who are not naturally of a very musical nature are apt, during their necessarily long study of them, to lag in the musical side of their development. While these studies of Fiorillo are most valuable in developing the technical side of the young student, being especially calculated to increase proficiency in double stops and stretches in the left hand and smoothness in various forms of string crossings and arpeggios in the bow arm, yet they are written in so musical a style, that several of them are used by famous artists as concert pieces. Especially valuable also are the examples of the old florid style of slow movement, in which every violinist who wishes to play with good taste the classical works for the violin should have special instruction. We have in preparation a new edition of the Fiorillo studies, which will be edited by Mr. Otto Meyer, who has been appointed by Professor Otakar Sevcik to represent him in the United States.

The advance of publication cash price is 35 cents, postpaid.

New Theory Book
By Preston Ware Orem

This book is intended for students who have mastered the elements of harmony. It goes into the theoretical side of musical construction and by actually doing things the student at the same time learns the whys and wherefores. The remaining portions of harmony should have no terrors for the student who has mastered the use of the common chords and of the dominant seventh chord. Modulation, which has proved a bugbear to so many, becomes perfectly easy and natural when properly and practically presented. The idea of this book throughout is to endeavor to make practical use of all theoretical musical knowledge.

The special introductory price in advance of publication is 60 cents per copy, postpaid.

Polyphonic Studies For Violin Classes
By Oscar J. Lehrer

Of the many methods for violin classes which are being introduced nowadays there are few which deserve the serious consideration that is due the ensemble methods of Oscar J. Lehrer. These Polyphonic Studies are written to follow the author's earlier work, entitled *Ensemble Method for the Violin,* and form a natural supplement for the same, inasmuch as where the first written work is entirely in the first position the Polyphonic Studies are written to use the third as well as the first position.

Mr. Lehrer has been wise in writing a work in which the technical material is all in three parts, as well as the melodious pieces which follow the necessary technical exercises. Every difficulty of time, bowing or style has been painstakingly illustrated with harmonious three-part exercises, so that the pupils will take a real interest in the technic as well as the pieces. Another advantage of the work is that all three parts of every piece are of equal difficulty, so that the pupils may in turn play each part, thus making the work equal in value to one three times its size. Add to this the fact that the author has been wise enough to intersperse the well-known but excellent folk tunes with selections from the greatest classical masters, and one can readily see that those who have the difficult task of finding music which is suitable for class study can find no better works for their purpose than the Ensemble Method for the Violin, followed by the Polyphonic studies, both by Mr. Lehrer.

The advance of publication price for the Polyphonic Studies is 40 cents, postpaid.

Concerto No. 1
Violin and Piano
By J. E. Accolay

One of the hardest problems that the conscientious teacher of the violin has to face is that of introducing the student to the concerto literature. After a series of studies and easier pieces de Genre, the teacher must find a bridge over which the pupil may go with surety to the "Studien Concerte" of Viotti, Rode, Kreutzer, etc. After the so-called study concertos above mentioned, technique and style are so developed that the modern concerto literature may be commenced with confidence.

Perhaps the best concerto that can be used as an introduction to the study of concertos is the first by Accolay. It has all of the style of the older concertos, without being quite as difficult. Being written mainly in the minor mode it develops the ear of the pupil who has been principally playing in the major modes, and the fact that it is written largely in triplets will give much-needed practice in that style of time. Starting with a bold introduction, a passage of not too difficult double notes follows, and then come passages in Martele, legato, etc. The melodies are beautiful and much in the style of the older concertos which are later to follow. One can find almost every kind of bowing in this miniature concerto, and if studied with care the pupil should greatly benefit in rhythm, bowing and in style. The Theo. Presser Co. will, in the near future, publish a splendid new edition of this concerto, the advance of publication cash price being 35 cents, postpaid.

Contemporary March Album
(New Album of Marches for the Pianoforte)

The above title has been selected for this new album which is now on the press. It is the best collection of marches that we have ever issued. The three principal types of marches, military march, parade march and grand march, are all well represented. These marches are chiefly by living writers and they are strictly up to date. They have been selected not only for their attractive qualities musically, but also because they can be used for actual marching purposes. The book is preceded by an introduction explaining the various types of marches and their uses.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

What the Vocal Student Should Know
By Nicholas Douty

Of course the vocal student should know volumes before he is even launched upon his career as a singer. There are certain indispensable things, however, that the famous author of this book has discerned in his years of experience as an artist, a practical musician, a composer and a teacher. In *What the Vocal Student Should Know* he presents this information in such concise fashion that few students could possibly read this book without getting value ten times its price in actual printed instruction. At the end of the book are given what might humorously be called "Douty's Daily Dozen," exercises for each voice, to be taken every day to keep the voice in prime condition. These invaluable exercises are not all original with Mr. Douty but are taken from those of the greatest singing teachers of the past. The advance of publication price of this work is 50 cents, postpaid.

Music-Writing Book
By Anna Heuermann Hamilton

A music-writing book that combines the best elements of an elementary theory book will prove a novelty to many of our readers. The trouble with most theory books of the past is that there has been too much theory and too little practice—too little actual work. Mrs. Hamilton is a practical teacher with an original outlook upon the educational field. Her ideas have been demonstrated in the success of her other books published by this company. The plan of the Music-Writing Book we are now preparing for publication is simple, direct and comprehensive. It gives all the needed material that the pupil should put down in black and white himself in his own handwriting to insure the teacher that he does actually know all the little ins and outs of the basic principles of music. There is not too much nor too little. It is the kind of a book to make the pupil think for himself—the acme of elementary musical training. You cannot fail to be delighted when you receive your first copy, which you may do immediately upon publication by sending in your order now at the special introductory price of 20 cents, postpaid.

A Knight of Dreams, or A Modern Pygmalion and Galatea
By May Hewes Dodge and John Wilson Dodge

A new musical comedy for mixed voices with up-to-date dialog and music that is most effective and not too difficult. The novelty of the plot will hold the attention of an audience from curtain to curtain. A struggling artist dreams the entire second act which is filled with the funniest of situations, classic and modern characters being all mixed up. The third act provides *the* happy solution. Staging and costuming are easily done and the production may be made as simple or as elaborate as desired. This musical comedy will provide an entire evening's enjoyment and offers an excellent suggestion for a Spring Entertainment. One copy may be obtained at the low advance of publication price, 35 cents, postpaid.

Album of Piano Pieces For Six Hands
By A. Sartorio

This book is very nearly ready but the introductory offer will be continued for one month longer. This will be a comprehensive volume containing original six-hand pieces by Mr. Sartorio, also transcriptions from well-known works, together with some very successful original pieces by other writers. These pieces will be of intermediate grade chiefly, although as a rule in six-hand pieces the parts for the second and third players are easier than those for the first player. Some of the third player's parts in this book are but little beyond the first grade in point of difficulty. All of the pieces are melodious and decidedly attractive.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

(*"Publisher's Notes" continued on page 66*)

World of Music

(*Continued from page 1*)

The Ballad Concert, so long a national institution of England, is reported to be much on the wane in popularity.

The Flonzaley Quartet has finished twenty years of its artistic endeavors. No similar organization has sustained a more consistently high plane of work; and in all these years but one change has been made in its personnel.

The One Hundredth Anniversary of Smetana's Birth will be celebrated at the Opera of Vienna, March 2, 1924.

A Drive for a Half Million Dollars was started in St. Louis on October 29th, this fund to be used to insure deficits for the next three years in the maintaining of the St. Louis Symphony Orchestra, of which Rudolph Ganz is conductor.

"Hassan the Dreamer," by M. W. Kneizl, the well-known composer of "l'Evangelimann," has been performed at the Volksoper of Vienna.

The Original French Manuscript of Verdi's "Ernani" has been seized at the offices of L'Opera of Paris. It is reported that the police acted by order of the French courts, as a result of the long-standing legal dispute prosecuted by the heirs of Victor Hugo, whose drama "Hernani" is the basis of the libretto used by Verdi. The case was begun by Hugo while in exile in the Jersey Islands, in 1863, and has never been definitely decided.

Maud Powell's Library of Music has been given to the Public Library of Detroit. It includes a most complete collection of violin works, many of which bear annotations in Miss Powell's own handwriting. In the collection are many pieces so rare that Miss Powell often loaned them to others who were unable to secure copies elsewhere.

Prohibition of American "Jazz" on the programs of public orchestras in Italy is being asked of the Italian Government in petitions carrying great lists of names, according to reports from Paris. Apparently the Italians are not attracted to this type of music.

Free Passes for Concerts have been abolished by the Musical Managers' Association of New York, with fines of $250 to $500 for infractions of the agreement.

An "Author's Copy" of "Dixie" has been presented to Cornell University of Ithaca, New York, by Charles W. Curtis, of Rochester, alumnus of the class of 1888. The original copy was stolen from the composer and this one made later.

The Study of the Orchestral Instruments has been incorporated in the course of music offered in the public schools of Washington, D. C.

Wartburg Castle, near Eisenach, interesting to musicians through its association with certain scenes in Wagner's "Tannhauser" and Liszt's "St. Elizabeth," and more than a thousand years old, has been closed to tourists because of financial difficulties.

The 2,000th Program of the Free Organ Recitals of the Carnegie Institute of Pittsburgh was passed during the present season. Of these 451 were given by Frederick Archer, 170 by Edwin H. Lemare, 195 by guest performers, and 1213 by Charles Heinroth, the present official organist.

The Cross of "Cavaliere Ufficiale di San Mauritzio e Lezzaro" has been conferred upon Giulio Gatti-Casazza by the King of Italy. This leaves but one Italian "distinction" for Gatti-Casazza to win, the "Collare di Annunziata," after which he will be "cousin of the King himself."

Frederick Stock, conductor of the Chicago Symphony Orchestra, by the gracious consent of its board of directors, has accepted an invitation to conduct performances of Wagner's "Siegfried" when that opera is given at the Auditorium this season by the Chicago Civic Opera Company.

Bulletin of the Home for Retired Music Teachers

Several meetings of different kinds were held at the Home last month, much to the interest and delight of the residents. One was a meeting of the Board of the Philadelphia Music Teachers' Association. After this meeting the members of the association gave an impromptu concert, which was greatly appreciated. Addresses were made by Mr. Stanley Muschamp, Mrs. Frances E. Clarke, Mr. John Grolle, Mr. James Francis Cooke. Miss Agnes Clune Quinlan; and Mr. Maurits Leefson played to great applause, and Mr. Lewis James Howell made a very great hit with the "Largo al Factotum" aria from "The Barber of Seville." On November 17 Allen Hensel Lewry, violinist; Mary Yoos, soprano, and Edith M. Griffenborg, pianist, gave a recital at the home which was warmly appreciated by the residents. The admission fee to the Home will be raised from $200 to $400 beginning with the first of April. The other qualifications are that the applicant shall have taught music in the United States for not less than twenty-five years, shall be between the ages of sixty-five and seventy-five years, and shall have ordinarily good health.

Lemare Album of Organ Transcriptions

The Lemare Album is destined to reach the music desks of thousands of organs because it is only very rarely that the organist has an opportunity to secure such a diversified book with so many practical selections. It contains transcriptions and original compositions by Mr. Lemare with novel effects in registration and directions for the treatment of the chimes where accessible. All of the masters of the past have had a great respect for folk-music, but in America our own beautiful melodies, such as those of Stephan Foster and others have rarely received a masterly treatment. Every organist needs the type of material which will be found in this book. The advance of publication price is only 50 cents, postpaid.

Four Seasons—Cantata By Kieserling

It is not often that we have a manuscript that meets our entire approval in all its phases; such as, musicianship, melody, lyrics and general interest. This is a short cantata of four sections, arranged for women's voices in three parts, not difficult but extremely interesting. It can be performed without scenery. A section is devoted to each season of the year and there is only one chorus to each section. These sections are entirely unconnected and each number may be used alone if desired. In fact, it is more of a concert number than a cantata. It is suitable for high school choruses and the complete work will take about 25 minutes.

One copy only of this work may be obtained in advance of publication at 35 cents, postpaid.

Twenty-five Little Melodies For the Piano By Mana-Zucca

This little book may be used in conjunction with any instruction book or with any elementary method. It begins with unharmonized melodies played with either hand or with the hands in alternation, and then works gradually into simple harmonies and finally into independence of the hands. Appropriate verses accompany these melodies, all of which are in characteristic style. The little pieces are all very tuneful and cannot fail to prove attractive to young students. The composer is one of America's foremost writers.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Sweney's Anthem Selections

We will continue the offer on this anthem book during the current month. It is a book for small chorus choirs or volunteer choirs. The anthems are all of a pleasing nature, not difficult and not too long excepting in a few instances where they are intended for concert purposes. This book has had a tremendous sale with the original publisher. Those having charge of choirs and needing such selections as are contained in this volume, will find that there is no better book than Sweney's for the purpose. The introductory copy may be had at the low price of 35 cents each, postpaid. When upon the market it will be sold at double this figure. Only one copy may be had with each order.

Vocal Studies For Low Voice By George Whelpton

The Vocal Studies of George Whelpton have made a worthy name for themselves; but up to the present time they have not been obtainable for low voice. They now appear in carefully selected lower keys, with additional studies written expressly for low voice. The voice teacher is constantly in need of a book of this kind which is a real help to the amateur as well as to the student who expects to become a professional singer. The work is one built upon actual experience in handling voices in a practical manner. The rapid adoption of the editions adapted to the high voices are the best practical endorsement of Mr. Whelpton's sensible, progressive ideas. The advance of publication price is 30 cents per copy, postpaid.

Favorite Musical Readings and Pianologues By Clay Smith

An entirely new collection of Musical Recitations in which the greatest possible variety is offered. Serious and gay, long and short, but always with an accompaniment which is not too difficult but helps interpret the meaning of the words. Each number is a veritable gem and the collection is without doubt a most useful volume to possess.

Our advance of publication price for one copy only is 50 cents, postpaid.

Album of Compositions By M. L. Preston

Mrs. M. L. Preston, also known in our catalog as M. Loeb-Evans, is one of those writers who have the real gift of melodic invention. Her pieces are not only tuneful but they have also a certain originality. Mrs. Preston excells especially in teaching pieces and drawing-room compositions of intermediate grade. The new *Album* will contain the best and most popular of all her compositions, including pieces in dance form, in characteristic style, reveries, songs-without-words, etc.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Easy Opera Album For the Pianoforte

In this new album the most admired melodies from all the standard operas will be found in easy and playable arrangements. These arrangements are as faithful as possible to the original melodies and to their harmonic treatment. No fanciful variations or ornamentations have been added by those making the arrangements. Some of the finest melodies ever written are to be found among the standard operas and apparently these are of perennial popularity. Many of the arrangements are new and especially made for this volume.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

New Recital Album For the Pianoforte

There is always room for a good recital album of intermediate grade. For a compilation of a book of this nature, we have a wealth of splendid material from which to draw and for this new volume we have made the very best possible selection. The pieces are chiefly of intermediate grade and they have been selected on account of certain most desirable qualities: they are profitable to study, they will interest the student, they will please and impress the listener. The best modern and contemporary writers are represented.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Stories Notes Can Tell By Frances Terry

These six little teaching pieces for the piano are out of the usual run. They are not in the dance forms at all, but they are decidedly in characteristic vein as indicated by the following titles: *A Tick-Tock Tale, Climbing Up and Jumping Down, About Robin Red Breast, Swing Sing-Song, The Sentinel's Story, Sleepy Top's Dream.* These pieces will appeal alike to teacher and pupil. The book will soon be ready.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Songs For Girls

For programs given by young ladies or girls we heartily recommend this volume. All sorts of pretty themes are treated in the texts but romance and religion are avoided. The subjects range from sombre to gay, while many of the songs may be used as Musical Recitations. The music of each number is most attractive, and great care has been exercised to use material in the proper range of voice.

Our advance of publication price for this book is 40 cents, postpaid.

Album of Trills For the Piano

This new book is now about ready but the special offer will be continued during the current month. This volume starts a new series: *Study Pieces for Special Purposes.* Each volume in the series is devoted to some special and important point in piano technic. The volume now under consideration is devoted to *Trills.* The numbers in this volume are not studies, they are real pieces, but in each one of them the trill is either an important or an exclusive factor. This volume may be used to advantage with any good third grade student. The pieces are arranged in progressive order.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

The Standard Vocal Repertoire

In selecting from our best and most popular song numbers to use in this album great care has been employed in the choice so that the entire contents may be of interest.

All singers, teachers, students and performers will be delighted to obtain bound in one album such a pleasing variety of vocal material.

Secular and sacred numbers are included, and we know the book will be decidedly useful.

The extraordinary low cash price on advance of publication orders, 35 cents, enables our patrons to obtain, for what is ordinarily the price of one song, this entire collection.

New Instruction Book By John M. Williams

This work is the outgrowth of many years of practical teaching among young people. It has taken years to compile and everything fits in its proper place just like a mosaic. The selections all appear in logical order, and the material has been gathered with the utmost care by this successful teacher of beginners. Another feature of the work is that both clefs are used right from the beginning. This method is becoming more and more popular at the present time. Mr. Williams' previous books have had enormous sales and we predict for this new book a prominent place in the teaching curriculum.

Our special advance price for the complete work is 40 cents per copy, postpaid.

From My Youth—Twelve Characteristic Sketches By R. Krentzlin, Op. 85

This is a set of easy grade pieces, each one of which tends to exemplify some special point in elementary technic; such as clinging legato, light velocity, rhythmic accuracy, triplets, style and expression, broken chords, trills, etc. Each piece has an appropriate title and from the musical standpoint, each number is a real gem, the practice of which will prove a real pleasure. Richard Krentzlin is one of the best living writers of educational piano pieces. This new volume will soon be ready.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Advance of Publication Offers Withdrawn

When it has been decided to issue a work of a certain character it is announced in advance of publication and orders are accepted at a low estimated cost of manufacture price. These orders are filled as soon as the work is ready. The time taken between the first announcement and the actual issuance of the work is very necessary to our editors and mechanical department for going over the work or compilation carefully, making changes, revisions, re-writing and re-engraving until no little detail have been left unattended in our efforts to make each particular work the best of its kind on the market. The following works are now on the market at reasonable retail prices and the advance of publication prices withdrawn. Teachers have the privilege of securing these or any Theo. Presser Co. publications for examination.

Crown Orchestra Collection. (Offered as Church Orchestra Collection.) This is a superb collection for any Church, Sunday School or Amateur orchestra organization. From a catalog of thousands of successful copyright numbers not available to other publishers there have been selected a number of attractive compositions, the majority of which are of a type suitable for Church and Sunday School playing. Beside a dozen and one good melodious numbers of this character that are also suitable for various calls upon an amateur orchestra there are about eight favorite hymns. Eight expert orchestra arrangers have assisted in making this collection and all the arrangements are effective, yet not difficult. Parts for all the instruments now in general use may be obtained. Piano acc., price 60 cents, parts 30 cents each.

School of Violin Technic, by Sevcik, Op. 1, Part 1. A fine new edition of these standard violin exercises in first position. The editing has been done by Mr. Otto Meyer, a well-known teacher and player and former assistant to Professor Sevcik in Prague. We feel that violin teachers will prefer this edition after they have seen it. Price, $1.50.

Kansas City Spirit, Cantata for Mixed Voices, by Carl Busch. A work forming an important part in a Kansas City celebration. Many cities and towns will be able to use this work on festival occasions, fitting it to local needs by slight changes in the text matter. The music is of a strong, classic, stirring character. Our examination privileges give directors ample opportunity to become acquainted with this work. Price, 50 cents.

The Mail Holiday Rush Is Now On

We ask your indulgence during and immediately after the holiday rush. Etudes may be delayed. If they do not reach you within two weeks after the date of publication which, is the first of each month, be sure and let us know. Second-class mail is always delayed in December and January, but all copies should be delivered by the fifteenth of each month. We are here to serve you and any cause for dissatisfaction should be reported to us at once.

High Class Magazines Clubbed With Etude

Our new magazine catalog for 1924 is now off the press. Combinations of Etude Music Magazine with other high class publications that you may select show an appreciable saving and we will be glad to fill any orders which you may be pleased to send us. A post card will bring you one of these catalogs by return mail. It is a handy thing to have.

To Etude Representatives

Don't hold subscriptions. Non-receipt of magazines means inconvenience to your friends and subscribers, causes complaint and makes it embarrassing to yourself and ourselves. If you select a premium which requires more than two subscriptions, let your orders come forward and we will give you credit for them. When the subscriptions necessary to secure the premium are received, we will be glad to ship your choice promptly.

Renewals

May we suggest that renewal for your magazine be sent immediately on receipt of notice. If you know the date when your subscription expires, it would be wise to send your renewal the month before. The date on which your paid term expires is printed on the wrapper opposite your name, and a prompt remittance of $2.00 (two years, $3.50) will prevent any possible lapse of numbers.

Beware of Fraud Agents

We are in receipt of daily complaints from our friends who have paid money for Etude Music Magazine subscriptions to strangers who are not authorized and who do not send us the order. Pay no money to anyone not personally known to you to be responsible.

Motion Picture Organ: Charles H. Demorest.

ALEXANDER RAAB

RETURN OF ALEXANDER RAAB

The Chicago Musical College takes pleasure in announcing the return to its faculty, after a year's leave of absence in Europe of Alexander Raab. One of the most notable virtuosi and teachers of America. Mr. Raab's premier position has been won by solid achievement. The success which he has gained as a teacher has been so great that his teaching time has been insufficient to accommodate the large number of students who are eager for his instruction. Mr. Raab sets forth in his teaching the most modern principles of piano-playing and he makes a specialty of the correction of faulty methods. Early application for his services is advisable.

FREE SCHOLARSHIPS AND PRIZES

OF THE TOTAL VALUE OF $20,000

75 Free and 140 Partial Scholarships awarded each year. Free and Partial application blanks on request. Pharaoh's Triumphal Jazz Band

THE revival of interest in things Egyptian has led to many inquires into the music of the Valley of the Nile. It took the genius of the French artist, author and traveler, M. Theophile Gautier, to picture the music that a Rameses demanded. In his "Romance of a Mummy" he limns the following gorgeous word picture of the triumphal march of an Egyptian emperor many thousand years ago. No jazz band of to-day, no "calethumpian" orchestra could equal the riot of noise that a Pharaoh demanded.

"A frightful uproar, rumbling, deep and mighty as that of an approaching sea arose in the distance and drowned the thousand murmurs of the crowd, like the roar of the lion which hushes the barking of jackals. Soon the noise of instruments of music could be distinguished amidst this terrestial thunder, produced by the chariot wheels and the rhythmic pace of the foot-soldiers. A sort of reddening cloud, like that raised by the desert blasts, filled the sky in that direction, yet the wind had grown down; there was not a breath of air, and the smallest branch of the palm trees hung motionless, as if they had been carved on a granite capital; not a hair moved on the women's moist foreheads, and the fluted streamers of their head-dresses hung loosely down their backs. This powdery fog was caused by the marching army, and hung over it like a fallow cloud.

The tumult increased; the whirlwinds of dust opened, and the first files of musicians entered the immense arena, to the great satisfaction of the multitude, who in spite of its respect for his Majesty were beginning to tire of waiting beneath a sun which would have melted any other skulls than those of the Egyptians. The advance guard of musicians halted for several instants; colleges of priests, deputations of the principal inhabitants of Thebes, crossed the maneuvering-ground to meet the Pharoah, and arranged themselves in a row in postures of the most profound respect, in such manner as to give free passage to the procession. The band, which alone was a small army, consisted of drums, tabors, trumpets and sistras.

The first squad passed, blowing a deafening blast upon their short clarions of polished brass which shone like gold. Each of these trumpeters carried a second horn under his arm, as if the instrument might grow weary sooner than the man. The costume of these men consisted of a short tunic, fastened by a sash with ends falling in front; a small band in which were stuck two ostrich feathers hanging over on either side bound their thick hair. These plumes, so worn, recalled to mind the antennæ of scarabæi, and gave the wearers an odd look of being insects.

The drummers clothed in simple gathered skirts, and naked to the waist, beat the onagraskin heads of their rounded drums with sycamore-wood drum sticks, their instruments suspended by leather shoulder belts, and observed the time which a drum-major marked for them by repeatedly turning toward them and clapping his hands. After the drummers came the sistra-players, who shook their instruments by a quick, abrupt motion, and made at measured intervals the metal links ring on the four bronze bars. The tabor-players carried their oblong instruments crosswise, held up by a scarf passed around the neck, and struck the lightly stretched parchment with both hands.

Each company of musicians numbered at least two hundred men; but the hurricane of noise produced by trumpets, drums tabors, and sistras, and which would have draw blood from the ears inside a palace, was none too loud nor too unbearable beneath the vast cupola of heaven, in the midst of this immense open space, amongst this buzzing crowd, at the head of this army which would baffle nomenclators, and which was now advancing with a roar as of great waters."

New Piano Teaching Material

Published by

THEO. PRESSER CO.

Collections of Studies and Exercises in Various Grades

As it is our desire to have every progressive teacher become acquainted with these excellent works we will gladly send any of them for examination.

To assist our patrons in the selection of music we have catalogs covering every classification, any of which we will cheerfully send gratis upon request.

BILBRO'S KINDERGARTEN BOOK

By Mathilde Bilbro **Price, 75 cents**

This is not a theoretical work for the teacher but a real valuable method for the very first instruction of young children at the piano. It is hard to imagine a better work for this purpose. The tiniest tots, not even knowing the alphabet, can be acquainted with the piano keyboard very quickly through the use of Miss Bilbro's unique and practical ideas and attractive easy study material.

SHORT STUDY PIECES

IN THE SECOND AND THIRD GRADES

By M. Greenwald **Price, $1.25**

Each one of these pleasing study pieces covers some particular phase of technic—one is a scale study, another a wrist study, another covers crossing the hands, and others treat with repeated notes, triplets, legato, chromatic scale, perpetual motion, velocity, broken octaves and broken chords. Truly a wealth of exceedingly fine study material here, pieces that will attract and hold the pupil's attention.

FIRST PIANO LESSONS AT HOME

Piano Book I—75c. **Writing Book I—25c.**
Piano Book II—75c. **Writing Book II—25c.**

By Anna Heuermann Hamilton

Although designed especially to assist mothers and older sisters in teaching their little ones, this work may also be used to good advantage in some cases by the regular teacher. The writing book and the piano book go hand in hand and must be used together to obtain the best results.

SHORT MELODY ETUDES

WITH TECHNICAL POINTS

By Mathilde Bilbro **Price, $1.00**

These studies afford a beautiful combination of melody and technic. They range from grade one and a half to grade two. Miss Bilbro is a gifted writer of elementary study material and her works are very successful.

GOLDEN MEMORIES

By Mrs. H. B. Hudson **Price, 90 cents**

These "golden memories" are twenty-seven songs of the long ago with melodies indicated by letters of the alphabet after the manner of Mrs. Hudson's other well-known works. The melodies are also given in the regular musical notation, thus bridging the gap between the A B C system and the ordinary music instruction. Any-one with five fingers and a brain can master this book, even older folks whose musical educations were neglected in youth.

ETUDES MINIATURES

By Frances Terry **Price, $1.25**

Twenty-six studies or study pieces in grades two and two and a half by a very successful writer of juvenile material. They are particularly good, being quite interesting musically and quite valuable technically. They exceed many offerings in these grades in that they are tuneful throughout and well contrasted, the harmonies and general treatment being most workmanlike. Both teacher and student will benefit by giving this excellent series a trial.

MODERN GRADED COURSE OF STUDIES

No. 19140—Grade 1 **No. 19141—Grade 2** **No. 19143—Grade 3**

By Henry Edmond Earle **Price, $1.00 each grade**

There are three volumes to this graded course, supplying about two years' study for the pupil. The author has done his work well; the grading is particularly well done and the selections, chosen from standard etudes, exercises and pieces, are most pleasing. Volume one may be used as a first instruction book if the pupil is not too young. Both clefs are taken up at the very start.

ETUDES DE STYLE

By E. Nollet. Op. 25 **Price, $1.25**

The grace and refinement, found in the writings of all modern French composers, are particularly well exemplified in these studies. Although in point of difficulty they do not proceed beyond grades 4 and 5, nevertheless, they are real artist studies, each one being well worth playing as a separate piece. They are ideal studies to follow Czerny, Op. 299 and could very well take the place of Czerny, Op. 740. Edited and fingered by Louis Oesterle.

TOUCH AND TONE

SHORT MELODIOUS EXERCISES

By Ave Corbett **Price, $1.00**

There is always room in the teacher's list for an additional set of studies suitable for the earlier grades. One tires of teaching the same things all of the time and students, too, are greatly helped by variety. These short and tuneful studies begin in the first grade and gradually progress to a point where the student is ready to enter the third.

SIXTEEN RECITAL ETUDES

By Ludwig Schytte. Op. 58 **Price, $1.25**

These studies correspond in mechanical difficulty with Heller, Op. 47. They are agreeable and pleasant to play, having musical worth, yet enabling the student to gain mechanical control of the keyboard. Teachers ofttimes find it helpful to substitute studies such as these for the commonly used works of Heller, Clementi, Kohler and others. Schytte ranks among the best of the modern composers.

PLAY AND SPORT

40 SECOND AND THIRD GRADE STUDY PIECES

By A. Sartorio. Op. 1235 **Price, $1.00**

Sartorio's educational material is always welcomed by piano teachers and this new set of bright, attractive study pieces is almost sure to be successful. While supplying a variety of technical material they are all tuneful and full of rhythmic go, making them interesting to practice. Each has been given an appropriate title, a feature that will appeal to the student in particular.

MELODIOUS ELEMENTARY ETUDES

By Franz J. Liftl. Op. 161 **Price, $1.25**

Franz J. Liftl is one of the leading European teachers working the easier and intermediate grades and his scholarly educational works have met with great favor. This, his most recent, is a set of studies suitable for second grade work and leading by easy stages into the third grade. They are well made musically and well balanced technically.

INTERMEDIATE STUDY PIECES

Price, 75 cents

This volume is useful for instructive purposes as well as for recreation. There are thirty-one numbers in this compilation, each piece exemplifying some points in technic as well as having quite a bit of musical interest. In point of difficulty these pieces are within the limits of grades three to five. They were selected from works of the best modern composers.

Two Outstanding Works for Piano Instruction—Used by Teachers Everywhere

The Most Frequently Used Elementary Method for Piano Beginners

SCHOOL FOR THE PIANOFORTE

Vol. 1. Beginner's Book	**Price, $1.00**
Vol. 2. Student's Book	**Price, $1.00**
Vol. 3. Player's Book	**Price, $1.00**

By Theodore Presser

Starting with the publication of the Beginner's Book, the now familiar instruction book with the red cover, this series has scored an unprecedented success in the musical education field. The simplicity of this work has enabled many teachers to achieve speedy results with even the youngest beginners. The Student's Book takes up the subject just where the Beginner's Book stops and holds the pupil's interest throughout. A complete treatment of the scales forms the center of this volume. Then follows the Player's Book, presenting a wealth of pleasing study material, treating somewhat in detail, trills, octaves, two notes against three, the pedal, etc. A student who completes this series will be capable of playing many enjoyable and entertaining piano compositions and will be thoroughly prepared for further advancement.

The Original of all Graded Courses of Pianoforte Study

STANDARD GRADED COURSE OF STUDIES FOR THE PIANOFORTE

IN TEN GRADES

Compiled by W. S. B. Mathews

Price, $1.00 each grade

This is the first and best compilation of studies culled from the works of all of the world's greatest writers and pedagogues, all selected with extreme care and brought together in logical and progressive order. This is a work of to-day, not of the past; since, in addition to the imperishable things of the past, the gems of modern thought and inspiration are being added continually, each volume being enlarged for that purpose. Although this course is complete in itself, from the very beginning up to artistic perfection, it may be used also as the basis for the most exhaustive study of piano music, since each volume contains carefully prepared lists and directions for expanding and supplementing the work of its respective grade.

Melodious, Interesting and Stimulative Throughout.

THEO. PRESSER CO. *Music Publishers and Dealers* **1710-1712-1714 Chestnut St.** **PHILADELPHIA, PA.**

The World of Music

A Grand Musical Festival will be held in San Francisco in March. An orchestra of one hundred and twenty-five musicians and a chorus of five hundred voices, with a fine galaxy of vocalists, and all under the direction of Alfred Hertz, will give a series of performances that will rank well with the greatest of American festivals of this nature.

Berlioz's Parisian Home, in the famous Montmartre district, is threatened with demolition through the widening of the street. As the composer lived here from 1834 to 1837, during which time he produced some of his best known compositions, including *Harold en Italie* and *Benvenuto Cellini,* his admirers have started a movement to save this musical shrine.

Mme. Genevra Johnstone-Bishop, America's leading oratorio soprano during the last decade of the past century, died at her home in Los Angeles on December 21. She also, in her prime, filled many engagements in the leading British musical festivals.

The Chicago Civic Opera Company began a season of performances in Boston, on January 28, with Mary Garden in her favorite role in "Le Jongleur de Notre Dame."

A Prize of 100,000 Francs is offered by Heugel, the Parisian music publisher, for a four-act opera of about two-and-a-half hours in length. One-fourth of the prize goes to the librettist and three-fourths of it to the composer of the music. Manuscript scores must be in possession of the publishers before October 31, 1924.

Vittorio Arimondi, erstwhile popular baritone of Italian opera but now retired, celebrated the fortieth anniversary of his debut by singing *Basilio* in "The Barber of Seville" with the Civic Opera Company of Chicago, with Mme. Galli-Curci as *Rosina.*

Frederick Stock, conductor of the Chicago Symphony Orchestra, led the performances of the Philadelphia Symphony Orchestra at Philadelphia on January 18, 19 and 20, and in Washington and Baltimore on January 22 and 23, in the absence of Leopold Stokowski for his vacation.

William H. Humiston. music critic of the *Brooklyn Eagle,* and with a wide reputation as a writer, reviewer and annotator of programs, died in the Fifth Avenue Hospital, December 5, as the result of an operation to determine internal troubles. Mr. Humiston was born April 27, 1869, at Marietta, Ohio, and before entering the journalistic field he had a rather wide experience as organist.

Mme. Takami Miura has divorced her Japanese husband, a noted physician of Tokio, and will remain permanently in America.

Xaver Scharwenka and Georg Schumann, who will visit America to conduct their own compositions at the North Shore Festival, Evanston, Ill., in May, will also act as "guest judges" in the $1,000 prize contest for orchestral works of American composers.

Mrs. Carl D. Kinsey, wife of the treasurer and manager of the Chicago Musical College, was killed, and Mr. Kinsey was seriously injured in a New York Central wreck at Forsyth, N. Y., on December 9. Mr. Kinsey's friends will be glad to know that he is convalescent.

The Metropolitan Opera House, according to report, is to be remodeled at the close of the present season, so as to add about one thousand to its seating capacity. Each performance at this "temple" now costs between $14,000 and $15,000.

Ben Davies, the veteran English tenor (a native of Wales) is still giving successful concerts in London, at the age of sixty-five.

An Annual "Mozart Festival" is planned for the German city of Baden-Baden.

The Philadelphia Orchestra had a "waiting list" of eight hundred would-have-been subscribers to its New York series of concerts for this season.

Chopin's Life and His Music are to form the basis of an operatic production in the nature of "Blossom Time" and its relation to Schubert. It is by Edouard Goldbeck, and his wife, Lina Abarbanell, is to have the leading role.

"Anna Karenina," the libretto founded on Tolstoi's novel and the music by Hubay, the eminent Hungarian violinist, has had a very successful *premiere* at Budapest.

Antonio Scotti's Twenty-fifth Anniversary as a member of the Metropolitan Opera Company was celebrated on New Year's night by a gala performance in his honor, of "La Tosca" in which he performed his favorite role of *Scarpia.* After the production a banquet was enjoyed at the Biltmore Hotel, attended by leaders in finance and society, and the music editors of daily papers and periodicals.

An Association of American Glee Clubs has started a movement along the lines of the Welsh Eisteddfod and the German Sänger-Bund, which will include countrywide singing contests with triennial meetings in New York and leading cities of the Central and Far West.

Sir Thomas Beecham boldly broke with tradition at a recent Queen's Hall concert in London. When Mme. Selma Kurz, the distinguished Austrian soprano, and the orchestra got at variance, Sir Thomas brought the performance to a halt by a rap of the stick. "There seems to be a certain misunderstanding about the song," he remarked. "I shall begin over again."

The American-National Orchestra created a very favorable impression at its public debut at Aeolian Hall, New York, December 12, 1923, with Howard Barlow as conductor. The organization is restricted in membership to American-born musicians, is pledged to bring forward American soloists and to perform at least one native composition on each of its programs. In this program Lyell Barber was the soloist in MacDowell's *Piano Concerto in A Minor,* while Lewis M. Isaacs' *Beyond the Mountain Line* and James P. Dunn's *Overture on Negro Themes* were orchestral numbers.

Italo Montemezzi, celebrated Italian composer of "L'Amore dei Tre Re," with his American wife, is spending three months here on a pleasure trip. "Americans go to Europe for relaxation," he says, "so why should not Europeans come to America for the same purpose?"

Charles Kunkle, composer, pianist and one of the musical pioneers of the Middle West, died in St. Louis, December 3, 1923. He was born in Sippersfield, Germany, June 22, 1840, and began his musical career in Cincinnati at the age of eight. His *Alpine Storm* was for a whole generation the goal of every schoolgirl's pianistic ambition. He was a leading factor in the musical development of St. Louis and its environs and assisted in the concerts of many notables such as Rubinstein, von Bülow, Rummel and Dr. Louis Maas.

Paër's "Maestro di Cappella," first produced in Paris in 1821, was the novelty of the season, performed by the Civic Opera Company of Chicago, in the fifth week of its season.

The Tax on Opera Companies has been abolished in Georgia, the House of Representatives having concurred in the recent action of the Senate to this effect.

The Gold Medal of the Philharmonic Society (London) has been awarded to Alfred Cortot, the French pianist. In the one hundred and twelve years of life of this organization (whose orchestra, we believe, is the oldest in continuous existence in the world), but twenty-three musicians have received this distinction. Gounod is the only other French musician to have been so honored.

Ignatz Waghalter, eminent Polish composer and conductor, made his American debut at Carnegie Hall, New York, December 7, at a concert in which he was assisted by the New York Symphony Orchestra.

Victor Garwood, one of Chicago's leading pianists and teachers of that instrument, died there November 21, at the age of sixty-four. For thirty years he had been a leading instructor in the American Conservatory.

A Prisoner in the Western Peni tiary has taught and conducted an orc of men and boys for twenty-five yea his life sentence. The State Federati Music Clubs has started a movement to him in securing suitable instruments.

Ferdinand Löwe, the aged conduc the Konzertverein of Vienna, and an in friend of Brahms, Wolf and Bruckne been compelled by failing health to from his coveted post. Paul von Klens Danish composer-conductor, has been as his successor.

Another Musico-Statesman h peared. This time it is an English con C. A Becket Williams, who has enter political arena as the Liberal candida Farnham (Surrey). Lloyd George sign nomination papers.

The Detroit Symphony Orches to have a $45,000 organ for its Or Hall. The instrument is the gift of M Mrs. William H. Murphy. Mr. Murp been a liberal supporter of musical prises in "The Auto City" and is presi the orchestra.

The First Three Prize-Winnin thems in the recent contest of the Publishing Company were the prod organists. The first prize of $15 awarded to Gordon Williams, born a cated in England, but resident in for nearly twenty years. The second $100 went to William Drobegg, bo educated in Germany, but now a resi Milwaukee. The third prize of $75 by Powell Weaver, a native of Penns now a prominent organist of Kansas

Mr. Josef Hofmann, the pianist many admirers claim that he is t most performer of our time, has torn more or less transparent veil of Dvorsky," the pseudonym under w permitted some of his orchestral wor performed a few years ago. He has given two concerts of his works, in N and in Philadelphia with the Phil Orchestra and Mr. Stokowski. His tions, notably his piano concerto, ceived with huge enthusiasm. Mr. is one of the most modest of men, a gratifying to see his work as a receive its proper recognition. Now a prime of his life, great things may be pected of him in this field.

Riccardo Martin, one-time promin tenor at the Metropolitan Opera House, Jane Grey, the actress, were recently marri

Gustav Brecher, formerly operatic c ductor at Hamburg, Cologne and Frankfu and for many years leader of the Philh monic Orchestra of Hamburg, has be chosen to be General-Musikdirektor of Leipsig Opera.

The La Scala Season opened on Nov ber 15, with a performance of Stra "Salome" and Riccitelli's "I Compagnac "Aida" was to have opened the season on previous evening, but was abandoned beca of the indisposition of the tenor, Radaelli.

Sir Edward Elgar, the eminent E lish composer, is at present in South Amer where he will make the journey to Mana one thousand miles up the Amazon.

Mathilde Schönberg, wife of Schönberg, the eminent composer, died ber 18.

The New Chimes of the Church Augustine were inaugurated by the pl on Christmas morning of "The Star S gled Banner." This is said to be the carillon in the New York district which a sufficient range to play this national

Franz Drdla, the Moravian com violinist whose *Souvenir* is one of the popular violin compositions of our tin now on a visit to America, and has engaged by the Keith circuit.

obby' can 'move on' a harmless pair of canoodlers in
street, as I have often seen him do, without inter-
ng with their liberty? The answer is that either he
ermitted to interfere with it, or else is taking the law
his own hands.

One evening during the very hot weather I sat by my
n window pretty late into the night, dreamily looking
e few passers-by. A little way along the road stood
ing couple, talking, and occasionally embracing one
er. Once the policeman strolled by and said noth-
the second time he told them to 'move on.' And I
ed myself why? There was no traffic on the street,
hey were not obstructing it; their demonstrations were
hin the limits of decorum, so they were not guilty of
cent behavior; they were obviously sober, so could
e accused of drunken disorderliness; they were mak-
no noise, so no one could say they were disturbing
peace; nevertheless they were 'moved on,' and their
ty was interfered with. But on what grounds?

there is a law by which people may walk along the
, but are not permitted to *stand* in it—well and
but in that case why may a person break the law
g as he holds two boxes of matches in his hand,
one discomfort by the pitiful face he pulls, or,
ely worse, if he jerks the bellows of a concertina
d out or makes passers-by feel sea-sick by his
ating *portamenti* on a *fiddle-string* attached to a
box? In short, if a man makes himself a thor-
nuisance to others, we are not allowed to interfere
is liberty; but if he does *not*, we move him on.
doctor said to me the other day: 'There is no dis-
rt greater than noise,' and I agree with him. At
o'clock in the morning I am awakened by the cries
milkman, which are particularly annoying after
t or a bad night's rest. Then follow the raucous
of a series of coal vendors, gas and coke vendors,
ble vendors, plant vendors, fruit vendors, rag-and-
nen, old bottle buyers, old iron buyers, and hosts
ers I have for the moment forgotten."

Grainger, Grieg and Strauss

y Grainger and Cyril Scott have been *confreres*
heir youth. The bond of sympathy and friendship
n them is already historic.

the time of which I write, Percy Grainger and
ther were living in an upper part of King's Road,
; but Percy's days were now so full that his
e friends saw but little of him. When they at-
d to make an appointment, they usually received a
erting letter from *Mrs.* Grainger informing them
ercy would be at liberty, say, from 4.20 to 4.40
n and such a day, and if they came, they must
to be punctual. As this 'how do you do, and
ye' arrangement, however, savored a little too much
isit to the dentist, they frequently decided they
not come, and had to be content to see Percy with
d on Mrs. Grainger's 'At Home' days. I did,
eless, avail myself of one of these lightning ap-
nts, and found my friend dressed in a most
ing costume consisting of a blue and red shirt,
much open about the chest, and a pair of shorts
out of coarse, dark-colored Turkish towels. Round
alves were twisted, very far apart, puttees of white
, under which he wore neither socks nor stockings.
Good Lord!' I ejaculated as I entered, 'Is it foot-
or Buffalo Bill on a penance?'

Percy wanted something cool to wear,' Mrs. Grain-
explained, 'so he got me to make him *that.*'

One hears that Wagner was very fond of dressing
in queer costumes—is this a peculiarity of com-
ers, I wonder? Which brings to my mind, since I
on the subject of Grainger and eccentricities, that
en Grieg came to London and stayed with the Speyers,
y asked him if there was anyone special he wished
meet.

'I should like to meet the young man Grainger who
tes choruses,' was the reply.

Accordingly, Percy was produced, and a very strong
pathy came into being between the two men. But
terwards heard from Percy that Sir Edgar and
S. found the old man a distinctly eccentric guest;
would spend most of his time sitting in the hall—
his hat on.

t Sir Edgar's I had my first interview with Richard
uss, when he came over to conduct 'Elektra.' It
been suggested that I should show him some of
scores with a view to his performing them in Ger-
y; but, although he professed himself interested,
in so far the interview was a success in other re-
ts, it proved disappointing. I had greatly admired
uss and had anticipated being impressed by his
sonality; so that to be greeted as I was, with lamenta-
s over the disturbed state of his stomach, acted
a piece of iconoclasm for which I had not been prepared. Although aware that the national malady in England is *liver;* in France, *migraine,* and in Germany, 'spoiled stomach,' I had associated Strauss with more artistic things.

"Nor did my second meeting with him, when Sir Edgar gave an evening devoted to his works, altogether dispel the unfavorable impression. This time Strauss himself was well enough, but his compositions were deplorably seedy; he had unearthed some work—Opus 2, I think—of which one could but say that it had far better have been left in its grave, or, rather, in its cradle. Moreover, a day or two later I was to hear the *Josefslegende,* which did not add to my admiration for him, considering what a descent from whilom inspirational heights it proved to be.

"As Vienna's leading critic wrote: 'It says in the Bible that the Lord was with Joseph—yes, but unfortunately not with the *Josefslegende.*' But then as Strauss admitted to Lady Speyer that *one day* he intended to write as *he* wished, the inference must be drawn that his monetary and musical aspirations were pulling in opposite directions. To what lofty ethers he will soar when freed from the considerational ballast of an unnecessarily heavy purse remains to be seen. But even then, I, for one, hope that his predilection for Mozart will not compel him to help himself more and more freely to those well-defined melodies which bear so close a resemblance to that all too melodious composer. Mozart has practically been the ruin of Tschaikowsky; will he prove the ruin of Strauss also? Time can but show."

The Composer of the Famous "Fifth Nocturne"

X. J. I. Leybach

XAVIER JOSEPH IGNACE LEYBACH. Born at Gambscheim, Alsace (Lower Rhine), July 17, 1817; died at Toulouse, May 23, 1891. Pianist, Organist and Composer. Son of the village schoolmaster. Had for his first teacher his brother Aloys, who was organist at Strasbourg; then with Professors Jauch and Wackenthaler, of Strasbourg, then finally he went to finish his education at Paris, where he studied with Pixis, Kalkbrenner and Chopin. In 1844 Leybach was elected, by competition, organist of the cathedral of Toulouse and held this post until his death. He published for his two instruments a great number of compositions. For the piano about 200 salon pieces, of which several became celebrated. His piano pieces are "easy, pretentious and pleasing"; for example: *Nocturnes*, Op. 3 and Op. 4; *Aux Bord du Ganges* (Mendelssohn); Op. 42; *Boléro Brillante*, Op. 61; *Ballade*, Op. 19; *Valse Poëtique*, Op. 216; *Les Batalières de Naples; Fantasias* on "La Somnambula," "Aida," "Faust" and other operas. We might also mention a "Method" and pieces for the harmonium; motets and songs with organ; and "The New Practical Organist" (350 pieces in three volumes) which is considered as one of his best works.

Sparks from the Musical Anvil

CONTEMPORARY COMMENT OF ACTIVE MUSIC LOVERS

"The tonal result should be the criterion of what is right and wrong and not the way it is produced."
—PERCY GRAINGER.

"What we need more than anything else musically in this country today is a great American opera company to give real opportunity for the American singer to sing, if possible, in his own language."
—HERBERT WITHERSPOON.

"Music is the art directly representative of democracy. If the best music is brought to the people, there need be no fear about their ability to appreciate it."
—PRESIDENT COOLIDGE.

"The potent influence of music in the everyday life of the nation is but beginning to make itself felt. It will spread with the appreciation of music's benefit to mankind."—CHARLES M. SCHWAB.

"Great composers of the past are remembered by their works combining beauty and simplicity—a combination of qualities difficult of attainment."
—BERNARD HAMBLEN (*English song composer*).

"I love music, but I do not try to play myself; I love music too much to spoil it."—ANNA PA[illegible].

Savez Vous?

Some Questions from M. Moritz Moszkowski

M. MOSZKOWSKI, who for many years has been a good friend of THE ETUDE MUSIC MAGAZINE, has been dangerously ill for a long period. His affliction is so exhausting to the famous composer that he is incapable of effort of any kind for many hours at a time. He has, however, from time to time written the following paragraphs of an educational character which he has collected and sends to the readers of THE ETUDE, under the title, "Savez Vous?"—(Do you know?).

Do you know:

That Liszt wrote an opera in one act at the age of fourteen, which was presented in Paris and interpreted by the well-known actor-singer, Alphonse Nourrit? At the end of the representation the child was carried upon the stage and received a very enthusiastic ovation.

Do you know:

That it was a Polish pianist, Mortier de Fontaine, who performed Beethoven's *Sonata, Op. 106,* for the first time in London?

Do you know:

That the musician, Czerney, who appears to us as such a formidable constructor of technical exercises, composed one oratorio and twenty-six masses?

Do you know:

That Bach and Handel were both born in the same year (1685—the year that saw the revocation of the Edict of Nantes), but a few miles apart in Saxony, that both became blind, that they never met, and that both died on a Good Friday?

Do you know:

Where the first representation of "The Flying Dutchman" was given? At L'Opéra of Paris. Wagner read his libretto to the director who found it interesting and bought it from him. Wagner naturally thought of writing the music himself; but he was informed that the conductor of the orchestra, Dietsch, had received orders to compose a score for the work. Wagner was very young at this time, and, without means, had to abide by this. The first performances were given with music of Dietsch to Wagner's text; but the Dietsch music was a complete failure.

Do you know:

That the composer, Raimondi, born at Rome (1786-1853), was one of the most prodigious contrapuntists? He wrote several very complicated Fugues which could be executed simultaneously. Four Fugues in four voices could be played together as quadruple Fugues with sixteen voices. Six Fugues in four voices could be performed as a sextuple Fugue with twenty-four voices. The most important work was written for sixty-four voices, which means sixteen choruses with four voices. His crowning efforts were three Biblical Dramas: "Potiphar," "Joseph" and "Jacob," which were executed simultaneously on one stage divided into three parts.

Do you know:

That E. T. A. Hoffmann, the author of the famous fairy tales (and the inspiration of Offenbach's "Tales of Hoffmann" and Schumann's "Kreisleriana") was also a composer and that he left four operas, of which the best critics of his time spoke very highly?

Do you know:

That Meyerbeer wrote twelve different marches for his opera, "Le Prophéte," before he secured the one by which he became famous?

Do you know:

That Ferdinand Ries (who one day had to play in public the *Sonata, Op. 106,* of Beethoven) was advised by the composer to leave off the great final Fugue and to close with the Scherzo. It seems strange that what would seem to us today as a lack of respect was tolerated and even suggested by the great master himself.

Think it Out Yourself

By A. de Z. Pogany

THINK it out yourself. One of the reasons why many students seem to stick behind in their musical work is that they consent to take anything in the way of musical instruction that is handed out to them, without ever finding out why.

Every problem in music and in playing has a reason behind it. The other name for reason is principle. If you do not find out the basic principles, you will always be on uncertain ground. Lord Bacon used to say, "Read not to contradict or confute, nor to believe nor take for granted, nor to find talk and discourse, but to weigh and consider."

Why is this passage staccato? Why should it be finger staccato instead of hand staccato? What had the composer in mind? What other composition is similar to this in effect?

"What Are My Earning Possibilities in Music?"

By the Noted New York Critic

HENRY T. FINCK

This very moment there are thousands of American girls and youths who are asking themselves: "What can I, as a student, look for in music as compared with other callings? Can I through music transform myself from literal poverty to fame, as have, for example, some of the Russian violinists?"

Why not? The field is open to any who cares to enter it. But *before you start*, let me tell you one thing, young girl—or young man. I speak from an experience of forty-three years as a Metropolitan critic, and I assure you most emphatically and irrevocably, that if your object in becoming a musician is entirely or chiefly commercial, you are foredoomed to miserable and utter failure.

One of the greatest and most successful of operatic singers was the American, Lillian Nordica. In her recently published book, *Hints To Singers*, there is a chapter on "Choice of Singing as a Profession," in which she says truly that "success as a singer is impossible to those with whom the question is 'How long will it take me to get on the stage, and how much shall I make when I get there?'"

The Secret of True Study

"The mercenary feeling," she adds, "cannot enter into it; *one must study because one loves one's art*, and once having begun one must stick to it. Love of art is the secret of true study. That art is not to be looked upon as a vehicle of making money, but as a something to be done beautifully, and to be done well for its own sake alone."

"One must study because one loves one's art." That brings us at once to the heart of the matter. Unless music—including your own singing or playing—gives you pleasure you cannot possibly give pleasure to others with it; and pleasure—intellectual, sensuous and emotional—is the alpha and omega, the beginning and the end, of music. You will waste a great deal of good money and hard work if you go ahead while lacking the gift of real and intense enjoyment of music.

It is different with most other professions. You *may* become a financially successful carpenter or engineer, or lawyer, or doctor, even though you have at the start no special liking for that particular field of activity. As you gradually learn the details of such a profession you get interested in them; you learn to like and even to love them; and this interest, combined with tremendous industry, may lead to your financial success.

But in the field of music this is not so. If you do not love it at the start you will never learn to love it sufficiently to be able to give others pleasure with your performances; and unless you do give pleasure you are doomed to failure. Ergo, unless you are intensely interested in music for its own sake, don't try to become a musician—that is, a soloist or public performer.

Of course, if your ambition is to become simply a minor musician—say a member of a band or an orchestra—you needn't be so particular in the matter of enthusiasm. Natural talent for music will suffice. Many thousands make an honorable and comfortable living this way. Thanks to the musical unions, orchestral players now have good pay—they have to earn it, too. If you have an idea that the life of a minor musician is an easy one, drop it *subito*—which is Italian for suddenly.

But, if you are willing to work, go ahead, learn an orchestral or band instrument thoroughly and you will have no difficulty in finding an acceptable job. To make *sure* of an engagement, learn a woodwind instrument—not the flute, for flute players are legion—but oboe, clarinet, or bassoon; for these the orchestras and bands yearn; sometimes woodwind players are so scarce that they can earn fancy wages, like bricklayers or plasterers. Think of that!

Yes, how about women? They cannot, alas, be plasterers and bricklayers, but have those of them who are humble enough to aspire solely to the rank of minor musicians any chance in orchestras?

Apparently not. The question of women and orchestras is somewhat mysterious and puzzling. Many a time in my long career I have read that the time had come for women's—or mixed—orchestras. But it hadn't. I don't see, exactly, why not. In our school orchestras, the number of which is getting to be amazingly large, girls and boys play together as successfully as they study together. But, when it comes to public orchestras, women are, as always, conspicuously absent, except sometimes as harpists; and even that seems all wrong, for the harp is the angels' instrument and angels are of the masculine gender. Do you remember how the famous sculptor, Gutzon Borglum, not knowing this, made a female angel for a cathedral in New York and smashed it when the critics called his attention to his blunder? Doesn't the very idea of a woman being an angel make you smile?

Joking aside, it does seem strange that there are no women in our orchestras except as harpists. Maybe it has been found that they won't obey the conductors. They won't even obey their husbands any more; the word obey is being removed from the wedding ceremonies. But I am joking again!

Seriously speaking, I think the fact that most orchestras travel a great deal may explain why there are no women in them.

Women, therefore, in the realm of music, seem doomed to the role of major artists, alias soloists. One of the strangest sights is a womenless orchestra playing for a woman, even a girl fiddler or pianist, or solo singer.

If the women are good enough for soloists, why not in minor parts?

And why shouldn't they travel with men? In the book by and about Mme. Nordica, to which I have referred, are a number of letters written by her mother. In one of them she says: "Lilly has sung in many of the largest theatres and halls in America, Great Britain, Holland, Belgium, and finally in the French metropolis at the Trocadero, and much of that time traveled with sixty-five gentlemen of all nationalities, that is, German, Italian, French, Irish and American. And not one word or look was ever heard or seen in the least possible manner approaching disrespect. Not a man of Gilmore's band would do more than raise his hat in complete deference to us as we met them in hotels, theatres or the street. As for Mr. Gilmore, he has the bearing and the soul of a Christian gentleman."

I believe the time *is* coming, and soon, when women will be members of orchestras, travel or no travel.

Disheartening Competition

There is another letter of Mrs. Norton that I wish to quote a line or two from: "Fifteen thousand pupils have been graduated from the New England Conservatory and *not one* has the reputation already made by Lilly in America, Great Britain and France."

Not one in 15,000! What became of all the others?—and that institution one of the very best in the world!

When you ask yourself, young woman or man, "can I through music win fame and fortune?" reflect on the fact that there are thousands of music schools in the world, and how rare are the song-birds, or pianists, or violinists who *do* make fame and fortune for themselves! It is not particularly encouraging. Is it a consolation to know that it is the same in most fields of human activity? There is a glut and ruinous competition in everything. So, after all, if you *have* musical talent and enthusiasm, go ahead and try. There is always room at the top—only, in trying to get there don't forget what Edison said about genius—that is, the top: "Genius is one per cent inspiration and ninety-nine per cent perspiration."

You cannot—you simply *cannot*—win fame and fortune in music unless you are willing to work in the words of Maud Powell, "longer and harder than any laboring man ever dreamed of doing." She—the greatest female violinist of all time—had been asked if the financial rewards of a musical career are commensurate with the outlay of talent, time, sacrifices and cost of education, and her answer was: "In rare cases, yes; generally, decidedly no." What made her answer the question so pessimistically was the fact that even if you have exceptional talent and work harder than a workman, you may fail dismally, simply because your personality does not interest the public.

"Let me tell you," Miss Powell went on to say, "that the world is full of artists and musicians whose talent and ability command the deepest reverence, who, nevertheless, cannot swell box-office receipts by a single dollar for lack of that elusive quality of magnetism. The great public is moved by *human* qualities more than by *art* qualities. So suppose you spend your youth and early womanhood in the sweatshop of art, and come forth into the light of public work well equipped technically and artistically, only to find yourself gloriously snubbed by the public because you are aloof and leave them cold—where is your financial reward then?"

HENRY T. FINCK

So you *may* succeed *if* you have a magnetic personality *plus* musical talent. And there are other ifs.

If, for instance, you are so nervous that you never do yourself justice when singing or playing for others, you should no more think of becoming a musical performer than you should think of becoming an Alpine guide if you get dangerously dizzy when looking down a precipice. It isn't done, and that's all there is to it.

If you are a born scoundrel I know of one way to get rich quick in music and that is to become a fake teacher. All you need to learn in order to succeed is poker. *Bluff* does it! The woods are full of girls who just love to be fooled and humbugged and fleeced. Make their work very light. Tell them that they have wonderful voices, and then you can, in three months, get them a chance to sing *Carmen* or *Isolde* at the Metropolitan Opera House. Charge $5 or $10 a lesson—the more the better. There are many "teachers" who do this; and the girls like them better than the honest ones. These girls, to be sure, never get anywhere; but what does the fake teacher care as long as he has their cash? The time will come when such "teachers" will be lodged in jail; but it hasn't come yet.

To come back to the Russian fiddlers we started with. Half a dozen have made "big money," but how about the others? There have been such multitudes of them that—well, I once defined Russia as "a country with 180,000,000 inhabitants *mostly professional violinists*." That may be an exaggeration, but it hints as the multitudinous competition awaiting those who wish to take up music as an avenue to wealth.

Try something else, is my advice, *unless* you are so passionately interested in music—as were all those who have succeeded—that nothing else will content you. For in that case you will be happy, even if you do not make "big money." And happiness is infinitely more important in this world than lucre. If you don't believe this, read the section on "Music, Money and Happiness" in my *Success in Music and How It Is Won.*

Suggested "Self-Test" Questions upon Mr. Finck's Article

1. *What is the secret of true study?*
2. *What opportunities seem likely for Women orchestral players?*
3. *What did Maud Powell say about the work of the music student?*
4. *What part do nerves play in platform success?*

Hints On Passing Musical Examinations

By Sydney Grew

Examination candidates are rarely cool and comfortable. Examiners are either cold, severe and academical; or kindly and human. There is no need for the young student to be nervous. This is said out of personal experience as examinee and examiner.

After my earliest examinations in organ and piano, I used to counter my nervousness by preparing my pieces so thoroughly that it was well-nigh impossible for me not to play them technically well, even when my mind was confused; my body exercising itself in the playing as by a process of habit. For several days before an examination I would be saying to myself, "In so many hours from now I shall positively be playing this piece to an examiner;" and I would wake on the terrible morning with feelings which, should I ever come to be hanged, will prove to have been useful preliminaries for that objectionable fate.

All this unhappy anxiety and confusion was wrong. Every moment of strained imaginative realization before the examination had weakened my powers, and had assisted in the creation of a bogey. I should have been taught by my teachers—not being clever enough to find it out for myself—that every thought of an approaching examination must be one of pleasantness, so that when the event finally arrives, the mind shall be in a pleasant mood, and the event itself thereby made pleasant. I should have been told that an examiner wants to pass candidates, not to fail them; that, as he is examining constantly, for him an individual examination is but one of many hundreds, and therefore nothing at all peculiar or exceptional. Further, I should have been told that a highly nervous candidate actually imposes a strain upon the examiner himself, first by the power of sympathetic reaction of one mind to another, and secondly by creating a need for the examiner to analyze the matter placed before him into its component parts of nervousness and musical ability, before he can arrive at his judgment.

The examiner's task is very responsible and difficult, under the best conditions. In a few minutes he has to judge of your year's work, and to apprehend your musical and general nature, also to forecast slightly your possible future as musical artist, so that, if advisable, he may tell you whether or not you should continue in your particular department of music. It is therefore necessary you should go to him with everything that may aid him, and especially with ease of mind and a quiet, modest confidence.

The matter of nervousness extends to a more important world than that of examinations. If you allow nervousness to develop, it will perhaps destroy the effectiveness of your playing in public. In examinations, you have only to satisfy an individual examiner; but in concert work you have to please, charm, stimulate, and ennoble a massed audience. To walk before a thousand men and women, and to occupy their time for half an hour, demands the best that is in you, and your true self—the self that is not you when you are fearsome.

Nervousness need not conquer you. It can be overcome, if not given scope for too long. I had to give up playing in public because I went too far in nervousness ever to be sure of safety when playing either of my instruments (piano and organ) to an audience. But when I took to public lecturing, and found the same sort of nervousness interfering with me there, stupefying my brain and making my voice wabble, causing me to feel, and perhaps to look, a fool, I then deliberately *practiced* confidence, and in the end acquired a sort of technic in anti-nervousness.

It would take too long to describe the process here, but I will outline one application of it for the examination candidate. Do not over-prepare for examinations. Leave scope for interpretative energy in the moment of performance, and do not make the music stale in your mind by excessive practice. Have a clear idea of the range of technical material incorporated in the scheme of the examination (scales, arpeggios, and the like), but do not try to work through the whole of it on the day of the examination, or on the day preceding. For some hours before the examination put it out of your mind, and go for a walk, read a book, or sit quietly at the Pictures. In particular, do not talk with other candidates about the examination. Such talk either disturbs your ideas or gives you fresh notions which it is too late to incorporate into your already determined work. Just before the time to go before the examiner, begin to think quietly and quickly of what you will have to do—the pieces, the order in which tests will be set you, and the general scope of the technical studies from which the examiner will make his selections. Fix deep in your consciousness these facts:—an examination is to be taken quietly; there is no reason at all why you should not pass; if you fail, it isn't a matter of life and death, and you can go up again next year; you are well prepared, and *you will not fail.*

Some candidates under-prepare. This is bad. If in your final moments of preparation for the examination you are suddenly convinced that you have not worked hard enough, go away, sacrificing the fee, and giving the examiner a little leisure. The examiner can tell nervousness from carelessness and laziness, and to the careless candidate he says the words that hurt.

Using Our Best Gift

By Louis G. Heinze

Playing from memory is to be valued as a gift from heaven, which usually gives early manifestations of its presence. Someone has said that, of all the gifts with which a beneficent Providence has endowed man, memory is the noblest.

One child, who as yet has studied nothing, is able at times to remember with ease a poem or a melody. Another, who has been at school for some time, has great difficulty in this respect. These differences in ability are to be seen in even the more advanced years.

Memory is too often accused of treachery and inconstancy, when, if inquired into, the fault will be found to rest with ourselves.

A quick and retentive memory, both of words and things, is an invaluable treasure and may be had by anyone who will take the pains. A child will memorize easier than an adult and girls easier than boys.

It may be both profitable and interesting to here give some examples of remarkable memory feats, outside of music.

Ben. Johnson not only could repeat all he had ever written, but also whole books he had read.

Cyrus knew the name of each soldier in his army.

Scipio knew all the inhabitants of Rome.

Seneca complained of old age because he could not, as formerly, repeat 2000 names in the order in which they were read to him, and he stated that on one occasion when at his studies, 200 unconnected verses having been recited by the different pupils of his precepter, he repeated them in reversed order.

Mirandola would commit to memory the contents of a book by reading it three times, and could frequently repeat the words backward as well as forward.

Bossnet could repeat not only the whole Bible, but all Homer, Virgil and Horace, besides many other works.

Mozart had a wonderful memory. When only fourteen years of age he was in Rome and went to the Sistine Chapel to hear the famous *Miserere* of Allegri. Being aware that it was forbidden to copy this renowned composition, Mozart placed himself in a corner, and gave the strictest attention to the music, and on leaving the church noted down the entire piece. A few days later he heard it again and following the music with his own copy in his hand, satisfied himself of the fidelity of his memory.

Hans von Bülow played and conducted everything from memory, and he was the first to set the fashion. To-day most artists play and conduct from memory and they are almost without number who can and do as much.

A good memory is a good thing, but you must learn to think as well as remember; and don't crowd your mind with all sorts of rubbish merely because you can remember. Memory should be a storehouse not a lumber room.

There are pupils who can play a piece without the music (though unable to fully follow the development of the piece) perhaps by the sense of sound rather than by a true musical memory. When such a player loses the thread, he cannot repair the damage and must simply stop or begin again.

A certain degree of musical knowledge will be necessary for the correct art of playing from memory, namely a knowledge of the construction of the melody, rhythm and modulations and form. It cannot be taken for granted that, even with the best knowledge of a composition, a satisfactory rendition can be given without using the music frequently.

Though memorizing may often be a special gift, and without a doubt can be acquired and developed, the question is, at what stage can this be done with the best results? If done at the very beginning the pupil may never be able to read well; so the reading had better not be neglected.

"Music strikes in me a deep fit of devotion, and a profound contemplation of the First Composer. There is in it of Divinity more than the ear discovers."

—Sir Thomas Browne.

Scales Day By Day

By Dr. Annie Patterson, B. A.

As most musicians allow, Scales are the bedrock, especially of pianoforte technic. Just as Schumann advised students to make Bach (J. S.) their "daily bread," so should pianists never omit to give the fingers their "daily walk," or rather "run," over the keyboard. Teachers differ as to whether this "Constitutional" should be taken in large or small doses. Some possibly consider that scale-playing should cease after the student period, relying on the *repertoire* in hand for sufficient subsequent development. But the majority, without doubt, look upon scale-practice as a necessary but uninteresting duty, to be rushed through and got rid of as quickly as possible.

Now the Scale stands for the even development of every finger on the hand, for facility in overturn and underturn of individual digits, and for the correct pose of hand and arm. Can any three points in piano playing be of greater importance than these? Hence I would strongly endorse the necessity of the "daily trot," were it even to cover the entire length of the keyboard—and so get hand and arm at every available angle—at least once a day. Instructors differ regarding the number of scales to be practiced at a time. Some advise a small selection only for the diurnal grind, these to be played carefully in all positions (including contrary motion). In this case, suppose four scales are taken daily (say, to start with, C with A minor, and G with E minor), the twenty-four of the diatonic series can be gone over in a working week of six days.

Personally, I prefer the following *regime*: Starting with C major, play this evenly (not too fast) up and down once through its entire compass; then pass directly to a similar treatment of the relative minor (A) in the Melodic form. Thence straight to G, then to E minor; thence to D, followed by B minor; and so through the whole "sharp" series, working, backwards, through flats (making, mentally, the enharmonic change on F sharp to G flat). Arriving "home" at C, take this in positions, following with the relative minor (A), now in the Harmonic form, and also in positions. This concludes the daily spin, which can commence and end on any keynote in the gamut, and thus equally practice that, and its related minor, in positions. This "run" is best taken in the morning hours and at the start of one's practice, though a short five-finger drill may precede with advantage. The scales themselves occupy only from five to ten minutes; and, if briskly and correctly done, one feels invigorated after them and well able to tackle any piece in hand.

Pleasure is added to this daily drill if, once the fingers become automatic at any particular scale, one tries to think of some well-known classical selection written in that key. Thus scale C major may bring Bach's famous "First Prelude" to mind, as also Handel's "Dead March" (in Saul) and Mendelssohn's "O rest in the Lord." Again, reflect on the number of beautiful compositions of Beethoven in E flat or A flat, of Mendelssohn in the "sunny" keys of A and E, or of Chopin's love for D flat, as in his "Berceuse" and the favorite Waltz (Op. 64, No. 1). Daily Scales thus performed brightly, intelligently, and with care, precision and appreciation, can never be found dull or mechanical. On the contrary, they form an ever-ascending Ladder of Achievement which even the virtuoso cannot afford to overlook.

The After School Pupil

By S. M. C.

Time, 4 P. M.

A small boy from the nearby public school enters the studio with flushed face, touseled and with facial expression telling of stormy adventures during the day.

Billie takes his place on the piano bench and begins to play his exercises with more mistakes than can be counted. He has expended a tremendous amount of energy during the course of the day, and frequent yawns tell of weariness and an empty stomach. Teacher, are you going to overwhelm this tired little lad with a torrent of reproach, or prod him on with words more stinging than the lash? How much better to spend a few minutes in cheerful conversation, or even a little game, which would make him forget the unpleasantness of the day, and put him in a better mood for the music lesson.

The teacher who is able to create and maintain an atmosphere of cheer or even of fun during the lesson hour, especially when dealing with young children, will succeed far better than one who takes matters too seriously.

The Thresholds of Vocal Art

An Interview Secured Expressly for THE ETUDE with the World Famous Prima Donna

MME. AMELITA GALLI-CURCI

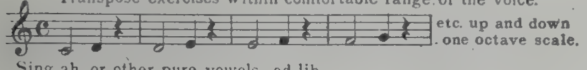
II

This section of this remarkably helpful conference may be read independently of Section I which appeared in the January issue of THE ETUDE.

"I AM sure that I am saying nothing novel in stating that the material that one sings is not nearly so important as how one sings. Personally I employed only the simplest materials. The exercises of Manuel Garcia are an example of this. It was with such material that this great Maestro is said to have started Jenny Lind and kept her practicing upon them for months in order to restore her voice.

1

Transpose exercises within comfortable range of the voice.

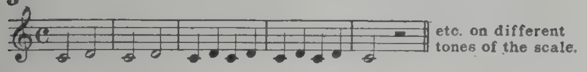


Sing ah, or other pure vowels_ ad lib.

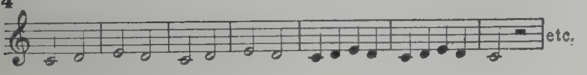
2

Similar exercises in sixths, sevenths and octaves.

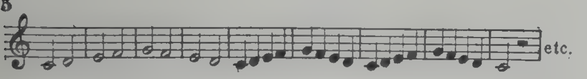
3



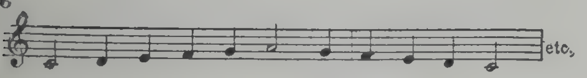
4



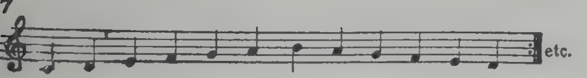
5



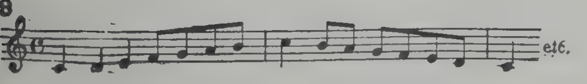
6



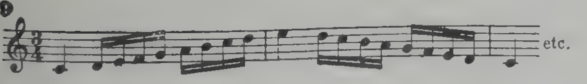
7



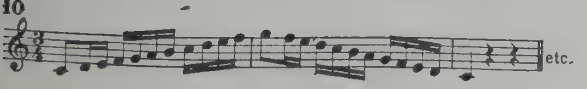
8



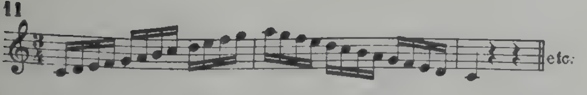
9



10



11



"Of course these exercises must be transposed to the most comfortable pitch of the voice. If done under the supervision of a teacher who really knows his business, so much the better.

"Garcia was really a very learned man with scientific tendencies, as his invention of the laryngoscope shows. The following quotations from his works are helpful to the student.

Vocal quality is the highest desideratum of every singer who would rise to the greatest heights in his art.

Every change of the quality of the voice originates in a change of the tube of the pharynx. As this very elastic tube is susceptible of countless changes of form it results in countless changes of vocal sounds or quality.

The sound that is to be preferred is mellow, well-rounded and ringing.

To avoid guttural sounds the tongue should remain tranquil at its base.

To avoid a nasal quality simply raise the soft palate by inhaling deeply and insuring an open throat.

To avoid hollow, cavernous tones avoid raising the tongue at the tip. Let it rest naturally in the mouth entirely without strain.

Be careful to avoid exaggeration in opening the mouth. The lower jaw should be allowed to fall by its own weight while the lips retire slightly as when one smiles. Let the tongue be loose and motionless, making no effort of any kind whatsoever to raise it at either extremity. Opening the mouth too wide tightens the pharynx and destroys the resonant vault-like shape of the pharynx. If the teeth are too close together the voice takes on a grating character. If you shape your lips like a funnel, as many singers make an effort to do, the voice becomes dull and heavy. An oval fish-like shape of the mouth makes for gloomy tones and inarticulate vowels.

Equality is absolutely requisite in the voice. Transpose each exercise into as many keys as necessary—never exceeding the natural limits of the voice.

Begin each day's study with sustained tones. Elementary practice should not last longer than five or six minutes at a time—repeated at long intervals several times a day. After months of practice these periods may be extended to a half an hour—not more.

"The singing student should make it a practice to assimilate as much as possible the vocal wisdom of the great singers and teachers of the past. I have profited immensely from such a wonderful book as "The Art of Singing," by Mme. Lilli Lehmann.

"The American vocal student spends entirely too much time at lessons studying mere songs—often very poor songs. Songs are all right; they contribute a great deal to the beauty of life and they serve to keep the family interested in the vocal progress of the student. But they should not supplant the real vocal food upon which the voice must be nourished for years. Songs are sometimes very comfortable for the teacher who does not care. They are often equally bad for the pupil. The average soprano voice, for instance, will develop wonderfully by the study of such roles as those of Bellini, Donizetti and Verdi. These are regarded with apprehension by the ignorant, where as a matter of fact they are much simpler than songs; that is, if the songs are to be sung right. They have a most salubrious effect upon the voice, freeing it, exercising it, strengthening it. One hour of "Somnambula," "Norma" or "Lucia" is worth five hours of ordinary songs. A revival in the employment of these roles for teaching purposes would be a revival in the art of training the voice.

"Don't be afraid of an abundance of solfeggios. Rather fear too little. Of course I am not in position to criticise singing teachers. All I know is by hearsay; but it seems that entirely too much time is spent upon nonessentials. Breathing is important but it is by no means a subject to which one must devote months and months of special exercises. I have never believed in exhaustive breathing exercises, which may even be harmful to girl students. Nature has a wonderful way of regulating the right amount of breath to the tone that sounds right. That is the best test after all. Vocal experiment by one's self will soon determine whether one is taking too much or too little breath. Pupils often depend too much on the teacher for this. Not until you are conscious of doing it right yourself will you ever succeed. Your consciousness must come from within.

MME. GALLI-CURCI

"'How can I acquire a beautiful tone?' This is a question that thousands of girls ask themselves. I know it was my constant inquiry, and still is, for that matter. The only answer is everlasting analysis. Analysis of one's self and every singer heard, including talking machine records. All through my youth I listened to the hundreds of singers I heard, with an inquiring mind. This singer's voice was too white, this too hard, this too harsh, this too dull, this too blue—it lacked lifeblood. I have listened to my own voice with no less severity. The same thought applies to technic. The only great technic is that of which the audience and the artist do not seem to be aware. With Kreisler and Casals, for instance, the tone seems to float out of nowhere. That is the acme of the technic of tone production.

"Thus the singing artist must be literally unconscious of technic or even tone production. Consciousness makes artifice rather than art. The singer should listen, rather than make various kinds of physical efforts to produce tones. By this I mean the most acute possible listening accompanied by constant constructive self-criticism—not self-irritation or fussing or worry, but the ambition to make more and more beautiful tones every day. I have never heard my ideal tone and never expect to. I am sure that my art would go backward if I did.

"The singing artist realizes that the tones that carry are those depending upon perfectly vibrating vocal chords. Many voices do not carry because too much breath is used or because the voice is "pushed" up into the nose or throat. Personally I would rather a thousand times sing in a very large hall than in a very small one. It is really very much easier. I do not try to sing any louder, but depend upon the carrying quality of my voice. If my voice is vibrant I seem to feel my whole body vibrating, my spine, ears, nose, throat, chest, everything. I feel surrounded by tone. If one makes an effort to push the voice, or "throw the voice" as some say, this experience never occurs and the voice does not carry. This is quite as true with a simple song as with an operatic aria. The public seems to have an idea that the operatic artist should be some big and overpowering artist who, by virtue of great physical strength and giant efforts, reaches the multitude. Of course this is absurd. The violin has quite as much carrying power as the bass viol; and it is only a small fraction of the size of its mastodonic brother. It is not "beef" as some imagine that contributes carrying power but rather what might be called acoustical perfection. If this were not so, only the fortissimos would be heard; whereas the greatest artistic effects are often secured through pianissimos so delicate that the whole great auditorium is hushed to the "pin-drop" stage so that they may be enjoyed. Simple songs are indeed often quite as hard to sing as great arias.

Studying the Song

"In studying a song I devote myself first to the absorption of the poetic beauties of the verse. Every good song is a miniature drama—a drama of moods, emotions, ideas. It is the mission of the singer to discover the central idea and bring out the theme. Next I make a distinct study of the vowels, their possibilities on the pitch where they occur. Vowel beauty and vowel variety in a song is like the different tone colors of the orchestra in a symphony.

"After this I make a thorough musical analysis of the song, phrase by phrase. The master composer introduces his harmonies to secure artistic effects. He does not merely "throw them in." Like the every brush mark in a painting, they must count for something. To understand and appreciate these harmonic effects contributes enormously to the rendition of even a very simple song. This is one of the reasons why all singers should be well grounded in music as well as in the art of producing beautiful tones.

"For similar reasons it is always bad to try to sing when tired or when worried. Singing demands a superlative physical condition. Worry attacks the voice like a blight. Learn to throw off worries if you wish to keep your voice fresh and bright. Also avoid practicing too soon after meals. The singer who attempts to do good work when her body is devoted to digesting a hearty meal, with the blood diverted principally to that purpose and away from the throat, is fighting an obstacle.

"Possibly the average girl who aspires to an artistic musical career and feels the real impulse for creative musical work in the interpretative sense, does not waste her time thinking of the emoluments of the singer. Others seem to be inspired by the possible financial returns. The financial returns are by no means the greatest delight of the art life. More gratifying still is the privilege of meeting and knowing great personalities in the field of art; painters, writers, dramatists, musicians who are doing something more permanent for mankind than merely acquiring money to pass on to others. Meeting such a personality as Mascagni, for instance, is an inspiration. He came to our home frequently when I was a child. He was a remarkable talker, often very playful in his moods and always an engaging guest. It was Mascagni who, in a measure, helped me make my determination to become a singer. When he first heard of my ambition he thought that it was foolish for me to try and advised me to go on with my career as a pianist. When he heard me sing, however, he quickly admitted the possibilities of my voice and said that it would be foolish to try to do anything else.

"Many people know of Mascagni's early struggle; how his "Cavalleria Rusticana" was written in an attic and how the composer suffered actual hunger while he was producing it. These all had a formative effect upon his character, making him human and sympathetic to young artists, in the highest degree.

"Of all the opera singers I have heard, probably Tamagno had the greatest effect upon me. The quality of his voice was marvelous. No matter in what part of the auditorium you might be sitting, his voice seemed to ring in your ears as though he were just at your side. His entrance in "Otello" was unforgetable; and his death scene, which was fortunately recorded very successfully, is one of the most wonderful records ever made. I would advise vocal students to purchase this as an investment and play it innumerable times.

"The talking machine has virtually revolutionized the resources of the vocal student. In these days there is no excuse for failure to become acquainted with the best in vocal art and more can often be learned through careful listening to records of real artists than from scores of the old-fashioned lessons. It may interest the novice to learn that I constantly listen to records of other artists of the past and present and never fail to profit by the experience. Even some of the bad ones show me what to avoid.

"The melodic line, the legato, the stream of beautiful sound are all-important. Just as the violinist must preserve a beautiful legato in most of his work so must the singer. The difference is that the singer in addition must care for clear enunciation and for the variety of vowel color. The art is, to do this without disturbing or ruffling the melodic stream too much. Over-enunciation agitates the stream so that the musical effect of a lovely legato is ruined. Under-enunciation or poor vowel treatment 'muddies' the stream.

"A song may also be compared to a little painting. An opera is a huge canvas of Michelangelo dimensions. A song may be no less intense in its significance; but it is a little canvas like a Fortuney, a Corot or even a Whistleresque sketch in black and white. As with a painting the song must have its high light, its climax. Everything else must be subordinated to and work up to the climax.

"Velocity is of course an indispensable asset for the coloratura soprano; but velocity without clearness, ease and, above all things, accuracy—is worthless. Velocity must be acquired through very gradual stages. Scales and arpeggios such as one finds in the Garcia exercises I have mentioned and in many other books are excellent; but the singer should be "all ears" to listen for the slightest irregularity of pitch, the slightest slurring. The only real remedy is to return to a slower tempo when these inaccuracies are discovered. This requires patience, but patience is the safeguard of all real artists.

"The voice like every other organ is ruined by either overuse or underuse. Literally speaking, I never 'rest' my voice. That is I never pass long periods without singing. Every day during my vacation I sing just as regularly as during my season. Rest in the sense of letting my voice lie fallow seems to do me more harm than good. It is just that much harder to recover my work. Neglect of a week or a month shows upon my voice just as much, as it would upon the trained athlete. The athlete's muscles do not grow stronger by rest. I rarely ever have a cold, but even when I do, I find that gentle exercise seems to help me work off the cold. Of course one must be very careful about this.

"Keeping the voice pure and fresh also depends very largely upon all the things which go together to make good health. Food is very important. Plenty of fresh vegetables, plenty of good milk, a moderate amount of meat, few sweets, all have a very pronounced effect in the long run. One of the things that the singer has to learn is that she can not eat anything that interferes with digestion in the slightest degree. Indigestion affects the voice even more than a cold. Nuts and dried fruits seem to possess properties that disagrees with me very decidedly."

Suggested "Self-Test" Questions on Mme. Galli-Curci's Article

1. *Who was the teacher of Jenny Lind?*
2. *How may guttural sounds be avoided?*
3. *Why are old Italian operas beneficial for the singing student?*
4. *What is the secret of a beautiful tone?*

6. *How must velocity be acquired?*

Pointers on Chart Teaching?

By Constance Savage Roe

A CHART is the teacher's best friend. Facts are so much clearer to children if they can actually see the teacher's statements right there, in black and white. Many explanations which the teacher might make and have the pupil get the wrong idea of entirely, would be understood perfectly with this proof. Children have queer little quirks in their notions, and they are usually from Missouri, requesting evidence. It will always pay the teacher to purchase two or three charts, or he can make his own. This is very easily done, and is often better than buying them; for the teacher can make them to fit his own particular needs.

Select bogus or bristol board, about twenty-six by thirty size, colored dark brown, or gray. Almost any dark color will do, however; anything that will show chalk marks. Make the figures with heavy black crayon, having the lines of the staff about an inch apart, and the notes about an inch high. Care should be taken to have the lines spaced evenly.

In teaching elements to children, it is desirable to have a number of charts. Many teachers do not like to have big, ugly charts all over their nice artistic walls. If they make them of heavy paper they can take them down at will.

First of all, a note chart is needed. Make simply the notes, all kinds, flags up and down, on the staff and off it. The clef signs may also go on this chart. Children should be taught from the first that there is no difference between an eighth-note with the flag up and one with the flag down. Many times this is confusing to them.

A separate chart should be made with the names of the notes, and notes themselves, placed in triads; first, the F-A-C-E, and the E-G-B-D-F. They should also be placed consecutively, running from the F below the bass to the A above the treble. Middle C should be explained with particular care at the beginning, and then the teacher can place the notes in the regular order with no break between the clefs.

It is surprising sometimes what ignorance there is among children regarding middle C. Many of them do not know where it is, nor why. Care should be taken in respect to this, as it is really very important.

There should be a table of time. Place the note values in regular order, with the rest below them. The rests are difficult for a child to remember, and should be explained with comparisons, as a quarter rest resembling a blackbird flying, when turned horizontally, an eighth rest like a per cent. sign with the O left off, etc. If the beginners are very young, and have not had arithmetic in school it is well to have a circle divided to show the values.

There should be a chart of old-style music. Consult any musical dictionary for this. At first, however, only the staff with eleven lines is necessary, to illustrate the explanation of middle C. In the course of time all the different styles should be explained and illustrated.

There should be a dictation chart. This necessarily has only the staves, blank. Children should be taught to both read and write readily from the beginning.

Spontini's Cure for Deafness

SPONTINI'S "Olympie," though now unknown to operagoers, was in its first season a notable success in Berlin, though the boisterousness of the music seems to have called out some sharp strictures even among Berlinese, whose penchant for noisy operatic effects was then as now a butt for the satire of the musical wits. A clever one follows:

A wealthy amateur had become deaf, and felt greatly the loss of the enjoyment of his favorite art. After trying many physicians, he was treated in a novel fashion by his latest doctor.

"Come with me to the opera this evening," wrote down the doctor.

"What's the use? I can't hear a note," was the impatient response.

"Never mind," said the other, "come and you will see something at all events."

So the two hied to the theater to hear Spontini's "Olympie."

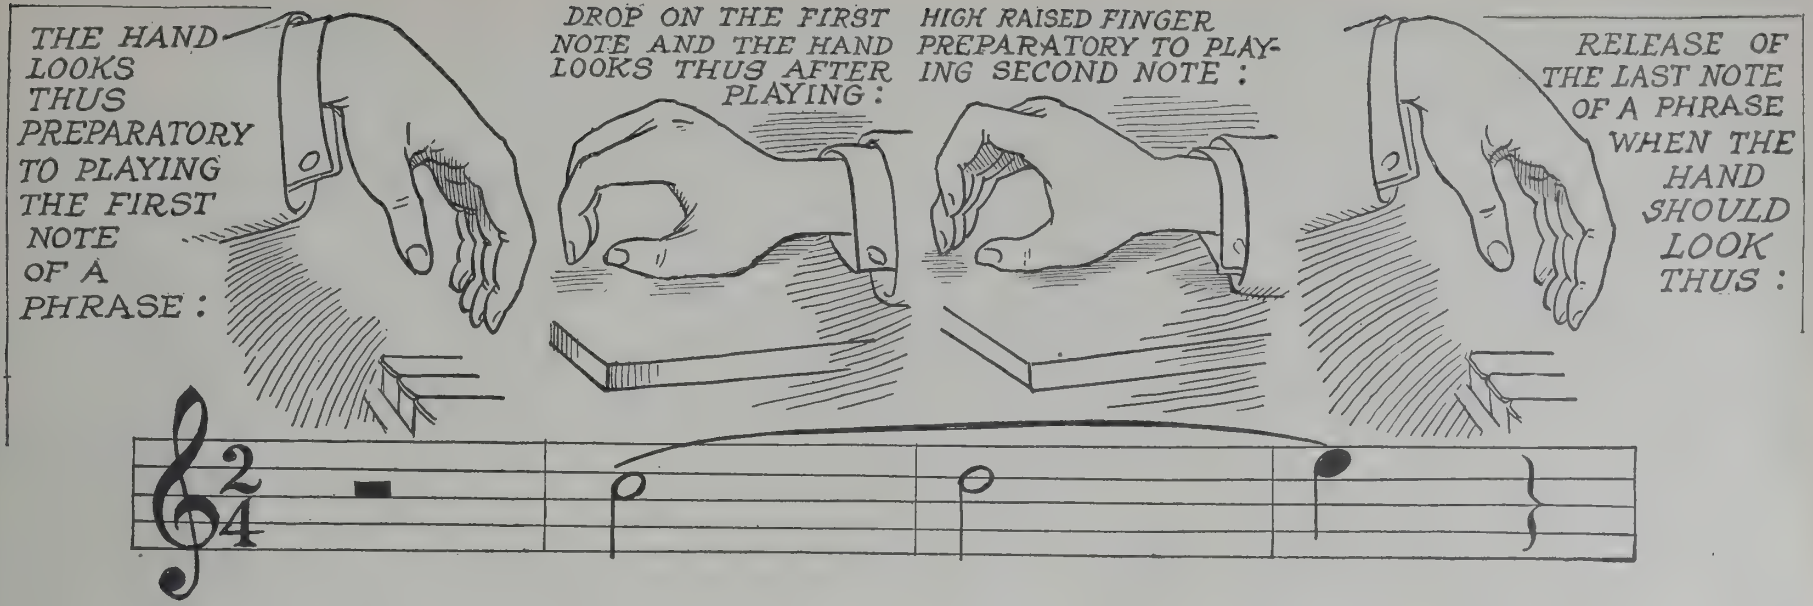
All went well till one of the overwhelming finales, which happened to be played that evening more *fortissimo* than usual.

Beaming with delight, the patient turned and exclaimed, "Doctor, I can hear!"

Drawing no response, the happy patient again shouted, "Doctor, I tell you you have cured me."

A blank stare alone met him, and he found that the doctor was a deaf as a post, having fallen a victim to his own prescription.

The March ETUDE, in addition to having the Symposium upon the World's Great Masterpieces by World Famous Contemporary Masters, will be an especially helpful and captivating number.



THE HAND LOOKS THUS PREPARATORY TO PLAYING THE FIRST NOTE OF A PHRASE:
DROP ON THE FIRST NOTE AND THE HAND LOOKS THUS AFTER PLAYING:

RELEASE OF THE LAST NOTE OF A PHRASE WHEN THE HAND SHOULD LOOK THUS:

What to Teach at the Very First Lessons

By *JOHN M. WILLIAMS*

Practical Advice for the Young Teacher

Do you want to learn how to teach? Mr. Williams' series, of which this is the second article, will show you.

If the pupil appears at the second lesson with the first perfectly learned so far as notes and time are concerned, do not immediately begin assigning new work. Was it not Emil Liebling who said his idea of the worst music teacher in the world was the one who each lesson said, "Take the next exercise?" Right here is a tremendously important point. *Correct playing conditions are more important than anything else, for the first year.*

Where is the child to learn these? From new material? No. Most emphatically, No!

When reading new material, our minds are engaged with;

First—Reading the correct note.
Second—Playing it with the correct finger.
Third—Placing it correctly on the piano.
Fourth—Counting correctly.

This leaves very little of our attention for *correct playing conditions.* For a beginner the *new material,* far from being a help, is very apt to be detrimental. Hence the importance of stressing the review work.

Beginning with the second lesson, for the next several times he comes ask the pupil, "Which is the more important—the new work or the old?" (By "old work" is meant the pieces that already have been "gold starred.") In this way the student learns to play easily and with freedom—two things much to be desired, but seldom seen. Of course, in new work the pupil learns all such as notes, values and principles; but correct playing conditions come after these things have been learned, when the mind is free to concentrate on other matters.

Use the Chart Daily

Use the chart a few moments at this lesson. Ask the direction of High and Low; locate Middle C. Have the right hand play from Middle C up to G, the left hand from Middle C down to F, observing that as the notes go higher on the piano they do likewise on the chart, and *vice versa.* Thus the pupil gets a correct idea of the Grand Staff and is saved much trouble later on.

Correct Playing Conditions

What are correct playing conditions? A relaxed hand and arm are generally considered desirable. Firm tips, (the first joints must not "break in") and slightly rounded (arched) knuckles are also advisable. If playing conditions are correct, the hand will gradually take on the proper shape. Work from cause to effect not from effect to cause. Immediately a child tries to "fix" the hand in a certain position, it gets rigid; and this rigidity or stiffness is the worst thing the teacher has to overcome.

Seat the child at the piano so that the under part of the forearm is about on a level with the white keys, or perhaps the wood in certain cases. (A large person can afford to sit lower than a small child.) "Neither High nor Low" might be a good motto. Next swing the arm gently at the side, absolutely relaxed—devitalized, Mr. Matthews used to say. When this can be done easily, the teacher should pick up the hand and arm of the pupil and let it drop. If it falls it is relaxed; if it does not there is a hold-back (tension) somewhere. When the pupil can "let go" with absolute *freedom,* try raising the arm about a foot above the lap and letting it drop onto the lap, *absolutely and completely relaxed.*

Now try the same thing, allowing the different fingers to fall on each key from C to G, always with the dead weight of the arm falling on each key. (Some teachers prefer the expression "live weight.") Easy? Not at all. A solid half hour has often been spent in teaching an advanced pupil to do this. The teacher who hurries over the first lesson in relaxation is only laying up future trouble.

Will one lesson be enough? Certainly not! The price we pay for a good pupil, for one who plays with freedom and ease, is constant watching, reminding and demonstrating. For every lesson for at least three months go back to exercise No. 1, for review, *concentrating on correct playing conditions.*

The Three Touches

Just as a carpenter must have hammer and nails to erect a building, the pianist should have at least Three Fundamental Touches with which to play the piano. In even the simplest motive, as C-D-E, three touches should be used.

First—The Attack, the touch (down arm) which we use to play the first note of a phrase. (See illustrations at heading of page.)

Second—High-raised curved fingers—the touch with which we play the intervening notes.

Third—The "release," the touch (up arm) used to release the last note of a Phrase.

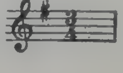
This exercise should be played very—very slowly perhaps in whole notes—slow enough for thought. It may be extended so that, after falling on C, the pupil plays D-E-F with high-raised finger-touch and releases the phrase at G.

The above are the "tools" or "technic" of the first few weeks. We need no other, and they may be demonstrated in a few minutes. Easy to teach? No! Naturally a child tries to do as asked; but effort generally leads to tension. But, by constant watching, correction and demonstration, it may be achieved. Not so, if all the time is given to *new* work; sufficient review work is *necessary.* These three touches should be applied to each exercise used.

Time and Key Signatures

In explaining time and key signatures, write out the word—"(SIGN) nature," thus. Ask what the first part of the word spells. Explain that just as stores, doctors and lawyers have signs announcing their places of business, so each piece of music has its "sign" or "signature." Thus, means that this is where Mr. ¾ Measure lives. Do the same thing later with the key signature. Have the pupil to say, "Mr. G-Major lives here, because the 'sign' (SIGNature) is one sharp, F sharp."

Ex. 1



The second lesson is finished. Attention has been concentrated upon *correct playing conditions,* but new material should be assigned, embracing ¾ as well as 2/4 time, and perhaps adding a note or two up or down.

The Third Lesson

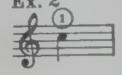
Begin the Third Lesson by a thorough drill on an exercise using the three fundamental touches of Lesson Two.

Next, hear all the work—old as well as new—paying particular attention to the *three touches* and *correct playing conditions.* Criticise, demonstrate and encourage. Always praise first, then show how it may be bettered. When each exercise can be played in the *three ways* of Lesson One, place a gold star by its side. This is important.

General Hints

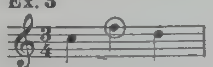
If a wrong finger is used, place a circle around the finger mark.

Ex. 2



If an incorrect note is played, place a circle about the note.

Ex. 3



If a particularly difficult spot or fingering needs attention, draw a figure by it, and tell the pupil there is a "nigger in the woodpile" who is laying for him and to be careful or he will get him. Erase the figure whenever the warning becomes unnecessary. A child loves a game, and anything done to make a game of the music lesson helps to get it learned.

Remember—"sugar-coat the pill." The child mind cannot be disciplined *from the outside.* This must come from *within the child himself;* hence, arouse his *interest* and he will then do the work himself.

The Weekly Assignment

How many exercises should be assigned at each lesson?

All depends on the age, talent, general physique of the child, amount of help given at home, and many other considerations. Some children have hands so small or so scrawny and thin that the slower they go at the beginning (commensurate with keeping them interested), the better for them. Their hand grows stronger or larger just as does the musical development—*slowly*. Musical progress should be a gradual unfoldment—a forced growth is neither natural nor desirable. Just as a hot-house plant may be forced for a while, so it is with music—but the ultimate result in each case is disastrous.

Fourth Lesson

About the fourth lesson the pupil should be ready for eighth notes. Eighth notes are now introduced much sooner than formerly, on account of the gain in rhythmic variety.

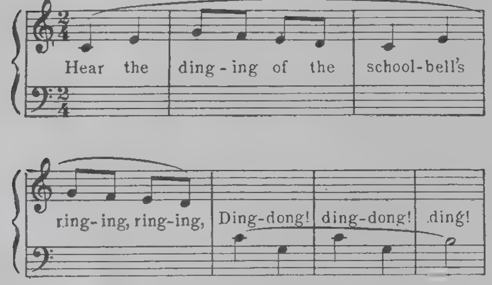
It should no longer be necessary to name the notes. Each exercise should be played:

First—Count.

Second—Sing.

Take the following little exercise:

Ex. 4

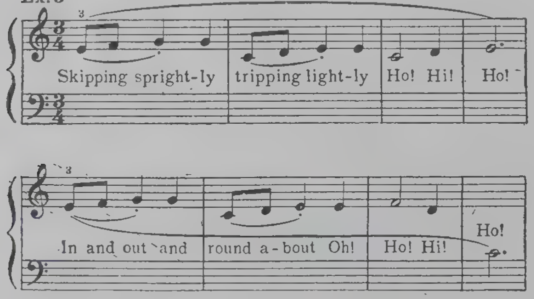


In most cases if the teacher plays this for the pupil it will be mastered quickly by imitation. Play it correctly—then explain carefully. First the Thing; then the Sign; the old pedagogical maxim holds good in music as well as at school. It is seldom necessary or desirable to count with "and"; the eighth notes should "pulse"—two notes to a beat. Most assuredly they do not do this when "and" is counted. Spend sufficient time on this point. Playing eighth notes at the time of quarter notes. Have eighth notes played as eighth notes or not at all. Pupils enjoy playing on time.

Recapitulation

In the following little exercise we have halves, quarters, eighths and dotted half-notes; staccato and legato touches. Make haste slowly; train your pupil to be an *observer*. Before the playing is begun, point out each mark in the exercise. (The staccato touch in this case is not the back-handed wrist staccato; it is simply the "release" or "up arm touch" used to release the last note of a phrase.)

Ex. 5



Continue to pay particular attention to correct playing conditions, and review from the very first exercise of this system at each lesson. The materials of the first two lessons should be played correctly and easily by this time. If the exercise of the three fundamental touches has been practiced daily, the pupil should have gained considerable freedom of the fore and upper arm; in other words, of the entire piano-playing apparatus.

The Next Few Lessons

It is inadvisable in a writing of this nature, to indicate the exact amount of material for each lesson, as children differ so materially in their capacities. As a general rule, after the first one they may take four or five little exercises (of one or two lines each) at each lesson. After the first lesson their practice should cover at least a half-hour each day. Some may work an hour a day to advantage. For children five to seven years of age, thirty minutes a day are quite enough, and in some cases fifteen minutes are ample.

Sharps and Flats

When the pupil arrives at the first sharp or flat explain both thoroughly.

Sharping a note raises its pitch one half-step.

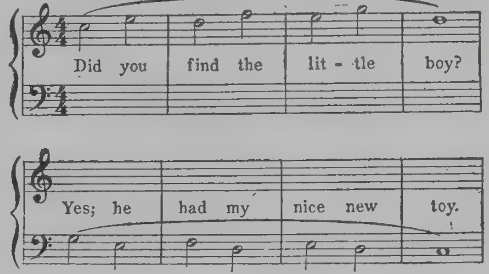
Flatting a note lowers its pitch one half-step.

Do not leave the subject with the idea in the pupil's mind that a sharp or flat is necessarily a black key. Assign daily practice in this for a week. It will save trouble later.

Extending the Playing Compass

The playing compass has, by now, been gradually extended until the pupil is utilizing the keyboard from F below to G above Middle C. He should have learned these notes naturally and with pleasure—by using them—not laboriously, away from the piano. He may now be given several studies using the notes lower and higher, as in this one:

Ex. 6



These will extend his playing compass seven additional notes, giving him, altogether, a playing vocabulary of sixteen notes of all of which he knows the names and their position on the keyboard.

Five-Finger Position for First Lessons

All exercises or pieces should be kept in five-finger position. Why? First, the five-finger position is the easiest (it requires no crossing of the thumb over nor of the fingers over); and, second, what we teachers need is easy material—just as easy as is compatible with holding the interest of the pupil—if we are to concentrate on correct playing conditions. Also, the invaluable practice of transposition of all the exercises into six or twelve major keys is greatly facilitated.

During this time the pupil should be learning also the different kinds of rests and their values, the correct playing of slurs, and phrasing.

An Early Beginning in Theory

By George Henry Howard

THEORY is commonly begun *too late*. The child should learn questions and answers from the music primer and catechism the very first week, and from thence onward. To know facts and principles about music is one of the foundation stones of conceptive and creative ability. The time to gather these facts and principles is childhood.

The study of harmony should begin not later than the third year of pianoforte instruction, preferably the second year. Yet, it should not be begun by pupils under nine or ten years of age.

Poor text books are one reason for unsatisfactory study of theory. The modern spirit of instruction has not yet taken a very firm hold of the makers of works intended to teach harmony and composition. Too many of them are still in the style of older generations. However, there is a noticeable awakening along this line, from which we may expect better results.

The meagerness of ear-training and tone-thinking discipline forms another defect in the common instruction in harmony and general theory.

Half of the success in harmony teaching is in making the subject as lovely as possible. In a flower garden, the child is first attracted by the beautiful colors and the lovely perfume. If all the flowers were black and white, he would take little interest. In harmony, let him feel the charm of beautiful melodies and chords.

The Boys' Recital

By Ethel Annis Randall

How often one hears it said "Oh! I just love to hear a man play the piano," or "I would much rather hear a man play than a woman." Does any one know how much larger is the percentage of girls studying piano than boys? Does not the average class consist largely of girls whether primary or advanced? And yet the master musicians of the world are men. How many delightful piano recitals have you attended in which the boys predominated? Usually the boys have rather a lonesome time, embarrassing to say the least, when the recital is given largely by beautifully dressed girls.

Such has been my experience after teaching eighteen years, in which time I have attended many recitals given by other teachers as well as my own. Before I began teaching I hoped I would never have a boy for a pupil, fearing it would be difficult, or I might fail altogether to hold his attention. I did not get my wish however, for the first pupil was a boy and a good pupil too, who progressed very well considering my inexperience. Since then I have changed my tune, for some of the best scholars have been boys, though seven was the largest number enrolled in a single year until last season when the number jumped to sixteen.

Why the boys should more than double in one year I do not know unless like the tramps, one tells another. As my class is limited to fifty pupils the proportion of boys was new to me. Through thinking of something to lend variety to the June recitals one day late in the winter, it came like a flash—why not have the boys give a recital all by themselves? This, instead of playing in their own grades, in three or four recitals with the girls, as usual. To this locality at least the idea was new. So far as I can learn no teacher had ever given such a recital, nor can I find any one who has ever attended one.

"No sooner said than done," as the fairy stories say; but teachers know that successful recitals are not given by a fairy's magic wand, so I began planning at once, but did not confide in the boys until later, in May, when the more deligent workers were nearly ready. Two of the pupils in the beginners' class had discontinued lessons, but that left plenty of material. You know a long recital is wearying to all concerned. The boys were delighted with the plan and wanted to "beat the girls' recitals," which of course resulted in most of the girls, the younger ones especially, working harder.

Only one of the older boys objected, saying he did not care to play with the little boys. When I explained to him how much people enjoyed going through a factory and watching the development of products from the raw material he saw the point and became enthusiastic. We had two rehearsals in the church auditorium where all my recitals are given; and the night of the boys' recital the platform where the grand piano stood, was beautifully decorated with cut flowers, for which the boys were largely responsible.

The ages of the fourteen boys ranged from eight to fifteen years, and the length of study from ten weeks to four years. All playing was from memory, including two duets played by first and second year pupils. Though I do not require memory work for duets, these pupils memorized so easily that they preferred to play without music. A brother of one of the boys who plays the bells in the local high school orchestra, played some patriotic airs with piano accompaniment, which as well as giving pleasing variety to the program, gave some good practice in accompanying to one of the older boys. We always have a singer or reader to give a change from piano numbers only, and for this recital I was fortunate in securing a young boy reader who is studying with the best teacher of that art in our city. He gave two delightfully humorous readings, with encores; so even our "assisting artists" were boys.

The experiment proved to be so successful that another time, with this experience, I shall plan to have more duets and some novelty.

This year the plans will not be kept secret from the boys, for they are looking forward with pleasure to their recital in June, 1924.

"THE history of music is the history of the attempt, by the arrangement of sounds, to gratify the senses, to use and enjoy the intelligence, and to attain to that ecstasy which comes from the contemplation of pure beauty."—W. J. TURNER.

NEW AND IMPORTANT SERIES OF LESSON-ARTICLES–SECTION V

Basic Principles in Pianoforte Playing

Secured Exclusively for The Etude by Interview with the Distinguished Virtuoso Pianist

JOSEF LHÉVINNE

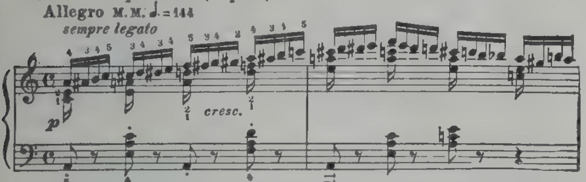
This Series Began in the "Etude" for October. Each Installment May be Read Independently.

Accuracy in Playing

Why is much playing inaccurate? Largely because of mental uncertainty. Take your simplest piece and play it at a normal tempo. Keep your mind upon it, and inaccuracy disappears. However, take a more ambitious piece, play it just a little faster than you are properly able to do, and inaccuracy immediately appears. That is the whole secret. There is no other.

It takes strength of will to play slowly. It is easy enough to let ambitions to play rapidly carry one away. I remember a student who would play the Chopin *A-Minor Chromatic Etude* at a perfectly terrific rate of speed.

Ex.V-1 Chopin Etude, Op. 10, No. 2



At the end both the performer and the auditor were breathless in the apprehension of mistakes. Among which there were bound to be several blurs, smears and other faults. It gave no artistic pleasure because there was no repose, no poise. Only by hard work was this pupil made to see that she should practice very slowly, then, just a little faster and finally never at a speed that would lead to mental and digital confusion. There is no limit to speed, if you can play accurately.

One good test of accuracy is to find out whether you can play a rapid composition at any speed. It is often more difficult to play a piece at an intermediate than at a very rapid speed. The metronome is an excellent check upon speed. Start playing with it very slowly, and gradually advance the speed with succeeding repetitions. Then try to do the same thing without the metronome. The student must develop a sense of tempos. In fact, the whole literature of music is characterized by different tempos. The pupil should learn to feel almost instinctively how fast the various movements in the Beethoven Sonatas should be, how fast the Chopin Nocturnes or the Schumann Nachtstücken should be. Of course there always will be a margin of difference in the tempos of different individuals; but exaggerated tempos—either too fast or too slow—are among the most common forms of inaccuracy.

Two Important Factors

Before leaving the matter of accuracy, it may be said that two other factors play an important part. The fingering must be the best possible for the given passage; it must be adhered to in every successive performance; and the hand position (or shall we say "hand slant") must be the best adaptable to the passage. The easiest position is always the best. Often pupils struggle with difficult passages and declare them impossible, when a mere change of the hand position such as raising or lowering the wrist or slanting the hand laterally, would solve the problem. It is impossible to give the student any universal panacea to fit different passages; but a good rule is to experiment and find what is easiest for the individual hand. Rubinstein, who so often struck wrong notes in his later years when his uncontrollable artistic vehemence often carried him beyond himself, was terribly insistent upon accuracy with his pupils. He never forgave wrong note slips, or mussy playing.

One of the chief offenders in the matter of inaccuracy is the left hand. Scores of students play with unusual certainty with the right hand who seem to think nothing of making blunders with the left hand. If they only knew how important this matter is! The left hand gives quality and character to playing. In all passages except where it is introduced as a simple accompaniment, its rôle is equally important with that of the right hand. An operatic performance with the great Galli-Curci as the soprano and, let us say, Caruso as the tenor, would be execrable if the contralto and the bass made the audience miserable by their poor quality and their inaccuracy. Practice your left hand as though you had no right hand and had to get everything from the left hand. Play your left hand parts over and over, giving them individuality, independence and character; and your playing will improve one hundred per cent.

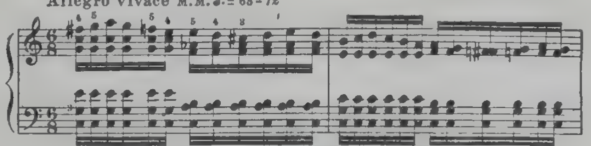
If you are suspicious about your left hand, and you doubtless have good reason to be, why not imagine that your right hand is "out of commission" for two or three days and devote your entire attention to your left hand. You will probably note a great difference in the character of your playing when you put them together. Left hand pieces and left hand studies are useful; but they are oddities, "freaks."

Some Things About Staccato

Staccato, considered as touch, is often marred by surface noises of the fingers tapping on the keys. Perhaps you have never noticed this. In some passages this percussive noise seems to contribute to the effect but in general it must be used with caution. A very simple expedient reduces this noise and increases the lightness and character of the staccato. It is merely the raising of the wrist. By raising the wrist, the stroke comes from a different angle, is lighter, but none the less secure and makes for ease in very fleet passages.

Try the following measures from Rubinstein's *Staccato Etude,* with your wrist in normal position. Then raise the wrist and note the lightness you have contributed to your playing.

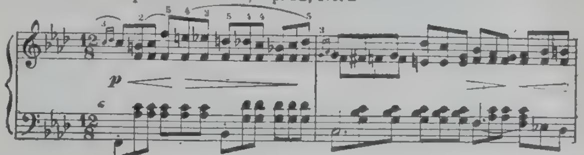
Ex.V-2 Staccato Etude



Finger staccatos, produced by wiping the keys, are also effective when properly applied. There is also, of course, a kind of brilliant staccato such as one finds in the Chopin Opus 32, No. 2, and in other passages, where the action of the whole forearm is involved. In this the wrist is held stiff. But in every and all cases let the fingers look down—see and feel the keys and not look at the ceiling!

JOSEF LHÉVINNE

Ex.V-3 Chopin Nocturnes, Op. 32, No. 2

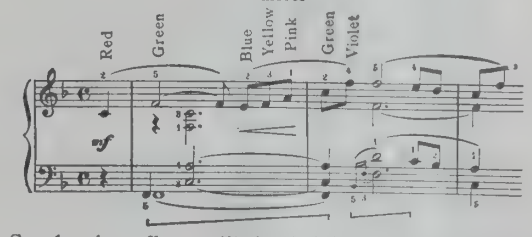


The Basis of Beautiful Legato

The word legato, meaning bound, has misled thousands of students. It is easy to bind notes—but "How?"—that is the question. There is always a moment when there are two sounds. If one sound is continued too long after a succeeding one is played, the legato is bad. On the other hand, if it is not continued enough the effect is likely to be portamento rather that legato (always remembering, that the word *portamento* as used in piano playing has an almost entirely different meaning from the use of the same word in singing).

Well played legato notes on the piano must float into each other. Now here is the point. The floating effect is not possible unless the quality of the tone of the notes is similar. In other words all the notes must be of the same tonal color. A variation in the kind of touch employed and a legato phrase may be ruined. The notes in a legato phrase may be likened to strings of beads. In the playing of many pupils the strings of tonal beads are of all different colors, sizes, shapes and quality in one single phrase. The touch control varies in the different notes so greatly that such a simple phrase as the following from Schumann's *Traumerei* might be likened to the following:

Ex.V-4 Schumann's Traumerei

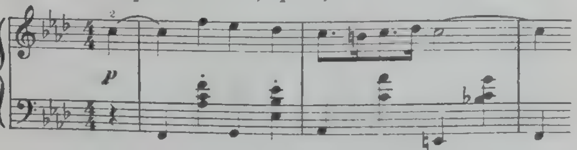


Surely the effect will be heightened by maintaining the same touch for at least one phrase.

When the colors are blended as in the prism, instead of being mixed up by ill-selected contrasts, the effect is far more beautiful, judged by artistic and aesthetic standards. Play *Traumerei* a few times, preserving the character of the phrases by careful observance of what you have learned in the previous sections regarding the principles of beautiful tone production at the keyboard.

Another excellent work in which to make a study of legato in the *F Minor Nocturne* of Chopin.

Ex.V-5 Chopin Nocturne, Op. 55, No. 1



One more principle in the matter of legato playing, before we dismiss it in this all too short discussion of a subject which might easily take many pages. The greater the length of the notes in a given passage in a pianoforte composition, the more difficult the legato. Have you ever realized that? Note that we have mentioned the piano particularly. On the violin the situation is quite different. Take Bach's *Air on the G String* with its long drawn out notes. They could have been made twice as long if necessary; but this would be impossible upon the piano, because this instrument's sound starts to diminish the moment it is struck. Therefore, in a legato in very slow passages, the student confronts a real problem. He must sound the note with sufficient ringing tone so that it will not disappear before the next note; and in striking the succeeding note he must take into account the amount of diminution so that the new note will not be introduced with a "bump."

Scales afford an excellent means for the study of both legato and staccato. Scales are valueless unless the student practices them with his "ears" as well as his fingers. Mozart was accused of playing a note in a composition (which required both hands at the extremities of the piano) with his nose. If students could learn to practice with their ears open and keen to hear niceties of tone, the task of the teacher would be a far more enjoyable and profitable one and music throughout the world would advance very materially.

All that has been said in this section of these conferences has an important bearing upon the succeeding sections which have to do with Rhythm, Velocity, Bravura playing and Pedal Study. Accuracy, beautiful legato and refined staccato are so important, however, that every student who gives these matters extra attention will surely be immensely rewarded. In fact it would be a very good plan to take a book of standard studies or pieces very much below your grade of accomplishment and by means of careful, thoughtful, devout study, in which your "ears" play an equal rôle with your fingers, take phrase after phrase and play them over and over again.

A beautiful touch, a beautiful legato will not come by merely wishing for it. It will not come by hours of inattentive playing at the keyboard. It is very largely a matter of developing your tonal sense, your aesthetic ideals, and mixing them with your hours of practice. Try practicing for beauty as well as practicing for technic. Technic is worthless in your playing, if it means nothing more to you than making machines of your hands. I am confident that centuries of practice are wasted throughout the world because the element of beauty is cast aside. Thousands of pianoforte recitals are given in the great music centers of the world, by aspiring students, every year. They look forward to great careers. They play their Liszt Rhapsodies, their Concertos and their Sonatas, often with most commendable accuracy, but with very little of the one great quality which the world wants and for which it holds its highest rewards—Beauty.

If this series of conferences succeeds in turning the attention of a few hundred students towards the need for beauty, and the means for expressing it in every moment of pianoforte practice, I shall feel repaid for giving the time to them.

Stop and Listen

Do you express the *composers* thought and mood?
Do you express what *you* feel and wish?
Whatever it is, by all means express something!

Suggested "Self-Test" Questions on Mr. Lhévinne's Article

1. *Name one of the most common causes of inaccuracy.*
2. *How is the effect of the staccato touch often marred?*
3. *How does the quality of tone affect legato playing?*
4. *How must scales be practiced?*
5. *How are hours of practice wasted?*

Arousing Interest With a Bulletin Board

By Caroline V. Wood

One way for a teacher to arouse interest in musical matters among her pupils, is to have a bulletin board of some sort in the studio or waiting room. On this can be tacked articles, pictures, and anything of interest especially those clipped from the musical magazines. The Etude is a rich source of supply for this purpose.

In this way a teacher can bring to her students' attention things that she would like them to know; and it certainly is much easier to put them on a bulletin board than to pass a magazine around to the individual students. Besides, we all know that a bulletin board of any nature is always read with much interest. Curiosity is perhaps a bigger reason for this than is the desire for knowledge. However, the results are the same. Information is diffused where you want it to be.

The bulletin board will also occupy the time and attention of pupils who sometimes have to wait a while for their lessons. "It makes waiting a pleasure."

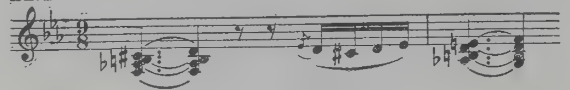
Discuss freely with your pupils the articles that you have posted, and call to the attention of some the particular items that you wish them to notice.

A Stumbling Block in Reading

By Orlando A. Mansfield, Mus. Doc.

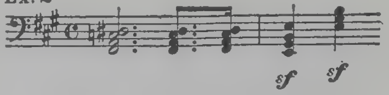
All conscientious teachers of keyboard instruments and of the pianoforte in particular, must have noticed, in the case of young students, a strong tendency—amounting at times to a very distressing habit—towards the misreading of one or both of two notes in alphabetical order, when one or both of the two are accidentals. This tendency, or habit, is to assign the accidental to the wrong note. Thus, in the following extract, from the Adagio of Beethoven's *Sonata in B flat, Op. 22*, the musical tyro will almost always read, at first sight, A natural and B flat, instead of A flat and B natural:—

Ex. 1



Of course the ear at once detects the error, but the fact remains. The probable reason for the misreading is that association with B flat is more frequent than with A flat. Similarly, in our next example, from the *Finale* of Beethoven's *Sonata in A, Op. 2, No. 2*, C sharp and D natural are often given at a first reading instead of C natural and D sharp:—

Ex. 2

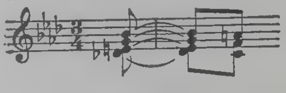


This again is because the student is probably more familiar with the sharping of C than with that of D.

In order to prevent this tendency, or temporary error, from crystallizing into a mannerism or a permanent habit, it is well to point out to the student that when two notes in alphabetical order have one of the notes inflected by the sign of a sharp, that sharped note is nearly always the higher of the two. Thus, if a natural and a sharp inflect two notes in alphabetical order, the sharp sign will almost invariably refer to the upper note, as shown in Ex. 2.

Similarly, in the case of a natural and a flat, the natural, being a sharper sign than the flat, will, in the overwhelming majority of cases, refer to the higher of the two alphabetical sounds, as in the following example, from the first movement of Beethoven's *Sonata in A flat, Op. 26:*

Ex. 3



This is really because the interval thus formed is an augmented 2nd, an essential factor in the composition of the long-suffering chord of the diminished 7th or minor 9th, as shown in Ex. 3, or a fragment of the chord known as the German 6th, as shown in Ex. 2. The reverse assignment, *e. g.*, D to E flat in Ex. 3, and C sharp to D in Ex. 2, would produce a minor 2nd, one of the harshest and rarer dissonances in music.

Further assistance tending towards the correct assignment of accidentals in alphabetical order may be derived from the clear recognition of the fact that accidentals do not so much affect notes as lines and spaces, consequently they are placed exactly upon or within the respective lines or spaces they inflect. Thus, in our second example, the natural is in the second space, and the sharp on the third line. Hence the natural denotes the sound called C, and the sharp that called D. Indeed, anything that can be done to simplify the reading of music to the young student should certainly be attempted, since the effort involved is already serious enough. As Ferdinand Hiller (1811-1885) once remarked, "If it were as easy to read music as it is to read books, Beethoven's sonatas would be as popular as Schiller's poems." Expressed in an English idiom, this may be taken to mean that, but for the difficulty of reading the former, a fugue of Bach would be as popular as a page of Milton, or a sonata of Beethoven as a Shakespearean drama.

If Liszt Came Back Again?

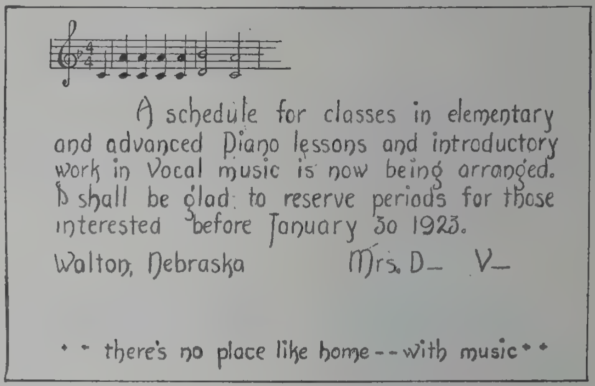
What would the Abbé Liszt think if he should come back to earth in this year of our Lord MCMXXIV? Would he see a musical world greater in extent but lacking in quality of achievement? Moritz Rosenthal, one of Liszt's most famous disciples, and thought by many to have the greatest pianoforte technic of all masters of the instrument, will discuss this subject in The Etude in a forthcoming issue.

Starting That New Class

By Gayle M. Van Horn

To get new classes organized, either for the new season or in a new community, is always a rather difficult proposition. The latter is the most trying. "How can I present myself?" "How may I appeal to them without making myself conspicuous?" These are live questions.

In the case of the writer the new community harbored no few acquaintances. They had, informally, heard her play; and, though she had not finished in music she wished to appear to the best advantage. Being somewhat artistically inclined, the plan very happily popped into her head to make little announcement cards. The illustration shows one of the set which brought immediate and gratifying results.



A schedule for classes in elementary and advanced Piano lessons and introductory work in Vocal music is now being arranged. I shall be glad to reserve periods for those interested before January 30 1923.

How to Select a Good Teacher

By Cooper Boyd

Scores of factors enter into the selection of a good teacher; but there are certain predisposing ones which stand out above all others. Unless these exist the chances of success are greatly reduced.

1. Select your teacher upon the story that his other pupils tell by their own performances, not by the advertisements, claims, brags, or by their list of social references or former successes. Attend his pupils' recitals and judge from them.

2. Select your teacher for his probable likelihood of understanding your temperament and working with you, not against you. Personal incompatibility of temperament negatives the efforts of the best teacher and the best pupil in the world.

3. Select your teacher for his contagious enthusiasm for music in general and his instrument in particular. The most erudite teacher imaginable is a poor thing without the dynamo of enthusiasm.

4. Select your teacher for his ability to inspire by his own playing.

You may not be able to get all of these outstanding factors in one person; but your success with your teacher will be largely in proportion to the number you do secure. The personality of the teacher, his character and his artistic ideals are his musical assets in the matter of bringing ultimate success to the average American pupil.

Three Pedagogical Pegs

By Mrs. C. M. Carpenter

The three best pedagogical pegs of the young teacher are the observation that the average child is—*curious—emulative—acquisitive.*

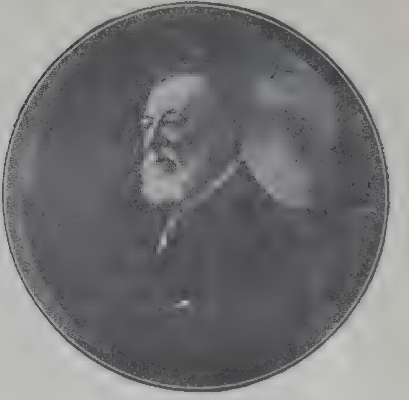
In other words, the child likes to ask questions, likes to imitate, and likes to be rewarded for effort.

Socrates taught by asking questions and encouraged his pupils to ask them. Your little musical wards want to know things. Urge them to ask as many questions as possible. At the end of the lesson say, "Try to think up something you don't understand about this piece and ask me about it."

Give the child models of performance and suggest imitation. Watch the mother bird springing about teaching the fledgeling to fly. She carefully measures the distances of her tiny flights from the nest so that it will not strain the little bird. The average teacher who plays flamboyant pieces before the little pupil is wasting time. Play something just in advance of the pupil, as a model, so that the pupil may exercise his natural instinct for imitation.

Don't forget that the average child is instinctively selfish. He wants to know what he is going to get out of his music lesson.

Brilliant Leaves from Saint Saëns' Note Book



Comments upon Music and Musicians, Penned by One of the Most Interesting Masters of the Past Century

The following extracts from "Outspoken Essays on Music," translated from the writings of Camille Saint Saëns, by Frederic Rothwell, and issued by the E. P. Dutton Co., represent but a small fraction of the rather voluminous literary creations of the great French composer. Aside from his extensive travels, his excursions into astronomy and into music publishing, to say nothing of his tours as a conductor, pianist and organist, and the production of his symphonic and operatic works, Saint Saëns was one of the cleverest and most entertaining of Composer-Critics since Berlioz. He had the sharp-pointed Gallic pen; and he used it to carve fascinating word images rather than to stab his contemporaries as did Wagner and some others. Saint Saëns may be regarded as a kind of tonal bridge from the older classical school to Debussy.

How Opera Fascinates Great Composers

M. Vincent D'Indy insinuates that the love of gain may have something to do with the preference for theatrical form shown by certain composers. As the public has always evinced a marked predilection for this form, no wonder musicians instinctively turn to the kind of music that will enable them to earn their living; not every one has the good fortune to be born with a silver spoon in his mouth. All the same, there must be some other reason, for almost all composers have written for the theater or have tried to do so.

Love of gain was not the incentive which made Richard Wagner embark upon his colossal work, the "Ring of the Nibelung," under conditions of so exceptional a nature that he did not know if it would ever be produced.

Meyerbeer was possessed of a great fortune, the major portion of which was swallowed up in his musical works. In his memoirs, Duprez artlessly tells how the gifted composer made every possible sacrifice to insure the execution of his operas, and how the famous singer profited thereby.

Haydn wrote Italian operas in his youth. During his stay in London, when producing his finest symphonies for the Salomon concerts, he began an "Orfeo" which he never finished, owing to the fact that the theater at which it was to have been given went bankrupt.

Mozart would still be Mozart, even if there remained nothing but his theatrical works.

Beethoven and Opera

The reason why Beethoven confined himself to the symphony and did not devote himself to the theater is that the Opera of Vienna would not have it so. Beethoven had actually offered to undertake the production of one work each year for five years.

No one can tell what would have happened if Beethoven's offer had not been refused, if he had acquired that theatrical experience which cannot be had apart from the theater and which is evident in the second version of "Fidelio" when compared with the first "Leonora." Certain parts of "Fidelio" are not inferior to any of his works: the famous "Pistol" scene resembles nothing that had hitherto been given. Had Beethoven been able to realize his desires, the very direction in which the lyrical theater was tending would probably have been quite different.

Both Mendelssohn and Schumann tried the theater. The failure of Schumann's *Genevieve*—interesting as it is from a musical point of view, though anything but adapted for the theater—was what determined his hostility to Meyerbeer; he could not understand how such music could be regarded as *music*, though he must have realized that the theater has to accept art forms inadmissible elsewhere. The painting of stage scenery is different from painting on an easel. Wagner placed the purely musical, even symphonic, interest in the foreground; but success was achieved only as the result of pressure directed upon the public, the duration and intensity of which were such that nothing like it up to that time had been seen, or probably ever will be again.

Berlioz, after writing the following terrible sentence: "Theaters are the disorderly houses of music, and the chaste Muse one drags therein cannot enter without shuddering," treated thus his own Muse, and certainly the result was not always satisfactory. Nevertheless "Les Troyens" is a superior work, though it was not smiled on by Fortune—that implacable queen who rules over battles and operas alike.

Richard Strauss, after becoming known to the public by symphonic poems, has revolutionized the musical world by extraordinary operas upon which I will not dwell, and thereby avoid irritating his admirers—for he has admirers. Did not one of them state that the fact of writing the song in one key and the accompaniment in another, was a matter of no importance whatsoever?

Remarkable Impressions of America

A great many things had been said to me in disfavor of the New World. "America will not please you," they told me, "everything you see will shock your artistic temperament." Pictures had been given me of excited and busy crowds, something like an exasperated England.

As regards the inhabitants, I did not find them as they had been depicted to me. Going about at their leisure in spacious streets everywhere, I judged them to be rather quiet compared with the bustling inhabitants of certain towns in the North of France. I found them both courteous and sympathetic. Besides, how could one help being satisfied with a country in which all the women are charming? And they really are, for those who chance not to be beautiful find it possible to pass themselves off as beautiful. I was afraid I might meet some bachelor women with short hair and harsh expression of face, and was agreeably surprised to find that it was not so. True, in America it is woman who reigns, even a little too much, I am informed; still, she remains essentially woman and she reigns as she has the right to do, by her charm and grace, her irresistible seductiveness.

To return to art. Dare I affirm that I frequently found better taste than in certain European cities which I will not mention by name? The Americans imitate the Romans, and especially the Greeks, also the fifteenth century and the *Renaissance.* Is it our place to call them to account for this?

The sculpture is not very imposing, but there are many picture galleries containing brilliant examples of the French school of the nineteenth century. Do not run away with the idea that the Americans have purchased the works of our artists indiscriminately and at too high a price. It is indeed the pick of the basket that they have acquired. And, whilst I feel somewhat sad to know that these artists, with most of whom I was acquainted, have now passed over, it was a great consolation to know that they have left behind them so glorious a fame.

To come to the art on which I am specially interested, I may mention that I found everywhere excellent orchestras, often composed of French performers and led by very good conductors. In New York I was delighted to meet Mr. Walter Damrosch, whose father had taken him there when a child, and with whom Liszt, who thought much of him, had put me in touch just at the time he was preparing to leave Germany for America.

Mr. Damrosch is a worthy successor of his father and is sympathetic to French composers. Nor is he alone in this. Whilst I was in New York, a successful performance of *La Croisade des Enfants*, by Gabriel Pierné, was given, and in all the towns I visited I found in the repertoire the works of César Franck as well as my own.

In Philadelphia, by lucky coincidence, a very fine performance of *Samson et Delila* was given by an amateur company of two hundred and fifty chorists. The *Delila*, both in voice and in talent was perfection itself and in the *Bacchanale* of the last act the orchestra reached the summit of enthusiasm and brilliancy.

I will be brief as to the reception I received personally. Nowhere have I found a more attentive public, more silent and enthusiastic. I had to endeavor to recover my fingering of past days in order to play my Concerto in G Minor which everybody wished to hear interpreted by the composer. This did not please me by any means, for now-a-days young pianists play it better than I do; I prefer to play the Fifth, which is more symphonic and more fitted to my present powers.

Well then, I played the G Minor at Washington before President Roosevelt who, after receiving me most affably, did me the rare and signal honor of coming to listen to my playing.

Shall I tell how pleased I was to see in Washington the statue of La Fayette along with that of Rochambeau? The Americans have one quality which touched me greatly, they are not ungrateful: they have not forgotten the part played by France in their independence.

Yes, America pleased me well and I would willingly revisit it, but as for living there . . . that is another matter. Born in the early part of the nineteenth century, I belong to the past, whether I like it or not. I shall always prefer our old cities, the sacred relics of Europe, before all the comfort of a young nation. On returning from New York, Paris seemed to me like some pretty *Bibelot*, but how glad I was to see it again!

What pleased me abroad was not so much the present America as the idea of what America will eventually be. I seemed to behold a mighty crucible in which a thousand ingredients are mixed to form an unknown substance. In the accomplishment of this task, what an expenditure of activity, wealth and scientific progress in useful and practical—as well as pure—science!

Everything one sees in America appears, from a distance, as a kind of mirage, for we are still in a transition period, preparing for a new world. It may be that centuries will be required to give it its perfect form, and, meanwhile, who can tell what will have become of this world of ours, carrying the heavy burden of a past which it cannot shake off!

Chopin's Sincerity

Chopin's musical studies had been so incomplete that he was forbidden the great vocal and instrumental compositions and had to confine himself to the piano, wherein he discovered an entirely new world. This specialty, however, may lead the judgment astray. When interpreting his works, we think too much of the piano, of the instrument regarded as an end in itself; we forget both musician and poet. For Chopin is above all a poet who may be compared with Alfred de Musset: like the latter he sings of love and women.

More than all else, Chopin was sincere. His music, without being in accordance with any particular program, is invariably a tone picture; he did not "make" music, he simply followed his inspiration. He expresses the most varied human feelings; he also gives musical form to the impressions produced in him by the sights of nature. But whereas in others, in Beethoven, for instance, these impressions may be pure and unalloyed, in Chopin's music . . . with the exception of a few polonaises that voice his patriotism . . . woman is ever present; everything is referred to her and it is this standpoint we must adopt if we would give the music its rightful character. His works thrill with a passion . . . now overflowing, now latent or restrained . . . that gives them an inner warmth of feeling which makes them live so intensely, though too frequently this is replaced by an affected and jerky performance, by contortions utterly opposed to his real style, which is both touching and simple.

This latter word may excite surprise when speaking of music that bristles with accidentals, with complicated harmonies and arabesques, but we must not—as is generally done—lay too much stress on these details. Fundamentally the music is simple, it betokens great simplicity of heart, and it is this that must be expressed when we play it, under penalty of completely falsifying the intentions of the composer.

Chopin distrusted himself: he invited . . . and sometimes followed . . . pernicious advice, unaware that he himself, guided by instinctive genius, was more clear-sighted than all the savants around him, who were devoid of genius of any kind.

An Appreciation of Gounod

A strange career was that of Gounod! Opposed from the very outset, as all creators are, courageously steering his course against wind and tide, it was his destiny never to know the peace of unchallenged success and tranquil glory; it was amid storms but seldom interrupted by brief spells of calm weather that he became the most popular musician in France.

> Pre-eminently was he a creator. Only in part are Marguérite, Juliette and Mireille the offspring of Goethe, Shakespeare and Mistral; the musician as well as the poet gives birth to children of his own, creations less complete, it may be, though nearer to the masses and possessed of that gift of ubiquity which it is the nature of music to bestow. England alone fully understands the Juliet of Shakespeare, Germany the Gretchen of Goethe, and Provence the Mireille of Mistral, but the public of the civilized world regard Marguérite, Mireille and Juliette as the daughters of Gounod. Less complex in nature than the children of the poets and animated by an intense musical life, they form part and parcel of our daily portion and receive us into their intimacy. Stripped of their precious garments they lay bare their heart's emotions, thrilling us in accord with their most secret and hidden feelings and leaving for their illustrious sisters the shining ornaments of the mind. Listen to Marguérite as she sings:

"Ceux dont la main cruelle me repousse
N'ont pas fermé pour moi la porte du saint lieu;
J'y vais pour mon enfant et, pour lüi, prier Dieu."

Listen to the simple chord that accompanies these last few words, thrilling us with a grief for which no consolation can ever be found, affording us a glimpse of the disturbing and mysterious depths of the vast cathedral, and then tell me if any other art can attain to such results with so few means and appliances!

Does not the cathedral in "Faust" seem a kind of link between the dramatic author and the chorister, symbolized by the organ which is shown on the stage? The religious music of Gounod is great, more especially the Mass of Saint Cecilia and the Requiem of "Mors et Vita," the Mass written at the beginning, and the requiem at the end of his career, the former adorned with all the brightness of a glorious dawn, the latter burning with the golden fires of a setting sun. In them we find sincerity of faith wedded to perfection of form, to a power and quality of voice that daily become more rare before the jealous and domineering influx of instrumental music.

The Need for Virtuosity

Certain of Liszt's compositions, which were once regarded as impossible of execution, are now everyday performances of the young pupils of the Conservatoire. On the pianoforte, as on all other instruments, virtuosity has made gigantic strides all along the line.

What hard things have been said against this virtuosity! How fiercely it has been attacked in the name of Art with a capital A! To think of that implacable, that impious war declared upon the Concertos both of Beethoven and of Mozart! One could not possibly have been more completely in the wrong.

> In the first place—the fact must be proclaimed from the house-tops—in art a difficulty overcome is a thing of beauty. This truth has been affirmed by Théophile Gautier in immortal verse, and after such testimony there is nothing further to be said.
>
> In the second place, virtuosity is a powerful aid to music, whose scope it extends enormously. It is because instrumentalists have all become virtuosi that Richard Wagner was enabled to dispense so lavishly that delightful wealth of sound, of which a good deal would have been impossible but for the virtuosity we affect to despise.

In such cases, however, beauty comes into existence only when the difficulty is really overcome to such a degree that the listener is unaware of its existence. We thus enter that realm of superior execution wherein Liszt was throned as a king, performing with the ease and assurance of a god. Power and delicacy and charm, along with a rightly-accented rhythm were his, in addition to an unusual warmth of feeling, impeccable precision, and that gift of suggestion which creates great orators, the leaders and guides of the masses.

When interpreting the classics, he did not substitute his own personality for the author's, as do so many performers; he seemed rather to endeavor to get at the heart of the music and find out its real meaning—a result sometimes missed even by the best of players.

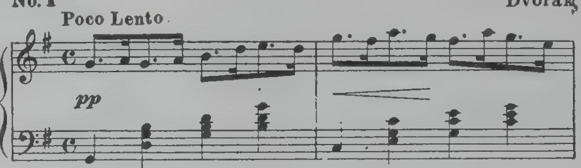
This, moreover, was the plan he adopted in his transcriptions. The Fantasia on "Don Juan" sheds unexpected light upon the deeper meanings of Mozart's masterpiece.

Symplifying a Rhythmical Problem

By Harold M. Smith

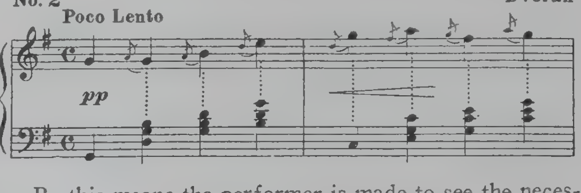
A rhythmical form often troublesome to the student, such as the following example:

No. 1 Dvořák



may sometimes be taught successfully by rewriting thus:

No. 2 Dvořák



By this means the performer is made to see the necessity of knowing in advance the note after the sixteenth. In playing grace notes this necessity is obvious enough, yet many fail to recognize the same principle in the rhythm above.

A rule well to remember is "Never play a quick note until you know what follows directly thereafter for both hands, and until you are mentally prepared to play it."

How Do You Know Your Piece?

By Anne Guilbert Mahon

Do you know your piece thoroughly?

Do you know the name of the composer? Do you know anything about his life? Do you know his object, his theme, his idea which he wished to express in the composition?

When away from the piano, can you tell the key and signature of your piece? Can you tell what are its highest and lowest notes? Can you shut your eyes and mentally see the printed notes on the page, exactly how the composition looks? Can you play it correctly, in your mind?

Can you recall the tempo, remember the correct phrasing? Can you describe the peculiarities of the piece? Does it feature chords, octaves, runs, arpeggios; or does it contain all of these? Can you remember the marks of expression?

Do you know the divisions of the composition, the different themes; and could you start any one of them? Do you know each section as if it were a composition of itself? Could you start anywhere in the piece and play it to a satisfactory close? A young girl, who had been in the habit of practicing several hours a day, was confined to her bed with a tedious illness. As she lay there slowly convalescing, the pieces she knew ran through her mind. She was surprised to find how readily she could picture the notes of some of them and how elusive seemed others which she thought she know by heart. When she recovered and went back to the piano, she found that, although her fingers were somewhat stiff from lack of exercise, she had gained in the knowledge of many pieces which before she had considered difficult that the mental training had been of great value to her although she had not been able to play a note. She had impressed those pieces on her mind, and they were never forgotten. She *knew* those pieces.

Mirror Practicing

By Jean McMichael

If you are a vocal student try memorizing your songs away from the piano, before a mirror alone.

This will be a great help by allowing you to observe your facial expression and by enabling you to correct many faults which cannot be detected while playing for oneself at the piano.

You will be surprised at the many strange things you do. It enables you to see just what kind of an appearance you make when singing in public; for a mirror reflects the truth.

It is a great teacher and critic for the concert performer.

Nothing great was ever achieved without enthusiasm. Emerson

Piano Touch as Seen by Famous Musicians

By Percival Garratt

Beethoven gave considerable thought to questions of piano tone production. According to Schindler, he advised players not to raise the fingers more than necessary in order to learn how to "sing" on the piano, and made fun of pianists who "wave their hands in the air."

With regard to *cantabile* playing, Beethoven's views were endorsed and carried into practice by Thalberg, who taught that "the keys should be felt rather than struck," and who recommended "great repose of the arms and hands" and the possession of "as much suppleness and as many inflections in the forearm, the wrist, and the fingers as a skillful singer possesses in his voice." These words are taken from Thalberg's "Art of Singing Applied to the Pianoforte," and were written at a period when musicians held the art of singing to be the ideal type to which instrumental technic should approximate. The more modern view (expressed by Busoni) is that the conditions of vocal art (breathing, the joining or division of syllables and words, the difference of registers, etc.) have little or no significance on the piano. The nature of the keyboard instrument does not allow a true *legato*, such as can be obtained by the human voice or by stringed instruments.

Thalberg's method, however, was a great advance over the stiff wrist and arm methods of Hummel, Moscheles, Kalkbrenner, and others—methods which had sooner or later to give way to a fuller coöperation of the whole upper part of the body. The increasing demands made by composers (from Chopin onwards) taxed the skill of pianists and created a new attitude towards keyboard problems. The appearance of works such as Liszt's Sonata and Balakirew's "Islamey" helped to emancipate players from all rigid methods, and gave a greater freedom to arm movements. It says much for the progress of piano playing that these formidable pieces by Liszt and Balakirew are now heard at pupils' recitals! Side by side with the development of agility and freedom has been the analysis of the production of beautiful tone. This is usually partly acquired and partly natural (the latter resulting from a particular hand-formation, temperament and racial characteristics.) Rubinstein said that he spent "thousands of hours endeavoring to find this tone and that." From the year 1880 an enormous literature on methods of touch has been accumulating. As a general rule, the greatest artists and teachers have little patience with so-called "methods." As Josef Hofmann bluntly says:—"There are but two methods in all the arts—a good one and a bad one. Most of the methods in vogue contain some good points—about a grain of truth to a ton of mere ballast." Many of the authors of piano-methods are so sure that they have found the whole truth and nothing but the truth that they are far from polite to anyone who ventures to differ from their views. We live in an age of speed and the "get-rich-quick" methods have an undoubted appeal to many.

Leschetizky and other great teachers have always insisted on their pupils regulating the quality (*timbre*) of tone from the brain. What is termed "a good touch" depends on the intention and attitude of the player towards his instrument. It was not fanciful of Mark Hambourg to suggest that "the hand in its attitude on the keyboard should reflect in some degree the spirit of the music—in a vivacious piece the hands should look full of energy, while in slow *cantabile* movements they should present a soft and sinuous appearance.

A standardized method of playing the piano is not wanted: the Golden Rule is that there is no Golden Rule. De Pachmann, the piano-poet, revels in pure beauty of sound; his *sforzando* has an entirely different tone-color from the *sforzando* of Percy Grainger, for instance, who does not hesitate to make use of his *fist* for certain effects. To take another example: Sarasate's violin tone was always exquisite beauty—tones that "dropped honey;" Joachim, on the other hand, would not mind rasping out a note on the G-string if he felt it needed that character. Sameness of tone is the deadliest thing in piano playing. The ideal pianist should be able to strike a chord with both hands and produce *simultaneously* ten varieties of tone-color. One has only to listen to Busoni, Bauer, and Rummel to appreciate what amazing effects can be obtained by those who control an unusually sensitive touch. Modern pianoforte music demands qualities of touch that were undreamt of in the last century; there is a wide range from the rainbow-hues of Scriabin and Debussy to the black-and-white of Béla Bartók and Satie.—From the "Musical News and Herald" (London).

The Relation of the Public School Music Teacher to the Private Teacher

By WILL EARHART

HAPPILY the relation of which we write is one that is constantly growing closer. Indeed, if public school music continues to enlarge in the direction of teaching instrumental technic, and if private teachers are drafted increasingly into the service of the schools by having their work outside given school credit and by coming into the school buildings to give the instruction in instrumental technic that is finding place there, it will soon be difficult to distinguish between the two types of teachers. It will be a fortunate day when this becomes true. Then public school music will have acquired a definiteness of aim that will add greatly to its strength; and then private teaching will have gained in breadth until its vision embraces *all* the people as affected by the ministrations of music. For public school music teaching is now concerned with music for the masses, but under comparatively indefinite instruction; and private teaching is concerned with the musical progress of the individual under very definite instruction. The new vision sees the masses brought under this more specific and intensive instruction with no loss in the extensiveness of the field. The tendency is a perfectly natural one, common to all progress. It represents a movement toward completeness, thoroughness.

But, as long as the two are separate—and their fields are as yet easily distinguishable—the work of the public school teacher in relation to that of the private teacher is that of the general to the specific. The private teacher of music is almost invariably a teacher of specialized musical technic. He (or probably she) teaches music *applied*, or, we may say, music expressed through the medium of the piano, the violin, the voice, or other mediums. The greater part of such instruction must necessarily be the application, or a technic of expression. But what is to be expressed?

From the Cradle Up

Too little, often, do the private teachers understand that unless from the cradle, in ways that they are likely to consider almost beneath their notice, there has been a slow, steady accumulation of musical experience, a musical background, there is nothing for the child or youth to express. That they make this mistake is evidenced by the material they sometimes give even to little children. The motive that every child—or, for that matter, any adult—has for learning to play an instrument, is to express some music he has in him through the attractive medium of that instrument. This is not a foreordained predisposition to evil, but a perfectly normal and proper, even fortunate tendency, which any true pedagogue would follow out according to the rule which bids him connect his instruction immediately with the experience the pupil has had.

It is not necessary, of course, that the very tunes with which a pupil is familiar should be used in his first technical study, though this is highly desirable and should be done if possible. But his first efforts should be upon music of at least a familiar kind, so that he will understand that the aim of his new study is, after all, to produce *music*, as he knows and feels it. Of course, if a pupil has practically no musical experience, or only one of a most unfortunate kind, there is nothing for the private teacher to do but undertake the laborious task of building up a musical experience before building up a technic of expression. It requires much more wisdom to do this than to teach pure technic; and the effort will try the patience of both the teacher and pupil. But, on the other hand, nothing is to be gained by putting the cart before the horse and endeavoring to develop a technic of expression of something that is not there to be expressed. From this nothing can result but a bewilderment, on the part of the pupil, that rapidly assumes the appearance of downright stupidity. As an illustration of what I mean, I may say that a few days ago I heard a violin student, a young boy, play an exercise completely out of tune, with no approach at any moment to correct intonation, and without exhibiting the slightest disquietude over his cacophonies. Yet the boy, on request, fluently syllabilized and sang with flawless intonation, the exercise he had so dreadfully mutilated. Evidently he had come to the conclusion that this new mechanism, the violin, was not intended to produce the same system of sounds that he had known in his singing as music. His readjustment, when he began to sing his exercises by syllables, was rapid.

Musical Orientation

Public school music should provide the basic experience and musical orientation upon which all later specialized musical technic can scarcely rest; and the private teacher should know the extent (and the limitations) of this experience and be wise enough to base his instruction solidly upon it. The private teacher, as we have said, is often too intent on developing technic, and is too slightly schooled in pedagogy, to do his part wisely; and on the part of the public school music teacher there are more difficulties and shortcomings than might be readily supposed.

The class dealt with by the public school music teacher is often—almost invariably, with respect to music—heterogeneous. Foreigners and natives, of all colors, sizes and shapes both physically and mentally, constitute any one of his groups. They are not classified according to their musical ability, and cannot be. They are not required or expected to study or practice their music at home. They are necessarily very largely dealt with, notwithstanding some systematic individual singing, as a group. The public school music teacher sees them only once in every few weeks for some twenty minutes. Instruction is therefore carried on by the grade teacher. She does wonders, considering the manifold duties and capacities required or expected of her; but she cannot be a specialist in everything, and the children do not always get from her what they could get from an expert music teacher.

WILL EARHART

School Music Essentially Vocal

But more important than these obstacles, at least with respect to our present thought, is the fact that school music is essentially vocal, while the music the children study with the private teacher is almost invariably instrumental. Even if the supervisor of music is not wholly taken up with singing, vocal music must still predominate largely in schoolroom instruction. But the public school teacher himself is often almost incredibly vocal.

Now it hardly needs argument to convince musical persons that there is a vast difference in the entire outlook upon music between those who sing and those who play. When one sings—at least as children sing in concert—he *is* the music, and the production of the music is almost unconscious; but when he plays he not only makes the music by conscious and difficult processes, but he also listens to it as well, almost as if some one else were making it. Unless, therefore, the teacher of "vocal music" in the schools has had some fairly serious dealings with instrumental technic in his own experience, certain unobtrusive but potent qualities and phases of treatment that would make the child's schoolroom experience carry over into his later instrumental study are likely to be lacking. These qualities and phases are, to be concrete, an instrumental truthfulness and exactness (without loss of expressiveness) in dealing with rhythms and phrasing, a keen attention to the effect of the music upon the ear, instead of confining attention solely to the loosing of an inner emotional impulse, consequent attention to ear-training in matters of pitch, quality of tone and rhythm, selection of music that not only "sings" but that also *satisfies the musical sense* through the ear, and constant operation of a preference for musical tone-effects instead of effects of verbal declamation. There need be no loss of joy in singing, no sacrifice of pure and musical vocal effect. Indeed, what would result would be purer type of singing, a definite growth in bel canto, a substitution of something of the organ—like quality of the St. Olaf Choir or the Ukrainian Choruses for, let us say, the "pep" of the college Glee Club. The net result would be to give the foundation for any and every kind and specific branch of musical training; and all this, so far as we have traced the process, would be done without any specific reference to instrumental music or any separate processes of instruction designed to foster instrumental interests as contrasted with vocal.

A Broader Scope

But the public school need not, and often does not, stop with such development of a general attitude toward music. By having children, and at times adult musicians, play; by speaking occasionally of the various musical instruments and their peculiar characteristics and powers; by comparing the tones produced by the voices of the children with those of the violin, flute, et cetera; by telling of the great orchestral works written by Schumann or Mendelssohn or some other composer, when a little song by one of these is sung; by describing the make-up of such an orchestra and comparing it with that of Haydn, when a song by Haydn is encountered; by encouraging children to attend concerts given by great instrumental soloists or ensembles; by referring casually to the effects produced by the church organ with which they are familiar; by telling the pupils of Handel's powers as an organist, Mendelssohn's as a pianist, in connection with songs by these composers; *by organizing school orchestras or little instrumental ensembles among the children themselves; by offering class instruction under school supervision on almost every musical instrument;* by all these a definite stimulus of interest in music and musicians in general and in instrumental music in particular may be aroused, and the beginnings of a sympathy for the modes of expression of music other than school songs may be generated. And, unless such breadth of interest and sympathy are aroused, the school has not done its duty.

But even at the worst, public school music does give considerable foundation for the work of the private teacher. At least the child is "tuned up" for music, so to speak; and ordinarily, even in average schools, he gets not only quite a well-defined and desirable musical orientation but also a considerable knowledge of elementary theory and staff notation and some ability to read music. The private teacher is not always enthusiastic over the extent and thoroughness of these attainments, and sometimes, we must admit he has good cause for even sharp criticisms. But, on the other hand, we must remember that even the private teacher's instruction is not one hundred per cent. efficient with *all* of his pupils, and that most of us teachers are given somewhat more to telling about the bad condition of pupils when they come to us than to proclaiming to the world their beatific condition when they leave us.

The better public schools, too, are doing now a quite remarkable work for the musical advancement of the pupils. To the attainments we have outlined in connection with the elementary schools we must add the really extensive and sound knowledge given in many high schools. In these advanced courses in Harmony and Musical Appreciation (which latter is made to include form and esthetics, principally, as well as biography and history) and a knowledge of the Orchestra and its instruments, which is given by school orchestras of almost symphonic proportions playing proficiently a fair repertoire of classical music, lead the student to a knowledge and appreciative understanding as great, surely, as the private teacher should ask. It remains only for him to connect his teaching wisely with it. It is a pity that we live in so busy a world that the public school music teacher and the private teacher cannot get together more intimately and learn one another's aims, methods and accomplishments. Much lost motion and difficulty would be avoided if there were such closer articulation. But even as it is, since private teachers are steadily coming more freely into the schools to give instrumental instruction, and since the public school music teacher is more and more becoming a broadly trained musician as well as pedagogue and is now more often than not skilled in practical musical technic of one kind or another, a better understanding is fast becoming established.

School Credits for Music

The practice of giving high school credit for the study of specialized musical technic under private teachers remains to be spoken of in brief detail. Here the two classes of teachers are brought into more direct relation, probably than in any other phase of musical practice. In fact they are united and are in the closest accord. The difficulties that beset the richer development of this modern phase of educational practice—for there are, unfortunately, many difficulties—must therefore be sought outside the two groups and outside of their relations; and they must be combated by both groups working together as one.

The difficulty most often spoken of is that of standardization. I think it is overestimated. The plan worked out by the Educational Council of the Music Supervisors' National Conference and adopted by the Conference, and later adopted for use in the State of Pennsylvania by Dr. Hollis Dann, State Director of Music, has for some years been in essential features in use in Pittsburgh and is entirely feasible as a working plan. It does not prescribe graded lists of material for piano, violin, or any instrument, and yet safeguards standards of accomplishment. Later, lists of material are to be prepared, and here the private teachers must come forward and give of their specific knowledge. Meanwhile, however, it is certain that progress in this practice has not been retarded seriously by the lack of standard lists of material.

The chief difficulty is that of age-old traditions of curriculum. Music, despite our sentimentalizing over it on divers occasions, is not yet accepted at court as a genuine educational subject. It is with music teachers, both public and private; and these often know better than anyone else, for frequently in these days the musician is a highly educated person with more than one scholastic degree to his credit. But educators who make the general curriculum for our schools, and, oddly enough, many parents, are sometimes not willing to give music scholastic place. It is true that I have never known an educator who knew music well who exhibited this reluctance. Anyone who is well educated in both music and general subjects is not only qualified to speak of their educational strength, but is always found to be well aware of the educational strength of music, as compared with other subjects. But these are few; and parents, taking this cue from the large majority of educators to whom music is, and throughout life has been, but name for an easy recreation, outdo the educators in avoidance of it as a subject for school credit that shall be integral in the school's diploma. They want their children to be really and truly educated and they know that no person has been considered educated unless he has taken Latin and other languages (dead or alive) and history and a certain assortment of other subjects properly hallmarked. And then come the colleges with their entrance requirements in which music is often not highly regarded, and with their curricula from which music is absent, and the chain is complete. It will in time be broken. Legislation such as we have now in Pennsylvania, though it is in advance of the general understanding, is highly potent. Musicians who are also college men, and college men who also know music, are increasing greatly in numbers and their weight will be felt. Meanwhile the music teachers, pupil and private, can co-operate with one another in careful study of the situation and in practical remedial effort. There is no doubt but that they will do this; for that their interests at this point are identical is most obvious. At other points, it is true, their interests are equally closely related; but at no other point are the teachers themselves so well aware of the exact strength and nature of the relationship. One would like to think that by this and other articles like it a keener sense of their common aims and a greater effort to co-ordinate their efforts might be aroused.

Suggested "Self-Test" Questions on Mr. Earhart's Article

1. *What is the little child's motive for learning music?*
2. *What kind of music should be employed for the first efforts of the child?*
3. *Give three means of broadening the scope of the child's musical training.*
4. *State the influence of College men in music.*

A Baby or a Doll?

By Nonabell Bailey

Many students go through years of drudgery to perfect fingers and technic only to find in the end that their playing makes no appeal to their hearers. There is no soul to it. In spite of the brilliant technic there is no passion, no fire, no joy, no sadness—in fact nothing that moves the hearers to nobler thoughts and richer lives, which is the real purpose of music.

What is the trouble? Is it lack of talent? Perhaps; but without talent of some degree, and great determination, the brilliant technic could not be required. In many cases it is the fault of the teachers. The primary and intermediate teacher has no right to feel that her duty is fulfilled when she uses the latest methods in training the child's fingers. Teachers, train the mind! It is the soul of your work; and without it there is nothing but utter failure. Do not feel that only the world-famed teacher can put the artist finish on a musician by a course in interpretation.

This work may be started at the very first lesson, even with the youngest beginner. In fact, the younger, the greater opportunity to stir the imagination. At the very first lesson it is well for the teacher to play something for the child after she has first told a story or painted a word picture about the piece. I often use Grieg's "Butterfly." First I tell the child of a beautiful garden filled with various colored, fragrant flowers, in the warm sunshine. Then I describe the butterfly—how it flits from flower to flower, pausing here and there, then fluttering on until it disappears over the garden wall.

Another good one is "La Fileuse," by Raff. Make the child see the old-fashioned spinning wheel, the little German girl in her quaint peasant costume; and he will have no difficulty in distinguishing the sad little song above the whir of the spinning wheel.

Such big numbers may seem too deep for a child They are not. Frequently the child will make a special request for the same piece every few lessons. Never refuse him. You will find that, with the proper word pictures skillfully used, it will inspire the pupil to put some real meaning into his own little pieces.

A very practical little girl put her whole mind on slowly thumping out note after note of the little lullaby she was learning. She was always scolding herself, or rather her fingers, for being so slow. I had previously explained that the piece was for a mother to sing to baby or a little girl to sing to dolly. At last I said, "But, Ruth, a baby couldn't go to sleep with all that noise." I was amused at her alarm as she said, "Oh, I forgot"—then in a whisper, "I thought it was a doll." You see she was a peculiar little girl to whom dolls did not mean much; but a baby—why her own baby brother was at home.

The idea is to give the imagination a start on the right road. Later the child will invent his own stories about his pieces. Encourage him, no matter how different they may be from your own ideas. Only help him to work it out with his fingers; and later when he comes to the masterpieces he will have no trouble in determining what is their soul. His feeling will be that of the composer and his interpretation what the master intended.

February is a fine month in which to begin to plan for your Summer Music Study. Planning ahead is far better than wasting time regretting lost opportunities.

Clementi, the Long-Lived

By W. F. Gates

A recently published schedule of the life extent of the great composers and performers omits one of the more notable of a hundred years ago, Muzio Clementi—beloved of piano students. This Anglicized Italian was not in the first rank of musicians; but his effect on the music of his and the succeeding days was marked, because of his writing in pianistic style for that then partly developed instrument.

Clementi's life extended from 1752 to 1832, a long life but not so notable for its extent as for the particular musical period it covered. This eighty years overlapped the complete lives of Mozart, Beethoven and Schubert. Clementi's life missed that of Bach by only two years, touched that of Handel, and largely was parallel with those of Haydn, Weber, Rossini, Mendelssohn, Schumann, Gounod, Chopin, Wagner, Verdi and Rubinstein.

Those eighty years, with a few more added at their end, may be said to have been the golden period of musical history. Before that day, music was in its infancy; since that time, it has shown signs of decadence. Today, so far as the making of great works is concerned, music seems to be taking a slumber. Possibly, the Muse is simply gathering power for a recrudescence, another period of production of great works to follow the widespread production of minor compositions now in evidence.

The Song of the Flats and Sharps

By S. M. C.

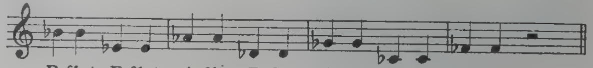
Of the many devices used by teachers to help their pupils remember the order of flats and sharps, the following proved most successful with a number of pupils. We call it "learning the Song of the Flats and Sharps," and proceed to sing the following tune, which the pupil plays:

Ex.1

F sharp, C sharp, G sharp, D sharp, A sharp, E sharp, B sharp.

Then down for the flats:

Ex.2



This device entails no learning of absurd sentences, or nonsensical jingles, and takes but a short time and a few repetitions to impress it upon the pupil. At the same time it teaches him to locate the sharps and flats upon the keyboard, a point which is neglected by many teachers. If you have a pupil who is backward in this respect, why not try the Song of the Flats and Sharps?

Clearing Away a Mechanical Problem

By Ruth L. F. Barnett

"Are you dreadfully busy?" asked a little music teacher. "I don't know what to do with Helen Brown. We have just spent her whole lesson hour on a study that she already 'knew perfectly,' and still she stumbles."

"Has she tried playing the hands separately?" I ventured.

"Oh yes, she has played the right hand alone dozens of times. The left is so easy that she could play it at sight. All the difficulty is with the other hand."

"For just that reason," I answered, "Helen must completely master the left-hand part. She must be able to play it easily and well at a much greater speed than is required with the hands together. If she can play it alone only as fast as it is meant to be played, what can that left hand do when the right hand is claiming all of Helen's attention?"

The little teacher rose to go. "I am going to telephone to Helen now to go to work on that left hand."

"And while you are about it," I sang after her, "put down in your mental notebook: *In any piece in which one hand has a much more difficult part than the other practice the easy part till it can be played twice as fast as need be; then work on the more difficult part with nothing to stand in the way of mastering it.*"

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M. A.

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered department. Full name and address must accompany all inquiries.

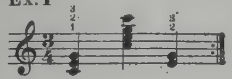
Study of the Grand Arpeggio

In response to my request for practice suggestions from our readers, I have received the following interesting scheme from Mr. Cecil Berryman, of Omaha, Nebraska. The scheme seems to me eminently useful and practical, and I intend to try it out on my own pupils. Mr. Berryman says:

> Get this practice scheme into the blood by a daily inoculation. Wilhelm Bachaus, the eminent pianist, is quoted as saying: "I start with ridiculously simple forms—just the hand over the thumb and the thumb under the hand—especially for arpeggios." Do not forget to play the following exercises exactly as written. Supplement them with various other rhythmic groupings.

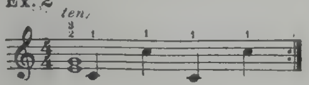
1. Play the tones of an arpeggio in *blocks*, or fingering-groups, as follows:

Ex. 1



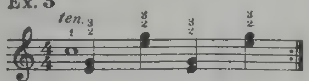
2. With the thumb free, hold the remaining tones in the "block" for a bridge, and pass the thumb rapidly from thumb-tone to thumb-tone:

Ex. 2



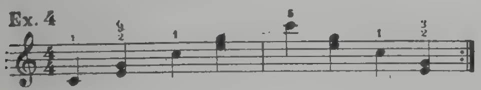
3. Hold down the thumb, passing the bridge over. The tempo should be slow but the lateral movement almost instantaneous:

Ex. 3



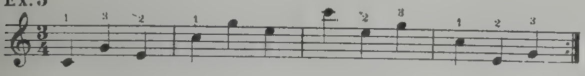
4. Play thumb-tone and bridge, the fifth being played alone:

Ex. 4



5. Play the "position tones" in inverted order—an excellent stretching exercise:

Ex. 5



Power in Scale Playing

> Please explain how scales that are played rapidly—that is, with fingers close to the keys—can be played loud. Where should the necessary pressure come from to play them this way?—K. M.

There are two chief sources of power in playing scales: (1) the downward action of the finger itself, and (2) the throw of the hand from the wrist. By the first means, the finger is held somewhat firm, and is given a downward swing by a quick pull of the finger muscle. More important for strengthening the tone, however, is the hand action. To secure this, hold your hand extended horizontally in free air. Then suddenly throw it downward, as though shaking water from the finger tips. Now perform the same movement over the keyboard, so that the fingers are interrupted in their descent by their impact upon the keys. You will find that the wrist has a tendency to jump up with each stroke.

Next, play a scale, keeping the fingers firm, as suggested, and allowing the wrist to rise naturally, as each key is sounded. In this way you can get a maximum of tone, which may be decreased as desired, by using less evident movements. As the scales are played more rapidly, the wrist may rise slightly when the second, third and fourth fingers are employed, and descend with the thumb and fifth fingers. Power will increase accordingly as you cultivate this feeling of throwing the muscular activity *over* and *into* the keys.

The Question of Relaxation

> In playing the melody notes in the first part of Rachmaninoff's *Prelude in C sharp minor*, I had been taught to let the hand come down relaxed on these notes so as to obtain a full tone without stiffness. I find that when I use the hands in this way they slip off the keys. What would you recommend?

Relaxation is the slogan of modern teaching, and a very good slogan, too, if properly applied. But "perfect relaxation," about which some teachers talk, is an evident absurdity which, if carried to its logical conclusion, would result in flopping about the keyboard like a seal out of water. If you play at all you must hold your arm up by the muscle in the upper arm, and must also have some muscular action in the fingers, at least. Where muscular relaxation is most important is *directly after a note has been played*, when muscular activity, especially in hand and wrist, is for the most part waste effort.

A full-arm movement is best used in playing the heavy melody notes of the Prelude you mention. Place the right hand on the keyboard, with fingers somewhat extended. Now hold arm, hand and fingers locked together in this playing position, and then raise all together about three inches, by shrugging up the shoulder. Next, drive some key down with a single finger, by a quick downward movement of the shoulder; and immediately relax the arm, retaining only just enough pressure on the key to keep it down.

These are the fundamental muscular motions to be observed in playing the heavy melody notes; although these motions will eventually be accomplished in a less obvious manner. The tone, to be sure, is produced primarily by arm-weight; but this weight is reinforced and regulated by sufficient muscular control.

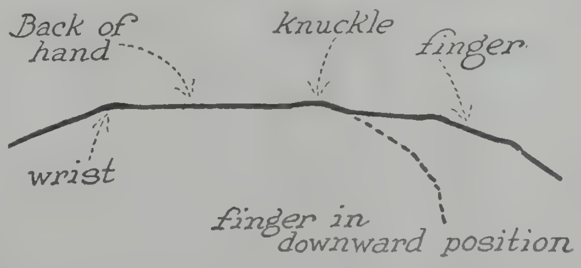
Double-Jointed Fingers

> I have as a pupil a girl of twelve whose fifth fingers are both double-jointed, so that if she raises them more than a quarter of an inch above the keys they "snap" up and when they strike from this high position they "snap" down. Can this trouble be corrected, and if so, how?—C. A. B.

It goes without saying that the "snap" which you mention should be avoided as far as possible. If raising the fingers produces this ill effect, why raise them?

In the time of Czerny and immediately following pedagogues, it was customary to hold the hands quiet under all circumstances and to produce the tone by hitting the keys with a high lifted finger. But in recent years it has been decided that this insistence on motionless hands is a mere fetish, and that any muscular movement which is of real usefulness may be rightfully called into action. Hence what was formerly done exclusively by the fingers is now aided, at least, by throwing the hand downward from the wrist, by rotating the forearm to right or left, and even by full-arm movements.

I advise you, therefore, to teach your pupil to make extensive use of such movements, and to confine the finger action to a downward swing from the knuckles. Even then the finger has considerable play from the nearly horizontal position shown in the following diagram to the downward position indicated by the dotted line:



By combining this throw of the finger with the various motions of the hand and arm above described, fluency of execution and ample command of tone should be acquired.

"SCULPTURE is motion caught in a moment of perfection. Music is motion always in perfection."
—MRS. BARTLETT A. BOWERS.

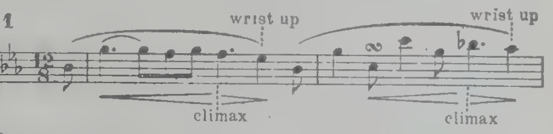
"THERE are in music such strains as far surpass any faith which man has ever had in the loftiness of his destiny."—THOREAU.

How to end a Slur

> How should the last note under a slur be played. I was taught to draw the finger gently off the key. Is that the correct method?—B. P.

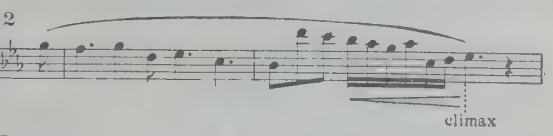
Frequently, though not always, the last note represents a quiet ending after a climax; and in this case your method is correct. I suggest that the climax-note under the slur be then played with a lowered wrist, and that the wrist be quickly raised after the last note, so that the finger is, so to speak, *dragged away* from the key, hanging down from the wrist. An example of this procedure is found in the first two phrases of Chopin's *Nocturne in E flat*:

Ex. 1



But some phrases end with the climax, as in the next phrase of the same nocturne:

Ex. 2



Here the final note is not only accented, but also somewhat sustained. Eventually, however, it may be released as I have described.

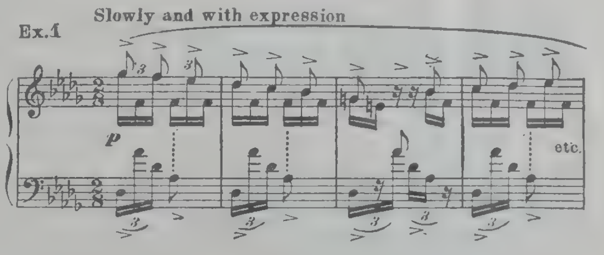
To interpret slurs properly, therefore, one must carefully discriminate as to whether their climax notes occur before or at the end.

Cross Accent. Sharps and Flats in the Signature

> (1) Please explain what is meant by cross accent?
>
> (2) Why are the seven flats in the key of C flat major in the reverse order of the seven sharps in the key of C sharp major?

(1) Cross accent, or cross rhythm, occurs when the accents of one voice-part conflict with those of another. This effect is most frequent in connection with ¾ and 6/8 meter, in the former of which there are three beats, and in the latter two beats to the measure. In this case, while the chief accents, on the first beats, coincide, the secondary accents conflict, or *cross* each other. A good example is found in Schumann's *Des Abends*, from Op. 12, where there are three distinct beats to a measure in the upper, melodic part, to two beats in the lower, bass part; so that the second beat of the latter falls between the second and third melody tones, thus:

Ex. 1



Chopin's *Waltz in A Flat, Op. 42*, has two notes in the upper part to three in the bass. Brahms is especially fond of such conflicting rhythms.

(2) Sharps and flats are placed in the signature in the order in which they naturally occur in successive keys. Since F is the first note to be sharped, in the key of one sharp, F♯ always comes first in the signature. In the key of two sharps, C♯ is added, after which come in order G♯, D♯, etc.

Similarly, since B is the first note to be flatted, in the key of F major, B♭ always comes first, then E♭, A♭, etc. Hence the final order of sharped notes is F. C. G. D. A. E. B, while that of flatted notes is B. E. A. D. G. C and F,—just the reverse.

"The self-criticism to which the artist subjects himself will prevent him from foisting an ill-prepared work upon the public. The true artist may be trusted to take that care; and the greater the artist he is, the greater the care he takes."—FRANK BRIDGE (*English composer.*)

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

MEYERBEER vs. CHOPIN

In his book, *The Great Piano Virtuosos of Our Time,* W. von Lenz records (with slight abbreviations):

"Once Meyerbeer came in while I was taking my lesson with Chopin. I had never seen him before. Meyerbeer was not announced; he was a king. I was just playing the *Mazurka in C. Op. 33*—only one page in length. I named it the 'Epitaph of the Idea' so full of grief and sorrow is this composition—the weary flight of an eagle!

"Meyerbeer had seated himself; Chopin let me play on.

"'That is two-four time,' said Meyerbeer.

"For reply, Chopin made me repeat and kept time by tapping loudly upon the instrument with his pencil; his eyes glowed.

"'Two-four,' Meyerbeer repeated quietly.

"I never but once saw Chopin angry; it was this time! A delicate flush covered his pale cheeks, and he looked very handsome.

"'It is three-four,' he said, *loudly;* he who always spoke so softly.

"'Give it me for a ballet for my opera (*L'Africaine,* then kept a secret), I will show you, then!'

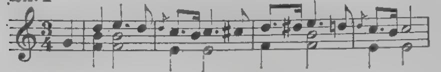
"'It is three-four,' almost screamed Chopin, and played it himself. He played it several times, and stamped the floor with his foot—he was beside himself! It was no use, Meyerbeer insisted that it was two-four, and they parted in ill-humor.

"It was anything but agreeable to me to have witnessed this little scene. Chopin disappeared into his cabinet without saying a word—the whole thing had lasted but a couple of minutes."

Meyerbeer, however, made amends on his way home with von Lenz to whom he gave a lift in his carriage. "'I had not seen Chopin in a long time,'" he is quoted as saying, "'I love him dearly! I know no pianist like him, no composer for piano like him! The piano is intended for delicate shading, for the *cantilena,* it is an instrument for close intimacy. I also was a pianist once, and there was a time when I aspired to be a virtuoso."

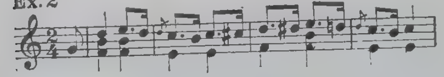
As to the little scrap between Chopin and Meyerbeer, here is the melody as Chopin wrote it:

Ex.1



And here is how Meyerbeer would have treated it (and it sounds very much like a Meyerbeer melody in this form). Take your choice!

Ex.2



SAINT-SAËNS ON IMPROVISATION IN CHURCH

In his *Musical Memories* Saint-Saëns ably defends the practice of improvisation in church. "I am fully aware," he says, "of what may be said against improvisation. There are players who improvise badly and their playing is uninteresting. But many preachers speak badly. That, however, has nothing to do with the real issue. A mediocre improvisation is always endurable if the organist has grasped the idea that church music should harmonize with the service and aid meditation and prayer. If the organ music is played in this spirit and results in harmonious sounds rather than precise music which is not worth writing out, it is still comparable with the old glass windows in which the individual figures can hardly be distinguished but which are, nevertheless, more charming than the finest modern windows. Such an improvisation may be better than a figure by a great master, on the principle that nothing is good unless it is in its proper place."

VON BUELOW ON APPLAUSE

To most musicians the applause of the audience is very precious. It is part of the recompense for the tremendous effort of acquiring a technic and a repertoire. Few would be willing to forego it; but apparently von Buelow, the great pianist and conductor, thought otherwise. The following is an extract from a letter he wrote to Madame Laussot, a friend of his mother. He was then twenty-four years of age and well on his way to success.

"As regards the little I may have accomplished in my art, the value of which consists in undeniable perfectibility alone; and as regards my claims to a recognition of it by the public........ I am only susceptible to the influence of applause in moments of nervous physical excitement. In cooler moments the judgment of a mass of people never exercises any attraction or influence upon me, however much I feel the value of winning the sympathy of some of its individual members. Every one of its manifestations has some sort of bribe to action. But true art never bribes, directly or indirectly."

One may add that von Buelow's indifference to the applause of the unknowing multitude was not assumed; it was quite genuine, and maintained to the end of his career. He had a reputation for being "cold." He seems to have been everlastingly seeking for that which he calls "undeniable perfectibility." It is a course worth recommending to any who hope to achieve a career as great as von Buelow's.

ONE WAY TO MAKE MONEY

It is a well known fact that many of the street piano players in big cities do exceedingly well. Most of them, Italians, manage to retire with sufficient funds to bask away the remainder of their days at Sorrento, Capri or Messina. A London musician of note thought that he would find out how much could be made in such a way. *Music* of London reports the following results.

"A doctor of music, a familiar figure at the Royal Academy, and a composer of repute, has, says a writer in the *Westminster Gazette,* carried out a daring and novel experiment. He has been concerned about the phenomenal increase of street musicians, and his objection was that they one and all assumed that the public only wanted jazz or popular music. He made a wager with other friends at the Royal Academy of Music that the passer-by would pay for classical work well interpreted. So he placed a first-class piano on a lorry, and went forth to the city to play. He gave the street crowds Beethoven, Bach, Chopin and others. The money poured in. He says it was the most profitable day of his life. He made more money out of classical music in the city than he could ever earn by a day's teaching."

IF YOU ARE MUSICAL—SHOOT!

Until the late unlamented war taught us differently, many of us were of Mr. W. J. Bryan's opinion that you had only to stamp your foot for a million crack-shot Americans to spring to arms; we imagine, however, even Mr. Bryan would have been astonished if the first to spring had been musicians. But consider the following from the London *Musical Opinions:*

"A military correspondent who is an accomplished amateur musician and has done a great deal of work for music in his own district, and is incidentally a crack-shot—for five years the captain in an important overseas shooting competition—states positively that a keen musical perception means a quickening of all the other faculties: sight, hearing, interaction of brain and physical functions; and ensures quick decision and swift action. . . . Music is with him a first passion, shooting the second; eventually he reveals how closely allied his two absorbing passions really are. He says, 'My experience of the many regimental bands that I have had dealings with is that the band is always, if it does its military course as a separate company, the best shooting company in the regiment.'"

Now perhaps some of our military schools which specialize on "rough stuff" will be persuaded to add more music to the curriculum.

MARTIN LUTHER ON MUSIC

A quaintly written *Popular History of Music,* by F. Weber, formerly organist at the German Chapel Royal at St. James' Palace, offers the following:

"Martin Luther himself was very musical, and with his friends sang in the evening compositions of Josquin, Senfl, and others, wherein he took the tenor part. Luther said: 'I am not of the opinion that the arts should be suppressed by the Gospel, but I should like to see all the arts, and music foremost, in the service of Him who has given them to us.' On another occasion, he said: 'Music is a splendid, beautiful gift of God, and near to theology.' And again: 'Music is the art of the prophets, the only art that can calm the agitations of the soul, and bring it into immediate connection with divine things.'" (We wonder if Luther found this out after the agitations of his soul caused him to throw his ink-pot at the devil!

"Luther had a high regard for Josquin's polyphonic compositions, and remarked thereon: 'Where natural music has been developed and polished by art, we may all the more see and recognize the great and perfect wisdom of God in his wondrous creation of music. Above all it must be wondered at, when one person sings a simple melody or tenor, besides which three, four or five other voices are also singing, which play and spring with shouts round such simple melody or tenor, embellishing and adorning that melody in various ways, and perform, so to say, a heavenly dance, friendly meeting and embracing each other heartily and gracefully, in a manner that those who have some understanding in it are moved thereby, must greatly admire it and think that there is nothing rarer in the world than such song adorned by many voices.'"

SOME SAYINGS OF DEBUSSY

In her book, *Claude Debussy,* Mrs. Franz Liebich quotes several of the great French composer's epigrammatic sayings, from which the following extracts are taken:

"Musicians will only listen to music written by clever experts: they never turn their attention to that which is inscribed in Nature. It would benefit them more to watch a sunrise than to listen to a performance of the Pastoral Symphony... Continue to be original, above suspicion."

"A fine idea in process of formation is a worthy object of ridicule for imbeciles. But rest assured that there is a greater certainty of finding a true perception of beauty among those who are ridiculed than among the class of men resembling flocks of sheep who walk with docility in the direction of the slaughter-house prepared for them by a clairvoyant fate."

"I write music in order to serve that which is the best possible within me and without any other preoccupation; it is logical that this desire runs the risk of displeasing those who love music of a conventional pattern to which they remain jealously faithful in spite of smiles and jests."

"'It is not possible to publish the *Suite Bergamesque,*' wrote Debussy one day to M. Louis Laloy; 'I am still in need of twelve bars for the Sarabande.'

"And as none of his previous ideas had satisfied him, sooner than publish the piece with the slightest defect he preferred to wait patiently for the right inspiration."

THE TRUE TEACHER OF MUSIC

Few greater teachers of piano have ever liver than Friedrich Wiech, the teacher of Robert Schumann, and, of course, of Clara Schumann, who was Wieck's own daughter. He is better known because of his opposition to his daughter's marriage to Schumann than in his true light as a great pedagogue. In a small book, however, entitled *Piano and Song,* he reveals his teaching ideals in a passage which, although addressed to voice teachers especially, really applies to anybody attempting to give instruction.

"A singing teacher who has no firm, decided principle, who is constantly wavering backwards and forwards, and who frequently leads others into error by his untenable opinions; who cannot quickly discern the special talent and capacity of his pupils, or discover the proper means to get rid of what is false or wrong, and adopt the speediest road to success, without any one-sided theories of perfection; who mistrusts, or blames, worries, offends and depresses, instead of encouraging; who is always dissatisfied instead of cordially acknowledging what is good in the pupil; who at one time rides a high horse instead of kindly offering a helping hand, and at another time praises as extravagantly as before he has blamed, and kills time in such ways as these—he may be an encyclopedia of knowledge, but his success will always fall short of his hopes. Firmness, decision, energy and a delicate perception; the art not to say too much or too little, and to be quite clear in his own mind, and with constant considerate kindness to increase the courage and confidence of his pupils—these are requisite above all things for a singing master as well as for a piano teacher."

Eight representatives of the British Empire were caught in a dugout during the war. When they were discovered, after a bombardment of six hours, the two Irishmen were fighting still, the two Scotchmen had formed a Caledonian Debating Society, the two Englishmen had not yet been introduced, and the Welshmen had organized an oratorio society.

The Value of the Duet

By Abbie Llewellyn Snoddy

Nothing is better for a pupil than to play duets as often as possible. The teacher who uses duets only for recital or show purposes is missing a great opportunity for her pupils' development.

From the very first lesson they may be used to advantage. Little exercises which would be deadly dull, if done by the tiny player alone, take on a surprising charm and delight when a bass is added. As the bit that he can do well is glorified by the harmony in the other part, the pupil hears a beautiful result and feels irresistibly that he is doing something worth while and is really getting on faster than he expected. Much, if not all the drudgery of a beginner's path, may be eliminated by the judicious use of duets, and many a child, who had to be driven to practice alone, will beg to be allowed to play from a new duet-book.

For a pupil who is weak in rhythm the duet is invaluable. If he has an ear at all for time, he will feel the steadying pulse of the other part; and even if he happens to be one of those rare but irritating individuals who, while murdering the time is sure that he is keeping it perfectly, nevertheless, he may soon be convinced of his weakness by a steady partner in a duet. Again, the pupil who plays rhythmically, but in lagging, dragging tempo with no spirit in his work, may be induced to hasten a little—to "step lively," in order to keep up his part. By the same means he may be brought to realize his lack of accentuation, a lack, by the way, which is distressingly prevalent among pupils.

Duets are equally good for sight-reading, and a portion of each lesson hour should be reserved by the teacher for this purpose especially if the pupil is so unfortunate as to have no one who can play with him at home. Duets may be simulated by the teacher playing one hand while the pupil plays the other. This is especially advisable when going over a new lesson, as it gives the child an opportunity to "hear how it goes," and, at the same time insures his going carefully over each part with separate hands—something of which one can never be sure unless it is done in the studio.

A further delightful feature, is the fact that many difficult compositions have been simplified for duet form until they may be learned much earlier than would otherwise be possible. Since to become familiar as early as possible with the best works of the best composers, is an important element in musical education, this is not to be lightly disregarded. When the student, at a later stage of his development attempts to play these compositions alone, he will feel that he has met old friends. The interpretation and general outlines will be his already.

So much for the duet, from the educational standpoint. Much might be added as to the pleasure of ensemble playing and the joy that comes from working with another whose zeal and interest is as keen as one's own. More, and still more, duet-playing is sure to add not only to the happiness of life in general but also to the sum of one's own musicianship in particular.

What Is American Music, Anyhow?

By E. van Haaven

We have laid such stress upon the subject of American music that we have almost forgotten that national music is a matter of slow artistic growth rather than the outcome of a preconcerted endeavor. We might play "American" music at every concert, induce the managers to consider and perform "American" operas, and talk and play only "American"-made compositions, till doomsday, and be still very little nearer the goal of true American music.

Merely being composed, published, and played in America, by American composers, printers, and performers, will not make the music "American." Much, indeed, of the music so labeled is either a rehash of the classics, or of the modernist style of music, and contains nothing distinctive. Or, rushing to the other extreme, it is a revival of old Indian themes or of Negro slave songs, neither of which is truly American.

American music, like the great American novel, is an elusive quantity, which recedes as one approaches. And why should we make such a point of Americanizing music anyway? Music is music, no matter where it is made. If we encourage the composers of our nation to develop the gift that is theirs—make it possible for them to get a hearing—we may rest assured that we have done all that is possible for American music. We are such a conglomeration of various races that the music that should express us would have to be a heterogeny of all styles and degrees. As things stand, with apologies to the "highbrows," the despised ragtime is more nearly expressive of our racial tendencies than any other. To begin with, we lack the repose of the long established nations. The classic mode is too cool, too leisurely in feeling for a nation which is still enjoying an exuberant youth. A country must have deep-felt wounds to wring from it that cry of pain which is the starting point of national music. The long-past Revolution contributed nothing, for the reason that triumph is not the best song-master. Our oppressed Indians, and the black slaves sang their life-and-death songs in our country; but they were not widespread enough, not sufficiently weighty numerically to count nationally. The Civil War gave American music its first impetus, in the songs that marked the pang of brothers at odds. Out of the pain of that struggle, came songs as sincere as are all folk music, as sincere as any music must be to be considered national.

And so, out of the late clash of passions and the grief of personal loss, even with victory, may come still another impetus to the cherished idea of American music. But to force the matter will only delay it. A century is all too short for its growth. Meanwhile there will arise many counterfeit presentments of American music, music which will express nothing more than individual caprice, or servile and feeble imitation of other people's music. But there is this to be said for the movement, when the representative American composer does come he will find an eager audience awaiting him, not the contemptuous cold shoulder of other days when no music without a foreign trade mark stood a chance of consideration.

"Practically a Grand in Upright Form"

That is how musicians describe the beautiful *Ivers & Pond* shown above. With its grand conformation plate, laminated bridges, agraffe construction and patented improvements, it marks the farthest advance in its type.

IVERS & POND PIANOS

whether smallest upright or largest grand are of *but one quality—the finest.* Embodying half a century's experience, they are used in over 500 leading Educational Institutions and 70,000 homes. Musically and artistically, they rank with the world's greatest pianos. For catalogue and full information, *write us now.*

How to Buy

Where no dealer sells *Ivers & Pond* pianos we quote lowest prices and ship from the factory tho' your home be in the most remote village in the United States. Attractive easy payment plans. Liberal allowance for old pianos in exchange. Every intending buyer should have our new catalog. *Write for it.*

Ivers & Pond Piano Co.

141 Boylston Street, Boston, Mass.

The Singer's Etude

Edited by Noted Vocal Experts

A Vocalist's Magazine Complete in Itself

Study of Indispensable Principles in the Art of Singing

By Anne Immink

CORRECT and controlled breathing is the foundation of the art of singing. A pure and steady tone cannot be obtained with an irregular and puffy flow of breath. Just as uneven and erratic blowing on the lute will produce uneven and unbeautiful tones, so will uneven and uncontrolled gusts of air from the lungs on to the vocal cords produce the same result. A pure and even flow of air, however, will produce a sweet and true tone. The voice will be small at first, but as music and not noise is the aim of the truly musical, this should not in any way discourage the student.

All beginnings, when correctly done, are small; and to attempt to do big things before one has learned to do small ones can only end disastrously.

Breathing Exercises

These exercises should be done regularly every day, either in the open or before an open window.

No. 1—*Long Breath.* For use when ample time is given for breathing and for singing long phrases. Slowly fill the lungs to their full extent, set the muscles of the diaphragm, breathe *out* without allowing the muscles to collapse. This exercise should be done ten times.

No. 2—*Catch Breath.* For use when the composer has allowed only very short rests for breathing between phrases, and in cases where, in very long phrases, no allowance has been made for breathing. The breath taken then must be instantaneous and imperceptible. Set the muscles of the diaphragm, and breathe in simultaneously—this causes an instantaneous filling of the lungs. Commence breathing *out* immediately, without allowing the muscles to collapse. The entire action, from the filling of the lungs to the commencement of the exhaling (beginning of the next phrase), should not take more than a fraction of a second. Do this exercise ten times.

No. 3—*Sustained Breath.* This exercise is not used in the act of singing, but is meant to strengthen the muscles of the diaphragm, sides and back. Slowly fill the lungs to their full extent, set the muscles all round and keep in set position until you have counted *ten.* Then breathe out, and allow the muscles to collapse suddenly and entirely. This sudden change from a taut condition to a soft and pliable one gives great strength to the muscles, so that in time they are able to stand any strain imposed by lengthy passages and difficult phrasing. As the muscles become stronger the student may increase the count until twenty or more is reached. This exercise should be done four times. Throughout all breathing exercises, and also when singing, the chest and the shoulders must be stationary.

Beauty of Tone, and the Danger of Forcing

Unfortunately, many a student, through enthusiasm, no doubt, sings to the full power of the voice. The result is that the student gets a false idea of rapid progress. The voice becomes loud, harsh and incapable of expression. The vocal cords, being constantly stretched to their full extent, lose their elasticity, and so become useless from a musical point of view. These cords are delicate, and should receive careful and, one might say, loving treatment. Under such circumstances, the voice grows in strength and beauty, and becomes capable of the richest tone shading.

From the earliest stages, however, the student should be careful to give to each note its full support of breath. Failure in this causes the singer to force, and so the vocal cords become strained. The foremost aim of any singer should be to produce beautiful sound—and let it be remembered that the beauty of tone does not depend upon its volume. Be content to let the voice flow as Nature intended that it should, and do not force. The artificial strength obtained by forcing will in time defeat itself by wearing all strength and power of expression from the voice.

This most important point cannot be over emphasized. With correct breathing and production, power will come of its own accord, and the student will find that she is able to travel from the softest to the loudest passages without the slightest difficulty, and that no strain will be experienced during the "forte" passages.

Production and the Resonant Position of the Voice

The throat should be in an easy unstrained position—Soft Palate raised, Tongue flat, Larynx low. The action of the larynx is automatic, therefore any movement made in the throat will only hinder and not assist it. Once the student has been taught the mechanism of the throat, she will realize that the action of the larynx is automatic and that the throat should be in a passive position. In fact, she should forget the existence of the throat and remember only that the firm muscles of the diaphragm give strength and that the voice vibrates either on the lips, behind the nose or in the head, according to the resonant position of the note being sung.

The Resonant Position of a Note is that position on the lips, behind the nose, or in the head, on which that particular note vibrates.

Sopranos, when singing on the bottom register, should get the vibration on the lips and behind the nose as much as possible, and should guard against trying to get the rich vibration heard on the bottom register of a contralto. The soprano voice, being of a light quality, must be kept light. Any attempt to make the bottom register heavy will seriously interfere with the blending of the registers and with the flexibility of the whole voice. However, with the exception of the bottom register, the middle and upper registers for both Sopranos and Contraltos vibrate on the same positions, **viz:**

Middle Register—On the lips, and, as it ascends, behind the nose;

Upper register, or head voice, between the brows and, as it ascends, directly above.

Tightening of the Throat Muscles

Few students are able to realize at first that beyond the larynx and the vocal cords the rest of the throat has nothing to do with singing at all, and should be in perfect repose. Any tightening of the throat muscles causes misplacement of the voice, the throat aches, and singing becomes a labor instead of a pleasure. For remember that singing should be a pleasure; even when singing passages full of tragedy and sorrow, the real singer experiences poignant pleasure.

Many do not realize that students tighten up the muscles of the throat because of nerves and because they have an exaggerated idea of the difficulty of singing.

Simplicity of Singing

Singing is essentially simple. It is its very simplicity that makes it so beautiful an art. But, as in connection with all other arts, it is only after much work has been done that one comes into a conscious realization of its simplicity. From the very beginning, therefore, let the student try to realize that her greatest obstacle is this exaggerated idea of its difficulty.

The Middle or Working Register

During the early stages of voice production, only the middle register should be exercised. The extent of this register, however, should be determined by the student's teacher. Later on, and no matter how advanced the singer may be, the main work should still take place on this register.

It is by working carefully on the middle part of the voice that the lower and upper registers determine themselves. And it is in this way that many students who consider themselves contraltos before taking lessons are surprised to find that nature has given them soprano cords, and vice versa. A case in point is that of a girl who, when she started singing could reach upper G. This took her to the full extent of her voice. After some months of careful working on the middle register she found that she could sing upper A with ease. So her voice continued to gain, and now after some years, she has a range which extends from B below to C sharp and D above. It must not be supposed, however, that she was "trained to be" a soprano. Had she worked on her upper register and tried to produce the notes before they came of their own accord, she would no doubt have lost them altogether. The same treatment applies to the lower register. If the voice is to be a contralto the larger gain will take place on the lower register.

In the male voice there are only two registers. The main work, therefore, should take place on the upper part of the lower register, and the lower part of the upper register, thus constituting a middle working register.

It will be seen by the foregoing that one cannot be trained "to be" either a soprano, contralto, tenor or bass. He or she can only be taught to produce perfectly the voice which Nature has seen fit to bestow; and it often takes years before the full extent of that voice is discovered. Some voices develop quickly, others do not.

The Blending of Registers

One of the greatest difficulties a singer is called upon to face is the blending of the registers. In rare cases singers have not this difficulty to overcome; but they are among the favored few.

On account of the heavier quality of the voice, the contralto has the greater difficulty in this connection; and the transition from one register to another is often painfully evident.

But it should be remembered that the placing of the middle register goes a long way towards obviating this difficulty. With the help of a good master, and if the student puts in assiduous brain work, the trouble will soon be overcome and forgotten.

Tonal Concept

All things, whether they take material form or not, are first formed in the brain. Therefore first hear your note mentally, feel it physically in its resonant position, and then sing it—provided of course that a good breath has been taken and that the muscles of the diaphragm are firm.

Temperament

This cannot be taught—this inner something, the possession of which enables the singer to appeal to the heart as well as the ear. But it can be developed.

Refuse to be shut up in a glass house. Come out into the world where there is so much of love and hatred, joy and sorrow. And, like the Lady of Shalotte, be not content with shadows. Know of these things so that the message in your song will carry conviction. All artists are messengers to humanity, reminding tired men and women that the sordid rounds and carking cares of life can be lost in a glorious world of harmony and color.

If you sing with a message from your soul, you will not fail to send away from your audience at least one who, besides enjoying with the others, leaves with a happier heart and a firmer purpose.

Finally, love humanity—for it is only by loving that you will understand sorrow and pity, and why it is that there is hatred. When you know of all these things, and you have experienced the pure joy of living, and sometimes despair, you will understand life and its vicissitudes sufficiently to be an artist.

The Use and Abuse of the R's in Singing

By Louis Sajous

EVEN among many of our well-known singers, not mentioning the dilletanti, who by way of instruction attend their many concerts, the rolling of the R is becoming an irritant to those who understand. Our singers would gain more recognition by musical critics if they would adhere more strictly to form.

Nothing is more distressing to a musician than to hear these transgressions, especially by many of our Church singers and some of our celebrated artists, who would do well to analyze and absorb rules and not make rules an exception.

Adhering strictly to musical and phonetic rule, the rolling of the R, whether long or short, is invariably on the first syllable of the word and accentuated if it falls on a musical accent, but not prolonged on the second or third syllable, unless followed by a vowel, then a short roll is used, unless, as before stated, it falls on a musical accent.

As an example, take the first line in the soprano aria of Mendelssohn's "Elijah." *Hear ye Israel!* The "R" in the word "hear" can be given a short roll, as the musical accent on the vowel "Y" is the weaker, notwithstanding that the "Y" is considered a consonant, when followed by a vowel. The same rule is applicable to the noun "Israel," as the musical accent falls on "Is." It may be noted also that the "Y," being a mongrel alphabet, seldom succeeds the long roll of the "R."

Again, in the Recitative for the tenor in "Elijah," *For Your Transgressions,* a short roll of the "R" is given in the word "for," but not in "your" as it is followed by a consonant; a short roll on "trans," and a longer roll on the syllable "gressions" as the latter is followed by a vowel and falls on a musical accent.

But the abuses do not lie so much in the above, at is a natural tendency to roll the "R," long or short, because it is always followed by a vowel, with one exception, when it is followed by an "H" as in Rhapsody, Rhyme, etc. But as the "H" in this case is superfluous and itself followed by a vowel, it is, as above stated, pronounced with a roll, as if the "H" was non-existent.

It is in the rolling of the "R's," in words followed by a consonant, that the abuses are noted and badly maltreated, for how often are we forced to listen to these exaggerated rollings in such phrases as the following: Fear-r-r not ye; If with all your-r-r hear-r-rts; Dear-r-r love remember-r-r me; My mother-r-r bids me bind my hair-r-r, etc., *ad infinitum.*

Singing From the Viewpoint of Declamation

By William F. Bublitz

THE best singing-teacher I ever had was a teacher of reading. She doesn't know that she gave me singing lessons; and at the time I didn't know it either. Since studying singing and singers however, I have decided that my old teacher in Elocution taught me in her Maxims some fundamental principles of expression that apply to singing as well as to reading. Looking through an old note-book the other day I came upon the following: Maxim One:— Emotional Congruity.

A good reader always employs proper emotional stress at the right time and place.

There were other maxims; but this one seems to be so often violated in singing that perhaps it might be helpful to others to know its application to singing.

In singing, proper emotional stressing can come only from sympathetic interpretation of the text and not from any artificial turning on or off of volume or pitch in voice. Visualize the picture you wish others to see and feel it as you do. The voice is subconsciously colored by our subjective perceptions. Great actors actively experience the emotions they project across the foot-lights. Actors have one device in acquiring emotional "steam" that is denied the singer, and that is to assume the bodily expression associated with the emotion they are portraying. The singer, though denied the actor's liberty in physical expression, should not fall into the error of being physically passive. By posture, by slight motions of the head and by facial expression, the singer should show what is going on in his mind.

Facial Expression

Facial expression exerts profound influence upon the emotions. Any method of singing that interferes with facial expression by demanding a fixed hyenic smile, or any other stereotyped attitude, is incorrect. Do not make the common mistake of grimacing or of exaggerating any facial expression. In fact, do not assume any preconceived facial attitude but allow Mind to show through the face.

From the reader's viewpoint, the singer is hemmed about with restrictions that make it difficult to show proper emotional emphasis at the right time and place. In reading, variations in volume or pitch are the voluntary devices for showing feeling. For the singer, the melody prescribes the variations in pitch; in fact, the melody is, in one sense, premeditated inflection. For that reason, some people regard all singing as being inartistic. I had an English teacher in college who was openly contemptuous of singing. "Bah," he would say. "Singing! Inartistic! When the text demands a rising inflection the melody has often a downward scale. Verses, entirely different in sentiment and fervor, receive the same mechanical setting. Sometimes all the verses are marked at certain places, ff, and pp; and only he who observes these marks is regarded as a person of good musicianship."

The professor is not altogether wrong. The singer has not the liberty of the reader. But to say that singing is therefore inartistic is like declaring that poetry is inartistic because it is not prose. Licensed freedom is not the ultimate criterion of art. Indeed, the exact opposite is more acceptable; namely, that rules are the very condition of art. Remove the rules and you remove all basis for comparison between accomplishments and render criticism impossible. The professor shall not lead us away from the point to be made, which is that the singer must recognize the limitations of his art; but these limitations carry with them no excuse for failure to observe the maxim of oral expression which relates to emotional congruity.

The Message

The singer must learn to fill himself to overflowing with the message he is delivering. His voice will then of itself take on the appropriate colorings that are beyond any voluntary control. Even the proper values in volume variations will tend to assert themselves; and, although volume is subject to conscious control, the singer should regulate it more according to how he feels than according to the markings on the score. I agree with the professor that singers in general too slavishly follow the ff's and pp's. Who put them there in the first place? They are only the evidence of someone's interpretation other than your own. They are helpful if not followed religiously; but artists pay little attention to them.

Some songs are easier to sing than are others; and the novice in artistic interpretation will begin with the easier ones. I class those as easier in which the melody and words synchronize from the viewpoint of inflection. Again I agree with the professor: In some songs there is an incompatibility, not only between the melody and the sentiment of the text as a whole, but also often actual divorce between the phrases within the melody and the parallel words. For that reason the cheaper popular songs are hard to sing. For an example of a song that is easy to sing *Little Grey Home in the West,* words by D. Eardly Wilmot and the music by Herman Lohr, is good. It is a perfect marriage of words and melody. It begins in a honeymoon and ends in an armchair; and throughout, the words and melody have kept faith. Try reading the lyric aloud and notice how the reading voice naturaly rises and falls with the notes placed above the words. If you would have something heavier, try the same experiment with Bruno Huhn's "Invictus." All really great songs sing themselves, to some extent. One reason for this is that the melody suggests the inflection which a good reader would place upon the words, if he were emotionally charged with their message. Sing songs at first which for you are easy to interpret.

"I wish we had a piano like this one. I can't play that old rattle-trap of ours at all. Mother's always getting after me to do my practicing, too. You're mighty lucky, Jane."
"We've had this Weaver ever since I can remember, and it's always been just perfect Everybody that plays it is crazy about it. Funny the difference there is in pianos."

"I just love to play your piano, Jane"

The difference in pianos—it isn't funny; often it's tragic. Dissatisfaction and embarrassment; money spent for piano lessons lost because the pupil won't practice—all can be caused by a poor piano.

The Weaver Piano has given Jane's family pride, satisfaction, enjoyment—ever since she can remember. For the beautiful tone and perfect mechanical action that so distinguish the Weaver last through a lifetime of constant use.

Buy a Weaver Piano. Convenient terms are easily arranged, and a liberal allowance made on your former piano. Write us for the name of the nearest Weaver dealer, and ask for the Weaver catalog.

Practical Natural Common Sense Voice Technique
By GUIDO FERRARI
Teacher of Singing

THE PRACTICAL FUNDAMENTALS OF VOCAL STUDY AS PRESENTED IN THIS BOOK MAKE IT IMMENSELY VALUABLE TO MANY TEACHERS AS WELL AS STUDENTS OF THE VOICE

THE ONLY SELF INSTRUCTION BOOK WRITTEN WHICH TEACHES THE DEVELOPMENT OF A BEAUTIFUL NATURAL FREE TONE

Many Never Get This Information in Years of Study in Some Vocal Studios.

Explains in a clear concise manner, easily understood by any one, the development of a good, clear and resonant voice. A complete study of tone production. Illustrations and explanations show fully and accurately the correct position of the mouth and tongue. Fully explains breath control. It teaches how to sing. Every word and note is a lesson. *PRICE $5.00*

Make remittance by check or Post Office money order to

GUIDO FERRARI
PRESSER BLDG., 1714 Chestnut St., Philadelphia, Pa.

To gain power in interpretation, nothing is better than exercises in interpretative reading. Memorize selections of prose and poetry; and learn to give them creditably. There is no better way to "loosen up," "relax," "unbutton," to quote from various voice teachers. Choose selections that have emotional appeal, and remember to "step out of yourself" into the place of the person or persons you are representing. Kipling, Mark Twain, Lew Wallace, Van Dyke and Dickens will repay search for material that has emotional strength.

Remember that singing is reading plus musical tone and no singer may hope to succeed who disregards any of the principles of interpretative reading.

Work Out Your Songs Mentally

By Charles Tamme

Song study should be done mentally. This means that the mind should have a clear, definite conception of the words, the music, the technic and the interpretation of a song before it is sung at all. Before the mind has this conception, it is unable to send instructions of any value or intelligence, whatever, to the voice.

All the details should be worked out with such clarity and precision that any deviation on the part of the voice can be checked up immediately for comparison and correction.

The voice is a servant of the mind. It can do only as it is directed. If instructions are vague, how can the voice be more than vague? If there is no direction, how can the voice be more than meaningless sound?

With study and practice, certain habits become fixed, such as correct vowel formations and clean, crisp articulation of consonants, so that the mind need not go into details about processes, merely calling upon the voice for results. And, of course, there would be danger of mechanical and monotonous singing in this, if it were not for the interpretation of the words and music.

A practical method for song study is as follows:

Memorize the Words

First, memorize the words. Memorize them thoroughly so you are sure you know them exactly, and that you can recite them rapidly, without stumbling. During this memory work, study the meaning of the words, their phonetical structure, and the proper stressing of the syllables. Review your vocal method. Next, let the imagination play with the words. Picture the mood and atmosphere of the song as a whole; then picture it phrase by phrase. Experiment with several ways of interpreting the various phrases until you decide upon which is best, fitting your interpretation as nearly as possible to the author's meaning.

Now recite the words, inflecting them with the full meaning you have chosen. If you are pleased, memorize these inflections; if not, search until you find meanings that do satisfy you; not until then should any part of the expression of the words be memorized.

The next step is to learn the music. If you are proficient at sight reading, study the music without the sound of the voice or the piano; otherwise play it carefully on the piano. In no case should the voice assist the mental apprehension of the music.

More features enter into the music of an ordinary, simple ballad than a great many singers realize. There are the intervals, the tempo, the rhythm and the dynamic marks. All these must be learned with as much precision as the words; again interpreting moods and feelings by use of the imagination. Now you are ready to put words and music together. This, too, must be done mentally.

Perfect Co-ordination

When the mind has fixed the song within it, detail for detail; in other words, when the mind holds certain definite ideas and ideals with regard to the song—it is in order to practice singing it. This practice will be a process of coördinating mind and voice.

The ear must listen that this coördination is perfect. There must be no tone sung which is not exactly as the mind conceived it. Listen that the consonants are all crisp and clean; that vowels are as perfect as you know how to make them; that trills and portamentos are really such; in short, that you are applying to your song everything that has been learned in vocal technic, wherever it is required. Listen also that the interpretation of the words is being carried out exactly as you decided in the preliminary studies of the song.

Outside the importance of giving the voice definite commands, through the mind, studying your songs mentally has other advantages. Mental study is an important saving of the vocal organs, especially in cases where it is called upon to do a great deal of singing or speaking. Mental study will also prevent the voice from forming wrong habits. For these reasons, work out your songs mentally.

The following from the New York *Evening Telegram* tells its own little story: "Singing includes deep inspiration and expiration; muscular action; increased circulation; joyous and intelligent interpretation—bringing smiles and tears. Song is thus lifted to its rightful place of activity and accomplishment, and is not the ephemeral ornament that many suppose."

"It is more difficult to sing well a simple song than an elaborate aria in Opera."
—Dame Clara Butt.

Of Meyerbeer's masterpiece, "Les Huguenots," a work whose splendors and limitations are well appraised to-day, Heinrich Heine wrote at the time of its production that it was "like a Gothic cathedral whose heaven-soaring spire and colossal cupolas seem to have been planted there by the sure hand of a giant; whereas the innumerable features, the rosettes and arabesques that are spread over it everywhere like a lacework of stone, witness to the indefatigable patience of a dwarf."

DONIZETTI

The Master-Operas

GALLI-CURCI

As a means of contributing to the development of interest in opera, for many years Mr. James Francis Cooke, editor of "The Etude," has prepared, gratuitously, program notes for the production given in Philadelphia by The Metropolitan Opera Company of New York. These have been reprinted extensively in programs and periodicals at home and abroad. Believing that our readers may have a desire to be refreshed or informed upon certain aspects of the popular grand operas, these historical and interpretative notes on several of them will be reproduced in "The Etude." The opera stories have been written by Edward Ellsworth Hipsher, assistant editor.

"Lucia di Lammermoor"

Of all the sixty-seven operas of Donizetti which have been publicly performed, *Lucia di Lammermoor* easily remains the favorite. It was first given in 1835 and is founded upon Scott's *Bride of Lammermoor,* which was published as a novel in 1819. The furore for the romances of Scott, like the love for the American novels of Cooper, was not by any means confined to English-speaking people, and at that time Scott was a great favorite of Donizetti, who, according to some of his biographers, was partly Scotch (one of his family names being Izett). Donizetti's father was a weaver who later became a clerk in a pawn shop (monte di pieta).

It was the father's strong desire that the son should become a lawyer, but the boy's musical impulse was so great that he was finally permitted to study the art. After finishing his studies he joined the army, and it was while he was in the army that his first opera, *Enrico di Borgogna,* was produced in Venice in 1818, when the composer was twenty-one years old. His productivity was enormous. Often he would produce as many as four operas in one year. Naturally much of his work was uneven, and while in nearly all of his operas there is evident the bubblings of his wonderful gift for melody, he repeatedly sank to the mediocre.

In *Lucia* we find not merely his finest melodic outpouring, but, what many musicians believe to be his highest musical treatment of his material. The extraordinary opportunities it offers for the coloratura soprano made this work the great favorite of Patti, Gerster, Melba, Sembrich, Tetrazzini and Galli-Curci. The famous sextet when *Ravenswood* arrives, just as *Lucia* has signed the contract of marriage between herself and *Lord Bucklaw,* is possibly the finest concerted number in Italian opera. More than this, it possesses dramatic worth altogether unworthy of the sneers of the modernists who attempt to compare the art of Donizetti with Wagner, which is like comparing Scott with Tolstoi.

Although the opera was given for the first time as early as 1835, in the San Carlo Theatre, in Naples, it was not given in New York until ten years later, when it was sung at the Park Theatre in the English language. The opera had, however, been performed in New Orleans in 1821. The famous mad scene, *O qual funesto avvenimento,* offers the coloratura soprano her finest opportunity in opera of that period. Donizetti was stricken with paralysis in 1845, and died three years later at the age of fifty-one, never recovering his mentality.

The Story of "Lucia di Lammermoor"

The libretto is by Cammerano and was derived from Scott's novel, "The Bride of Lammermoor." The scenes of the plot are in Scotland, and the time is the sixteenth century.

Act I, Scene I. A Forest near Lammermoor. *Normanno,* Captain of the Guard of Lammermoor, asks his men to watch for a secret lover of *Lucia,* sister of his master *Enrico. Enrico* enters to talk of this matter with *Normanno. Normanno* suggests *Edgardo* of the hated Ravenswood family, which rouses *Enrico* to threaten vengeance.

Scene II. A Park near the Castle. *Lucia,* with her faithful *Alisa,* has come from the castle to meet *Edgardo.* While waiting, she relates to her maid the legend of the fountain beside which a Ravenswood lover had slain a maiden. *Edgardo* appears, to tell *Lucia* he is called to France. He desires to undertake a reconciliation with *Enrico,* which *Lucia* assures him will mean their parting forever. *Edgardo,* roused to fury by *Enrico's* mortal hate, renews his vow of vengeance. After tender farewells, he leaves the half-fainting *Lucia* to *Alisa.*

Act II, Scene I. An Ante-room in the Castle. *Enrico* and *Normanno* discuss the approaching marriage of *Lucia* to *Arturo,* by which *Enrico* plans to retrieve his fortunes. *Lucia* enters pale and listless. *Edgardo's* letters have been intercepted and by this and forged papers she is led to believe him false and to yield reluctantly to wedding *Arturo.*

Scene II. The Great Hall of the Castle. The Knights and Ladies join in a "Bridal Chorus." *Lucia* enters and almost faints; is led to a table to sign the marriage contract. A terrible silence ensues when *Edgardo* appears in the rear, dressed in black; and the great Sextette, "The most dramatic and thrilling number in the entire range of opera," begins. *Edgardo* and *Enrico* draw swords but are separated by *Normanno.* Shown the marriage contract, and assured of the truth by a trembling nod from *Lucia,* the furious *Edgardo* rends the contract, flings it at the fainting *Lucia* and rushes from the castle.

Act III, Scene I. The Tower of Ravenswood Castle. *Edgardo* is brooding over his misfortunes when *Enrico* enters to challenge him to a duel.

Scene II. Hall in Lammermoor Castle. Peasants and domestics of the estate make merry, when the agitated *Raimondo* enters to say that *Lucia* is insane and has murdered her husband. He has scarcely finished when *Lucia* enters and, oblivious of those about her, begins the celebrated "Mad Scene," after which she is carried insensible to her room.

Scene III. The Tombs of the Ravenswoods. *Edgardo* waits for *Enrico,* who in remorse has left for England. *Raimondo* comes from the castle and tells him that *Lucia* is dying which the tolling castle bell confirms. *Edgardo* stabs himself and expires in *Raimondo's* arms.

"Master Operas" which have already appeared are: "Aida," "Andrea Chenier," "Boris Godounow," "Carmen," "Cavalleria Rusticana," "Die Walküre," "Don Carlos," "Ernani," "Il Segreto di Susanna," "La Boheme," "La Juive," "La Traviata," "La Tosca," "Le Roi d'Ys," "Lohengrin," "L'Oraoclo," "Louise," "Madama Butterfly," "Manon," "Parsifal," "Mefistofele," "Samson et Delila," "Rigoletto," "Tristan and Isolde."

PROFESSIONAL APPROVAL

The PREMIER BABY GRAND PIANO

THE instrument embodying the artistic qualities demanded by the real musician and artist, yet purchasable at so reasonable a price, that a material saving is effected, compared with any other make of Grand Piano of quality. This is due to its being the product of the largest and most critical grand piano makers—the institution that made the Small Grand Piano the instrument of universal appeal.

Before selecting *any* piano, see and hear the Premier, sold by leading dealers. If you cannot obtain locally, advise—we shall see that you are supplied.

The Organist's Etude

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Magazine Complete in Itself"

Edited by Well-Known Organ and Choir Experts

The New Anthem

Norman H. Harney

There was a young organist once who suffered from the not uncommon failing of placing too high an estimate on his own powers. He prided himself on the ability to see, almost at a glance, all the various features of an anthem and to understand it thoroughly after only a hurried examination.

When he had selected a composition for the use of his choir he presented it at rehearsal without feeling it necessary to make a careful and detailed study of it beforehand. As a result the anthem was new not only to his singers but new to him as well, and there was often a great deal of unnecessary floundering at rehearsals. After singing the composition once or twice he would, perhaps, get a different idea concerning the tempo of the piece as a whole, or he would find it advisable to make some modification in the time of one part as compared with another. He would encounter unexpected difficulties in one or another of the voices, and discover technical tangles which he had not previously unraveled.

As for the interpretation of the music, he was not uncommonly quite without any clear conception of what he wanted to do. In short, he was trying to study the anthem along with the choir, instead of having mastered it previously in private. In this manner he wasted time which might have been spared; he expended energy that could have been put to better use; and he lost a certain amount of his authority over the choir by demonstrating rather forcibly that he did not know exactly what he wanted.

However, since that day, time, experience and common-sense have shown the young man the error of his ways. He now follows a rather different method of procedure. First he plays the new anthem over a number of times to acquaint himself with its general character. He works out carefully his interpretation of the work, decides on the tempo, makes a note of such passages as are likely to require special attention, and fixes firmly in his mind a definite idea as to how he desires the compositon to sound when his choir performs it in public. In short he subjects the whole work to a rigorous study, and acquaints himself intimately with every feature of it. Now when he comes before his choir he has a definite plan carefully laid out, and knows just what he is aiming at. As far as is humanly possible every difficulty has been foreseen, and, to borrow a line from Handel's *Messiah*, "the rough places have been made plain," as far as he is concerned, at any rate, and that is more that half the battle.

He was formerly choirmaster merely in the arbitrary sense of having authority over a group of singers. Today he is not only master of the choir, but "master of the situation" as well. He has learned to appreciate the great importance of thoroughly assimilating a piece of music and of knowing it from every angle before bringing it to the attention of his choir.

Rossini and Wagner

In the blessed tranquillity of his villa at Passy, Rossini received one day a call from Richard Wagner. The famous composer of the music drama bowed to the celebrated author of *William Tell, The Barber of Seville* and other masterpieces, and complimented him repeatedly. Rossini, smiling with affected modesty and with his usual sarcasm, answered, "Composing came easy to me, and I wrote a few little things."

"Learn all there is to learn, and then choose your path." —Handel.

The Gospel Song in Disrepute

By George S. Schuler

To some people a Gospel song is worth less than the paper upon which it is written; to others it is very precious. In considering its merits, two lines of thought must be borne in mind, the music and the poem.

By reason of the simplicity of Gospel music it is tabooed by many musicians; but this seems scarcely justifiable, inasmuch as the purpose of the Gospel song is to set to music a religious poem which can be easily sung by the masses. One reason why musicians who compose in the larger forms are not composers of Gospel songs, is not lack of interest, but because they cannot readily limit themselves to this simple form of music.

Immortal Hymn Writers

It is difficult to recall an opera or symphony composer who has written a simple hymn-tune or Gospel song. On the other hand, such men as John B. Dykes, composer of "Lead, Kindly Light;" Lowell Mason, composer of "Nearer, My God, to Thee;" Thomas Hastings, Barnby, Woodbury, Bradbury, and a host of others, were men who knew little about opera and symphony writing; yet they have made their names immortal by their contributions of hymn-tunes and Gospel songs.

How to Test a New Song

Because Gospel music is simple, many inexperienced harmony students rush too quickly to the press with their immature compositions, which has contributed largely to the feeling against Gospel music. As a mother looks upon her first born, so many of these young writers feel regarding their first creations, forcing them upon the unsuspecting public.

Dr. Towner, the composer of "Trust and Obey," advised his students to write much for practice, but to destroy what they wrote. "Too many," he would say, "think their first compositions are destined to become masterpieces."

To write simple compositions containing charm, beauty, and at the same time "singable," is by no means an easy accomplishment. The great things in art assume the form of simplicity.

A song should be submitted to a reliable publisher, who, if it has merit, will accept it for publication. If it is returned, let it be submitted to a second publisher, considering the judgment of these two sufficient evidence as to its practical worth.

The Publisher Has Responsibility

But the publisher must share a goodly portion of the responsibility for this adverse criticism of Gospel songs; as too many cater to public opinion rather than to the uplifting of church music. A representative of one of the church music publishing concerns recently remarked, "The publishers as a whole are giving the church-going public too many unwholesome 'holy jingles.'" This is a serious indictment and comes with much force from such a source; but the publisher must not be criticised too severely, for his part is largely pecuniary.

And then, too, the poem plays no small part when considering the success of hymn-tunes and Gospel songs. Many aspiring to write religious poems have had little or no preparation for the task. A week seldom goes by when poems are not received from some dear saint to be set to music, who does not seem to realize that poetry involves more than having the end of lines rhyme.

Mr. Gabriel, who is in a position to known, recognizes the dearth of good religious and Gospel poetry as appalling.

How Others May Aid

Nevertheless, although the Gospel song may be held in disrepute by many, we should, as far as we individually are able, exert every effort to place it above criticism. Those who conduct meetings may assist by declining to select songs that are below standard, even though they may be popular.

Singing the so-called religious song, whose message is more or less cumbered with intricate music, distracting accompaniments, and the idle repetition of words and phrases, can never take the place of the well-selected and well rendered Gospel song. The song that brings the Gospel to the lost is the Gospel song at its best.

Hints for the Choirmaster

Remember that eternal vigilance is the price of progress in choir work.

Be hopeful, energetic, enthusiastic.

And couple with that, eternal drill on first principles.

Don't imagine that because you have pointed out an error once to your choir you have conquered it. You will need to repeat that same thing a dozen times later on. Explain it, rub it in, pound it in.

Be sure you have thoroughly studied and digested a new anthem at home before giving to your choir. Be able to sing every part, if necessary; be thoroughly imbued with the spirit of both words and music. Don't come to practice expecting to learn the anthem along with the rest.

As far as possible, vary your rehearsals from week to week. If you are in the habit of taking up hymns and old anthems first and new music later, just reverse the order sometimes. It will be a change, and give freshness to your work.

Occasionally sandwich in a ten-minute talk on some vital points of choir work. Not just a random talk, but prepare your matter thoroughly, and let it be full of helpful hints.

Remember that to be successful a choirmaster must be an optimist.—The Choir.

Radio Services

By Harvey B. Gaul

Three years ago this coming New Year's Day, wireless or radio began sending out church services. Calvary Church, Pittsburgh, Pennsylvania, was the first church in the world to send out its services. Since that time the Westinghouse Electric Company and Calvary Church have been conducting a veritable clinic to improve the transmission.

It was comparatively easy to send out the sermons; that was merely the business of standing before either a visible or invisible transmitter and preaching. But the music, ah, that was the rub. As more and more churches are having their services broadcasted, and more and more organ recitals are being sent out, the purpose of this article is to help organists and choirmasters arrange their music so that the results will be ninety-nine per cent.

Our attempts at first were stimulating, thrilling, pathetic and discouraging. Try as we would the result was muddy, the choir lop-sided and the organ nothing but blah-blah. We hung the receivers high and we hung them low, we hung them in and out and round about; and the result at first was the same, messy and impure. Finally we came down to cases. Our choir at Calvary is a boy choir of over sixty voices, and this means a divided choir of cantorus and decani. At first we had the transmitters in front of the trebles and the result was nothing but thin tune went out. Then we hung them over the men and all that was broadcasted was an um-pah bass or a yah-yah tenor. There was no sense in it and precious little tune. The organ did nothing but "blast" or groan. The pedals blurred and the pianissimo stops failed entirely to register.

After this had continued for a Sunday or two we decided to make a drastic change. Fortunately Calvary Church possesses a rood-screen. A large receiver was made and hung in the middle of the rood-screen. In a jiffy there was balance of tone. What before had been all soprano or all bass became four-part singing. So far, so good. The organ was a large divided organ placed high in the clear-story. It was played in an antiphonal manner; and the result was that sometimes there was an organ sounding and sometimes nothing at all occurred. To smooth out the organ difficulty we placed the receiver a little higher and stopped using antiphonal effects so that the organ became a unisonal. Another and smaller receiver was placed up high near the pipes to catch the pianissimo stops such as the Vox Celeste, Unda Maris, Aeolina and the like, and was never used except when the organ was playing softly.

We had receivers placed at the rear end of the church (Calvary is as large as an English cathedral) to catch the processional and recessional. One was in the nave, one in the narthex and one in the ambulatory. They were all controlled from a central switch-board operated by a Westinghouse employe. Every time we hit a dead spot we experimented as to how to overcome it.

After three years of constant experimentation we have found that full organ when used for more than a minute or two "blasts" and kills everything. In other words the receivers become too full of sound. In accompanying the choir, mixtures and sforzando pedal are rarely employed; the accompaniment consisting chiefly of diapasons. The less volume the better the transmission. Incidentally and as an unintentional by-product, the choir has improved a vast amount, thanks to the sparing use of the instrument.

Lorenz's Easter Music

EASTER CHOIR CANTATAS

"King Triumphant" by E. L. Ashford, 60 cents. New 1924. Moderately difficult. Splendid scholarly music.

"Jesus Lives" by Chas. H. Gabriel, 60 cents. New 1924. Easy. Bright tuneful music.

"From Cross to Glory" by E. S. Lorenz, 30 cents. New 1924. Very easy. Includes tableaux and other spectacular features.

These three cantatas sent on approval. To get seven different cantatas on approval, advance 15 cents for postage and packing. State grade of difficulty desired.

EASTER ANTHEMS

Our ten most popular out of over 300 we publish sent on approval upon request.

EASTER SOLOS AND DUETS

Our ten most popular out of 100 we publish sent on approval if you advance 10 cents for postage and packing. If you state voice desired, we will so limit selection.

Send for free catalog.

Mention the "Etude" and get a free copy of our solo booklet, "The Church Soloist."

Easter Cantatas

ALLELUIA!
For Mixed Voices

By R. M. Stults Price, 60 cents

Mr. Stults is the composer of many successful Cantatas but this new work is fully the equal of, if not superior to, any of his previous efforts. There are ingratiating solo parts for all the voices and strong, well-contrasted choruses beautifully telling the story of the Resurrection. This cantata is worthy of performance by the trained choir and not too difficult for the average volunteer organization.

THE DAWN
For Women's Voices—2 Par

By William Baines Price, 50 cents

This cantata will prove most useful for volunteer choirs where men's voices are lacking, or not overly reliable and for girls' school or college organizations. All of the music is written for two-part singing, soprano and alto, with a few solo or unison passages. It is tuneful, bright and pleasing, easy to master and grateful to sing. Thirty minutes time is required for performance, but parts may be omitted if desired.

PUBLISHED BY
THEO. PRESSER CO.
1710-12-14 Chestnut St. PHILA., PA.

Solo stops, such as the Oboe, Clarinet, Flute and Horn, register perfectly. They have the right biting timbre. String tone floats and the Vox Humana carries admirably. To sum it all up, when playing organ for radio, use compositions that require solo stops and the work will be a happy one. In playing the pedals use discrimination. Bombardes and thirty-two foot diapasons blur out the rest of the stops. Of course, as a matter of fact, we employ the pedals entirely too much as it is, and while a bourdon is decidedly an adjunct, most of us overdo it. Clean playing carries; and staccato touches help. Mussy playing and long sustained chords become nothing but a blur.

As to the choir the ideal combination is the quartet or the double quartet, in fact, any small ensemble where the singers are placed shoulder to shoulder, is preferable. The more that *a capella* music is employed, the better the results. It is amazing how clear unaccompanied singing is over wireless. Solos and duos are to be commended, they always register. A solo that calls for sostenuto effects is preferable. Extreme high notes such as C for a soprano or B flat for a tenor are likely to "blast," or in the phraseology of the broadcasting room, "go blooey."

If possible, sing the hymns unaccompanied, particularly the processional and recessional, as the turns and twists as the choir marches round the nave or through the chapels leave many an "air-pocket." If it is not possible to omit the organ, then use it sparingly; and forget for the time being that the instrument contains reeds and tubas. Pianissimo singing always carries, fortissimo singing very often "blocks" the transmitter. Focus on the transmitter and never sing at it from a tangent. It is not necessary to treat it as if you were making a phonograph record and imagine you are singing into a horn; but on the other hand it is not advisable to focus the voice on the chandelier.

Vocal fugues and involved counterpoint are not the most desirable form of radio music. On the other hand there is nothing finer than a magnificent Bach chorale with its canonic treatment.

If when your rector is considering broadcasting the services, you will keep the above points in mind, you will save yourself, the rector, the transmitting company as well as the vast unseen audience, a great many trying moments.

Apropos of installing radio, there is a great deal of bosh now going around. People who know nothing about it assert that it depletes congregations and that people prefer to stay at home and listen to the service rather than make the effort to attend. That is nonsense, because the personal equation always enters into listening either in singing or in preaching. The phonograph helped the concert and opera tremendously; and radio will do the same for the church service. It is possible that people have gotten religion via wireless; but the chances are they have never been stirred as they would be in hearing the parson and the choir in church.

Wireless is not perfect by any means but engineers and scientists are working all through the long nights trying to improve it. It will be possible in a short time to broadcast the service of one church so that another may enjoy it, but before that time comes, organists will have to improve their hymn-tune playing.

Accompanying Motion Pictures in Church

By Roland Diggle

TEN years ago the above title would have seemed ridiculous; but to-day, when more and more churches are installing motion picture machines, the subject is of intense interest to organists. Here in Los Angeles more than a dozen of the leading churches make a four- or five-reel moving picture the feature of the evening service. The film exchanges and the makers of motion picture machines say that the movement is gaining with surprising rapidity, and with good reason. Where the average evening congregation was but a handful it is now almost impossible to get a seat.

Now, as to the accompaniment to these pictures from the organist's standpoint, what is he to do? I have attended some of these evening services and the point that has struck me particularly in regard to the music was that the organist seemed to be trying to imitate his theater confrere, and at the same time trying to keep the organ as churchly as possible. The result was that the whole thing was scrappy and restless. It did not help the picture at all: in fact, it detracted and irritated.

The first thing to decide is, shall the picture be "played" in the accepted sense that it is done in the theater; or shall the music simply be a background, as a beautifully lighted art gallery enhances the pictures therein. We must remember that the picture shown in the church, even though chosen for the moral it conveys, is the same picture as is shown in the theater. In the one it is shown for entertainment; in the other for education and uplift; and the only difference in the two performances will be the music accompanying it. Hence it seems that the music for the church showing must be in direct contrast to that used in the theater. This does not mean that it has to be dull and uninteresting; but it does mean that the "popular" element must be eliminated.

The showing of a moving picture in church does not mean that the dignity or helpfulness of the church service shall be impaired in any way. It is to be regarded as an added attraction, not for entertainment, but to teach a lesson. This being the case, the psychology of the thing rather demands that the usual parts of the service, music and all features, should be on a higher plane than without the picture. In this way, and in this way only, can the introduction of the picture into the church service be condoned.

Having decided, then, that we shall not "play" the picture, in the accepted sense, but only have our music as a background, what are we to do? We shall have no preview as our theater brother has; and, as the cue sheets will be of no service to us, we are left to our own resources. Personally, I think it is very much better, for we can start with a clean slate. We will say that the picture takes forty-five minutes; and, by the way, it is advisable to find out in advance the length of time it is to take and plan accordingly. If you are careful it will prevent you being held up in the middle of a piece at the end of a picture. Whatever time it takes, it is our plan to arrange a program of organ music to take the same length of time. It must be planned carefully, so that the pieces follow one another as smoothly as possible. The idea of making one piece a sort of feature piece and playing it two or three times during the picture is a good one. I heard this done with the *Adagio* of Guilmant's third sonata. It was played at the beginning, in the middle and towards the end, each time with a slight change of registration; and it was most effective. I had seen the picture at a theater, accompanied by orchestra and organ; but it was very much more enjoyable in the

A warning -bleeding gums

ARE your gums tender? Do they bleed when brushed? If so—watch out for Pyorrhea.

This disease of the gums, which afflicts *four out of five* people over forty, not only destroys the teeth, but often wrecks the health.

In Pyorrhea the gums become spongy, then recede; the teeth decay, loosen and fall out—or must be extracted to rid the system of the infecting Pyorrhea germs which breed in pockets about them. These germs lower the body's vitality and cause many diseases.

You can keep Pyorrhea away. Visit your dentist often for teeth and gum inspection, and use Forhan's For the Gums.

Forhan's For the Gums prevents Pyorrhea—or checks its progress—if used in time and used consistently. Ordinary dentifrices cannot do this. Forhan's keeps the gums firm and healthy—the teeth white and clean.

Start using it today. If your gums have receded, use Forhan's according to directions, and consult a dentist immediately for special treatment.

Philadelphia, Pa.

church, with an accompaniment of real organ music, even though the organ was small. In this feeling, the writer was not alone.

The most important thing for the organist to remember is to play softly. It is rarely that one should play above MF. This is difficult to do; but one must remember that the music is only a background; and even though the organ may have but five or six soft stops, it is better to use these and make the picture a success than to use the loudest stops and spoil it. The most useful stops are the soft strings and flutes with an occasional reed. The diapasons and heavy reeds should hardly ever be used. What can be done with a few soft stops and well-chosen music is surprising. There are scores of beautiful things that can be played with an Aeoline and a Dulciana; and if you are lucky enough to have sub and super couplers, the many effects you can get are delightful.

Don't be afraid to give your pedals a rest; nothing is more depressing than the everlasting boom of a Bourdon pedal. It is suggested here that you investigate some of the charming pieces for harmonium by Karg-Elert, Charles Quef and Jean Hure.

As to the music to be played, above all avoid the commonplace. Do not play Handel's *Largo*, the *Hymn of the Nuns*, *The Lost Chord* or Scotson Clark's *Marches*. Do not play transcriptions of the pieces that are so well played by the theater orchestras. Remember you are not trying to compete with the theater as a place of entertainment; but in your humble way you are trying to help your listeners spiritually. Organ literature is almost unknown to the average theater audience, hence you have this wonderful heritage to fall back upon in your effort to make the church picture different. You can afford to pick the very best that you are capable of handling. You have no unmusical manager to please and if you explain your position to your pastor he will be quite sure to back you up.

In many ways it is a wonderful opportunity to educate people up to an appreciation of good legitimate organ music. An un-musical person may not like to sit and listen to Bach's *My Heart Ever Faithful;* but, if he half consciously hears it three times during the picture, it is bound to leave an impression.

One should be careful in going from one piece to another. Have the keys nearly related; and let your modulations be as unostentatious as possible. Outside of real organ music are a number of transcriptions that you may safely use; for instance, some of the movements from the Beethoven sonatas, two or three of the Chopin Nocturnes, some Schubert, Schuman, Debussy, MacDowell and Mendelssohn (the Songs without Words), but, once again, avoid the commonplace if you would do your part to place the picture where it belongs in its relation to the church service.

The Organ "Rattle"

By Stanley A. Keast

BEN VENUTO'S article bearing the title "Stop That Buzz" in the November issue of THE ETUDE brings to mind an experience I had while practicing some months ago. While using the Great Organ whenever the octave above middle "C" on the Open Diapason was struck, distinct rattling was noticed off in the body of the church. At first little attention was paid to the phenomenon, but the rattling continued, so I decided to investigate.

The church auditorium was noted for its exceptional acoustic properties, the slightest sound being distinguishable, particularly when no person was about. Window ventilators were suspected as being responsible for the trouble, so a tour of the church was made but all were found secure. Next a wall lighting fixture and a light on the pulpit candelabra were investigated without disclosing the trouble. By accident a door leading into a small cupboard in the side of the church was found standing open just a trifle. This did not excite suspicion, but was mechanically closed and latched. Going back to the console I decided to try over just one more number, trusting to luck that the trouble would right itself before Sunday. Imagine my surprise when, on trying the organ, the rattling had ceased. To make doubly sure that the source of the disturbance had been located, the door was again opened as it had been originally found; and the rattling reappeared just as soon as the organ was played. A lot of the practice hour had been wasted; but the discovery repaid all trouble.

On another occasion a similar experience attended the running over my Sunday music. This time, however, upon depressing one of the pedal keys a most annoying buzzing accompanied the response from the pedal pipe. A round of the auditorium failed to solve the problem. The offending pedal was weighted down and the pedal pipe examined. It was then that a sparrow, which had gotten in through the ventilator in the roof of the church and had made its way down through the top of the pedal pipe, was discovered. Being unable to work its way out again it had died in the pipe. Upon removing the little body the buzzing ceased.

Keeping Time in Hymns

By E. F. Marks

A MONGREL arrangement of the hymn-tune "Bethany" (Nearer, My God, to Thee) has just turned up. This setting of the tune consists of two measures in 6/8 time, then two measures in 4/4 time, throughout the entire hymn. Why should an old familiar church-tune have been changed to such an unusual rhythm? Evidently some director or organist had been very delinquent and surrendered to rhythmic weakness present in many untrained congregations.

Many have recognized or experienced the manner in which many congregations drop a beat at the end of a phrase (usually in the fourth measure), especially if a rest precedes the next phrase. This most often happens in such a hymn as "Onward, Christian Soldiers" with the setting of Sir Arthur Sullivan, where the whole-note at the end of each fourth measure is so often shorn of its last beat.

A congregation can be easily led to keep perfect time if its attention is drawn by the director to the fact that in certain measures the note ending the phrase should be held a little longer than has been customary. It takes but a short time to train an assembly to keep true rhythm; and when once awakened to its duty in this matter, it really seems to enjoy the knowledge that it is rendering a hymn correctly as far as absolute rhythm is concerned. A congregation which enters well into the spirit and rhythm of its hymn-singing is sure to elicit favorable comment from visitors.

Question and Answer Department

Conducted by ARTHUR DE GUICHARD

Always send your full name and address. No questions will be answered when this has been neglected.

Only your initials or a chosen nom de plume will be printed.

Make your questions short and to the point.

Questions regarding particular pieces, metronomic markings, etc., not likely to be of interest to the greater number of ETUDE readers will not be considered.

Musical Analysis—Sonata-Form.

Q. What is meant by the "analysis" of a sonata movement? for example, of a Beethoven composition (namely, Andante movement of Op. 79).—J. B., Box 104, Trail Bb., Canada.

A. Musical analysis of sonatas, or of any form of musical composition, consists of the study of their construction with regard to their themes and their division into phrases and subjects, their sequences and transformations, as well as such matters as succession of periods and modulations. Analysis, therefore, means a complete study of musical form. Sonata-form may be studied in any good text-book on Form, together with its construction and analysis. For analysis of Andante, Op. 79, Beethoven, see Prout's "Musical Form," P. 185.

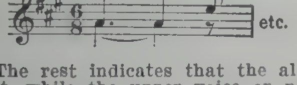
International Copyright.

Q. What is the duration of a musical copyright, as between this country and England?—ARY D., Boston, Mass.

A. This question was asked recently, but in answering it an error crept in which has been courteously corrected by "C. G. D.," to whom thanks are due and hereby tendered. "Under the law in effect subsequent to July 1, 1909, the total period of copyright protection is 56 years, *i. e.*, an original term of 28 years and a renewal term of 28 years more, to be obtained by a registration made within the final year of the original term. See Sections 23 and 24 of the Copyright Law."

The Signification of a Rest.

Q. What is the meaning of the rest and of the position of the stem of the last note E, in the following:



A. The rest indicates that the alto part is silent, while the upper voice or part (as shown by the stem turned up) continues.

Solfeggio—About Change of Key.

Q. In teaching Solfeggio: I should like to know your opinion about changing syllables in cases where the key changes by the introduction of accidentals, although not formally by change of signature. It seems to me that the syllables are intended as an aid to the ear and not as an end in themselves, so where they are an impediment, why not find a sensible way around? A pianist would certainly note the change of key, why not the vocalist? I understand, however, that some object to this practice, and I wonder if I am justified in the use of it in public school work.—R. P., Kingston, Mass.

A. You are justified in its use, most emphatically. Where the ♯ or ♭ is merely transitory, involving no modulation, such ♯ or ♭ will take its accidental name; but when there is modulation (shown by the ♯ or ♭ being repeated) the notes must take their new names in accordance with and in relation to their new key-note, or *do*. A very good practice is to call every new ♯, involving modulation, *si* (or *ti*), as leading to *do*, and to call every new ♭, involving modulation, *fa*, as leading to *mi*. By so doing, sight-reading is very much simplified, a more precise knowledge of the harmonic structure is acquired, the ear is assisted, singing in tune is assured, and modulation is effected without any difficulty.

Sax-horns—Saxophones.

Q. I know what a horn is—the French horn, for instance—but what is a Sax-horn? Is it a Saxony horn? and is it related to the Saxophone?—M. P., Danielson, R. I.

A. The Sax-horn is a cylinder horn invented by Antoine Sax (1814-1894). These horns have 3, 4 or 5 cylinders, so that each horn is capable of playing all the notes of its scale without difficulty. It is only related to the Saxophone from the fact that both instruments have taken their name from their "father"—Mr. Sax having invented both the Sax-horn and the Saxophone family.

English Names of Time Values.

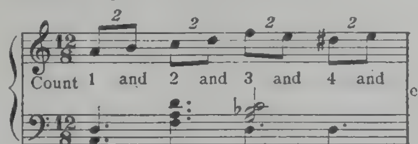
Q. What are the meanings of "minims, crotchets, quavers?"—BAS., Flint, Mich.

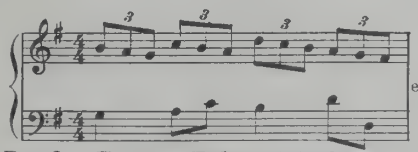
A. They are the English names for time values, thus: the whole-note is a semibreve, the half-note a minim, the quarter-note a crotchet, the eighth-note a quaver, the sixteenth-note a semiquaver.

Two to Three—Three to Two.

Q. Please tell me how the following measure is to be counted; and also what the figure "2" means.—M. McK. A., Buffalo Ridge, Va.

A. The time $\frac{12}{8}$ is counted by four beats to a measure, each beat being worth three eighth-notes, giving an impression of triplets. This measure, however, requires only eight eighth-notes (instead of twelve) or two to a beat—the beat being always the same length or pace. It is the converse of triplets in four-four time, where three eighth-notes are played to one quarter-note beat. London's playing two notes against three will be very helpful to you.





Rondo, Fugue, False Notation, Ostinato Basso.

Q. (i). What is the difference between the episode in a Rondo and in a Fugue? (ii). Define False Notation. (iii). The meaning of Ostinato basso?—A. W. S., Hartington, Ontario, Can.

A. An episode, in a rondo, a fugue, or any other movement is a part which separates the different forms of the subject or of the themes. In a fugue the term is applied to the phrases which are supplemental to the chief subjects or their answers. The exposition or counter exposition in a fugue is followed by an episode, in which neither the subject nor answer are heard. The episode is chiefly used for modulating into other keys in which the subject is to be heard. In the rondo, the keys usually chosen for the episode are: subdominant major, relative minor, tonic minor (all in major movements. The end of the episode is arranged so that it may modulate back to the dominant of the tonic key. In other respects, both in Fugue and Rondo, the episode serves the purpose of providing relief and contrast from the chief subjects. (ii). Unless you mean writing erroneously a sharp for a flat (g♯ for a♭) or *vice versa,* should not the question read "false *relation?*" A false relation is caused by the sounding of a sharp or flat in one part and correcting it by a natural in another part. For instance: the bass sings E and the tenor in the next chord sings e♭, and so forth. The interval of the tritone, or augmented fourth, is a false relation. (iii). *Basso ostinato* (no letter "b") designates a bass which is constantly recurring but always with varied accompaniments.

Voice Physiology.

Q. 1. What is a "tight" throat? What its causes and cure?

2. Do you think that a person who cannot swallow pills would have a voice that could be developed? The voice is fairly sweet but breaks frequently.—MARY G., Oakland, Cal.

A. 1. For "tight" read "constricted." The term is applied to any form of interference with the natural functioning of the larynx and throat. It is caused by any one of many origins or conditions; wrong position, throat exertion, fear, over-anxiety, wrong practice and teaching, sudden emotion, most frequently from a belief that pitch and resonance are obtained by a deliberately designed determination and intention to sing by means of direct action and effort of the larynx and throat. Its cure: To aim at perfect relaxation of the parts and *to repose* the voice—first, by rest; then, by reposing or replacing it.

2. Most likely. It depends upon the nature of the impediment, whether it be material or mental. If material, it would be a problem for a throat surgeon to solve; if mental, it would indicate the necessity for the employment of common-sense and will-power. Can the person swallow food, candy, peanuts, what not? Yes; therefore pills could be swallowed, by the persistent exercise of will-power. Where a healthy throat, musical mentality and persevering sincerity are coupled to a correct ear, the voice can always be developed. Whether it is worth while, depends upon the *quality of the voice.* That is another matter.

BAND and ORCHESTRA LEADERS!

The prompt, accurate service of our Band and Orchestra Dept. is responsible for the large growth of Mail Order Business in this Department. A large stock embracing classical, standard and popular publications enables us to render excellent service to Band and Orchestra Leaders. Send your orders to:

$1.00 Down Brings This

Floor Lamp With Fifth Ave. Silk Shade

Here is something you have always wanted—a beautiful floor lamp with handsome and elegant Fifth Avenue silk shade—to add an extra tone of elegance and luxury to your home. On this generous offer you can see just how this floor lamp and silk shade will look in your home, without risking anything. Send only $1.00 with the coupon below, and we will send it complete to your home on approval, equipped for use with either gas or electricity. We take all the risk.

Gas or Electric

The Lamp Comes equipped for choice of gas or electricity. Has 2-light Benjamin socket for electricity only, with 8-ft. silk cord ready for use; or comes with 6-ft. rubber hose, burner, mantle and chimney for gas.

Mahogany Finish Standard is 69 inches high, 3 inches in diameter. Highly polished French mahogany finish.

30 Days Trial When the lamp outfit comes, use it freely for 30 days. See how beautifully the colorings of the handsome silk shade blend and harmonize with everything in the home. How *useful* it is, too—so handy for reading, can be moved around with ease to furnish a beautiful light and rich warmth and coziness to any room in the house. If after 30 days trial you decide not to keep the lamp, just return it at our expense and we will refund your $1.00 deposit, plus any freight or express you paid. You cannot lose a single penny.

Silk Shade

Made in Fifth Ave. design, 24 in. in diameter, of delft blue silk, shirred top, alternating plain and fancy art silk panels. Twelve panels in all. Tinsel braid border, with four inch Chenille fringe. American beauty shirred lining. The harmonious color scheme gives effect of red light shining through a blue haze—a rich, warm light. Shipping wt. 27 lbs.

Marshall Silky Fringe Pull-Cords

Also pair of Marshall silky fringe pull-cords with 3½ in. silky fringed tassels, giving added rich effect.

For gas use, order by No. G6332NA.
For electricity, order by No. G6333NA.
Send only $1 with the coupon, $2 monthly.
Total Bargain Price for lamp and shade $19.85

$2.00 a Month

If you discover that this lamp is a tremendous bargain at the price we ask and you decide to keep it, send only $2.00 a month until you have paid the total bargain price of only $19.85. Yes, only $19.85 for this luxurious lamp and silk shade complete. Compare this value with anything you could buy locally at anywhere near the same price—*even for spot cash!* Straus & Schram gives you this bargain price and almost a year to pay. We trust honest people anywhere in U. S. No discount for cash; nothing extra for credit. *No C.O.D.*

Price Slashed

Send NOW!

Decide now to *see* this beautiful floor lamp and silk shade in your home on approval on this price smashing offer. Think how the nickels and dimes slip away for useless things; save them for something *worth while* that will give satisfaction for years. Send the coupon with only $1.00 now. Satisfaction guaranteed.

SUMMY'S CORNER

Teachers of piano are constantly demanding new teaching pieces—pieces that are fresh, timely and really musical—for new pieces often solve old difficulties. Among our recent publications the following have been particularly successful:

CARTER, Buenta

Fountain .... *Grade 3-4* 40c
An arpeggio effect, descriptive of the title.
Little Clown .... *Grade 2-3* 30c
A clever musical expression of the clown's spirit of skill and drollery.

GRISWOLD, Henrietta

A Bear.........*A Long Tramp*.........*Our Indian Guide*... *ea.* 30c
Three of the most delightful second grade pieces, pianistic, uncommon tone pictures. Especially adapted for boys.

GOODRICH, Florence A.

Butterflies Wink Their Primrose Wings.......... *Gr. 2* 30c
Romanza......*Will O' the Wisp* .... *Gr. 3 ea.* 30c
Etude Melodique....*Martha's Favorite*.......... *Gr. 2-3 ea.* 40c
Busy Fingers .... *Gr. 3* 40c
Six splendid teaching pieces, with pedagogical suggestions by this well-known educator.

CLAYTON F. SUMMY CO., Publishers
429 S. Wabash Avenue, Chicago, Ill.

Many of the above pieces are discussed in the new STUDY SERVICE SHEET, edited by Mrs. Gertrude Z. H. Murdough. Sent FREE on request.

The Violinist's Etude

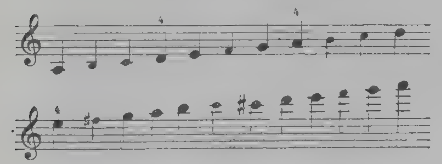
Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Overtones, or "Sympathetic Tones"

By Frank S. Hart

THE sympathetic tone is like a helping hand to the young violinist, in the making of a good intonation, if he will but reach out and take it. In the following list the notes made larger than the rest are the ones that awaken a sympathetic response in the other strings.



The advanced violinist, playing in the higher positions, has by this means a way of checking up his intonation; if he will train his ear to hear whether the note he is playing with his finger awakens the overtones in the other strings. On the other hand, if on certain notes he fails to get a sympathetic response, he is playing out of tune or his strings are out of tune.

The writer has rarely failed to bring out an exclamation of wonderment from the pupil when this point in the laws of sound is demonstrated. Playing on the A string of the violin, the pupil's attention is called to the movement of the string as it vibrates back and forth, then as I switch quietly over to the A on the G string, they are amazed to see that the A string is still sounding or moving as much as before, although I am two strings away from it with the bow. This demonstration is impressive. It is as wonderful as wireless telegraphy. In fact, this newly developed servant of mankind may be said to be a colossal development of this idea.

Artistic Touch

What practical use can we make of this phenomenon? The answer is given above in the list of notes. In other words, the violinist, when he places his finger on these big notes, receives a wireless message as to whether he is right or not if he has been trained to hear or feel them.

This is one of the practical or scientific reasons why the expert violinist makes a violin sound better and louder than the beginner can. Why call it "artistic touch" or some other vague or intangible term?

Beginners can often be cured of the bad habit of sprawling their fingers across the strings, if they are impressed as to the advisability of keeping the fingers well set up so as to keep the unemployed string free. In building up to the third finger, G on the D string for instance, the finger tips should be set so that the G string is free, but does not so much matter if the A string is touched because the sympathetic tone comes from the lower string.

That the average player knows very little about these things is shown by the following incident. I was invited by the proprietor of a hotel to come and hear a mechanical violin and piano player which had been installed in his big dining room. The instrument was like a regular player-piano, except that the melody was played by three violins which were placed in a superstructure on the piano proper. The novel feature of the instrument was the bow, which was a circular affair that revolved at varying speed. This was controlled by certain perforations in the roll and instead of the bow being placed on the strings, the violins were brought against the bow. The creator of the instrument was not only a mechanical genius, but he also knew all the fine points of violin playing. The relation between violin and bow, as to speed and pressure, could be varied and was all cut in the roll. Even the vibrato was obtained by a rocking device at the tail-piece end of the strings.

I learned these details later; but at first I heard the instrument from the far end of the dining-room. While it played the *Meditation from Thais* and *Traumerei,* the proprietor, who by the way, was a violinist who had played with me in a school orchestra years ago, explained that the violins might be called the E, the A, or the D violin, and that each violin was brought into use only as the notes on that string were reached in the melody. The pieces were so arranged that no G violin was needed.

He also said that there was a special arrangement for tuning the strings with the piano. By pressing a button marked A, the bow would revolve and sound the A violin; and anyone with ear enough to tell whether two tones are alike or not could tune the string to the A of the piano. There were, of course, D and E buttons.

All this explanation led me to believe that there was only one string on each of the violins, but when we went to the other end of the room to see the instrument work at close range, I noticed then that all the violins had their full allotment of strings. The owner said he had not thought it necessary to mention this fact to me as only one string was used on each violin and he really didn't see what the others were there for unless it was to equalize the pressure on the bridge. I was surprised that a violinist of his ability did not know the purpose of the other strings: *They were there for the sympathetic tones they supplied.* It then occurred to me to ask if he had kept these "unused" strings in tune and he said, "No." Upon investigation we found them woefully off pitch, as they had not been touched since the instrument had been installed some two or three weeks before. It proved to be some trouble to tune them as they could not be bowed. After all the strings had been tuned we put on another roll. The whole instrument took on a new tone and the owner felt that not until then did he fully know how to get the best music out of his instrument. Was it my "artistic touch" that had given this instrument greater beauty of tone and resonance? No! It was simply my knowledge of a fact in the realm of acoustics that had wrought the change.

Greater Tone

There are three big reasons why every violinist should make a study of this subject. First, a greater volume of tone is obtained, because two strings sound instead of one. Secondly, the quality of tone is enhanced. And last, but not least, a more just intonation is attained.

Early in this article a reference was made to wireless telegraphy. Let us now go into the matter more thoroughly and see how, in principle, this work is like wireless telegraphy. It will be noticed that the final note on the diagram at the head of the article is the A two octaves above the open A string. The reason the open A string will move sympathetically, when this high A is placed perfectly, is because this high note is the exact pitch of one of the partial or upper tones of the A string. (It might be well to state that any note that corresponds in pitch to the harmonics of any string will cause that string to sound sympathetically. These harmonics or partial tones may easily be determined if the following law is followed. When a string is divided in half, a tone of twice the vibrating speed is produced; in other words, its octave. One-third of the string produces the twelfth above, or the octave and fifth. One-quarter of the string produces its double octave; and a fifth division a tone two octaves and a major third above. In a general way then, the student may expect to find the most sympathetic response on notes that are octaves, fifths or thirds of his open strings.

Wireless and Violin

To return to our high A again, if a series of staccato strokes resembling the dots and dashes of the telegraph code were made on the note and it proved too high in pitch for the ear to hear, nevertheless the A string, moving sympathetically, would get the message. Now this is, in miniature, how the wireless operator gets his messages. It must be done in this way, because the message sent out by the wireless is vibrating at a million vibrations a second while the human ear is not sensitive to a sound over 16,000 or 17,000 vibrations a second. Any sound or impulse at the rate of a million vibrations a second would be non-existent as far as our ears are concerned.

Let us call this high A that a violinist is playing the wireless message that is too high for a human ear to hear, but, as stated before, the A string which is low enough for us to hear gets the message. In wireless messages the pitch is not always the same; so, to carry out the illustration, let the violinist play A flat instead of A. Then, of course, the A string would not get the message unless someone turned the peg and let the A string down to the proper pitch; and this is just what the wireless operator does with his tuning arrangement. Here, then, is the difference in the actions of a wireless operator and a good violinist: the wireless man adjusts the receiver, but the violinist should hear or see that his message is not being received on the A string and he should, therefore, change the pitch of his "message."

THE ETUDE will shortly present two captivating interviews with world famous violinists. The first is from O. Sevcik and was secured for THE ETUDE by Otto Meyer, Mr. Sevcik's American representative and a teacher of renown.

The second is with Franz Drdla, the composer of Souvenir and Serenade which have sold in immense quantities. Both men are Czecho-Slovaks and both are known to everyone who has ever played the violin.

Paganini

By Bertha Altbayer

PAGANINI'S whole life was a series of interesting adventures. His musical temperament, deep love of romance and wonderful sense of humor led him hither and thither.

Although great, the violinist was far from wealthy. His home was an attic in a gloomy house, in one of the humblest streets of Genoa. Tradition says that he often played in the streets and courtyards; but as this was an Italian custom of the day, his reputation was not damaged.

His boon companion for many years was Paliari Lea, his favorite accompanist. "Often did the two friends ramble, in the night-time, through the narrow, winding streets and lanes of the old city, Paganini discoursing most eloquent music on his violin, and Lea accompanying him on the guitar or violoncello. In this gay, carefree way they would patrol the midnight streets, improvising ravishing duets under the windows of fair marchionesses, and waking good citizens from their dreams to make them sensible of realities still more charming."

One evening a nobleman engaged the two musicians to serenade a beautiful young lady. At the appointed hour the friends drew near the signorina's window. Before drawing his first bow, Paganini was observed to place in his right hand an open knife. All at once, in the midst of a brilliant prelude, a string of his violin was heard to break; and by the tone of the report it could be told that it was the first string.

The violinist said something about the dampness of the night air, but instead of stopping to replace the broken string, went on playing so ably upon the other three that no listener could have perceived its loss. In a few moments the second string broke, and before the musician had played many bars the third followed its example.

The gallant who was the employer for the evening of the two artists trembled for the end of his serenade. But his fear quickly changed to astonishment, he assures us, with such skill did Paganini continue playing on the one remaining string.

Not content with imitating the tones of all musical instruments, Paganini mimicked also the notes of all kinds of birds and the cries of almost every animal. One evening, at the close of a concert, the master's Amati said "Good night!" so clearly, that the whole audience replied: "Buona sera!"

He was very changeable and thought no more of breaking an engagement than of taking a walk. Chancing to be in Parma on the day that the Grand Duchess Marie Louise, widow of Napoleon, gave a fête, Paganini wrote to the Grand Chamberlain offering his services for the concert announced for the evening of the same day. Hardly had the violinist dispatched his letter when a sudden whim caused him to declare that he would not play.

The Chamberlain summoned him and demanded an explanation telling him that an engagement entered into with royalty should certainly be as binding as one entered into with a private individual. After much pleading, the artist agreed to play.

At the court of the Grand Duchess the want of punctuality and of strict attention to the niceties of court costume were considered two great sins. A particular dress had been appointed for all who attended the concert.

This was nothing to Paganini, however. He kept the illustrious audience waiting more than a quarter of an hour and then

IT'S REALLY SURPRISING HOW

Stuber's "Instrumental Music Course" has met with the warm approval of supervisors and teachers.

The coming school year will find this course forming the backbone of public school instrumental music in many of the more advanced cities. Its practicability has been proven by four years' use in public schools. Constant revision keeps it up to date in every particular.

We would appreciate the opportunity of sending complete copies on approval to supervisors and teachers.

appeared before it in a costume as different from the court costume as day is from night. It consisted of a sky-blue blouse ornamented with large steel buttons and, like all the rest of his garments, evidently borrowed from an old clothes shop near at hand; a waistcoat of flowered velvet, so long as to reach almost to his knees; breeches of white satin, as much too small for him as his waistcoat was too large; a pair of white silk stockings three times too large and loose for him and appearing even wider and looser than they really were by contrast with the straight breeches above them, and a pair of heavy leather boots so thick and clumsy as to contrast greatly with the silk stockings.

At his appearance peals of laughter were heard on every side. The merriment became even greater when it was perceived that Paganini had ornamented his breast with several scores of decorations bestowed upon him by members of royal families.

After order had been restored, Paganini began to play. His enchanted listeners were moved alternately to smiles and tears. The audience listened spell-bound. Greater and greater grew the enthusiasm, until it became impossible of restraint. The palace rang with tumultuous applause.

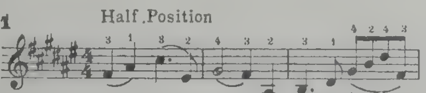
The Half-Position

A CORRESPONDENT asks an explanation of what is meant by the "half-position," and whether it is of much practical importance. In teaching, I have found that the average pupil is usually puzzled by this position, and when he meets a passage in it he usually plays it badly out of tune, invariably fingering the notes too sharp.

Friedrich Hermann, eminent writer of works for the violin, including his well-known "Violin School," says of this position: "When passages having many sharps occur in pieces, one uses the half-position, which in such cases offers more security for pure intonation than the first-position."

Hermann illustrates the half-position with a study of which the first three measures are given below, and which gives a very good idea of how this position is used. It will be noted that the fingering is half a tone back of the first-position. Many pupils in playing half-position passages place their fingers almost as high as in playing in the first position, thus making the intonation too sharp.

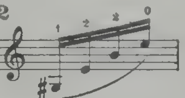
1



The half-position is not used very often, and it is not often that extended passages or whole melodies are played in it; but when it is needed it is absolutely necessary for a clean performance of the passage.

Chords or arpeggi often occur which it would be impossible to play without using this position. Such an arpeggio is the following, taken from the *Sixth Air Varié*, by De Beriot.

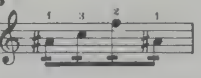
2



As the first finger is required for the G-sharp, the lowest note, it cannot be used for the E and B, the next higher notes, so these must be played with the second finger, which is half position fingering.

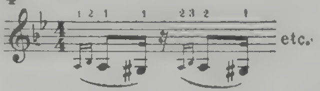
The following passages taken from the Kayser *Studies, Op. 20, Book 11,* also illustrate a passage where the use of the half position is essential for a clean performance.

3



As the first finger is required for the A-sharp throughout the measure, it is best to use the third finger for the C-sharp and the second for the F-sharp, as the undue extension of the second finger, if it was used for the C-sharp, is avoided, likewise the treacherous cross fingering from the F-sharp to the A-sharp, if first position fingering were used.

4



In the above passage the first finger should remain on the G-sharp, making it necessary to use the second finger for A and the third finger for B-flat. Every teacher knows that it is very difficult to get pupils to play this passage in tune, as they will invariably finger the A and B-flat too high. Once they get the idea firmly fixed in their minds that the fingering must be pushed back half a tone from the first position and all will be clear sailing.

The average teacher gives very little attention to the half position, but this is a great mistake, as it gives wonderful facility in executing passages which naturally lie in this position. It is used mostly in passages where the first finger occupies a position half a tone from the nut.

The Germans call this position the "sattel-lage," because the fingering is close to the nut "sattel" being nut in German.

Once the pupil understands thoroughly the theory of this position it is not difficult, and smooths the way over many difficulties.

Opéra Comique From the Pulpit

THOUGH perhaps best known by his opera, "Samson and Delilah," Camille Saint-Saëns was for twenty years organist at the Madeleine, and here, as always, he strove to keep his music appropriate to its surroundings. In his book of Memoirs he tells us he was occasionally chided for being even too churchly.

"There was a tradition that I was a severe, austere musician. The public was led to believe that I played nothing but fugues. So current was this belief that a young woman about to be married begged me to play no fugues at her wedding!

"Another young woman asked me to play funeral marches. She wanted to cry at her wedding, and as she had no natural inclination to do so, she counted on the organ to bring tears to her eyes.

"But this case was unique. Ordinarily, they were afraid of my severity—although this severity was tempered.

"One day one of the parish vicars undertook to instruct me on this point. He told me that the Madeleine audiences were composed in the main of wealthy people who attended the Opéra-Comique frequently, and formed musical tastes which ought to be respected.

"'Monsieur l'abbé,' I replied, 'when I hear from the pulpit the language of the opéra-comique, I will play music appropriate to it and not before.'"

Violin Questions Answered

By Mr. Braine

Joh. Strauss.

S'Cona—Joh. Strauss, Wien (Vienna), 1724, was one of the great army of obscure violin makers whose names each fill up only a line or two in biographies of the world's violin makers. I can find no details of his life or works. Such violin makers, once in a while, however, produce a violin which comes pretty close to being a masterpece.

Paolo Albani.

A. L.—Paolo Albani, Cremona (1650-1700), was a maker of considerable fame, and his violins are valuable when well preserved, and good specimens of his art. There were other Albanis—Signor Albani (Palermo, 1633), and the two Mathias Albanis (father and son), at Botzen, of the Tyrolean school of violin making of the seventeenth century.

Labels Tell Nothing.

H. T.—From the date you send me, with a request to know the value of your violin, I have no means of judging whether the violin is worth $3 or $20,000. All you send is a copy of the label. The label may be genuine or counterfeit, and the violin also may be genuine or imitation. If the violin is a poorly made imitation of a Strad, in bad repair, it might not be worth over $3. It it is a genuine Strad, in first rate preservation, and one of the best that Stradivarius made, as regards tone, it might be worth as high as $20,000. No one can judge a violin from copies of the label or written descriptions. An expert must have the violin actually in his hands to value it. The advertising columns of THE ETUDE contain the names of dealers in old violins. Arrange with one of these dealers for an examination of your violin.

Joseph Rauch.

W. J. N.—Very few details of the life of Joseph Rauch, violin maker, are available. He made a number of instruments of very respectable quality, but could hardly be classed as a great maker. Commothau, where he made violins, is in Bohemia. Your violin may be genuine, as the violins of makers of lesser note are not so much counterfeited.

Chevrier, Violin Maker.

W. H. S.—André Augustin Chevrier, Brussels, 18—, was a violin maker of the Belgian school who made some very good instruments. His violins resemble those of Lupot, somewhat, but have a different tone. Full details of the maker's career are not available.

"Strad" Values.

M. B. and W. D. D.—A violin containing a label "Antonius Stradivarius," is worth from $1 to $20,000. If it is a badly-made, battered up imitation Stradivarius, in very bad repair, it might not be worth more than the first sum. If it is a first rate, genuine Stradivarius in perfect preservation, with a tone equal to any violin Stradivarius ever made, it is possible that a purchaser might be found at the latter figure. You will first have to ascertain whether the violin is genuine before a value can be placed on it. It is probable that there are a million imitation Strads scattered over the world.

A Genuine Stainer.

F. C.—If your violin is a genuine Stainer (the greatest maker of Germany) the label would signify that it was made by Jacobus Stainer, in Absam (Germany), in 1724. However the chances are 100,000 to 1 that your violin is an imitation. 2—If you will reflect a little you will see how impossible it would be for me to tell whether your violin is genuine or not, or to suggest repairs or changes, which would improve the tone, without seeing the violin and playing on it. Your only course would be to send the violin to one of the leading violin dealers (such as those who advertise in the ETUDE) for examination. 3—I cannot say whether the repairs made at your local shop have been properly done or not without seeing the violin.

Sweating Fingers.

P. H.—Violinists who are troubled with sweating fingers often find it an advantage to rub a little oil of sweet almonds on gut strings, when these are used. It is best not to apply the oil farther up than within about six inches from the bridge. Many manufacturers of gut strings oil the strings before sending them out for sale.

Bowing and "Laws of Sound."

M K—Violin Teaching and Violin Study by Eugene Gruenberg, has much interesting advice on violin bowing. If you are interested on the scientific aspects of "sound," you might get some of the works of Hemholtz, 2d. The writer you speak of has also written; "How to Make the Violin," "Secrets of Violin Playing," and "How to Choose a Violin."

A Stainer Violin.

F. H.—If translated, the label in your violin, means that the violin was made by Jacob Stainer, in Absam, (Germany), in 1702. The label you send me is worded correctly, but whether it or your violin is genuine, I could not say without seeing them. Send your violin to an expert for examination. 2—I would have to hear you play before I could tell whether you can become "more than an average player" or not. Try to arrange a hearing with some recognized musical authority, and get his opinion on your talent.

Strad Labels.

J. L.—Absolutely impossible to judge violins without seeing them, on the strength of a copy of the label. There are millions of violins scattered all over the world, with Stradivarius labels. These labels can be bought very cheaply and put into any kind of a violin.

Mathias Albani.

J. L. J.—Mathias Albani, Botzen, 1650-1709, was a Tyrolean violin maker of considerable note. He was a pupil in violin making of Nicola Amati, the famous maker of Cremona, and having thus been educated in the Cremonese school of violin making, his workmanship is of an Italian character. Indeed it is often mistaken for Cremonese work. The following is a copy of a genuine Albani Label; "Mathias Albani me fecit, Bulfani in Tyroli, 1706." Translated the label reads "Matthias Albani made me, at Botzen, in the Tyrol in 1706." The leading violin teachers of Los Angeles can you give you the address of an expert who can tell you if your violin is genuine or not.

Book Review

Defense of Classic Church Music. By Richard L. Cannon. Forty-six pages, paper bound. Published by Richard L. Cannon, Tarpon Springs, Florida.

This interesting booklet is now out in a new dress for its second edition. In a series of short chapters the author gives some very interesting information regarding musical matters connected with the church service. More especially his thought is directed to questions historical and connected with the art in America.

Unique Voice Training Studies. By W. P. Schilling. Twenty-five pages sheet music size; paper covers. Published by W. P. Schilling, at $5.

A method of study for high voice which should interest the student and teacher. The success of special material of this kind depends upon the receptivity of the student. The writer has produced several successful works.

In the Organ Lofts of Paris. By Frederic B. Stiven. Cloth bound; seventy-five pages. Published by The Stratford Company, at one dollar per copy.

A personally conducted tour of the principal churches of Paris. The author has caught the spirit of these ecclesiastical masterpieces, many of which smell of the musty past, so that he carries the reader at his heels through their grandeur as well as their curiously dark and secret ways. His character sketching of their organists is clear cut, naive and convincing. The book is illustrated with halftones of organs, organists and interiors. A more delightfully interesting and instructive little book in its line could scarcely have been written.

Musical Competition Festivals. By Ernest Fowles. Cloth bound; 170 pages. E. P. Dutton and Company; at $2.00 per copy.

The author, an experienced Adjudicator, handles his subject "from the inside," as one who knows. The Musical Competition Festival is a fixed institution of Great Britain which, if handled judiciously, might well be introduced more generally into the States. In his small volume Mr. Fowles very lucidly outlines the qualifications for success in the different features of the organization and consummation of these enterprises, including among others, chapters on The Competitors, The Adjudicator, Selection of Music, The Audience and Possible Developments. Almost invaluable to the one interested in organizing musical competitions.

Creative Technique. By George Woodhouse. E. P. Dutton and Co. 53 pages; bound in cloth. Price, $1.25.

A series of short chapters by a representative English teacher who seeks to make plain certain fundamental facts in Technic. The student and the teacher will find much that is useful and valuable in this work.

The Making of Musicians. By T. H. Yorke Trotter. Cloth bound; 137 pages. Published by E. P. Dutton and Company; at $2.00.

In five interesting chapters the author gives a very definite outline with much valuable information as to the course to be pursued in developing the innate ability of the pupil. A very engaging chapter is the one devoted to the teaching of the advanced student, in which an appreciation of the harmonic structure is emphasized. A book that will be welcomed by many musicians and which will be a valuable addition to the library of the young professional aspirant.

The Grotesque Native Music in Far Off Burmah

By Paul Edmonds

[EDITOR'S NOTE:—American musicians have been hearing a great deal about the quarter-tone and eighth-tone systems of the Orient, indicating that the native Eastern ears are much more finely attuned than ours, which can discriminate nothing more minute musically than the half-tones in our harmonic system. The following excellent article from *The Musical Times* of London disputes this rumor insofar as it refers to Burmese music.]

IT was in the Street of the Umbrella Makers that I heard a Burmese band for the first time. The houses, which were also the shops, stood open to view, enabling the passer-by to see all that was going on within, from the most intimate domestic concerns in the background down to the manufacture and sale of the brightly-colored umbrellas in the forefront. Tamarinds and palms cast their shade across the uneven roadway. Pi-dogs yawned and scratched and snarled, and children as naked as they were born played happily in the dust.

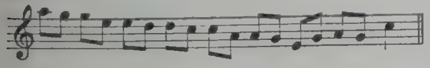
The band squatted in the street outside a house that, like the rest, was open in front. A Burmese girl inside was powdering her face with "thanaka," before a mirror. Close by, laid out on a bed, was the corpse of a man. The band was playing merrily, having evidently been engaged for the funeral. The Burmese dislike dirges, dead marches, and music such as Westerners consider appropriate. They employ a band to drive away sorrow—and, after all, isn't this exceedingly sensible?

The corpse, I was told, was that of the headman of the village, who had just been murdered by his brother-in-law. The funeral was to take place that afternoon.

The band consisted of a circle of gongs, a circle of drums played with the fingers, a particularly shrill oboe, two pairs of cymbals, large and small, a bamboo percussion instrument, and a big drum. I wanted to write down the tune, if possible, in Western notation. But there was so much more noise than music that to do so proved an utterly hopeless task. I gave it up in despair.

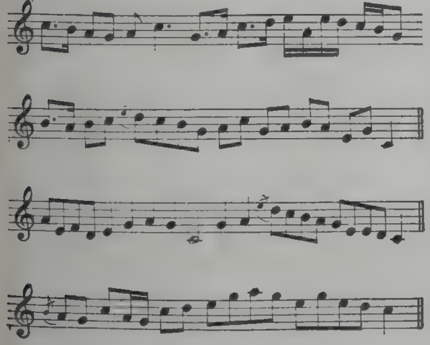
A few weeks later, when travelling up-country, I met a Burman by the name of Hla Tin, through whose help I was enabled to arrive at a more satisfactory result. With the aid of a kind of mandolin he picked out for me the tune of what he called the "baw-le." This tune, it appears, is used for songs of a sad character, and is preceded by a short introductory phrase which is also played between the verses and again at the end. The introductory phrase ran:

Ex. 1



The tune itself ran:

Ex. 2



Upon examining the introductory phrase I found that it was, or seemed to be, pentatonic. But the tune itself was not so, with the important exception of the cadences. These, as will be seen, are in every case pentatonic in character, and the leading-note does not occur.

My next proceeding was to test carefully the scale of a pattala, the Burmese xylophone. This instrument, which was in the key C, had, I found, an eight-note scale; but at first its classification puzzled me, since in the upper octave the note B was nearer to B flat than to B natural, whereas in the lower octave it was the other way about. How to account for an approximate B flat in one octave and an approximate B natural in the other octave of the same instrument was a problem. The note F in both octaves was indeterminate, and seemed to be about halfway between F and F sharp. This suggested to me what I believe to be the true explanation, which is that the pentatonic scale is the foundation, and that notes have been more or less roughly inserted in the two gaps between E and G and between A and C in order to make the scale approximate to the Western major scale.

Subsequently I examined the circle of gongs which forms the basic feature of a Burmese band. This was also in the key of C, and here again it was difficult to be certain whether the seventh note B was meant for B natural or B flat, and whether the fourth note F was intended for F sharp or natural. Both these notes were indeterminate.

An examination of the tuning of the circle of drums brought me back again to the pentatonic scale. I was quite excited to discover that the note B was omitted altogether, and that the note F was missing from both the lower octaves, though it appeared in the top octave. It was quite evident to me now that I was back to the bed-rock of Burmese music, and that the fact of the introduction to the "baw-le" tune being pentatonic was not a mere accident as I had almost begun to think. On consideration such an introduction, consisting of two bars which are always played at the beginning and between every verse, and have no doubt been so played from time immemorial, is much more likely to survive in its original form than the tune proper, which would be liable to gradual alteration owing to the free interpretation allowed to the singers. I therefore feel convinced that Burmese music was originally pentatonic, and that so far from being able to appreciate such subtle intervals as quarter-tones the Burman is only now growing used to semitones, and even yet the very narrow semitone that occurs in the Western scale between the seventh and eighth notes (otherwise between leading-note and tonic) is too fine for the Burman ear.

The insertion of the indeterminate notes at F and B, of which I have spoken, would easily lead the casual observer to imagine quarter and three-quarter tones. The occurrence of such tones, however, or of what appear to be such tones, is purely accidental, and due to the indeterminate tones alone.

The Burmese band, owing to the fixed scale of the gong circle, always plays in one key. The band of which I examined the instruments was in C major—approximately. The absence of semitones or accidentals makes modulation into other keys impossible, consequently monotony is unavoidable. The only variations are variation in time, rythm and accent; and variation obtained by grace-notes, appoggiaturas, and runs added at the discretion of the individual performer. The license allowed to the individual, and the fact that the drums with their pentatonic tuning cannot possibly play exactly what is being played by the other instruments with their eight-note scale, makes Burmese music a characteristically happy-go-lucky affair. It is often quite pleasant to listen to, I admit—for a short time; but the Western musician can learn nothing from it. Nor, if it comes to that, can he learn anything from the Burman about making a real good noise. That is an art in which our ultra-modern composers have nothing to learn from anybody!

A System of Harmony
By John A. Broekhoven Flexible Cloth, Price, $1.00
A Harmony Work with Many Individual Points

Broekhoven's Harmony contains many features of special value and information to teachers and students not found in the average book on harmony. Among these are: The short and clear sections numbered for the purpose of ready reference. The questions after each chapter. The explanations of musical examples. The use of the term **Sept chord** for the confusing term **chord of the seventh** found in all books on harmony. The free resolution of collateral Sept chords. The explanation of altered chords. The chord analysis of the six-key group. The presentation of the various phases of suspensions, retardations and anticipations. The exhaustive illustrations of modern modulation. The harmonization of a melody in the soprano, alto, tenor and bass. Four, three and two-part writing. Examples of simple counterpoint and mixed counterpoint. The harmonization of a choral in four, three and parts. Omnitonic harmony, and the application of chromatic chords. This complex of subject matter gives Broekhoven's Harmony a broader scope of material for musical composition than found in the current works on harmony. The complete index of the subjects treated given at the end of the book is an encyclopedia of musical elements most valuable for reference.

Eight Songs
from
Green Timber
Lyrics by CHARLES O. ROOS
Music by THURLOW LIEURANCE

The Enchanting Wonders of the Great American Outdoors Inspired These Beautiful Songs

THIS cycle of "Green Timber" songs stands as one of the most original in American song writings.

These songs put a touch of the unusual to a program and give the singer an excellent opportunity to display artistry in voice and interpretation.

The secret of the appeal of these songs is in the manner in which they conjure up the heart throb of the great outdoors. The "Green Timber" country or the "Magic Valley" of the St. Croix River is one of nature's beauty spots, where the vast stretches of whispering trees, majestic and hazy hills, and an enchanting stream move the most prosaic. The poet and musician have blended inspirations in these "Green Timber Songs," giving the heart beat of this *Enchanted Valley.*

Price $1.50

A very interesting two page preface is given in the cycle.]

On Sale Music

A little over a year ago, we issued a catalog listing 689 titles of "Most Played Piano Music" in easy, medium and difficult grades. These titles were selected from our earlier publications and only pieces were selected which had proven their value and no unknown nor untried works were among them.

The catalog was so favorably received that schools and teachers immediately availed themselves of the opportunity to secure a liberal selection according to our "On Sale" plan and as very little of this music was returned at the close of the teaching season, this plan of simplifying the "On Sale" method proved highly successful.

We have now continued this plan with our newer publications, selecting only the very choicest, most practical and most used pieces and desire that colleges, schools and teachers order a selection to be used as a stock of "On Sale" music for the whole year's work. Just say, "Send me 50 easy, 50 medium, 10 difficult pieces from your special selection of later publications" or as many of each class as your work seems to demand. As there will not be a piece of doubtful value in the selection and as the "On Sale" plan applies to the entire selection, there is absolutely no risk whatever in making such an order.

Mail Order Service To Record Buyers

Any merchant who is in position to offer the best in his line, both in merchandise and service, deserves patronage and generally gets it. For a period of more than three years we have been trying and trying hard to perfect a system that would give The Etude readers and others the best possible service in connection with Recorded Music.

If you could but see the shelves in our Record Department stocked from floor to ceiling with VICTOR and BRUNSWICK Records you would realize that our boast, *"That we can meet every requirement in Recorded Music, if produced by the Victor or Brunswick Laboratories,"* is not an idle one. Our close proximity to the main sources of supply and our well-trained force of clerks make it possible for us to mail to you, the same day the order is received, the record or records you most desire. All orders in amount of $3.50 or over are mailed via Parcel Post, postage prepaid. All are well packed and guaranteed against breakage in the mails. Charge accounts, payable upon receipt of the statement, are solicited, although we are quite willing to send Records Parcel Post, C. O. D.

Easter Music

Now is the time for the enterprising choir master to prepare the program for Easter services. Easter Sunday falls, this year, on April 20th. By making use of our "On Sale" privileges, directors are enabled to select suitable material and we are now ready to send choir cantatas, anthems, solos and organ numbers for both the morning and evening services. For choirs desiring a Lenten or Easter cantata, we recommend the following: Crucifixion, Stainer; Dawn of the Kingdom, Wolcott; Living Christ, Stults; Wondrous Cross, Berge; Immortality, Stults; Greatest Love, Petrie; From Death Unto Life, Stults; Stabat Mater, Rossini; Victory Divine, Marks, and Alleluia, Stults.

Among the new Easter anthems, we recommend the following: Rejoice and Be Glad, Berwald; Sing with All the Sons of Glory, Stults; Today the Lord Is Risen, Kountz.

For the soloist we submit the following: He Is Risen, Paul Ambrose; Christ the Lord Is Risen, Delafield; Easter Triumph, Shelley; Hail Glorious Morn, Geibel; Lord Is Risen, Lansing; I Know That My Redeemer Lives, Chaffin; Sing O Sing, Risher.

Easter services for the Sunday Schools: Hail Festal Day, Hallelujah! Lo He Wakes, Risen King, Dawn of Hope.

Organ numbers of festival character: Festal March, Kroeger; Festival March, Diggle; Hosanna, Wachs; March Pontificale, Lemmons; March Triumphale, Becker.

Write today, describing your needs and let us send a package of "On Sale" music for your inspection.

The Castaways Operetta for Women's Voices By Fay Foster

Women's clubs, young ladies' colleges and organizations of the kind will welcome this clever musical play. The work is not difficult to undertake and provides an evening of keen enjoyment. The plot is absorbing. Native women in unique costumes on a mysterious island and a shipwrecked company of very up-to-date young women form the setting. Each number is, of course, charmingly conceived; the situations are most amusing and cleverly handled and the music has an irresistible lilt and pulse. The dialog is bright and humorous and the scenic effects most startling, although inexpensive and easily produced. The advance of publication cash price for one copy is only 40 cents, postpaid.

Principles of Expression In Pianoforte Playing By Adolph F. Christiani

We have come into possession of this, one of the most important works on pianoforte playing and in future we will control the publication of this most useful book. There has been no work on pianoforte playing that has been more popular and more quoted than this one by Christiani. In our establishment alone, since the book has been published, we have sold 675 copies. This is an unusual sale. *Principles of Expression in Pianoforte Playing* is one of the works that every progressive member of the pianoforte teaching world should possess. The enormous number that we have sold in our establishment alone, attests the value of the work and we are very proud that we have become its sole publisher in the future. The retail price always has been $3.00. If it were issued at the present time the price would be considerably higher, but we are going to hold to the original figure of pre-war time, namely $3.00 net.

The author, Adolph F. Christiani was a pupil of Liszt and the work is dedicated to him in the following manner: "To *Franz Liszt*, the great magician of the pianoforte this work, in admiration of his matchless genius and in recognition of his sympathetic kindness, *is dutifully inscribed*, by A. F. Christiani."

Christiani was born in Kassel, Germany, in 1836 and died in Elizabeth, N. J., U. S. A., in 1885, just at the time the book was issued. He taught in Vassar College, also in Pittsburgh and Cincinnati. The information given in this work on phrasing alone is worth ten times the price of it, in fact there is no greater authority and we cannot recommend it too highly. We are placing this book on special offer for a very short time only.

Our special advance of publication price will be $1.50 per copy, postpaid.

Album of Scales For the Pianoforte

Since the *Album of Trills*, the first volume in the new series, "Study Pieces for Special Purposes," is published and on the market, we are now offering in advance of publication the *Album of Scales*. This volume will be of about the same difficulty as the *Album of Trills* and perhaps a little more useful, as there is scarcely a piece in it that does not contain more or less scale work. This book needs very little advertising as its usefulness is so apparent that it is taken for granted. We particularly pride ourselves on the selection of pieces in which there is scale work. A more useful, general volume could not be found.

Our special advance price in advance of publication is 30 cents per copy, postpaid.

Holberg—Suite for Piano By E. Grieg, Op. 40

This favorite work will be added to the Presser Collection. Our new edition will be carefully revised and re-edited. It consists of five movements in antique style. Holberg (1684-1754) was the founder of Danish literature. The numbers are *Prelude, Sarabande, Gavotte, Air* and *Rigaudon*. The *Rigaudon* is often heard as a separate number, but the entire suite is well worth careful study and latterly, the *Prelude* has been played a great deal. Grieg has caught very aptly the grace and spirit of the old-fashioned dances.

The special introductory price in advance of publication is 25 cents per copy, postpaid.

The Dawn Easter Cantata—Women's Voices By William Baines

A most useful Easter cantata for volunteer choirs where the men's voices are not reliable, or for girls' schools and colleges. The music is for two-part singing, that is for soprano and alto, throughout with a few unison or solo passages. The music is tuneful, bright and pleasing, easy to master and grateful to sing. The time required for performance is 30 minutes, but parts may be omitted if so desired. The advance of publication cash price for one copy only, is 25 cents, postpaid.

Little Folks' Music Story Book By James Francis Cooke

This book has been in preparation for a long time. It is designed to be the simplest possible history of music—a book to precede "The Standard History of Music." It is told in the language of little folks, but does not make them feel little. The illustrations are all "cut-out" pictures. That is, they come on a big sheet like the pictures in the famous Tapper series "Child's Own Book of Great Musicians." In addition to covering the subject of music history in delightful fashion, this book also gives pictures of the leading orchestral instruments, and tells how any little child may learn to compose a tune. The writer, who has a number of successful books of children's musical literature to his credit, has put his very best efforts into this fascinating book. If you desire a copy immediately upon publication you may have the advantage of the special introductory rate of 50 cents by ordering now.

Reverie Album For the Pianoforte

There has been a considerable demand for an album devoted to pieces of the *Reverie* order. This is very closely allied to a Nocturne Album. The reverie might possibly be considered less pretentious and less difficult than a nocturne, but they are both a quiet, dreamy order of music, such as might be played for Sunday purposes. This album will contain nothing more difficult than third or fourth-grade pieces and will be selected from our most popular music of this style. While Gottschalk's *Last Hope* is a good example of a reverie, it will not be included in this volume on acount of its difficulty. This book will prove a very acceptable one and placed on the music-rack of the piano in the home will disclose many selections appropriate for playing before company. The music will be graded and only such pieces will be included as have had great popularity.

Our special advance of publication price for the volume will be 35 cents per copy postpaid.

Four Seasons—Cantata By Kieserling

Only the experienced director who has rummaged through piles and piles of music eagerly hunting for what he wants and must have, knows how very difficult it is to get a cantata for women's voices, in three parts, that is simple enough to be given without too many rehearsals, that may be given with or without special scenery or costumes and still has real melodic merit and charm. Such a work is this new composition by Kieserling. Women's Clubs, High School Choruses, Campfire Girls, all groups requiring a practical work which will prove entertaining to the audience as well as to the performers and will require only twenty-five minutes on the program, will do well to secure this work immediately upon publication by ordering it now at the special introductory rate of 35 cents, postpaid.

What The Vocal Student Should Know By Nicholas Douty

This unusually fine little book might also have been termed "What the Vocal Student Should Do," since Mr. Douty has added a very remarkable appendix giving a dozen daily exercises for each voice. It has already been humorously and alliteratively called by our editorial staff, "Douty's Daily Dozen." It ought to be worth many times the price of this book for any vocalist and vocal student to learn what an artist-teacher of such distinction as Mr. Douty feels are the essentials in doing and knowing in the art of singing. It is one of the very best books of its kind we have seen; and we know that many vocalists will want to use it regularly. It emphasizes no peculiar methods. In fact, in the "Daily Dozen" appendix Mr. Douty has taken exercises (in addition to his own) from numerous classical authorities. The advance of publication price is 50 cents, postpaid.

lleluia
horal Cantata for Easter
y R. M. Stults

Throughout all of Mr. Stults' numerous ompositions, beautiful melodies are a rominent feature and he has been espe- ally happy with the selections in this new antata for the joyous Eastertide. There re solo parts for the various voices of a ixed choir and strong, well-contrasted horuses, beautifully telling the story of he Resurrection. Choir directors will find is work a boon because, while it is not ifficult to render and not too many re- earsals will be required, it is sure to rove exceedingly effective.

Our advance of publication cash price or one copy only, is 30 cents, postpaid.

Vhat To Play—What To Teach
y Harriette Brower

Miss Brower is well known to Etude eaders through her numerous contribu- ions to this magazine. This book proceeds long very original lines. It tells how to ake programs. The programs are of rogressive difficulty, from the simplest to enuine reproductions of the programs of reat artists at Carnegie Hall. It gives he names of hundreds of pieces and com- ents upon the method of playing them in ublic. The book is of particular use to eachers; but students and artists may ain immensely by reading it. Introduc- ion price by our special plan of enabling ur readers to get such books at a very uch reduced rate by ordering in advance f publication, 75 cents, postpaid.

he Amateur Musician
y Russell Snively Gilbert

This little method is intended to intro- luce music to very young students through he medium of the piano itself, striving to waken the creative consciousness of the upil and by so doing to quicken progress nd increase interest. It may be taken up n connection with any instruction book or vhile the rudiments are being taught it nay be used without any instruction book. t starts right off with both clefs, but with nly one hand at a time. After the first ew elementary exercises, some are left for he pupil to complete by himself. It is book that is just past the kindergarten tage.

The special introductory price in ad- ance of publication is 30 cents per copy, ostpaid.

lbum of Compositions
y M. L. Preston

This will prove to be a very attractive nd entertaining volume of intermediate ieces. Mrs. Preston's teaching pieces have roven most popular with both teachers nd pupils and we have assembled in this ew volume some of the most successful umbers. These are in various styles: Drawing-room pieces, reveries, nocturnes, lances and characteristic pieces. All are nelodious and all lie well under the hands. This will prove one of the best books to ise with third-grade students, both for tudy and recreation.

The special introductory price in ad- ance of publication is 30 cents per copy, ostpaid.

Scene de Ballet
Violin and Piano
By C. de Beriot

This is not a new number to those familiar with the literature of violin music, but there is coming out in the Presser Collection a new edition of the favorite Scene de Ballet by de Beriot. We are fortunate in having an editor of the highest order in Mr. Thaddeus Rich, the concert-master of the world renowned Philadelphia Orchestra. In addition to laurels won in the orchestra and concert field, Mr. Rich is a master violin teacher and an unquestionable authority on violin matters. Scene de Ballet is not only a standard teaching work because of the technical and musicianly qualities it compels one to employ, but it is also an ideal concert solo. With it the violinist can execute a very showy and musicianly solo that is sure to win an audience. The opportunity to secure this new edition at the advance of publication price of 30 cents should not be overlooked.

A Knight of Dreams
Musical Comedy—Mixed Voices
By May Hewes Dodge and John Wilson Dodge

A suggestion of Pygmalion and Galatea runs, in a humorous way, through the plot of this operetta. The story is really very funny, especially the second act in which an artist has a dream in which the characters of the classic stories get all mixed up. The dialog is snappy and bright and the variety of characters introduced adds charm to the evening's entertainment. The music is catchy and tuneful and not too difficult. The costuming is simplicity itself and the staging most easily done. To everyone interested in producing an operetta during the coming season, we offer the suggestion that they take advantage of the opportunity to subscribe for this work at the special advance of publication price, 35 cents, postpaid. One copy only may be had at this rate.

First Lessons in Bach
By Walter Carroll—Book 1

The attention that is given to Bach studies increases as the love of music advances. While Bach is one of our oldest composers, his music was dead for 75 years and was only resurrected by Mendelssohn. Since then the study of Bach became more and more a part of our curriculum of study for piano. This book, *First Lessons in Bach* by Walter Carroll, is one of the many selected works that is becoming immensely popular and we are adding this small volume to the *Presser Collection*. This new edition is very minutely edited. The selection comprises all of Bach's pleasing easy pieces. This work can be taken up at the close of the second year of study and ought to form a part of the teaching repertoire of every progressive teacher of the pianoforte.

Our advance price on this valuable little volume is but 20 cents, postpaid.

Vocal Studies
For Low Voice
By George Whelpton

Many teachers and singers have found the *Vocal Studies for High Voice* by George Whelpton extremely practical and exceedingly helpful and the forthcoming *Vocal Studies for Low Voice* are sure to find a flattering welcome. With years of experience in handling voices, developing accomplished amateurs and successful professional singers, Mr. Whelpton is able to well build a study work for low voice of the best character. Voice teachers will do well to order a copy of this work now, insuring their becoming acquainted with these studies at the low advance of publi cation cash price, 30 cents a copy, postpaid.

Fiorillo's Studies
For Violin

Among the classics in violin literature these studies have maintained their place for over a hundred years, the composer having died about 1823. Many different European and American publishers have issued this work, evidence of its universal and continued acceptance as an essential part of the violin student's training. These studies may follow or precede those of Kreutzer and their perfect mastery carries one well on the way to violin virtuosity; certainly no great performer has neglected these studies. The retail price of this work in existing editions is $1.00, but advance cash orders for our edition will be filled at 35 cents a copy.

Favorite Musical Readings and Pianologs
By Clay Smith

These recitations are all new in the sense that they have for the most part been tried out only a few times by Mr. Clay Smith and his famous concert company which is known in Chautauqua from coast to coast. Most of the music is original with Mr. Smith. One recitation, however, has the accompaniment of Mendelssohn's "Consolation" and is exceedingly effective. Recitations with music are "all the go" now, and you cannot get a better collection than this one. The advance of publication price is 50 cents, postpaid.

New Theory Book
By Preston Ware Orem

It is one thing to have mastered a certain amount of harmonic knowledge and quite another thing to put it into actual practice. This new book is for the student who has mastered the elementary principles of harmony and who wishes to go further and to know the whys and wherefores of his methods of procedure. The best method of mastering the principles of musical construction is by the actual use of them and by developing them step by step. One who knows harmony as far as the dominant seventh chord will easily develop a knowledge of the rest of it. And when one has learned the principles of melodic construction it is but a step into actual composition.

The special introductory price in advance of publication is 60 cents per copy, postpaid.

Rainbow's End
Operetta for Children
By Cynthia Dodge

There is a splendid moral to the story of this little play which is in three scenes, the last of which may be omitted if so desired. The "Chest of Gold," always a fascinating story, gathers new lustre in this charming musical setting. The fairies of all worlds are called in to help and the scenic effects are very pretty. The music is easily learned and suitable for children's voices. The costumes are described in the score which contains all music and dialog, as well as complete stage directions. If necessary, the cost of production may be reduced to a minimum.

One copy only may be obtained at the advance of publication cash price of 40 cents, postpaid.

Music-Writing Book
By Anna Heuermann Hamilton

This is a real writing book, something more than the mere imitating of given patterns. Everything that may be looked for in a writing book is to be found in this work and besides, the theoretical part keeps pace with the practical, so that the pupil not only writes, but understands what he is writing about. This is in every way one of the best writing books that we have seen. It is easy to understand and it may be taken up by one who is but little past the elementary stage.

The special introductory price in advance of publication is 20 cents per copy, postpaid.

Lemare Album of
Organ Transcriptions

The organ transcriptions by Mr. Lemare are decidedly out of the ordinary. He takes the old melodies and sheds new light upon them. Each number is a lesson in itself in harmonic treatment and in registration. Among the transcriptions in this book are *Aloha Oe, Love's Old Sweet Song, Swing Low, Sweet Chariot, My Heart at Thy Sweet Voice* (Saint-Saëns); *Star of Eve* (Wagner); *Anvil Chorus* (Verdi), and others. Also the hymn tunes *Onward, Christian Soldiers, Lead, Kindly Light,* and *Adeste Fideles.* Two original pieces are included: *Evening Pastorale* and *Salute D'Amour.*

The special introductory price in advance of publication is 50 cents per copy, postpaid.

Standard Vocal
Repertoire

This volume now in course of preparation will contain a variety of songs sacred and secular for all voices. Each song is being selected with regard to its fitness for inclusion in a book of this kind. In size and general apearance the new collection will correspond to our earlier publications of this class such as "The Standard Vocalist," "The Standard Song Treasury" listed at 75 cents, each, but until publication we will book advance orders for "The Standard Vocal Repertoire" at 35 cents each, postpaid, if paid in advance. As the book will contain about forty songs practically none of which may be found in any other collection, advance purchasers will secure a real bargain at a trifling cost.

(*Publisher's Notes continued on page 138*)

World of Music

(*Continued from page 73*)

Sir Thomas Beecham, who went into voluntary retirement after the disbanding of his opera company, has resumed his activities in the London musical world. His initial appearance was as conductor of a symphony program.

Thirty Thousand Applications for Seats were received for the opening performance of the season of the Chicago Civic Opera Company, and the Auditorium has a capacity of about 5000 seats.

Strauss' "Alpine Symphony" recently had its first performance in England, at a Queen's Hall (London) concert under the baton of Aylmer Buesst. "Nobody seemed to lose his head over it."

Giacomo Puccini is reported to have won his suit for damages from the Ricordi music publishing house of Milan, for issuing a fox-trot including an air from "Madama Butterfly," the amount to be decided later by the court.

The New York Oratorio Society celebrated in December the fiftieth anniversary of its existence, with a performance of Mendelssohn's "Elijah." Albert Stoessel conducted and Louis Graveure interpreted the music of the prophet.

A "Guinea Subscription," limited to that amount per head, has been launched in London, for the purpose of raising a £12.000 fund as an endowment for the venerable Philharmonic Society.

American Citizenship has been applied for by Georges Baklanoff, Russian baritone; Tito Schipa and Giulio Crimi, Italian tenors, and Harry Steier, German tenor, all principal Artists of the Chicago Civic Opera Company.

Mme. Lilli Lehmann, greatest of the Wagnerian sopranos of the last generation, celebrated her seventy-fifth birthday, November 24, 1923. Found giving a lesson, she said, "Life is too short to engage in birthday fetes."

A Monument to Arrigo Boito was unveiled in the La Scala of Milan, on November 3, last. The statue is of Carrara marble, the work of Luigi Secchi. Toscanini and Giordano were among those at the ceremonies.

Bulletin of the Presser Home for Retired Music Teachers

Several evenings of the past month have been given up to entertainments of varied character, thus adding many pleasures to the life of "the Home family."

On Tuesday evening, December 11th, "Mother Moore" gave a very interesting talk on her work among her "85,000 boys" at the League Island Navy Yard. Preceding this talk, Mr. Presser surprised us by a call. With him were Mr. and Mrs. Thurlow Lieurance, so widely known for their work in preserving the native Indian music. With Mr. Lieurance at the piano, Mrs. Lieurance delighted all those present by her singing of two of his songs, including the world-favorite, "By the Waters of Minnetonka."

On Thursday evening, December 13th, The Presser Home Social Club was entertained with an address, "Germantown Humor," by the Germantown lecturer and humorist, E. B. Phillips.

On Sunday afternoon, December 16th, Alan Hensel Lewry, violinist, and the Quartet Choir from St. John's Lutheran Church, Philadelphia, gave a sacred concert at the Home.

Monday evening, December 17th, Dr. A. E. Harris, pastor of Nicetown Baptist Church, favored the Home family with an informal talk on "Joan of Arc."

Saturday afternoon, December 29th, Mr. Lewry, violinist, and Knapp, pianist, enlivened the Holiday Season by a program of excellent music.

Album of Favorite First Position Pieces
FOR VIOLIN AND PIANO
Price, $1.00
A volume of this kind is of great value in the violin world. It gives the beginner on the violin encouragement through the excellent numbers it contains which are melodious and interesting yet at the same time easy to play. There are twenty-two numbers of real worth arranged in progressive order. Teachers here have an ideal volume for instructive purposes and beginning violinists will find it just the volume to possess for their recreation or recital needs.
THEODORE PRESSER CO.,
1710-1712-1714 CHESTNUT ST.,
PHILADELPHIA, PA.

New Recital Album For the Pianoforte

Recital albums are always in demand and this new one should prove one of the best. A recital piece must have certain qualities. In the first place, it must please the average listener. In the next place, it must do more than please: It must have certain musical qualities which will commend it to the trained listener. Then, from the standpoint of the teacher, it must have technical qualities which make it worth while to spend actual lesson time upon it. Every piece in this book will be found to possess the qualities mentioned. In point of difficulty the pieces are not easier than grade III and not more difficult than grade V.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Concerto No. 1 For Violin and Piano
By J. B. Accolay

Our new edition of this standard teaching work has been edited and revised by Mr. Thaddeus Rich, the concert-master of the Philadelphia Orchestra. This work is much used in violin teaching, especially in schools and conservatories. It represents a certain stage of advancement in technical accomplishment and is in reality a compendium of foundational violin technic. This concerto is in strictly classical form and in a single movement.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

From My Youth—Twelve Characteristic Sketches
By R. Krentzlin, Op. 85

This is one of the best sets of easy grade teaching pieces that we have seen. Their titles are as follows: *When Mother Speaks, Childhood Joys, On a Jolly Hunt, A Gloomy Tale, Youthful Marchers, On the Playground, Italian Dance, In the Gondola, Gypsy Dance, At the Children's Ball, A Precise Story* and *The Humming Top.* Each of these pieces is in characteristic style and each one is intended to exemplify some special technical point. They will prove acceptable recital pieces, they may be used as recreations, they may also be used as studies.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Songs for Girls

This unusual collection is written for a distinct purpose. Teachers know that young ladies and girls want to sing; but many educators prefer not to give them romantic songs nor songs of the religious type. Therefore we have picked out the best songs dealing with nature, flowers, humor, good cheer, optimism, and all of the things that are natural and delightful in youth. Some may be effectively used as musical recitations. The practical teacher will immediately identify this book as one long wanted and greatly needed. The composers range from A. Goring-Thomas and Arthur Sullivan to modern writers such as Huerter, Krohn and Geibel. Our introductory price previous to publication is 40 cents, postpaid.

New Instruction Book
By John M. Williams

The most outstanding feature of this new work is that it begins right off with both clefs. Everything starts from "middle C" and works from it in either direction. The material used has all been tried out in actual teaching through a course of many years by Mr. Williams personally. In fact, as Mr. Williams states in one of his letters, "the pupils wrote the book," meaning by this that material which was not approved and absorbed readily by the pupils was rejected as unsuitable for the book. Mr. Williams has been highly successful in his teaching and also with the books he has published previously. We anticipate a very great success for this new work.

The special introductry price in advance of publication is 40 cents per copy, postpaid.

Kayser, 25 Selected Studies For Violin
By Chas. Levenson

With the addition of this collection of studies taken from Kayser, op. 20, our violin catalog is being materially strengthened. Mr. Charles Levenson has taken twenty five of the best of the Kayser studies and has added a very effective second violin part, in score. Teachers who like to play along with their pupils will find this collection very useful. And the busy teacher who does a great deal of class work will find these studies to be excellent material for ensemble practice—having part of the class play the second violin. The average violin student as a rule does not get much experience in ensemble work until after he has advanced quite a way, but with this collection his training along this very important line of study may commence early. Every progressive violin teacher should take advantage of this special introductory price in advance of publication of only 40 cents a copy, postpaid.

Album of Piano Pieces For Six Hands
By A. Sartorio

Six-hand music in book form is one of the few things that has not been overdone in the way of publishing. There are but very few volumes of this kind extant. In this collection some of the most important pieces are represented, such as, *Tannhauser March, Carmen, The Mill,* by Jensen, and others. The grading is such that pupils in the second year at least may take part, although the two upper parts had better be taken by pupils somewhat more advanced. This makes an excellent volume from which to select material for recitals. This will positively be the last month at which this volume can be secured at a reduced rate. It will be withdrawn next month as it is now on the press.

Our advance of publication price is 35 cents, postpaid.

Easy Opera Album For the Pianoforte

This album will contain easy and playable arrangements of such favorite numbers as *My Heart at Thy Sweet Voice, Saint-Saëns; Evening Star, Wagner; I Have Lost My Euridice, Gluck; Spinning Chorus, Wagner; Soldier's Chorus, Gounod; Faust Waltz, Gounod; Carmen March, Bizet; Miserere, Verdi; Aida March, Verdi,* and many others. All of the standard operas are represented. The melodies are given as close to the originals as possible, there are no fanciful variations nor ornamentations. The original harmonies are also adhered to.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Stories Notes Can Tell
By Frances Terry

This little book is now in press and will soon be ready. The six little pieces comprising the volume are such as are used by teachers who are accustomed to look for musical value even in the easiest pieces. These particular pieces although very easy have definite musical merit and they are in characteristic vein, all of them. None are in the dance forms or in what may be termed the monophonic style. The composer is a very successful writer of pieces for the young.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Advance of Publication Offers Withdrawn

The Advance of Publication withdrawals this month include several very meritorious new works. The advance prices are withdrawn and the works are now immediately deliverable at the reasonable prices noted. Teachers, of course, are entitled to our usual liberal professional discounts. These works have been well described in previous issues and there is little need to dwell upon them at length at this time beyond stating that they are extremely satisfactory offerings and each is expected to take a place among the foremost sellers of their respective classifications. Any of these works may be secured for examination.

Album of Trills for the Pianoforte. A collection of pieces employing various forms of the trill, making it possible enjoyably to develop this particular device in technic. The pieces range from grades 2 to 5. Price, 75 cents.

Twenty-Five Melodies for Juveniles by Mana-Zucca. Delightful little melodies for young beginners. Starting with the most easy type of a piano piece the progress is nice and gradual. Texts that aid in holding interest accompany many of these pieces. This is a valuable contribution to educational material by one of the foremost woman composers of the day. Price, 75 cents.

Contemporary March Album offered in advance as *New Album of Marches.* This is a very acceptable collection for schools, lodges, gymnasiums and any other place requiring march pieces for the piano. Military, Parade and Grand Marches make up the collection. Price, $1.00.

Polyphonic Studies for Violin Classes by Oscar J. Lehrer. Harmonious three-part exercises for violin classes. Some folk tunes and selections from the masters are interspersed. All three parts are of equal difficulty. This particular book is well suited to follow the same writer's very successful *Ensemble Method for the Violin.* Price, $1.00.

Sweney's Anthem Selections. A favorite book for volunteer choirs now added to the Presser Catalog. The anthems are very pleasing, but not difficult. Price, 75 cents.

Have You Renewed Your Etude Subscription?

Nearly all subscriptions expiring with the December or January issue have been renewed, but there are still some few to be heard from. To prevent the lapse of your subscription and the loss of any numbers through the edition becoming exhausted, we have continued these names on our list, extending to our subscribers the courtesy of remitting later. If you have not already done so, please favor us with your renewal so that we can adjust the subscription as a paid one for the current year. The last six editions of the Etude Music Magazine are completely sold out, so renew promptly to prevent disappointment in securing current numbers.

Warning

Swindlers are about again. The annual crop of letters of complaint due to non receipt of magazines on subscriptions shows that frauds are working among music lovers throughout the country. Beware of strangers representing themselves as ex-soldiers, college students, workers for charitable institutions, etc., who take subscriptions for Etude Music Magazine. Pay no money to anyone not personally known to you. The agent who is honest will be glad to have you send your money direct and collect his commission from us. Furthermore, an honest man or woman can easily prove his or her authority and responsibility.

Premium and Magazine Catalogs

Did you receive your copy? If not, send us a postcard and we will send you a 1924 edition of either the premium or magazine catalog or both if you wish it. All rewards offered in the premium catalog are of standard manufacture by reputable merchants who are glad to guarantee their wares.

Rewards for New Subscriptions

All of our rewards taken from the Premium Catalog this year have proven exceptionally attractive. Here are a few that are particularly well worth working for:

Indestructible Decollete Pearl Necklace, perfectly matched and graded, 24 inches long, solid white gold soft catch, guaranteed by the manufacturer not to peal or discolor, a necklace of which you may well be proud. Only five new subscriptions.

A 24-inch Amber or Sapphire Cut Beaded Necklace, only two new subscriptions.

A Dainty Ivory Finish Electric Lamp, with metal and silk shade, choice of either old rose or delf blue, insulated cord connection. Only four new subscriptions.

Metal Bread Tray. Twelve inches in diameter, either oval or square design and mighty good looking for only two new subscriptions.

Manicure Set in a cardinal red satin-lined case, soft grey suede, real leather, containing six fittings, French ivory handles. This case must be seen to be appreciated and is indispensable when traveling. Only three new subscriptions.

Memorandum Pad. The busy teacher will find this small black leather case with reminder pad a handy article for lesson appointments and other engagements so easily forgotten. An extra pad is supplied. Only one new subscription.

Be sure to send for premium catalog showing other splendid articles given for one or more new subscriptions.

A Two Years' Subscription For $3.50

Save 50 cents by renewing your Etude Music Magazine subscription for two years instead of one. We will accept a two years' subscription to one address at a net price of $3.50, saving you a half dollar or 12½ per cent. Many successful men readily pay cash to obtain but 2 per cent. discount and Etude readers will profit greatly by taking advantage of this liberal offer.

Mail Deliveries During and After Holiday Rush

If any magazine has gone astray during the holiday rush, do not complain to the representative who took your order or the magazine subscription agency. Drop a card direct to the Circulation Department of the Etude Music Magazine. It will save a lot of time and enable us to adjust the matter. We are here to serve you and any cause for dissatisfaction will receive our careful attention.

ALBUM OF
SIX COMPOSITIONS
In Modern Style *For the Pianoforte*
BY CHARLES HUERTER
Price $1.00

This is a novelty that will prove a source of delight to every pianist. Mr. Huerter, one of the best contemporary composers, has made some interesting experiments in ultra-modern methods of harmonization and these pleasing fourth and fifth grade pieces are the result. At no time, however, does the composer lose his vein of original melody and while the harmonic treatment is unique the compositions are always interesting and playable. They should go very well as recital numbers.

Theo. Presser Co. 1710-1712-1714 Chestnut St. **Phila., Pa.**

VIRGIL PORTABLE
KEYBOARD
For Pianists and Piano Students
Invaluable to Traveling Pianists and Indispensable to Pianists and Students Living in Apartments, Hotels or Small Rooms.

JUNIOR ETUDE

CONDUCTED BY ELIZABETH A. GEST

Musical Terms

This list was begun last month and will be continued. Copy the words in your note book.

Barcarolle—a composition imitating to a certain extent the boat songs of the gondoliers. Generally in 6-8 time.

Ben—(or bene) well, as *Ben Marcato*, well marked, or well brought out.

Berceuse—a cradle song or lullaby.

Bravura—brilliancy, boldness.

Bis—twice. Sometimes written over measures that are to be repeated.

Cadence—a succession of chords forming a close to a composition, or to a division of a composition.

Cadenza—a brilliant and usually rapid passage introduced on a pause in the harmony.

Calando—dying away in tone and speed.

Cantabile—in a singing style.

Cantata—a small oratorio (that is, a composition for chorus, and solo voices, usually with orchestral accompaniment). The words of a cantata are generally secular, while those of an oratorio are sacred.

Listening to Others

Are you a good "listener?"

You know a great many people like to talk, and do so incessantly, but are quite impatient when other people talk. You probably know lots of people of this variety.

There are some people just like this in music, too. They love to play or sing, and perhaps do so rather well, but the trouble is they think that they do it better than anyone else, and would rather have people listen to them, than listen to any one else themselves. Are you one of these people?

You know, no matter how well you play or sing, or how pleased your teacher may be with your work, you can always learn something by listening to others.

You may hear someone play one of your numbers, and even if they play it poorly on the whole, yet there may be some detail which they play better than you do yourself, and you should listen attentively and try to get some new ideas from listening that would improve your own playing.

Of course if you have the opportunity to hear a great artist, you must really know how to *listen* or the opportunity would be wasted.

Learn to be a good listener, whether the player be much better than you yourself or not, and this will help you to become a good player.

Do Your Musical "Bit"

Music helps the world to go
Through its daily grind,
So sing your songs with all your heart,
'Twill help a lot, you'll find.

Dear Junior Etude:

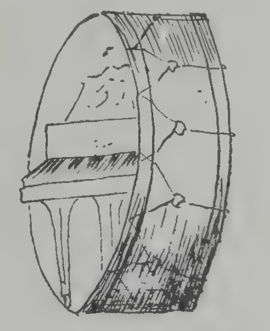
Will you please pronounce the name of the composer, Trygve Torjussen.—L. H. (Age 16), Georgia.

Answer. Pronounce, Trig-vay Tor-yus-sen.

The Piano Complains

By Marion Benson Matthews

"I am *not* a bass drum," remarked the Piano, suddenly, in an indignant tone. Jane, too frightened to speak, sat with her hands poised in air. "I've stood this banging just as long as I can," continued the Piano. "I don't know whether it's because you children have a grudge against me, or whether you're merely thoughtless, but every time you sit down before me you pound, pound, pound my keys until I ache in every joint. It's high time we pianos went on a strike; we ought to receive more considerate (not to say sensible) treatment."



"I am not a bass-drum," said the piano.

"Yes," admitted Jane, "and I do try to remember."

"Well, you don't try hard enough," retorted the Piano. "That's one reason why I spoke to you. You don't often hear a Piano speak, do you?"

"I've never heard one before," said Jane.

"Then you'll be all the more likely to remember it," replied the Piano. "I beg you, however, not to go to the opposite extreme, and try to play a march, or a brilliant caprice as softly and dreamily as you would play a lullaby—although I think there is not much danger of that. I merely ask you to use a little judgment and not to bang my poor keys from the moment you sit down at the keyboard. If I see that you are forgetting, I shall speak to you again some day."

What Happened to Cynthia

Once upon a time, in the Land of Music, there was a little girl who took piano lessons. Her teacher was a very good teacher, and her piano was a very good piano, and her mind was a very good mind; but still she did not learn to play well.

She could not understand why it was thus, and she used to complain to her Musical Fairy about it, for in the Land of Music every pupil had a fairy to help them.

"Oh Musical Fairy!" she would say, "why is it that I do not play better? I have a very good teacher, and I have a very good piano, and I am not stupid, am I?" And the Fairy would answer and say, "Yes, Cynthia, you have a good teacher and a good piano and you are not stupid. But, you know, piano playing will not come without work—without real, hard practice—and that is your trouble. You do not practice well; so I am afraid that you will never learn to be a good player."

Cynthia felt very sorry, but she did not see what she could do about it, so she said, "Well, then, I suppose I will never learn to play, for I really cannot be bothered practicing."

"Oh, but Cynthia, you must. Think what a terrible thing you are saying! Think what a great pleasure and power you are denying yourself. Take back those words Cynthia, please."

But Cynthia would not take them back. She was lazy and she did not want to be bothered practicing.

"Think how wonderful music is," pleaded the Fairy. "Think how wonderful it is to be able to play and make beautiful music."

But Cynthia did not care. "If I have to practice," she said, "I hope I will never hear any more music," and she ran away down the field by the brook and laid down in the deep grass.

The little brook flowed on by her feet, over the stones, and made little waterfalls, but never a sound of the brook's music could she hear. "Oh, dear me!" she said. "I must be getting deaf." And the little birds came and sat in the bushes near her and sang, but never a sound of their music did she hear. "Oh, my!" she said in alarm, "I really must be getting deaf."

Then she ran back to her house, and saw her sister practicing her violin; but never a sound of the music did she hear. Then she began to cry and call for her Fairy.

"Oh, Fairy!" she cried, "what has happened? I cannot hear the song of the brook, nor the song of the birds, nor the sound of my sister's violin, and I am so sad."

"Well, Cynthia," said the Fairy, "you said that you hoped you would never hear the sound of music again. I am sure that you are sorry now for saying that you would not practice, are you not?

"Yes, and Fairy, I really did not mean it. I am going to practice two hours every day until I grow up, and I am going to be a fine musician some day. You just wait and see!"

Do-Re-Mi

By Leona I. Coddington

Do-re-mi!
I can't see
Why Do and Re should
Play with Mi;
For they live farther
Down the street,
And always seem
Quite incomplete!
And Fa and Sol and
La and Si!
Such funny folks,
Dear me! dear me!
But when we get in
Line just so—
We make the sweetest
Songs,—you know!
But one-two-three
And Do-re-mi!
It doesn't seem
Just play to me!

Enjoy Your Practice

Do you enjoy your music lesson? Of course you do—everybody does. Do you enjoy hearing others play? Of course you do, and you enjoy playing yourself, don't you? But to play well, so that it becomes a real joy to do, as well as to listen to, you must do lots and lots of practicing.

Most musicians, and in fact all the good ones, enjoy their practicing thoroughly. Do you? If not, it is probably because you are not practicing correctly. There is a good way and a bad way to practice; and to do it correctly you must exercise that part of your gray matter called "will."

You know your will is very powerful, and its power must be directed correctly.

When you sit down to practice, say to yourself, "I *will* to practice well. I *will* that I shall practice correctly. I *will* that I shall practice with all my heart. I *will* that I shall concentrate on what I do."

Then your "will" will be the boss and it will be a good boss, too, and your practice will be enjoyable and worthwhile.

JUNIOR ETUDE—Continued

Junior Etude Competition

The Junior Etude will award three pretty prizes each month for the best and neatest original stories or essays and answers to puzzles.

Subject for story or essay this month—*"Do animals like music?"* Must contain not over one hundred and fifty words. Any boy or girl under fifteen years of age may compete, whether a subscriber or not.

All contributions must bear name, age and address of sender written plainly, and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pa., before the tenth of February. Names of prize winners and their contributions will be published in the issue for April.

Rules: Put your name and age on upper left-hand corner of paper; and address on upper right-hand corner of paper. If your contribution takes more than one piece of paper do this on each piece.

Do not use typewriters.

Competitors who do not comply with all of the above conditions will not be considered, and their names will not appear in the honorable mention list.

Honorable Mention for Essays

Marguerite Kreiner, Jean Wright, Beatrice Fay Frackman, Thelma Thoresen, Ernestine Buck, Lucille Hill, Walter Marland, Gladys Donnely, Bebe Alloway, Kathryn Melsberger, Richard Hawkins, Elizabeth Boston, Jessie Steele, Margaret Wait, Mildred McDaniel, Edith Crawford, Lillian Lehman, Thusnelda Bauer, Bernice Breneman, Hazel Gabbert.

(Only those who followed all of the contest rules are included in this list.)

THE KIND OF MUSIC I LIKE BEST
(Prize Winner)

Music is a method of expressing thoughts which can not be expressed in words, gestures or writing, nor in such arts as painting and sculpture. Therefore the kind of music I like best is that which I can use in my everyday life. I do not care much for the ultra-modern music because it seems that the person who plays it can merely perform a mechanical act and can not portray any true emotions. I am partial to the older classics; for to my mind, they not only have beautiful melodies, but they offer more opportunities to express our emotions and feelings. I like best the simple melodies that appeal to the hearts of everyone, whether educated or not, and which tend toward the formation of higher ideals.

Marjorie Young (Age 14),
Arkansas.

THE KIND OF MUSIC I LIKE BEST
(Prize Winner)

It might seem foolish for me to write about the kind of music I like best when I really do not like any kind the best. Of course, there are certain pieces I like better than others; but when it comes to a choice between soft sweet music, and loud sprightly music it all depends on the mood I am in at the time. When I am happy the first who knows it is my old friend the piano, for I tell it so by a lively piece. When I am angry I tell my friend the piano about it with a loud chord. I love all kinds of music with all my heart and hope I will never like any particular kind the best.

Beatrice Wilson (Age 13),
Maryland.

THE KIND OF MUSIC I LIKE BEST
(Prize Winner)

We have many kinds of music, classical and otherwise; but I like one kind of music that has no name of its own, but may well be called classical, and that is the music of the birds. Some summer day, just to listen to our feathered friends caroling their good morning song is indeed an inspiration. Each note of their song is in harmony with the last. And besides, the birds out-of-doors, we have the canary in the cage, warbling away from morning 'til night. Oh, how many ways nature provides for us to hear good music! and that is the music I like best.

Helen Allen (Age 12),
South Carolina.

Question Box

Dear Junior Etude:

I have never seen music written in the key of seven flats or seven sharps. Is music written in these keys, and if not, why not?
—A. P. (Age 12), Washington.

Answer. Occasionaly you will come across music written in these keys, but not frequently. The reason is that the key of seven flats is the key of C flat, which on the piano is the same as the key of B with five sharps, and it is easier to use the five sharps than the seven flats for the same notes. In the same way, the key of seven sharps is the key of C sharp, which is the same as the key of D flat, and it is easier to use the five flats than the seven sharps. This change of notation for the same key is called "enharmonic change."

Dear Junior Etude:

I enjoy The Etude very much. In the spring a musical contest was held in our town, and a baby grand piano was the prize for the one who played the best. One hundred and four people played in the contest, and fourteen played in the finals. George Perkins won the contest.

From your friend,
Helen Thomas (Age 12),
Penna.

Puzzle Corner

There were forty-eight mistakes in the December puzzle. Frances Gertrude Jones found thirty-seven, and told what each one was, as was required in the rules. Edith Cranford found twenty-seven, and also told what each one was. Kathryn Malsberger found the same number and told what they were.

However, many others sent in the number they found but did not tell what they were, and still others sent in corrected copies of puzzles not even saying how many mistakes they found. No one need expect to have their work considered for prizes unless all of the rules of the contest are observed.

Prize Winners for Mistake Puzzle

Frances Gertrude Jones (age 13), Indiana; Edith Cranford (age 12), Alabama; Kathryn Malsberger (age 11), Pennsylvania.

Honorable Mention

Evelyn Gillings, Estelle Manning, Ruth Fox, Helen Fox, George Thompson, Katherine Clement, Marjorie Black, Beatrice Johns, Claire Cummings, Fay Fontaine.

(Only those who followed all of the contest rules are included in this list.)

Letter Box List

Letters have been received from the following: Gertrude McKay, Grace McGee, Dorothy Query, Emma Beatty, Clementine Wohlheter, Marjorie Tipton, Lucile Hill, Florence Green, Christine Cole, Rosella Sassaman, Lou Ernestine Buck, Faye Edmond, Mary Evelyn Shirley, Inez Thompson, Daniel Robins, Alice G. Dees, Leona Carr, Narian Tary Head, Marjorie Tyre, Doris Mary Stewart, Ada Margoles, Alvina Johnson, Frances Par, Ethlyn Marten, Robert Everly, Ethlyn Ford, Mabel Root, Madeline Chardon, Carolyn Kloeppel, Alberta Mary Sites, Margaret June Peeters, Martha Margaret Jones, Elizabeth McClung, Dorothy Parrish, Juanita Whitney, Lucile Crabb, Nell Wiess, Leroy Baird, Vera Pearl Zscheile, Helen C. Olsen, Thelma Bennett, Marjorie Hazard, Eleanor K. Harper, Mildred Pattison.

I don't see why some people say
That scales they just abhor,
Because I like to play my scales so much
I'm always wanting more!

Frederic Chopin

Born, Zelazowa Wola, 1810. Died, Paris, 1849.

"Incomparable composer for the piano" to which he devoted his whole life and talent. He liberated the piano from orchestral and choral influences and gave it a proud position by itself. Schumann called him "The boldest and proudest spirit of the time."

Etude Portrait Series

AN EXTRAORDINARY OFFER

EVERYTHING for the GARDEN IN EXCHANGE FOR ETUDE SUBSCRIPTIONS

Let us supply you with beautiful flowers, luscious fruits and nourishing vegetables for your garden from spring to fall. We will send you any collection which you may select on receipt of the number of new subscriptions shown opposite your selection.

16 Packets Flower Seeds, one new subscription

1 Pkt Aster	1 Pkt Mignonette
1 Pkt Sweet Peas	1 Pkt Morning Glory
1 Pkt Candytuft	1 Pkt Nasturtium
1 Pkt Calendula	1 Pkt Poppy
1 Pkt Calliopsis	1 Pkt Scabiosa
1 Pkt Cosmos	1 Pkt Sweet Alyssum
1 Pkt Larkspur	1 Pkt Zinnia
1 Pkt Marigold	1 Pkt Oriental Flower Garden

16 Packets Vegetable Seeds, one new subscription

1 Pkt Beet	1 Pkt Onion
1 Pkt Bean	1 Pkt Parsley
1 Pkt Cabbage	1 Pkt Parsnip
1 Pkt Carrot	1 Pkt Radish
1 Pkt Cucumber	1 Pkt Sweet Corn
1 Pkt Lettuce	1 Pkt Squash
1 Pkt Muskmelon	1 Pkt Turnip
1 Pkt Watermelon	1 Pkt Tomato

12 PALMETTO ASPARAGUS—one new subscription (large one year old roots).

8 APPLE TREE, grafts with heavy one year branched roots, 2 Delicious, 2 Wealthy, 2 Yellow Transparent and 2 Jonathan, one new subscription.

8 BERRY PLANTS, 4 Lucretia Dewberry, 4 St. Regis Red Raspberry, one new subscription.

6 CUMBERLAND BLACK RASPBERRY PLANTS, the largest and best black cap grown, these plants will grow in any climate, one new subscription.

6 EL DORADO BLACKBERRY PLANTS, Berries are large, very sweet and of delicious flavor. It has never known to winter-kill, one new subscription.

8 PROGRESSIVE EVERBEARING STRAWBERRY PLANTS, one new subscription.

6 ONE YEAR OLD GRAPE VINES, 2 Concord, 2 Niagara, 2 Moore's Early, one new subscription.

One 2 year old Plum Tree, improved sugar.
Two 2 year old Apple Trees.
One 2 year old White Walnut or Bitter Nut.
Three 3 year old Grape Vines, (Concord).
One 2 year old Peach Tree.
All for two new subscriptions.

8 ROSES OF SHARON, These beautiful roses are very easily grown and will bloom the first year, one new subscription.

12 THUMBERG BARBERRY ONE YEAR PLANTS. This is not the Russian barberry. but is a very beautiful plant and is used for making ornamental hedges, one new subscription.

10 BEAUTIFUL SHRUBS, 2 year old plants. Nothing improves a home more than ornamental shrubs and these will prove a source of great pleasure indefinitely, 1 Purple Lilac, 2 Golden Bell, 2 Roses of Sharon, 2 Hall's Japan Honeysuckle, 1 Spirea Van Houttei, 2 Flowering Catalpa, all for one new subscription.

12 ASSORTED ORNAMENTAL BULBS, 2 Hyacinths, 4 Narcissus, 4 Tulips, 2 Freesias, only one new subscription.

5 LOVELY ROSES, one year old, strong, healthy, with good roots:

2 Joan of Arc, beautiful white.

"A Skin You Love To Touch"
painted by R. F. Schabelitz

You, too, can have A skin you love to touch . . .

SLEEP—fresh air—the right food—all these help to maintain the general tone of your skin.

But good health alone will not insure a good complexion. Many conditions that seriously detract from the appearance of the skin, such as blackheads, blemishes, excessive oiliness, etc., are of purely local origin.

Give your skin itself special care, if you want it to be smooth, soft, delightful in texture and color.

Each day your skin is changing

You *can* have a lovely skin, if you will. Each day your skin is changing—old skin dies and new takes its place. By giving this *new* skin special care, you can actually make your complexion over—you can give it a clearness and smoothness it has never had before.

You will find the special treatment your skin needs in the booklet of famous skin treatments, *"A Skin You Love To Touch,"* which is wrapped around every cake of Woodbury's Facial Soap.

Get a cake of Woodbury's today, at any drug store or toilet goods counter, and read, in this booklet, just how to take care of your skin. Learn how to free it from such defects as blackheads, blemishes, conspicuous nose pores, excessive oiliness, etc. Even a week or ten days of the right treatment will bring about a marked improvement in your complexion.

A 25 cent cake of Woodbury's lasts a month or six weeks for general toilet use, including any of the special Woodbury treatments. The same qualities that give Woodbury's its beneficial effect in overcoming common skin troubles make it ideal for general use. Woodbury's also comes in convenient 3-cake boxes.

Three Woodbury skin preparations—guest size—for 10c

The Andrew Jergens Co.,
5602 Spring Grove Ave.,
Cincinnati, Ohio

For the enclosed 10 cents—please send me a miniature set of the Woodbury skin preparations containing:

A trial size cake of Woodbury's Facial Soap
A sample tube of Woodbury's Facial Cream
A sample box of Woodbury's Facial Powder.
With the treatment booklet, "A Skin You Love to Touch."

If you live in Canada, address The Andrew Jergens Co., Limited, 5602 Sherbrooke St., Perth, Ontario. *English Agents:* H. C. Quelch & Co., 4 Ludgate Square, London, E. C. 4.

Suggestions for

Commencement and Baccalaureate Music

THE time is ripe for selecting music for Graduation Exercises. Supervisors may secure any of the numbers below for examination. These lists are worthy of careful note since many excellent new publications are brought to attention in addition to established favorites of previous years.

COMMENCEMENT CHORUSES

A few suitable two, three and four part choruses are here listed. Space does not permit showing many other excellent choruses.

Catalog No.			School Grades	Price

The World of Music

Jacopo Peri's "Euridice" was recently revived at the Pitti Palace, Florence, during the second Italian Musical Congress. The first performance took place three hundred and twenty-three years ago, at the festivities attending the marriage of Maria di Medici and Henry IV of France; and it is generally recognized as the first opera ever given public performance.

The Guitar is a "Bourgeoise" Instrument, by a ruling of the Soviets, according to a quotation in the London *Musical Standard* from a Moscow newspaper. It would be interesting to know the social position of the Ukelele, the Saxophone, or the Jazz Drummer's outfit.

Giuseppe Gallignani, Director of the Conservatory of Milan, died in December. Born at Faenza in 1851, he was for thirty-two years director of the famous school to which he gave the name of "Verdi Conservatory" in honor of the eminent composer.

Mme. Julia Claussen, the eminent Swedish contralto of the Metropolitan Opera Company, recently gave a program at the Royal Palace of Stockholm, by invitation of King Gustav and Queen Victoria. Also she has received the Christine Nillson Medal from the Royal Academy of Stockholm.

W. A. Clark, Jr., has been voted "The most useful citizen of Los Angeles" by the Realty Board of the city. This came as a recognition of his services as the founder and sole guarantor of the Philharmonic Orchestra of Los Angeles; and at a banquet as a token of his choice the board also presented to him a service watch.

"Dido and Aeneas," an opera by Henry Purcell, written in 1680 for the "Young Gentlewomen" of Mr. Josiah Priest's boarding school at Chelsea, has had a New York performance by the Society of the Friends of Music.

$250 in Prizes is offered by the Ohio Federation of Music Clubs for the best Anthem, Piano Solo, Violin Solo with Piano accompaniment, and Secular Song. Open to Ohio Composers. Particulars from Mrs. W. D. Crebs, 71 Oxford Avenue, Dayton, Ohio.

Rev. Sabine Baring-Gould, widely known in England as a novelist and church historian, and principally in this country as the author of "Onward Christian Soldiers" and "Now the Day is Over," lately passed away at the age of eighty-nine.

Frank J. McDonough celebrated on Christmas day, last, his fortieth anniversary as Organist of St. John's Church, Rensselaer, New York. The event was the occasion of a public reception to the musician, who received a purse of four hundred dollars as a mark of appreciation of his services.

Four "Premieres" for New York was the record of the week beginning January 6. Laparra's "La Habanera" and Riccitelli's "I Campagnacci" had their first American performance at the Metropolitan; while d'Albert's "Die Toten Augen" and Kienzl's "Evangelimann" were presented by the Wagnerian Opera Company at the Manhattan.

Alfred Gruenfeld, internationally known as composer and pianist, died recently at his home in Vienna.

The American Society of Composers, Authors and Publishers, to which a number of prominent music publishing houses belong, has forbidden the broadcasting of their publications except on the payment of a royalty. The Theodore Presser Company has not yet joined this combination.

"St. Katharina," the first opera ever produced in the German language, has been discovered in the archives of the Salzburg Municipal Museum. It was first performed at the Episcopal castle of Hellbrunn, near Salzburg, on August 31, 1617—ten years before the premiere of "Daphne" by Heinrich Schutz, which had hitherto been credited as the first opera given in German.

The Atlantic City High School (New Jersey) has lately installed probably the largest and most complete organ in any such school of the world. It was designed by Senator Emerson L. Richards of that state, an organ enthusiast.

Scottish Sang Schules were instituted as far back as 1280, established for the training of choristers. The last came to an end with the Siege of Dundee in 1651. This has lately been revived for the best singers of the four Dundee academies.

"Paderewski the Artist," one of a series by the American sculptress, Malvina Hoffman, has been presented to the American Academy of Rome by Mrs. Henry Fairfield Osborn.

An Electric Orchestra Director, designed to synchronize the moving picture and its musical accompaniment, has been invented by S. W. Lawton of the Keith-Moss theaters. The musical cues are signalled by the operator of the projector.

"The Cave of Salamanca," an opera-bouffe by Bernhard Paumgartner, founded on the famous comedy by Cervantes, has been very successfully brought out in Germany.

Apathy of the German Residents of New York towards the season of performances by the Wagnerian Opera Company is given by the officers of that organization as the cause of its financial troubles, according to *Musical America*. Their season closed in the second week of January.

A. F. Adams, for many years the president of the Wolfsohn Musical Bureau, died on January 6. Mr. Adams performed a notable service for American music in the publishing and managerial fields.

"Hassan," a wonderful blend of fine poetry, gorgeous scenry, color, and music, is having a great success at His Majesty's Theater in London. The play is by the British poet, James Elroy Fletcher, and the music by Frederick Delius.

John N. Burnham, the blind composer and organist of New York, has been awarded the prize offered by the Hymn Society for the best setting of Rev. Harry Webb Farrington's "Harvard Prize Hymn," *Our Christ.*

The new Kroll Opera House of Berlin is to have its three hundred dressing rooms and its restaurant fitted out with chandeliers and furniture from the former royal palaces.

Henry Hadley is to conduct the first British performance of his "Resurgam," which is to be given by the London Choral Society and the London Symphony Orchestra. It was first produced at the last Cincinnati May Festival.

"The Night Bell," an operetta by Donizetti, was recently performed for the first time, from the original manuscript, at Breslau.

An Unusual "Messiah" Record is that held by the Halle Choral Society of Manchester, England, which has to its credit an unbroken chain of annual performances of this masterpiece, since 1859.

A National Conservatory of Music is to be established, if a bill lately introduced in congress becomes a law. The National Conservatory would be under the direction of a Federal Department of Education, for which a bill provides and of which Department the Secretary would be a member of the President's Cabinet.

Plenty of Money in Vienna. $110 was recently offered in vain for a box at the "first night" of Oscar Strauss' new operetta, "The Pearls of Cleopatra," at the Theater am der Vien.

Maurice Maeterlinck, distinguished Belgian novelist, from whose works the libretti of "Pelleas et Melisande" and "Monna Vanna" were made, is reported to contemplate a visit to America.

Brigadier General Charles G. Dawes, formerly Director of the National Budget and now Chairman of the Committee of Reparations, is a talented musical amateur, his "Melody in A Major," for violin, having been many times on the programs of Fritz Kreisler, who has also made a Victor record of it.

"The National Federation of Music Clubs as a Constructive Force in America" is the topic proposed for discussion in an essay competition in which the federation offers one hundred dollars for the best essay submitted before May 1.

Count Geza Zichy, famed as a one-armed pianist, died in Budapest on January 15th. A child prodigy, he lost his right hand on a hunting expedition when fourteen years of age, but carried his development of the left hand to such a point as to win fame as a performer. He has also produced notable compositions, along with the practice of law.

Reed Miller, one of our best tenors in concert and oratorio, passed away at his home in New York, on the afternoon of December 29th. He was a native of Anderson, South Carolina, and had filled a number of leading church positions in New York.

The Opera Season at Tunis recently closed brilliantly with performances of "Thais" and "La Tosca."

The Sixtieth Anniversary of Richard Strauss is to be celebrated this year at Munich.

Italo Montemizzi, on the evening of January ninth, was presented a silver wreath from the management of the Metropolitan Opera House, in honor of the tenth anniversary of the premiere of his tragic opera, "L'Amore dei Tre Re" at that famous institution.

Alfred Piccaver, the American tenor, who has for several years been a favorite at the Vienna Opera, made his American debut, as the Duke in "Rigoletto," at the Auditorium in Chicago, with marked success, in January.

Gustav Dannreuther, violinist, prominent for many years as a member of leading chamber music organizations, especially the Mendelssohn Quintet Club of Boston, died at his home in New York on the twentieth of December. He was a native of Cincinnati, Ohio, but had resided in New York since 1884.

Albert Coates, the distinguished English conductor, has arrived in America to have charge for three months of the Rochester Symphony Orchestra at Rochester, New York.

A new State Opera, Theatre Smetana Museum, Conservatory, and great Concert Hall, at a cost of 31,000,000 kronen, are planned by the city of Prague. Otokar Rovotny has been commissioned to draw plans which, the report would indicate, are to include all the above under one roof.

The National Association of Harpists will hold its Fourth Annual Convention in Indianapolis, some time in May, 1924.

Grand Opera for Cleveland, Ohio, during a part of February, is rumored. The organization is under the auspices of the Musical Arts Association, and Mary Garden, Feodor Chaliapin, and Rosa Raisa are among the guest artists announced.

When Mattia Battistini recently appeared at the National Opera in Berlin the house sold out with most of the seats at six to twelve dollars each. Why ask other nations to feed them?

Geraldine Farrar, Galli-Curci, Dame Clara Butt and Josef Hofmann recently appeared simultaneously in Chicago; and each is reported to have appeared before a "sold out" house.

The Lincoln Cathedral Organ is being rebuilt. The great pipe of the 32 ft. open bass is made of timber three inches thick and is of dimensions 3 ft. 2 in. by 2 ft. 9 in., so that a man would not be crowded in crawling through it on his hands and knees.

B. W. Foley, one of the leading vocal teachers of Cincinnati, and long the chorus master of the Cincinnati May Festival, passed away on January first. A native of Covington, Kentucky, he was educated mostly in Leipsig, Brussels and Paris.

"The King," a Christmas oratorio by E. Bruce Knowlton, the American composer, was given its first public presentation on December 28th, by the Portland (Oregon) Singers' Association, with a chorus of some four hundred and fifty voices.

(Continued on Page 209)

University Extension Conservatory

CHICAGO, ILLINOIS

The Leading and Largest Conservatory of Music Offering Extension Courses

Recently inspected by the Illinois State Examining Board and the Superintendent of Public Instruction of the State of Illinois. Full recognition to be given this institution at the completion of certain minor changes in the Advanced Courses. These changes are in the process of making and will be completed within a few weeks.

Courses for teachers of Piano, by Wm. H. Sherwood and Public School Music by Frances E. Clark—Courses leading to Diplomas and the **DEGREE OF BACHELOR OF MUSIC.** ***Harmony, Advanced Composition, History of Music, Choral Conducting, Piano, Violin, Cornet, Organ, Mandolin, Guitar and Banjo Courses***—all by eminent teachers.

No matter where you live, what your previous musical training has been, whether you are an established teacher or one just preparing to teach, you cannot afford to fail to get the benefit of our special terms.

More than 150,000 ambitious men and women have gained proficiency in these various branches of music by the University Extension Method. And to you we offer the same advantages which were given to them.

Opportunity can either make or destroy

Some day, you say to yourself, your opportunity will come. And it will. It comes sooner or later to almost every one, giving him the chance to do bigger things and make larger profits than ever before.

Most people want success, but don't know how to get it

Most people seeking success are sincere enough in their desires — but they don't know the way.

Working blindly, groping in the dark, struggling against *trained thinkers*, is placing a tremendous handicap upon the person who *wants* to succeed but who lacks definite, certain knowledge of the fundamentals that underlie all music.

Special affiliation with noted Chicago College for residential work gives our graduates credit for Extension Courses. ***Full details and catalog sent on request.*** Address the Registrar for sample lessons from the course which interests you. Write a letter if you wish. Tell of your previous experience and what your plans are for future study.

If you are ambitious—sincere in your desire to enlarge your class, work for Teacher's Certificate and Degree, you will be benefited greatly by these lessons. Samples sent to "ETUDE" readers, without obligation.

THE ETUDE

MARCH, 1924 Single Copies 25 Cents VOL. XLII, No. 3

The Etude's Most Significant Symposium

The honor conferred upon The Etude by the contributions and opinions we are privileged to present on the following pages is appreciated with heartfelt sincerity.

It is doubtful whether so many men and women of international renown in music have ever coöperated hitherto in a symposium of such wide human interest. Many of those who have participated are destined to immortal fame.

In soliciting the opinions of these musicians upon the ten greatest masterpieces of the art, they were assured that we would tell our readers that we thoroughly realize that the opinion of any one person merely stated that individual's personal preferences. The interest is in the consensus of many opinions. Thereby we might make a list of the great works which every music worker should strive to hear.

We also assured them that we would tell you that we realize that, with the great wealth of material, there are far more than ten great masterpieces. Yet every thinker has his natural preferences; and these preferences taken in the aggregate have a real significance in reflecting contemporary opinion of eminent musical minds upon the state of musical appreciation in this first quarter of the Twentieth Century.

We have noted the country of the birth of each of the contributors. The eleven countries represented in this World Court of Eminent Musicians are tabulated thus:

United States of America	8	France	1
Russia	4	Belgium	1
England	3	Spain	1
Italy	2	Germany	1
Poland	2	Austria	1
Australia	1		

All of those participating are "cosmopolitan" in their views. They represent many branches of the musical profession, thus:

Conductors	3	Educator	1
Pianists	7	Publicist	1
Composers	8	Singer	1
Organists	3	Violinist	1

Naturally many of the pianists, organists and conductors are also composers; but we have classed as composers only those who devote most of their time to that line of work.

Whatever the result of this most unusual symposium, it is sure to set many minds a-thinking. Few will agree with the results as we tabulate them below. Some of the contributors who have replied have "thrown up their hands" and declared the inquiry impossible. Others equally famous have realized that a statement of preferences would hold the mirror up to contemporary musical opinion. Note the word "contemporary." Mr. John Alden Carpenter in his reply has wisely called the reader's attention to this. This is the consensus of the opinions of twenty-six of the biggest minds in active musical work upon musical art at the present—not yesterday or to-morrow.

Of course, personal opinions, nationality, training, friendships, traditions, and so on, all affect the individual. This human aspect makes the problem more interesting. It is the consensus of opinion that really counts. Where a great many minds run in the same direction the results must be significant.

Our own opinion would differ from those of many who have contributed. We should have felt that one of the majestic Sonatas of MacDowell, as well as some of the other momentous works of American composers whose names we cannot very well recite here because of the taboo on comparisons of the works of living composers, might have been included in this list. Note, however, that American-born music workers and others long resident in this country have been included among those who have contributed opinions. As it is, apart from Mr. Kelley's "Paradise Lost," the only other American works that are even mentioned are two which are unquestionably masterpieces of their type, "Suwanee River," and "The Stars and Stripes Forever," which the composer himself pertinently adds to his list. It is true that these works are masterpieces in their class. They probably have a wider currency than any of the other masterpieces.

Of the countries represented Germany appears 171 times; France, fifteen; Russia, eight; Poland, eleven; Italy, five; Belgium, six; England, five; Hungary, four; America, three; Norway, two; Bohemia, one. Remember, however near this may be to an indication of the actual musical taste of the time, it is the statement of preferences of twenty-six men and women familiar with the great music of the world, many of whom have been musical globe-trotters most of their lives. That it has a significance is unquestioned. If it is a reflection of real conditions: the world's musical debt to Germany is infinitely greater than to any other country.

The composer whose name appears most frequently is Ludwig van Beethoven, who is mentioned thirty-six times.

The list would appear as follows:

Beethoven	36	Chopin	12
Wagner	33	Schumann	12
Bach	24	Mendelssohn	8
Mozart	14	Tchaikowsky	8
Brahms	14	Debussy	7
Schubert	13	Bizet	7
Franck	7		

Of the masterpieces enumerated the following lead: Die Meistersinger, 14; Mass in B Minor of Bach, 10; Fifth Symphony, 9; Tristan and Isolde, 9; Ninth Symphony, 7; Carmen, 7; Sixth Symphony *(Pathetique)* Tchaikowsky, 5; Don Giovanni, Mozart, 4; First Symphony, Brahms, 4; Violin Concerto of Mendelssohn, 4; Sonata in B-flat minor, Chopin, 4; Piano Concerto, Schumann, 4; L'apres Midi d'un Faune, Debussy, 4; Sonata, Opus 111, Beethoven, 4; Seventh Symphony of Beethoven, 4; St. Matthew Passion, 4; Unfinished Symphony of Schubert, 4; Schubert's *Erlking*, 4; Parsifal, 4.

This music should be heard, at least, by all students and lovers of music, either direct or through the phonograph renditions. We regret that more of the modern composers are not represented. The modern Italian art-works, Verdi's "Falstaff" and Puccini's "Madama Butterfly," surely deserve to be recognized as immortal creations.

One significant fact is that most of the masterpieces enumerated were produced before 1850. The only really modern work in the lead is Debussy's "Afternoon of a Faun."

What makes a masterpiece is about as difficult to define as what makes a master. Possibly, only a master who can interpret the work of another or who can create a masterpiece is entitled to an opinion upon the subject. Perhaps you will remember the clever scorn of Benvenuto Cellini in his retort to his prince who had criticised one small section of his work without considering it in reference to the whole. Cellini told him none too mildly that only the master was entitled to understand the whys and wherefores. It is for this reason that this symposium is of particular value. All of those participating are recognized as masters in their callings and their choice reveals that there is some consensus of opinion upon certain works which stand out above others more prominently, and can be regarded as the greatest masterpieces.

LEOPOLD AUER

Master Teacher of the Violin

(Born, Veszprem, Hungary.)

Replying to your request, I am glad to send you herewith the list of ten of my favorite musical masterpieces.

J. S. Bach (1685)—Mass in B Minor........*Germany*
L. van Beethoven (1770)—Ninth Symphony.*Germany*
J. Brahms (1833)—Quintet in F Minor for Piano and Strings......................*Germany*
J. Brahms (1833)—First Symphony in C Minor *Germany*
R. Schumann (1810)—Concerto for Piano....*Germany*
F. Mendelssohn-Bartholdi (1809)—Concerto for Violin ....*Germany*
R. Wagner (1813)—"Lohengrin"...........*Germany*
R. Wagner (1813)—"Meistersinger"........*Germany*
F. Liszt (1811)—"Faust" Symphony.......*Hungary*
P. I. Tchaikowsky (1840)—Sixth Symphony *(Pathetique)* ....*Russia*

MME. FANNIE BLOOMFIELD-ZEISLER

Distinguished Austro-American Pianist

(Born in Bielitz, Austria, but resided in America since early childhood.)

It is almost impossible to narrow one's favorite compositions down to ten, still more the Greatest Musical Masterpieces. I am jotting down a few that come to my mind this minute; but I will not say that there are not scores of others that rank just as high. I should prefer to head my list with some statement to that effect unless you suppress the names altogether. I am rather ashamed of my list when I remember how many giants I have left out.

F. Chopin (1810)—B Minor Sonata, Op. 58....*Poland*
R. Wagner (1813)—"Die Meistersinger"....*Germany*
L. van Beethoven (1770)—Fifth Symphony (C Minor)..............................*Germany*
R. Schumann (1810)—Piano Quintet........*Germany*
F. Schubert (1797)—"Erlking".............*Germany*
F. Mendelssohn (1809)—Violin Concerto...*Germany*
L. van Beethoven (1770)—Sonata, Op. 111..*Germany*
R. Schumann (1810)—Piano Concerto......*Germany*
G. Bizet (1838)—"Carmen"..................*France*
J. Mozart (1756)—G Minor Symphony......*Germany*

JOHN ALDEN CARPENTER

Eminent American Composer

(Born, Park Ridge, Ill., U. S. A.)

I enclose a list of ten works which seem to me close to indispensable. This would have been a very different list ten years ago, and I am sure that ten years hence it might be something very different. A list of this nature must always indicate at any given moment merely a survival of the fittest.

J. S. Bach (1685)—B Minor Mass..........*Germany*
L. van Beethoven (1770)—Seventh Symphony *Germany*
Irving Berlin—Everybody Step..............*Russia*
Georges Bizet (1838)—"Carmen"............*France*
Fr. Chopin (1810)—C-sharp Minor Polonaise.*Poland*
C. Debussy (1862)—"Pelléas and Mélisande"..*France*
M. Moussorgsky (1835)—"Boris Godounoff"..*Russia*
I. Stravinsky (1882)—"Petroushka"..........*Russia*
A. Sullivan (1842)—"Pinafore".............*England*
R. Wagner (1813)—"Die Meistersinger"....*Germany*

Note (1) The order of listing is alphabetical.

(2) In the case of Berlin, the choice of this particular composition is arbitrary. Any one of half a dozen masterpieces of the same type by this composer would serve as well.

(3) Ditto in reference to the Chopin selection.

GEORGE W. CHADWICK

Eminent American Composer

(Born, Lowell, Mass., U. S. A.)

It seems to me quite impossible to pick out the ten greatest masterpieces of musical art, for the reason that there are more than ten composers of the first rank and all of them have written more than one masterpiece, differing in scope and size, of course, but still perfect works of art.

Certainly one cannot say that Bach's (1685) Passion Music (Germany) is greater than his B Minor Mass or "Tristan and Isolde;" (Wagner, 1813, Germany), greater than the same composer's "Götterdämmerung," or perhaps that the G Minor Symphony of Mozart (1756, Germany) is of less importance than the Requiem.

What might be interesting to publish would be a list of compositions of the acknowledged masters which are *inferior* to some works of minor composers.

The nods of Homer have probably never been recorded; but such a list would certainly be an encouragement to struggling genius.

FREDERICK CORDER

Eminent English Musical Educator
Professor of Composition, Royal Academy of Music, London

(Born, London, England.)

The more one thinks of this rash question and realizes the vastness of the field covered by it, the more impossible does the answer seem.

You cannot say whether a table is better than a chair, or even an orange is a finer fruit than a strawberry, though you may personally prefer the taste of one to the other. So how can you decide whether Beethoven's (1770) C Minor Symphony (Germany) is more of a masterpiece than Schubert's (1797) "Erlking" (Germany); or Puccini's (1858) "La Boheme" (Italy) a finer thing in its way than Debussy's (1862) "L'apres Midi d'un Faune" (France). There are more than ten times ten musical works that are just about perfect, but scarcely one that will bear comparing with another.

If you take ten main fields of musical endeavor and seek to pronounce which is the greatest achievement in each, you are a little nearer to a verdict. Take oratorios: Handel's (1685) "Messiah" (Germany); Mendelssohn's (1809) "Elijah" (Germany), and Elgar's (1857) "Dream of Gerontius" (England) are all noble works; but there are plenty of others, though you may not happen to know them. Beethoven's (1770) nine symphonies (Germany), Mozart's (1756) last three symphonies (Germany) and Haydn's (1732) last twelve symphonies (Germany) are all masterpieces of musical skill and beauty. Personally, you might perhaps prefer to listen to Tchaikowsky's (1840) "Pathetique" (Russia) than to either; but you could not justly call it more of a masterpiece than one of Haydn's (1732) little gems (Germany).

Surveying smaller fields, can anyone dare to say that Schumann's (1810) lovely pianoforte concerto (Germany) is a greater or lesser masterpiece than either of Beethoven's (1770) last two (Germany)? One might be allowed to prefer the Schumann (1810) Concerto (Germany) to that of Grieg (1843) (Norway); but a musician would hesitate to apply the term "masterpiece" to anything by the latter composer, whose technic is not of the highest rank.

As to operas, there are hardly any that will bear comparison with another. "Il Trovatore" (Verdi—1813—Italy), and "Parsifal" (Wagner—1813—Germany); "Faust" (Gounod—1818—France), and "Le Nozze di Figaro" (Mozart—1756—Germany); "Carmen" (Bizet—1838—France), and "The Beggars' Opera" (Gay—1685—England), have nothing in common; all are works that we could not spare, though some people might reasonably assert that the only two operas to which the term "masterpiece" could justly apply are "Tristan and Isolde" and "Meistersinger."

No, the question cannot be answered satisfactorily. Even were you to narrow it down to "which are the three finest violin concertos?" or the "three finest string quartets," you perhaps would get a personal expression of preference which would perhaps be interesting but of no particular value. Did you ask which is the finest of Beethoven's nine symphonies (Germany) or of Wagner's (1813) operas (Germany), or of Schubert's (1797) Songs (Germany), you might get some interesting expressions of opinion, but your query is quite unanswerable.

VINCENT d'INDY

Eminent Modern Composer

(Born, Paris, France.)

I am not embarrassed in sending you a list of the Ten Greatest Masterpieces of Music, as I believe that real musicians will not differ in their appreciation of these works.

This list is presented in chronological order and contains works of large dimensions which, because of their elevated thought and permanence of architectural structure, leave no room for doubt.

C. Monteverde (1647)—"Orpheus"..............*Italy*
J. S. Bach (1685)—Mass in B Minor.........*Germany*
J. S. Bach (1685)—St. Matthew Passion.....*Germany*
C. W. Gluck (1714)—"Orpheus"............*Germany*
L. van Beethoven (1770)—Mass in D Major.*Germany*
L. van Beethoven (1770)—XII Quartet in E Flat *Germany*
L. van Beethoven (1770)—Ninth Symphony.*Germany*
R. Wagner (1813)—"Tristan and Isolde"....*Germany*
R. Wagner (1813)—"Parsifal"..............*Germany*
C. Franck (1822)—Quartet in D Major......*Belgium*

CLARENCE EDDY

Famous American Organist

(Born, Greenfield, Mass., U. S. A.)

Opera—
R. Wagner (1813)—"Nibelungen Ring".....*Germany*
Charles Gounod (1818)—"Faust"............*France*
Oratorio—
G. F. Handel (1685)—The Messiah..........*Germany*
J. S. Bach (1685)—B Minor Mass...........*Germany*
E. S. Kelly (1857)—Paradise Lost.........*American*
Symphony—
L. van Beethoven (1770)—Fifth Symphony..*Germany*
C. Franck (1822)—Symphony in D Minor...*Belgium*
Piano—
L. van Beethoven (1770)—Concerto in E Flat *Germany*
Violin—
L. van Beethoven (1770)—Concerto........*Germany*
Organ—
J. S. Bach (1685)—Passacaglia.............*Germany*

ARTHUR FOOTE

Distinguished American Composer

(Born, Salem, Mass., U. S. A.)

J. S. Bach (1685)—B Minor Mass...........*Germany*
W. A. Mozart (1756)—Symphony in G Minor *Germany*
(One of the most perfect things in existence.)
L. van Beethoven (1770)—Ninth Symphony.*Germany*
J. Brahms (1833)—Symphony in C Minor...*Germany*
L. van Beethoven (1770)—Piano Concerto in E Flat Major.........................*Germany*
Robert Schumann (1810)—Fantasie Opus 17 in C Major..............................*Germany*
(To me the greatest piano work of the last 100 years.)
G. B. Palestrina (1594)—Mass of Pope Marcellus *Italy*
C. W. Gluck (1714)—"Orpheus"...........*Germany*
Richard Wagner (1813)—"Die Meistersinger" *Germany*
Franz Schubert (1797)—Erlkoenig.........*Germany*

ROBERT FUCHS

Eminent Austrian Composer and Conductor

(Born, Frauenthal, Austria.)

The question is very difficult to answer. Nearly every work of Bach, for instance, is "a great masterpiece"; so also are most of those of Beethoven, Haydn, Mozart, and others. Though it is impossible for me to answer your question exactly, because of my musical conscience and principles, I shall try, showing my readiness to satisfy your wish by risking a guess at the "ten greatest masterpieces." Among them should be:

J. S. Bach (1685)—Well-Tempered Clavichord *Germany*
J. S. Bach (1685)—Mass in B Minor........*Germany*
George F. Handel (1685)—"Messiah".......*Germany*
Joseph Haydn (1732)—"The Seasons"......*Germany*
W. A. Mozart (1756)—"Don Juan"..........*Germany*
W. A. Mozart (1756)—Sixth Symphony in G Minor *Germany*
L. van Beethoven (1770)—Fifth Symphony..*Germany*
L. van Beethoven (1770)—Piano Concerto in G Major..................................*Germany*
Franz Schubert (1797)—Symphony in C Major *Germany*
Robert Schumann (1810)—Phantasie in C Major, Op. 17...........................*Germany*

AMELITA GALLI-CURCI

World Famous Prima Donna—Formerly Concert Pianist

(Born, Milan, Italy.)

You have asked me to choose what I believe are the ten musical masterpieces. It is an impossible question, for no matter which ten one chooses, it is easy to name another ten equally good. The fact is that there are vastly more than ten musical masterpieces, none of which can be called the greatest musical masterpiece, for there are so many forms of writing—symphony, oratorio, opera, sonata, nocturne, waltz, etude, concerto, and so on, almost *ad infinitum*, that a masterpiece can only be designated as a masterpiece in its idiom. However I shall try.

Among the symphonies I should choose Beethoven's (1770) Fifth Symphony (Germany).

Of the violin concertos, the J. Brahms (1833) D Major Concerto. (It says the most to me, although it does not speak so familiarly the language of the violin as do some of the more showy bravura types written with the virtuoso in mind.)

The literature of the piano is so rich, I shall not attempt to single out a "masterpiece." One thinks of several: Beethoven (1770), Sonatas (Germany); Fr. Chopin (1810), Two Sonatas (Poland), as well as Chopin's Ballades, Etudes, Nocturnes, Waltzes—all masterpieces.

The same is true of the Fr. Schubert (1797—Germany), Hugo Wolf (1860—Germany), J. Brahms (1833—Germany), and Schumann (1810—Germany) songs.

I am unable to give an unprejudiced opinion as to the greatest opera; like the fly on the oil painting, "I am too close to see the whole picture." Debussy's (1862) "Pélleas and Mélisande" (France); Wagner's (1813) "Tristan and Isolde" (Germany); Verdi's (1813) "Rigoletto" and "Traviata" (Italy) are representative of their type.

No, the more I think of this question, the more impossible it appears. I have not named the ten great musical masterpieces, because it cannot be done. I feel reasonably sure of only one—the greatest melody of the folk-song type is *Suwanee River*—I say this without hesitation.

PERCY GRAINGER

Distinguished Pianist, Composer, Conductor

(Born, Brighton, Melbourne, Australia.)

I think your idea of discussing in THE ETUDE the question "What are the ten Greatest Musical Masterpieces?" an excellent one. In order to limit my favorites to ten, I must be content to state which work I consider the greatest within ten of the most important styles and forms of composition, and that is what I have done in the following list, considering only such works as I consider "masterpieces," no less as to balance of form and perfection of compositional workmanship than as to depth of emotion and inspiration.

Greatest Oratorio—
J. S. Bach (1685)—St. Matthew Passion.....*Germany*
Greatest Opera—
R. Wagner (1813)—"Tristan and Isolde"...*Germany*
Greatest "Nature" Music—
F. Delius (1863)—Song of the Hills.........*England*
Greatest Symphony—
P. I. Tchaikowsky (1840)—"Pathetique"......*Russia*

J. Brahms (1833)—Quintet in F Minor......*Germany*

ALBERTO JONAS

Eminent Piano Virtuoso and Teacher
(Born, Madrid, Spain.)

I have always been interested in the questions propounded by The Etude and have gladly answered them, for their aim has been to attract the attention of the general public to important subjects on musical education, culture and refinement. The value of this can hardly be overestimated. In a country which throughout its breadth and length has not one single state-subventioned conservatory of music, not one state-subventioned opera, and not one state-subventioned orchestra, your present query, "What are the ten Greatest Musical Masterpieces?" seems to me to depart from your traditional policy of inciting discussion upon useful subjects. This question which asks one to grade the artistic merit of every musical composition ever written—from a song to a chamber music composition, or a symphony, or an oratorio—cannot be answered intelligently. Is Grieg's (1843) *Solveig's Song* (Norway) greater than the Pastoral Symphony of Beethoven (1770, Germany) because the latter lacks the depth and pathos of the Fifth Symphony or of the Ninth Symphony, by Beethoven also?

Can the Tchaikowsky (1840) Violin Concerto (Russia) be weighed in musical ounces against the Brahms (1833) B flat Major Concerto (Germany) for piano? Is the F Sharp Minor prelude by Chopin (1810, Poland) greater than the Schumann (1810, Germany) Piano Quintet? How does Tchaikowsky's (1840) Fifth Symphony (Russia) compare with "Die Meistersinger" (Wagner, 1813, Germany); Schubert's "Unfinished Symphony" (1797, Germany) with Mozart's (1756) "Don Giovanni" (Germany), and so forth, *ad libitum ed ad adsurdum.* To know who the chap was who beat the world's record in the various branches of sport, may be deemed by some of paramount importance because of its elevating, ennobling influence on humanity; but in art such methods do not apply. The greatness of a musical composition can be gauged only by a comparison with other compositions of the same kind, as well as by its effect on our soul, our heart and our intelligence. These three potentialities are, to paraphrase the mighty Bacon-Shakespeare, "Infinite in their variety." Hence, many tastes, opinions and forms of artistic worship. Heinrich Heine, the immortal poet, was asked what he thought of Goethe, and said that he would have to go back to the beginning of Creation and retrace the whole history of mankind in order to give a fitting answer Your question is still wider in its scope.

A Prize Contest Upon This Symposium

THE ETUDE has the honor of announcing that the following distinguished judges have been induced to select the winner in a contest for the best article of not more than 2500 words and not less than 2000, discussing the various phases of this momentous symposium upon

"The Ten Great Masterpieces"

Dr. Leopold Stokowski,
Conductor, Philadelphia Symphony Orchestra

Dr. Frank Damrosch,
Director of the Institute of Musical Art, New York

Mr. Harold Randolph,
Director of the Peabody Conservatory, Baltimore, Md.

Mr. Felix Borowski,
Director of the Chicago Musical College, Chicago, Ill.

The distinction of winning this contest upon this symposium which is sure to be discussed far and wide will be an honor worthy of great effort. The winning article will be featured and paid for at our customary rates. The contest is open to all. Extracts from articles that may not win the first place may be published at regular rates. The contest closes September 1st, 1924. What masterpieces have been omitted? Is the judgment of the group significant? Here is a contest which should interest professionals, critics, amateurs, clubs, schools, colleges.

EDWIN H. LEMARE

Eminent English Organ Virtuoso and Composer
(Born, Ventnor, Isle of Wight, England.)

Oratorio—
F. Mendelssohn (1809)—"Hymn of Praise". *Germany*

Short, concise, inspired; every bar full of beautiful melody and interest; choruses, as are all of Mendelssohn's, written with a true knowledge of what is "singable and effective." Symphony a model in form and beauty.

Music Drama—
R. Wagner (1813)—"Parsifal"..............*Germany*

Musical poem, the study of which never fails to reveal further hidden meanings conveyed through the "Language of music."

Overture—
P. I. Tchaikowsky (1840)—"Romeo and Juliet". *Russia*
F. Mendelssohn (1809)—"Midsummer Night's Dream"...................................*Germany*
J. S. Bach (1685)—Great G Minor Fugue....*Germany*
J. Brahms (1833)—Requiem................*Germany*
R. Wagner (1813)—Prelude "Die Meistersinger" *Germany*
A. Dvorák (1841)—"Stabat Mater"..........*Bohemia*
W. A. Mozart (1756)—Choral Fugue "Pignus Futurae" (from Litany in B Flat)......*Germany*
F. J. Haydn (1732)—Sixteenth Mass........*Germany*
R. Wagner (1813)—Prize Song "Die Meistersinger"..................................*Germany*

JOSEF LHÉVINNE

Distinguished Piano Virtuoso
(Born, Moscow, Russia.)

J. S. Bach (1685)—Mass in B Minor.........*Germany*
J. S. Bach (1685)—Prelude E Flat Minor (from first book of the Well-tempered Clavichord) *Germany*
L. van Beethoven (1770)—Ninth Symphony. *Germany*
L. van Beethoven (1770)—Sonata, Opus 111. *Germany*
F. Schubert (1797)—Unfinished Symphony..*Germany*
F. Schubert (1797)—Erlkönig..............*Germany*
F. Mendelssohn (1809)—Violin Concerto....*Germany*
F. Chopin (1810)—24 Preludes, Opus 28.......*Poland*
Richard Wagner (1813)—"Tristan and Isolde" *Germany*
P. I. Tschaikowsky (1840)—Sixth Symphony *(Pathetique)*..............................*Russia*

MORITZ MOSZKOWSKI

World-known Composer
(Born, Breslau, Poland.)

I would like to give you a detailed answer to your inquiry; but, really, each one of the ten questions demands separate treatment. Unfortunately, my painful malady makes this impossible.

In response, however, to one part of your questionnaire, I desire to reply that the ten most important concertos are:

Piano—
L. van Beethoven (1770)—Concerto in C Minor *Germany*
L. van Beethoven (1770)—Concerto in G Major *Germany*
Fr. Chopin (1810)—Concerto in E Minor.....*Poland*
F. Liszt (1811)—Concerto in E Flat Major..*Hungary*
C. Saint-Saëns (1835)—Concerto in C Minor..*France*
Violin—
Mendelssohn (1809)—Violin Concerto.......*Germany*
M. Bruch (1838)—Concerto in G Minor.....*Germany*
M. Bruch (1838)—Concerto in G Minor.....*Germany*
E. Lalo (1823)—Symphonie. Espagnole.......*France*

GIACOMO PUCCINI

Distinguished Opera Composer
(Born, Lucca, Italy.)

Here are the ten masterpieces according to my opinion:

R. Wagner (1813)—"Meistersinger"........*Germany*
G. Verdi (1813)—"Aida"........................*Italy*
V. Bellini (1801)—"Norma"....................*Sicily*
G. Bizet (1838)—"Carmen"..................*France*
M. Moussorgsky (1835)—"Boris Godounoff"..*Russia*
L. van Beethoven (1770)—L'Eroica.........*Germany*
L. van Beethoven (1770)—The Fifth Symphony *Germany*
L. van Beethoven (1770)—The Scherzo of Ninth Symphony......................*Germany*
J. S. Bach (1685)—Fugue in G Minor........*Germany*
G. B. Palestrina (1594)—Mass, Pope Marcellus..*Italy*

OLGA SAMAROFF

Distinguished American Pianist
(Born, San Antonio, Texas, U. S. A.)

It is always difficult to measure greatness in any field and to choose a limited number of works as supreme or standing indisputably above others. If possible, I should like it stated, if my name is used, in the discussion of which you write, that the list of works I give is, in my opinion, a list of *ten of the greatest works,* rather than "the ten greatest works," for I really do not believe that one can say of any ten works: "They are the ten greatest." With this reservation I submit the following list:

J. S. Bach (1685)—St. Matthew Passion.....*Germany*
L. van Beethoven (1770)—Fifth Symphony. *Germany*
L. van Beethoven (1770)—Violin Concerto..*Germany*
L. van Beethoven (1770)—Piano Sonata, Opus 111 *Germany*
J. Brahms (1833)—Requiem................*Germany*
J. Brahms (1833)—Violin Concerto..........*Germany*
R. Wagner (1813)—"Tristan and Isolde"..*Germany*
W. A. Mozart (1756)—"Don Giovanni".....*Germany*
F. Schubert (1797)—C Major Symphony....*Germany*
G. Mahler (1860)—8th Symphony...........*Germany*

WALTER R. SPALDING

Eminent American Musical Educator—Professor of Music, Harvard University
(Born, Northampton, Mass., U. S. A.)

I send you enclosed my personal list:

J. S. Bach (1685)—Well-tempered Clavichord *Germany*
L. van Beethoven (1770)—Fifth Symphony..*Germany*
L. van Beethoven (1770)—Seventh Symphony *Germany*
G. F. Handel (1685)—"Messiah"..........*Germany*
W. A. Mozart (1756)—G Minor Symphony·*Germany*
F. Schubert (1797)—Unfinished Symphony..*Germany*
J. Brahms (1833)—First Symphony.........*Germany*
R. Wagner (1813)—"Die Meistersinger"....*Germany*
R Wagner (1813)—"Tristan and Isolde"....*Germany*
G. Bizet (1838)—"Carmen"....................*France*

(Continued on page 154)

The Beginner and the Pedal

Bringing Charm to the First Stages of Piano Playing

By M. BAPTISTA BATTIG, O. S. B.

"TEACHER, please may I use the pedal?"

Thousands of piano teachers hear this year after year and religiously repress the student's natural instinct for pianistic tone color. Scarcely any phase of piano study is more important, and especially for the beginner, than the correct study of the use of the pedal. In this the young teacher particularly needs guidance. The trained musician's ear will guide him as to the proper groupings of the harmonies by the use of the pedal; but with the student of the lower grades the most careful training is necessary.

Bad Pedaling Ruinous

Nothing spoils piano-playing more than the wrong use of the pedal—reference being made here to the right, or sustaining pedal. It is because of this ill use that piano-playing palls on so many who listen with delight to the violin. On no other instrument can the clearness of a passage be so easily marred. Too often the unsatisfactory results are evidently the fruits of insufficient attention to artistic pedal-use during the lesson period.

The young pupil is almost always anxious to use the pedal. To the ear it makes the piece sound nicer and grander—all of which is really true, if it is well used. And here are a few suggestions that may help to this end:

The Mechanism of the Pedal

I.—The pupil should be given a careful explanation of the mechanism of the pedal. Let the child look inside the piano to observe how most of the tones are produced by the hammer striking three strings. As the hammer strikes the strings the damper (sordino) is lifted from them. The tone sounds as long as the finger rests on the key. Remove the finger from the key and allow the pupil to see how the damper falls back against the string and suppresses the sound.

II.—Strike again the same key—say, Middle C—and at the same time press the right foot down on the pedal, showing the pupil that all the dampers (sordini) are lifted. Then strike the same key once more, leaving the foot on the pedal, but adding another tone, E above the C, whilst lifting your finger from the former. Ask the pupil to listen and to explain the effect. He will say that it sounds very pretty. Ask him what has happened to the dampers, and he will answer that all of them have remained away from the strings.

III.—Repeat the previous procedure, adding the G just above the notes sounded before. The child will recognize the beautiful effects produced by the combination of these three sounds.

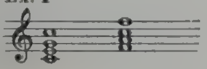
An Interesting Experiment

IV.—Let the pupil repeat this chord of III, adding to it other C-E-G's, leaving down the pedal all the while. From this it will be found that the three tones of a triad may be connected under one pedal pressure without destroying the clearness of each sound. Show this also by playing C major arpeggios and chords in succession. They will always be beautiful. Repeat the procedure with the G major chord, to make the pupil understand that any three tones of a triad will produce the same beautiful effect.

V.—Start again with Middle C, using the pedal, soon adding D. Let the child judge as to the result. If he has not a musical ear you will have to repeat the trial several times, probably very forcibly. He will then discover that it does not sound well. Again play C and E, with a new pedal pressure. Let him find out the difference. Then play the first three or four tones of the C major scale with the pedal down. The answer will be that it sounds very unpleasant. From this may be derived the rule that "successive tones of the scale may not be played with the same pedal pressure."

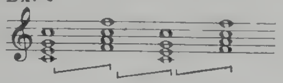
Exceptions to this rule will be taught in the more advanced grades. Through these short exercises the student will accustom himself to listening and thus sharpen his ear for the effect of the pedal. The following steps ensue. Play the C major chord with octave and then a similar F major chord.

Ex. 1



Let the pupil discover whether these chords can be connected by the fingers alone. The answer will be in the negative. Let him find out how to connect them with the pedal. Let him hear how beautiful the effect will be if the pedal is pressed down after the first chord has been struck (perhaps on the second eighth of the half note) and held *till the new chord is struck*, and so on.

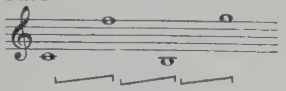
Ex. 2



In this way alone can an entire connection of chords be made.

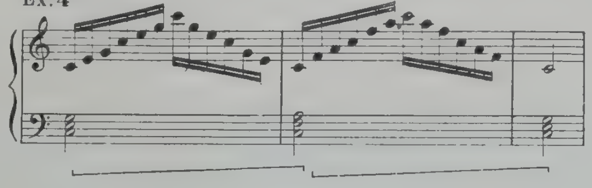
After what has been said, we can see that the sustaining pedal has a two-fold aim. First—*The pedal collects related tones.* Second—*The pedal connects or binds chords or tones too far apart to be connected by the fingers.*

Ex. 3



With these two principles in mind, the student will be able to manage the pedal fairly well in the easier pieces where there are not many passages of a complicated nature. The teacher should select some studies containing arpeggios, such as Czerny's *Preliminary School of Finger Dexterity, Op. 636*, Nos. 7, 8, 12, 15, 16, 18, 23; and *School of Velocity, Op. 299*, Nos. 3 and 17; and others of this type. Cramer's Studies all afford ample material for the study of the pedal. The pupil must be warned never to use the pedal directly with the first note of the arpeggio, but rather with the second note, if they are eighth-notes (quavers), and possibly with the third, if they are sixteenth-notes (semi-quavers), and to lift the pedal with every new harmony as soon as the connection has been established.

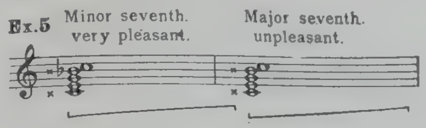
Ex. 4



This rule is to be recommended, especially for all short notes in rapid tempo, in order to assure clearness in the important harmonies. To practice slowly each of the five pedal studies heretofore outlined, and to listen attentively to their effects, is most important.

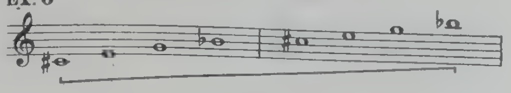
We now may proceed a step farther in our study of the pedal; that is, add a minor third to a triad and ask the student to listen whether it sounds well. The answer will be in the affirmative. The rule follows that "the minor seventh, although a dissonance, accords very well with a major triad and its fundamental note; therefore all tones belonging to the chord of the seventh may be gathered together under the same pedal pressure, but not when the seventh is major.

Ex. 5



In Ex. 5, B and C form a semi-tone, which is almost the strongest dissonance we have. After the pupil has practiced exercises with a minor seventh, the teacher may explain chords containing only minor thirds, that is, the chord of the diminished seventh.

Ex. 6

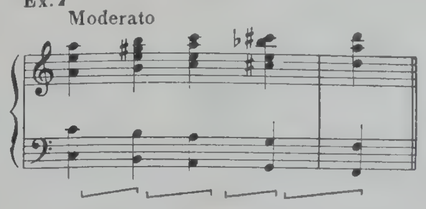


Let the student listen to the effect when using the collective pedal. Illustrate the use of such a pedal in studies or pieces from the lesson. Czerny studies abound in such chords. The chord of the "augmented sixth," also, may be freely used with the pedal, and any arpeggio derived from it.

Short Pedal Work

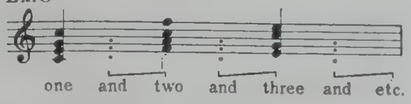
Greater difficulties than those arising from the use of the pedal through a long arpeggio are those connected with short pedal work which should link a melody consisting of chords that can by no means be connected by the fingers.

Ex. 7



Accustom the pupil to dividing these chords mentally into two eighths, and to pressing down the pedal with the second eighth and again lifting it after the first eighth of each following chord. Thus the difficulties will become less stringent. If this passage were in rapid tempo, it would suffice to press down the pedal on the second and fourth beats, on the unaccented beats; as the first and third beats are in themselves more prominent, being endowed with their natural accents and do not need, therefore, so much help from the pedal. A very good method, which may be applied in the use of short pedaling, is to train the student to count as in Ex. 8.

Ex. 8



The principles here given are those of the late Ludwig Deppe. His aim and incessant endeavor was to raise piano-playing, by the judicious use of the pedal, to the same standard as that of the violin.

To Pedal or Not to Pedal

Nothing excites the child's curiosity more than the pedals, the little "handles" down at the foot of the piano. He plays with them at the creeping age and they form a mysterious connection with the music that he hears come out of the big box. Many teachers wait for years before they introduce the pedal in the work of the pupil. We feel that this is a mistake. As soon as the child's intelligence is developed enough and his legs long enough he may safely be indulged in the Pedal.

The teacher requires such a book as "The Pedal Book", by J. M. Blose, and a few elementary pedal studies, all of which will make the work of the beginner far more enjoyable.

The pedal is the veil of atmosphere which takes away the crudeness and roughness from the musical picture, blending the tones, pastel-like, in their beauty.

Self Test Questions Upon this Article

1. *What is the first step with the child in teaching the Pedal?*
2. *What is the two-fold aim of the sustaining Pedal?*
3. *What studies would you suggest for Pedal work?*
4. *When should the Pedal be used in arpeggio playing?*

A World Court of Eminent Musicians

(Continued from page 152)

CYRIL SCOTT

Eminent English Composer and Pianist
(Born, Oxton, Cheshire, England.)

Personally I could not presume to say what are the ten greatest masterpieces in music. The conception of what constitutes a masterpiece changes with each generation. Nationality has also something to do with the matter. Octogenarian lovers of music, in England, would say that the "Messiah" is a masterpiece. No doubt it is; but I know of no contemporary composer who wants to go and hear it. An Italian once confronted me with the works of Bellini and referred to them as the greatest Italian masterpieces. They bore me stiff. I told him so and he was horrified. I could multiply instances of the diversity of tastes which go to show there is no criterion. God only knows and he won't tell.

LT. COM. JOHN PHILIP SOUSA, U. S. A. R. F.

Famous Conductor and Composer
(Born, Washington, D. C., U. S. A.)

There is such a wealth of material to select as masterpieces that when one starts to make a list it causes an embarrassment of riches. Offhanded, I would select in their various classes:

L. van Beethoven (1770)—Fifth Symphony..*Germany*
P. I. Tschaikowsky (1840)—"Pathetique" Symphony *Russia*
A. Rubinstein (1829)—"Ocean" Symphony.....*Russia*
R. Goldmark (1830)—"Sakuntala"............*Hungary*
R. Wagner (1813)—"Tannhäuser"...........*Germany*
P. Dukas (1865)—"The Sorcerer's Apprentice" *France*
Edward German (1862)—"The Welsh Rhapsody" *England*
Johann Strauss (1804)—"The Beautiful Blue Danube" Waltz.........................*Germany*
E. Elgar (1857)—Pomp and Circumstance...*England*
J. P. Sousa (1856)—"Stars and Stripes Forever," March ....*America*

EDUARD SCHÜTT

(Born, St. Petersburg, Russia.)

Your idea of publishing the different opinions of the many artists, who feel and think differently, in such a popular journal as The Etude is certain to arouse great interest and I am confident that this rather difficult task will be effected by you with your usual tact.

Now it would have been easier for me to select one hundred masterpieces than ten. What is loved and esteemed in youth, often loses with years; and one is inclined to judge too severely of some modern productions and only by degrees recognizes and appreciates great artistic work; as, for example, with some compositions of Brahms whose harshness and beauty I only gradually learned to admire. Therefore, without much reflection I send you a list of ten pieces which I admire most.

R. Wagner (1813)—"Meistersinger".........*Germany*
R. Wagner (1813)—"Walküre".............*Germany*
G. Bizet (1838)—"Carmen"...................*France*
L. van Beethoven (1770)—V Symphony.....*Germany*
F. Schubert (1797)—Symphony in B Minor (Unfinished) ....*Germany*
P. I. Tschaikowsky (1840)—Symphonie "Pathetique" *Russia*
J. Brahms (1833)—Piano Quartet, B Minor.*Germany*
J. S. Bach (1685)—Chromatische Fantasia and Fugue ....*Germany*
R. Schumann (1810)—Etudes Symphoniques *Germany*
F. Chopin (1810)—All the pianoforte compositions *Poland*

SIEGFRIED WAGNER

Eminent Composer and Conductor
(Born, Triebschen, Germany.)

Ten is too small a number, because I would name all sonatas and all quartets of Beethoven.

J. S. Bach (1685)—St. Matthew Passion.....*Germany*
J. S. Bach (1685)—B Minor Mass...........*Germany*
J. S. Bach (1685)—Well Tempered Clavichord *Germany*
W. A. Mozart (1756)—"Marriage of Figaro".*Germany*
L. van Beethoven (1770)—All Symphonies..*Germany*
L. van Beethoven (1770)—Missa Solemnis..*Germany*
R. Wagner (1813)—"Tristan and Isolde"....*Germany*
R. Wagner (1813)—"Nibelungen Lied"......*Germany*
R. Wagner (1813)—"Meistersinger".........*Germany*
R. Wagner (1813)—"Parsifal"..............*Germany*

OWEN WISTER

Eminent Man of Letters and Publicist
(Born, Philadelphia, Pa.)

(Mr. Wister is an able musician and has composed music which met the enthusiastic approval of Franz Liszt.)

When a man has heard in the course of his life 129 operas, some of these many times, how can he honestly (or possibly) select a single favorite? The same impossibility applies to many other forms of music. Subject to this understanding and to save crowding, only one example is given under each head—where half a dozen could easily be named. Music of the present day has not been considered, as it is less familiar to the selector.

L. van Beethoven (1770)—7th Symphony....*Germany*
R. Wagner (1813)—"Flying Dutchman"....*Germany*
R. Wagner (1813)—Paris version of "Tannhauser ballet" ....*Germany*
R. Schumann (1810)—Quintet E Flat.......*Germany*
R. Schumann (1810)—Quartet A Minor....*Germany*
J. Brahms (1833)—Trio E Flat (with horn).*Germany*
R. Schumann (1810)—Piano A Minor concerto *Germany*
Max Bruch (1838)—Violin concerto.........*Germany*
L. van Beethoven (1770)—Moonlight Sonata *Germany*
L. van Beethoven (1770)—Violin, Kreutzer sonata *Germany*
F. Chopin (1810)—Polonaise in A flat major..*Poland*
G. F. Handel (1685)—"Messiah".............*Germany*
R. Wagner (1813)—"Die Meistersinger"....*Germany*
G. Bizet (1838)—"Carmen"...................*France*
C. Lecocq (1832)—"La Fille de Madame Angot" *France*
J. S. Bach (1685)—G Minor Fugue, Organ..*Germany*

How to Observe the Signature Correctly

By Edwin H. Pierce

One of the most common stumbling-blocks with all young pupils (and many older ones) is the failure to remember where the sharps and flats of the signature apply. The practice of scales and broken chords in the various keys is supposed to aid extensively in mastering this problem; and this is a considerable help; but no matter how faithfully the student practices scales, in the applying of the signature to music in general, "line upon line and precept upon precept" becomes necessary. One of the best methods of arriving at perfect mastery of this difficulty follows.

Assume we are talking to a young pupil who has for the first time a piece in the key of G (signature one sharp). "This little bristly character (♯) at the beginning of the piece means that all the notes of that letter (the same in name at the line where this character stands) are 'sharp'—they are played on the black key just to the right. Now what letter stands on that line?"

"F."

"Yes, that is right. Are there any other F's on the staff?"

"Yes, on the first space."

"Very good. Now take a pencil and look all along this upper line; if you find any notes on it, mark them lightly so as to remember them. Now look along the first space and see if you can find any notes on that, and if so, mark them, too. Now play over the right-hand part and use the proper black key whenever you get to one of these notes."

The same routine is used for the other hand, but with the bass clef, of course, a different line and a different space will be affected. A similar routine would, of course, be used for the key of F (one flat). The pencil-marks should be erased in a few days, as it would be bad for the pupil to get a habit of depending on them. The real benefit comes from searching out the proper notes beforehand, thus developing accuracy and a clear understanding.

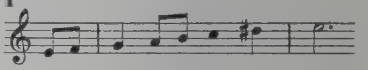
More Sharps or Flats

The pupil should not go on to pieces having two or more sharps or flats until he has had long enough experience in these simpler keys to strike the right notes almost automatically, and is able (in keys which he knows) to do without even the excellent process just described. But when a first attempt is made in the key of D (two sharps) or the key of B flat (two flats), this method should be used to locate the new sharp (C sharp) or the new flat (E flat). Similarly in going on to keys of three, four, five or six sharps or flats. Theoretically we might use this method at once for *any* signature; but as a matter of efficient teaching, it is much better to deal with only one *new* flat or sharp at a time.

"Unmarked Accidentals"

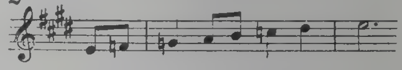
Please do not take anything we are saying in this article as detracting from the custom of scale-practice. Scales are absolutely necessary as a means of acquiring agility and smoothness; scale-passages, also, are exceedingly common in the pieces of nearly all composers and proper earlier preparation is needful in order to be able to play them well. But as a reliance for learning to play the proper notes in miscellaneous music in various keys, their efficiency is sometimes over-estimated. This is most in evidence in what are known as unmarked accidentals. In the course of a piece, except in some of the very briefest and simplest, there are sure to be, here and there, modulations to other keys, which being of a passing nature are expressed by accidentals instead of a change of signature, but the sharps and flats of the signature still apply, except where actually changed by the accidentals. For instance, in the following example in the key of C, none but the most careless and blundering player could fail to notice the D sharp

1



because it is immediately indicated by its proper sign, but the same identical passage might occur as a passing modulation in a piece in the key of E.

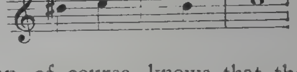
2



Now, the D would still be sharp, because (although the F♯, G♯ and C♯ have been contradicted by accidentals), the D♯ of the signature remains in force. Yet the passage is actually in the key of C, and sounds in the key of C; and the more thoroughly the player knows his scales, the more apt he will be to apply instinctively the signature of the key of C (no sharps or flats) and play the D *natural*. In a case like this, great help may be found in this method.

A still more common example of its usefulness occurs where an accidental must be applied to several different notes in the same measure falling on the same letter, but (in accordance with custom) having the accidental written only before the first one, as

3



Any musician, of course, knows that the last note in this first measure is just as sharp as the first one; but it sometimes takes considerable patience to impress on the beginner that the effect of the sharp has not evaporated before the last note in the measure.

If Franz Liszt Came Back to Earth Again

What would the Abbe-Virtuoso think of Musical Conditions to-day? What would he think of the present-day piano virtuosi? Moritz Rosenthal, one of Liszt's favorites among all his pupils, has given THE ETUDE his views upon this subject in his characteristically interesting fashion. Read what the greatest technicist of the day has to say about a fascinating subject This is just one of scores of similarly interesting articles we have secured for the near future.

The Violin Student's Fundamentals

An Interview With the Celebrated Czecho-Slovak Master Teacher of the Violin

OTAKAR SEVCIK

Secured Expressly for THE ETUDE by Otto Meyer

Biographical

(Otakar Sevcik, one of the greatest teachers of violin of all time, was born at Horazdowitz, Bohemia, March 22nd, 1852. He was a pupil of his father, A Sitt, A. Beenewitz. After successful tours and engagements as conductor in important posts, he became violin teacher in the music school of the Imperial Music Society, at Kiev. He remained in Russia for seventeen years. In 1892 he went to the Prague conservatory, where he remained for fourteen years, having among his pupils, Kubelik, Kocian, Zimbalist, Ondricek, Culbertson, Marie Hall and Otto Meyer, who collaborated in securing this article. In 1909 he became director of the Masterschool for Violin, in connection with the Imperial Academy of Music of Vienna. He is the author of numerous works for the violin. It is a privilege for ETUDE *readers to have these valuable opinions of Professor Sevcik.)*

DURING the many years that I have taught the violin in Europe and in the United States, I have taught pupils of every age and nationality, and it has been always a matter of interest to me to compare the musical characteristics of the different nationalities.

After the success of Kubelik, a great many American and English pupils came to study with me in Prague; and, having taught in the United States for the last several years, I have some suggestions to make to violin pupils in general, but especially to American violinists.

American pupils are as talented as any in the world, and they work as hard; but in general, they have one failing, they have not absorbed enough music into their subconscious mind. If one were to put a very fine plant in a dark cellar, and were to water and cultivate it very carefully; yet it could not grow into a fine healthy plant. So no matter how fine a musical talent we may have, and no matter how carefully the teacher may guide the musical studies, yet the lack of the light of plenty of good music in the everyday life is a great handicap. Musical education should commence in the earliest years, in the home, and should be continuous from that point on.

Musical Education in the Home

By musical education in the home, I mean that the prospective pupil should hear much singing, and many good concerts. In this way the ear is early trained; and the mind unconsciously grows accustomed to good melodies and correct harmonies. The reason that the Russian and Jewish violinists have a so uniformly good tone, and a fine vibrato, is that from the earliest years they hear much good singing in their homes and in the rituals of their religions. They learn to hear and think good tones and therefore they express good tones when they later learn the violin.

In my earlier years, I was very fortunate in being placed in a very musical atmosphere, and in having my musical sense thus developed. At five and a half years I was taught to sing; and when six and a half years old I commenced the study of the piano which was continued for a year. At seven years, I was started in my violin studies, from which time the singing and piano work were made subordinate. At the age of nine I was appointed solo alto singer in the famous Kreutzer church in Prague. This entitled constant practice in singing and reading music at sight, as I was often called upon to sing difficult arias without rehearsal. From that time on, of course, the violin studies took up the greater part of my time; but the development of the ear and sense of rhythm, which the early work in singing at sight brought about, were a most important factor in the success of my work on the violin. For this reason I now advocate strongly that young violinists shall first be able to sing their violin music. This assures that they are able to hear what they wish to play.

Another vital factor in musical success which American violin students are apt to neglect is their health. Without good health and nerves musical success is impossible; and I find that in this country the students are apt to run either to the extreme of all exercise and no music, or all music and no exercise. Abroad the students take long walks daily together; and then, refreshed in mind and body, they are able to work with joy and concentration. That brings rapid results. When in Europe, I walk about fifteen miles daily. This exercise, combined with a simple diet, has made it possible for me to give the pupils the best that is in me all day, and also to write in the evenings my new technical studies.

The student should have all the good instruction that is possible; but on the other hand he should also develop as far as possible the ability to teach himself. By that I mean that he should, when he makes a mistake, try to figure out why it was made, and then with intelligence invent exercises to correct that mistake before proceeding further. There is too much blind repetition, and too much rapid playing during study. By rapid playing the pupil thinks to save a few minutes; but in reality he loses years. My technical exercises have all been written either for my own needs or for those of my pupils; and publication followed only as a result of the success of the pupils who had used the exercise.

During my more than forty years of experience I have evolved a system of teaching the violin which in many respects is very different from that heretofore used and of which I shall now try to give a few of the underlying principles.

First of all, single note playing should be the same as double note playing. The one who for years plays in single notes and then tries to play double stops will find that for the double stops another hand position will be needed, and will then have to return almost to the beginning. Single notes correctly played require the same position as double stops. For example, if you play a scale starting with the third finger on C on the G string, the fourth finger on D on the G string, the first finger on E on the D string and the second finger on F on the D string, you should if you have held down all of the fingers have two thirds, C-E and D-F. Why should one learn it only as single notes, when if the fingers are held down the hand position is improved and one learns at the same time the double stops. In my method almost all combinations of single tones are immediately converted into double stops, and thus the technic is unified.

Second—It has so often happened that pupils who seemed to be playing quite well in tune would, when an open string was sounded, be found to have deviated markedly from the pitch, that I now have evolved a system by which almost constantly the intonation is tested with the open strings. Since the violin is tuned in perfect fifths, the intonation will be found slightly different if the interval is tested with the lower string than if it is tested with the upper string. For that reason (as far as possible, two notes which follow each other should be tested with the same string. In all ensemble playing it is therefore necessary for the pupil to temper the pitch.

Insufficient Command

Third—Too often it occurs that students who hope for a virtuoso career are disappointed; and when they turn to orchestra or ensemble playing they find that their command of rhythm and bowing is not sufficiently well developed. I want all pupils who study my system to be all-around musicians, and therefore have incorporated in my studies exercises to develop command of every rhythm and bowing, even to the rag-time or syncopated rhythms which are so overworked in this country. All parts of the bow should be evenly developed; and students should especially work for control of the bow at the frog.

Fourth—I believe that the student can scarcely commence too early with the study of all of the higher positions. The day of first and third position players is past. Modern composers use all of the positions without discrimination—the second, fourth and sixth positions as much as the first, third and fifth. For that reason, as well as from the fact that I have found that study in the higher positions has the greatest value in developing strength and flexibility of the hand and fingers, I believe that as soon as a pupil has mastered well the first and half positions that they should at once proceed to work evenly in all of the positions up to the seventh. This will also greatly benefit the hand position in the first position and insure that the pupil brings the elbow well under the violin, which in turn greatly facilitates the change of position. The player who masters the violin in all the positions is compelled to change the measure or distance of the whole and half tones in each position. Each position is like a different violin, ranging from the largest violin, in the half and first position, to a very small violin, in the seventh position. If this position work is too long delayed, I do not think that the player will ever be fully at home in the higher positions, or that he will be able to judge the distances with ease and accurary. Pupils must learn to feel the unity of all of the positions; and for that reason I believe in making an exercise in the first position and then studying it progressively in the second, third, fourth, fifth, sixth and seventh positions.

Now in this brief article I am not trying to explain these ideas in detail. That would be impossible in such limited space. However, I am trying to give a few new ideas over which you may ponder, and which in turn will lead to thinking for yourself.

In later years I am laying increased stress on the co-ordination of the harmonic with the technical. I well remember how disconcerting it was when I first encountered such unusual features as augmented chords; and therefore I now give in each position many exercises in diminished triads, augmented triads, diminished-seventh chords, as well, as, of course, major and minor triads.

PROF. OTAKAR SEVCIK

Also, I try to develop in my pupils disassociation of the left and right arms. Too many players when they try to play loud with the bow, press harder with the fingers of the left hand, and *vice versa* when they play softly with the bow, do not press enough with the fingers of the left hand. To conquer this, I give many different bowings for difficult passages, so that gradually the muscles governing the bow arm are made independent of the left hand.

Self-Test Questions Upon Prof. Sevcik's Conference

1. ***Where should musical education commence?***
2. ***Name a physical exercise very beneficial for music students.***
3. ***Why should the position for single note playing be the same as that for double note playing?***
4. ***How should the pupil temper the pitch in ensemble playing?***
5. ***How early should the student commence with the study of higher positions?***
6. ***How should the right arm and the left arm be disassociated?***

Musical Telepathy

By Ruth L. F. Barnett

A FAMOUS blind musician and lecturer, Adam Geibel, mystifies his audiences by having individuals hold up various articles and at the same time having a pianist play chords upon the piano while he names the articles. Of course the trick is merely a matter of ear-training. The pianist spells in tones upon the piano the main letters defining the articles. Mr. Geibel does not depend upon the seven letters of the musical alphabet, but has a code which his quick ear detects with no difficulty.

The idea is an interesting one and affords much amusement when applied to musical spelling in ear-training classes. Let me tell you about one very successful musical spelling class.

A class of beginners settled the business of locating notes on the pianoforte keyboard by playing this interesting game.

First they took pencil and paper and made as many words as possible out of the letters A, B, C, D, E, F, G. That done they went to the piano and the first pupil played the notes F-A-C-E. The pupil who first named the word spelled took the next turn, and so until each pupil had followed the spelling of over thirty words and so was able to name instantly any note on the keyboard.

Later we tried using the sharps instead of the naturals, as F sharp, A sharp, C sharp, E sharp, and this was a bit harder; but it served to get rid of the notion that sharps must always be black keys. Of course, we used the flats in the same way.

The final stunt was to recognize the words by ear, after being told the first note of each. At first it seemed impossible, but by degrees it became easier, and several pairs of ears were much sharper for the experience.

A Fall-board Protector

By Gertrude Greenhalgh Walker

WHEN a new grand piano was bought for studio use, I was quite concerned over the little scratches on the fall-board, made by careless students who would not trim their nails nor curve their fingers.

To eliminate this worry some stiff cardboard was secured and stood between the keys and fall-board in such a way as to not to interfere with the action. This cardboard was cut about five inches high and the full length of the keyboard. A ten-cent can of mahogany stain helped some.

The cardboard has served a double purpose. When a nail scratches it, it moves and is a silent reminder to curve the fingers. Then the nerves are relieved by the knowing that the scratch is on a false front; and when this becomes defaced it is but a small matter to make another.

Too Old for Music Study?

By Hermann Becker

No one in full possession of his faculties is too old to study a musical instrument, though undoubtedly an opportunity of growing to one's chosen instrument from childhood is an advantage, if a very highly developed technic is to be reached.

Stiff muscles and joints seem to offer a permanent obstacle to the realization of an adult's musical dreams. This thought is in most cases strong and convincing enough to nullify any attempt at making the effort towards this musical ideal.

This article will attempt to give a practical means of overcoming the many difficulties which appear because of muscular stiffness. And let it be understood that a child has just as many, if not more of these. The powers of logic, will, concentration, discernment and the desire for progress which the adult has in his favor seem more than to counterbalance the attributes of youthfulness.

All cannot become fine solo artists; but given musical enthusiasm, a good ear and patience, there is no reason why an adult should not derive unbounded pleasure from the various forms of ensemble playing, such as the orchestra, trios, quartets. The average amateur does not require the highly developed technical fluency of the professional artist, which requires talent and a great amount of concentrated study.

Before practicing each day, ten minutes should be given to loosening the ligaments, tendons and muscles of the hands and fingers—away from the instrument. These daily exercises will render the hands and fingers strong and flexible. Most men have strength without flexibility, whilst many women have flexibility without strength. Both are necessary to the instrumentalist. The advantage of practicing such exercises away from the instrument lies in the fact that the whole attention may be given to the task.

Without enumerating a series of exercises on digital development, we shall illustrate concisely a few exercises which have been found beneficial as a daily practice.

Whilst performing the exercises let the whole mind be given to the factors of *strength* and *flexibility*. Think them strongly enough and you will realize them. Athletes such as boxers and runners do not confine themselves entirely to their actual boxing and running practice when they train. Exercises for the development of the muscles and sinews involved are performed assiduously, and form part of the daily program. This applies to instrumentalists also. In fact instrumental practice may be cut down by at least one-half should a series of such exercises be cultivated, a tremendous saving in time and energy. The old method of achieving finger and hand control involved a physical and mental wearying repetition of lengthy mechanical exercises at keyboard or fingerboard which often killed musical inspiration and interpretative power. The ultra robust survived the ordeal, becoming highly skilled technicians, often at the expense of artistry.

The Exercises

1. Rotate the fully extended hands slowly and forcibly from the wrists, stretching them out during the circular movement involved, as far as possible. Continue twelve times with each hand. This will develop the forearm flexors and extensors, involving the muscles and sinews leading to the hands and fingers.

2. Open the hand forcibly, straightening out fingers to fullest extent. Endeavor to straighten still more, at the same time widening as much as possible. Count twelve slowly, always trying to straighten and widen further. Do not strain.

3. From latter position at (2) close the hand very slowly, counting twelve whilst in the act of closing. Let the movement take place with all the hand muscles fully contracted.

4. With the hand fully clenched, endeavor to clench still more forcibly for twelve seconds.

5. Open the hand quickly and resume position as at (2).

6. Relax the hand by shaking it whilst held loosely. Repeat the whole exercise till tired. Every movement involving a contraction must be followed by the opposite extension, otherwise there will remain some muscular stiffness engendering difficulty with certain technic. No muscle must be allowed to antagonize another to the point of strain.

"ART is a river flowing onward to eternity, and all we fail to know about it is, where and whither it may turn next. Whence it comes, thither it returns."

—THOMAS TAPPER.

Interest! Initiative!

To THE ETUDE:

PERHAPS your family is blessed with a child giving sign of musical talent. Art instinct is a delicate plant. To tear it out in a bad environment is deadly.

Beware of spirit death when present-time evil gets in its work to destroy the soul of a child of promise. This is done every day in the awful waste of child activities in school and at home; and I would implore mothers to study into this condition. And now for a hint or so regarding music study in which some mother may feel inclined to give the child of promise a *five-minute* lesson every day, as the mother of Mendelssohn did when her son was two years old. Review, dear, generous mother, and let the little one profit. There is such a wealth of delightful material!

I suggest the *Beginner's Book* by Theodore Presser, or Fred Beyer's *Elementary School of Piano Playing*. Then add W. S. B. Mathews' *Standard First and Second Grade Pieces*. This will give a fine start to any gifted child. With no great amount of trouble a talented child can be led along to very satisfactory advancement as one takes up the graded pieces of the publishers of THE ETUDE. Get *interesting* bits for study. One-half is done when the child *likes* the work in hand, you know.

Let us hope for better times in money matters. Then when there is a feeling that mother needs help in the music study of John or Mary call in the very best professor obtainable. He will review mother's work, enlarge upon it and then the untold joy of the real advance is ours.

Our music has joy, peace, gentleness, goodness, truth. What is crude, cross, ugly, should be severely kept from the young, so far as it is possible. The initiative and interest of music study can help more than all the advice in the world.

FRANCES GRANT VON TETZEL.

A Test for the First Year Piano Student

By Nancy D. Dunlea

A PIANO student may observe some of the fundamentals in piano playing or other music, purely by ear. But to make certain that the pupil has an intelligent understanding necessary for correct reading, an examination is very useful.

Piano pupils, like the average school attendant, are stimulated by tests at stated intervals. An examination every ten weeks, with a grade, is much appreciated both by parents and pupils. It indicates progress so definitely. It encourages the ambitious pupil to cover a certain amount of work and with an examination in view it makes each lesson more thorough.

The pupil who has completed Presser's *First Steps*, or the *Beginner's Book* or its equivalent, and who has been reviewed during the work, should be able to pass the following examination creditably.

1. Name the five lines of the Treble Clef.
2. Name the four spaces of the Treble Clef.
3. Name the five lines of the Bass Clef.
4. Name the four spaces of the Bass Clef.
5. Write the Treble and Bass Clefs.
6. Tell where Middle C is written on the treble staff.
7. Tell where Midde C is written on the bass staff.
8. Name the scales or keys that contain sharps in their signatures.
9. Name the scales or keys that contain flats in their signatures.
10. Name the key that has three sharps. What are these sharps?
11. Write the scale of B-flat.
12. How is a minor scale formed?
13. Name the minor scales related to the major keys of D major, B major and A-flat major.
14. What is the signature of the key of E minor?
15. What steps or numbers of the scale form the major arpeggios?
16. What is the difference between a slur and a tie?
17. How many beats should a whole, a half, a quarter, an eighth and a sixteenth note have when the time is $\frac{4}{4}$?
19. Write three ways that show that a note is to be accented.
20. Explain what D. C. means.
21. What do the following marks of expression mean: *f, p, rit., ten., crescendo, dim., poco a poco?*
22. What is the difference between *lento* and *presto*?
23. Is a flat above or below the note to be flatted?
24. What sharps are white notes on the keyboard?

Basic Principles in Pianoforte Playing

Sixth and Last Section in a Remarkable Series of Educational Conferences With The Distinguished Virtuoso

JOSEF LHÉVINNE

"In the final discussion of this series it may seem wise here and there to recapitulate some of the principles already enunciated. Let us discuss, however, for a few moments, by way of an interlude, the all-important matter of memorizing music. The custom of playing everything by memory is of comparatively recent introduction. Very few musicians at the time of Mozart, Haydn or Beethoven ever thought it necessary. Just as at the present time it has come to be the custom of certain orchestral conductors to dispense with the score, it gradually became the thing to appear in concert without the printed notes and very few artists of any considerable standing have played with notes to any extent during the last twenty-five years. I am told that Pugno, the French pianist, did employ them in America.

"There can be no question that the act of turning pages in full view of two or three thousand people may well disturb the atmosphere of the concert room. It is therefore considered indispensable to memorize. This does not mean, however, that one should essay to memorize the entire musical literature as some students elect to do. Learn those things that are necessary, that will be useful. Do not tax the memory.

People Who Memorize Readily

"Do not place too much stress upon those who memorize readily. Some people seem to be gifted with a kind of mental glibness. They make their mental photographs with a kind of cinematographic rapidity; and the impress is likely to disappear quite as rapidly. If you find that you memorize slowly, do not let it bother you. I have found that the students who depend too much upon their natural gifts in memorizing make many mistakes. Their memories are neither reliable or accurate. When they need their memories most they fail them. I say this purposely because I know that a great many students have a terrible struggle in the matter of memorizing. Stick to it. The more effort you put in your memorizing the firmer will be the impression upon your brain negative.

"Memorize phrase by phrase, not measure by measure. The phrase is the musical unit, not the measure, unless the phrase lengths happen to conform to the measure lengths. The thing to remember is the thought, not the symbols. When you remember a poem you do not remember the alphabetical symbols, but the poet's beautiful vision, his thought pictures. So many students waste hours of time trying to remember black notes. Absurd! They mean nothing. Get the thought, the composer's idea; that is the thing that sticks.

"For the same reason that one should memorize by phrases, one should also have a firm grasp of the elements of harmony to memorize well. Chords are musical words. The arrangement of chords is not as arbitrary as the arrangement of words in a sentence, but the sequence of chords in harmony is an immense help to the memory.

"In my own case my memory seemed to be asleep until I was twelve years old. Then I memorized only with the greatest difficulty. Now, by dint of great experience, I memorize very easily. It is all a matter of persistence, time and training. It is for such a reason that I would encourage all those who are now having a struggle with memorizing. What you do memorize, memorize well. There are amateurs who seem to be able to play the greater part of the whole literature of the piano from memory, but who do not play any one piece really finely. Of course, the concert pianist has stored away in his subconscious mind literally millions of notes. He makes up his programs for a season—if he is called upon to play a certain concerto he has not played for some time, he practices upon it and it comes back to him with a readiness dependent upon the thoroughness with which he originally learned it.

The Daily Practice

"Daily drill in memorizing, if only just a little, is better than studying memorizing now and then. It is the regular practice that counts.

"Four hours a day of practice is good measure. Over-practicing is just as bad as under-practicing. It should be the younger student's aim and desire to get done with technic as soon as possible. There is no short cut. One cannot go around or under the mountain. One must climb straight over it. Therefore in the earlier lessons more attention must be given to technic than in the later lessons when a really masterly technic has been developed. The trouble is that most students seem to look upon it the other way. Two hours a day for those who are not advanced in music (not beginners by any means) are not too much for technic. I do not see how one can climb over the great mountain of modern technic at a less speed than two hours a day. Otherwise, they would be old men and women before they could hope to compare with others in these days of enormous technical competition. Everybody knows that technic is only a means to an end; but without this means one does not reach the end. There may not be anything very beautiful about the great, grimy engine of an automobile; but if one would get to the journey's end—to the dreamland of wonderful trees, gorgeous flowers and entrancing beauty—he must have the means. You must travel just so many scale miles, and arpeggio miles and octave miles before you arrive at the musical dreamland of interesting execution and interpretation.

"Always divide your practice periods. Do your technic at one time and your pieces at another. Approach the two sections with different aspects.

"Avoid worry and distractions of any kind when you are practicing. Your mind must be every minute on what you are doing, or the value of your practice is lessened enormously. By intense concentration, love of your work and the spirit in which you approach it, you can do more in a half hour than in an hour spent purposelessly. Do not think you have been practicing, if you have played a single note with your mind on anything else.

"When you practice in the right spirit you don't know what it is to get tired. I often practice three and four hours and hardly realize that I have been practicing at all.

Secure Variety in Practice

"Variety in practice is most important. Repeating monotonously over and over again in treadmill fashion is the very worst kind of practice. It is both stupid and unnecessary. Take the scale of C. It may be played in hundreds of ways, with different rhythms, with different speeds, and with different touches. The hands may be varied. One hand may play legato and the other staccato. Practice in this way, using your brains and your ingenuity, and your practice will not be a bore to you.

"Practice in rhythm is something which American students in particular should not fail to secure. The student should look upon the rhythm of a piece as part of the personality of the piece. It should be marked by a strong vigorous design in the background. The Bohemians, Hungarians, Poles and the Russians seem to have an instinctive sense of rhythm. The Americans seem to fail in it. It puts me to my wits' ends to know how to develop this sense of rhythm, which is one of the most human things in music. Playing duets helps to develop it; and of course hearing a great deal of strong rhythmic music is an aid. This can be heard in concerts and also by means of the talking machine.

"Accompanying an instrumentalist or a singer with a strong rhythmic sense is also a very good way of awakening the lethargic pupil to his rhythmic shortcomings. It is sometimes something of a shock to the young pianist to be asked to accompany such a singer for the first time. They find themselves being dragged along into new thought channels of which they have known but little.

In order that teachers and students may have Mr. Lhévinne's exceptionally fine ideas upon piano playing in more permanent form, the series which began in the October issue and is completed in this one will be published as a book, a notice of which appears elsewhere in this issue.

"Rhythm should not be thought as something dead. It is live, vital, elastic. Of course, in the deadly thump, thump of the military march of the Schubert type, there is not the sprightly rhythm that one finds in a Chopin Etude. Whether the piece is played slower or faster the rhythmic design must not be obscured. It must always be there.

Acquiring Velocity

"First of all, let me admit that there does seem to be a physical limitation in the matter of velocity, and this differs with different people. It is mental as well as muscular nervous. Certain pupils do have limitations. The ability to acquire abnormal velocity by no means insures musical ability. Some pupils can play 'like lightning,' but can hardly do anything else well. Do not overrate velocity. Some develop it very quickly, and some acquire it only after great patience and persistence. Therefore, there is no hard and fast rule upon how to develop it. Perhaps the best general principle is the acquisition of the habit of playing with an extremely loose, floating hand. Rigidity of muscles and velocity never go together. Personally, I was always able to play with great rapidity. One of the serious mistakes that Safonoff made with me was that when he found that I could do a thing unusually well he would indulge me in it. He never gave me enough of the works in which there was no occasion for bravura, virtuosity and velocity. Develop your weak points; the strong points will take care of themselves.

The Danger of Bravura

"There is something about all of us that fascinates us with anything that is showy. When we have a piece that 'goes off' like a lot of fireworks, it intrigues us. Such pieces are dangerous; they lead one away from the finer side of one's art.

"In bravura playing, the spirit and character of the piece is everything. Bravura playing is daring. One elects to play a brilliant passage, takes a chance, and accomplishes it. One is thrilled with success and then proceeds to waste valuable time in developing it to the disadvantage of other phases of technic.

"Bravura playing is also attempted all too early by students. They want to play the Tchaikowsky Concerto before they can properly play a Czerny exercise. I once found one student who didn't know anything but bravura pieces. He was able to astonish all his relatives, but could not dream of giving a well-balanced program before a musical audience.

"Another danger of bravura is that many seem to look upon it as a kind of musical scrimmage. As the tempo and the dynamic force are increased in a brilliant passage, the notes become more obscured and confused, the octaves are mixed up and the trills mussy. Good bravura playing is just the opposite, and as the effect begins to 'soar and resound' there should be more and more clarity.

The Danger of the Pedal

"If there is a danger in Bravura, there is also a danger in pedaling. So much latitude can be taken in pedaling (and, indeed, who would make hard and fast rules for pedaling) that the novice uses the pedal like a kalsomine brush with which he might paint the back fence. The pedal demands study, meticulous study. It should be used with the same intelligence and definiteness as the fingers. It should be applied in the fraction of a second and released at just the right moment.

"One of the dangers is in not releasing the pedal at the right time. When to raise the foot is just as important as when to put it down. The best pedal effects in artistic playing are those in which the audience does not realize that there is a pedal at all.

"Regular pedaling (that is, when the pedal is depressed when the note is struck) and syncopated pedaling (depressing the pedal after the note has been struck) both have their uses. When playing a series of chords, use the syncopated pedaling, for in no other way can the sound be made continuous. It saves the piano from sounding like a xylophone.

"Pedaling is all in the knowing how. I employ a full pedal, a half pedal and a three-quarter pedal. In some of these effects the pedal just barely raises the dampers up from the wires; sometimes they touch slightly, producing a delightful harp-like effect. (This effect is rarely heard upon an upright piano as the mechanism is different.)

"One of the dangers of pedaling is in the so-called atmospheric effects. One knows that in a beautiful Corot painting the sharp outlines are almost nowhere to be seen. Corot, the master, lost them in a wonderful atmosphere. Thus, in certain modern works of music these outlines may be softened by the very skillful use of the pedal. There is no hard and fast rule, each phrase is a law unto itself.

"The pedaling in a Haydn Sonata and the pedaling in a Chopin Berceuse are as different as the brush technic that one would find in a pre-Raphælite painting and in a Millet. They represent different epochs and must be treated differently.

"What is so fascinating as the art of music; and how can it be approached with more charm by the individual than through the pianoforte. There is hardly anything so hideous as bad piano playing, and scarcely anything more beautiful than the masterly interpretation of a great composition by a great artist. Surely, it is worth all the study and far more, to acquire an intimacy with this wonderful instrument which brings so many of the gorgeous treasures of the tone world so near to the individual."

Self Test Questions Upon Mr. Lhevinné's Article

1. *Why is the study of memorizing indispensable?*
2. *Why should one memorize by phrases?*
3. *How can one practice without getting tired?*
4. *What is the basis of good bravura playing?*
5. *Name one of the dangers in pedaling*

Left-Hand Faults

By Margaret Danischek

THE left hand, as a rule, is far less developed than the right.

The left wrist is probably much more constrained than the right one; perhaps not enough to injure seriously your technic, but just enough to spoil the finish of your playing.

Beauty of tone depends almost entirely on the looseness of the wrist, and without complete relaxation it is next to impossible to get the full beauty out of your playing.

Try scales with both hands and it will be seen that the right invariably leads; try octaves and it is the same.

There is a great deal too much arm motion in left-hand playing. Relax the wrist and play more with the fingers. "Floating and Drifting" (by L. Renk, Opus 3, No. 5, in the November, 1923, issue of THE ETUDE) affords good exercise for a loose raising and falling of the wrist. Try something with the left hand in staccato work and keep your wrist as relaxed as possible.

Play scales and pieces with the left hand leading. Even a week of this kind of work will show perceptible results in technic and clarity and strength of tone as well as in musicianly execution.

Student Helps

By Katherine K. Brown

IN learning to read at sight, try to let your eye take in a whole phrase or group. Do not read note by note. Children now learn to read books by picturing to themselves the whole word, and not by spelling it letter by letter. Do the same in reading music.

"Repetition," says Gibbon, "is the mother of all knowledge."

The same holds in regards to music. (Slow repetition.)

When anything difficult is met, ask yourself at once, "Where does the difficulty lie?" Investigate, experiment, and you will soon discover that you are probably making false movements and otherwise doing what ought not to be done.

Knowing what the difficulty is means that it is almost overcome already.

Curious Facts About the Names of Musical Instruments

By Marcus A. Hackney

ALMOST everyone knows that name of our most familiar musical instrument, the Piano, has a longer and more dignified form "Piano-forte"; but not everyone knows what the full name means, nor how it got it. The inventor of the instrument was particularly proud of the fact that it was able to give a distinction in power, from soft to loud, merely by a difference of touch on the part of the players, which the old Harpsichord, its predecessor, would not do. Accordingly he named it "Piano-forte," from two Italian words meaning "soft" and "loud." In short, he called it the "Soft-loud." (*Col' piano e forte.*)

The name of the Violin has a long and somewhat complicated history, which interests the learned, but would be too tedious to recount here in full. We have a more familiar and less dignified word for the same instrument, namely, "Fiddle," which, by the way, so excellent a musician as Percy Grainger does not disdain to use in his own publications. German, like English, has two different names for this instrument, almost exactly like the English words just mentioned: "Violine" and "Fiedel." It has the word "Geige," which is possibly still oftener used. We have only one name for the Viola; the Germans have this same name for it, but they also have another more homely one—"Bratsche." ("Viola" or "Bratsche," just on the same plan as our own "Violin" or "Fiddle.")

The Violoncello

"Violoncello" (sometimes most incorrectly spelt *violincello*) has a curious history, arising from the Italian language being particularly rich in diminutives and augmentatives—words which mean a *little* thing or a *big* thing. "Violone" (which must not be confused with the French "Violon," meaning simply "violin") means a *great big* violin, and was used to indicate what we call the double-bass. The termination "cello" means a *little* thing. Consequently "Violoncello" is a *little great-big violin*; in other words, an intermediate size. The use of the abbreviation "Cello" is rather meaningless, but serves its purpose very conveniently.

The name of the Clarinet has sometimes been incorrectly spelt "Clarionet," probably from the false supposition that it is derived from "Clarion." The Clarion, a now obsolete instrument, was simply a very high shrill sort of trumpet—an instrument of totally different nature.

The Oboe gets its name from the French, not directly, but through the Italian. The French name is "Hautbois," meaning "high wood," and "Oboe" is an imperfect attempt to render the French pronunciation of this word phonetically in Italian spelling. In English it is very commonly heard pronounced *o-bo*, but *o-boi* would be more nearly correct.

The Piccolo is more properly the "Piccolo Flute," for piccolo is simply the Italian word for *little*. It might be a little *anything*. However, as in the case of "Cello" for "Violoncello," the word is convenient and generally understood.

That long wooden instrument which forms the bass of the wood-wind section in an orchestra is known as a "Bassoon," derived obviously from the word "bass," alluding to the pitch of its tones. In Italian, French and German—sometimes even in English—it is called the "Fagot" (the spelling differing slightly in the language named), from its resemblance to a *fagot* or bundle of sticks, when it is disjointed for convenience in carrying.

The name of the Trombone is another example of the use of an Italian augmentative, being derived from "Tromba," a trumpet.

The Saxophone gets its name from its inventor, Adolph Sax, and dates from the year 1846.

One of the most curious corruptions that ever happened to the name of a musical instrument was that of the Basset-horn, which was an instrument of the clarinet type—not a horn at all. It is said to have been invented by an Englishman named Horn, who called it "Horn's Basset," that is, a little bass of Horn's invention, but shortly the name got twisted to "Basst's Horn," and this error was carried into France, Italy and other countries, and never corrected. This instrument, by the way, though written for by several of the greatest composers, has now become obsolete, its parts being now usually taken by the Bass Clarinet.

"THE master puts into music the thoughts which no words can utter, and the description which no tongue can tell."—S. A. BARNETT.

Contemporary Comments of Active Music Lovers

"A National Conservatory, with free tuition for qualified pupils, is the great need in America."—KENNETH M. BRADLEY.

"There is a great fountain of new life in a singing people. Song in mass is a regenerative force of incalculable power in the social body."—HARRY BARNHART.

"Because we love America, we know that a musical America will be a greater America, a nobler America, and a truer America."—MRS. JOHN F. LYONS.

"Of all the intellectual processes none is more helpful to the student than concentration."—OLGA SAMAROFF.

"I find English a very grateful language to sing in, and not at all difficult or unpleasant, as some would have us believe."—ELENA GERHARDT.

"Aside from the æsthetic quality of music it is wonderfully satisfying and restful. It smooths out wrinkles and puts a man at rest with the world and with the universe."—THOMAS A. EDISON.

"We should give all our foreign operas in English. If they are given in English they will become more popular with our people."—MRS. EDGAR STILLMAN KELLY.

"National art has always been the expression of an ardent national spirit and can only be premised upon a nation of which that art is a direct and immediate æsthetic expression."—JOHN POWELL.

"The important thing is to determine the combination of different capacities possessed by the student in different lines, and not necessarily the extraordinary capacities in one line."—CHARLES H. FARNSWORTH.

"I have every sympathy with the trials of composers and every admiration for any fine personal acts or sayings they are credited with, but I am not to admire their compositions because of this. There is only one reason for appreciation of composers, and that is the quality of their creations. . . . I see no calm reason why Bach and Beethoven were more interesting men to meet in their time than are Elgar and Strauss in ours."—JOHN F. PORTE.

Press Hard

By Marjorie Gleyre Lachmund

Do you *press* hard? Yes? Well, then, do you press hard in the *soft* parts? No? But you should! You should *always* press hard. When students realize this there will be less slip-shod, uneven playing. Do not be afraid it will "spoil your touch." It will, on the contrary, develop the even strong touch that every pianist should possess.

Sometimes when a pupil finishes playing an exercise I ask: "Are you tired?"

When the answer is "no" I know that the pupil was not pressing hard enough to acquire strength. Etudes are studied primarily to develop strength and technic. If you do not press each note down firmly you are not getting the full value out of your study. Sometimes one thinks he is pressing hard when he is not at all. You should *feel* the pressure in the muscle of the under arm above the wrist; then you may be sure you are exerting enough strength. But while the effort should be felt in this muscle, there must be no strain at the wrist. The wrist should always be free.

"That's all very well for loud parts," you say, "but the expression often calls for *piano* playing."

That's just it. Pressing hard does not—should not—imply playing loud. You should be able to press the key down firmly in soft passages also. Never play on top of the keys; always press them way down. This not only gives a firm, even touch, but also brings the tone out with a fullness which is much to be desired in both *forte* and *piano* passages.

Chats With Serious Piano Students

By SIDNEY SILBER

Sidney Silber was born in 1881 at Waupun, Wisconsin. After studying with several noted teachers abroad, he returned to America to continue his career as a concert pianist and teacher. He has appeared with large orchestras and has given recitals in many cities in the West. For some years he directed the Piano Department of the University School of Music at Lincoln, Nebraska. He then accepted the position of Dean of the Sherwood School of Music of Chicago, a position he now holds.

An Unscientific Device

Thousands of piano teachers have vainly sought to attain the impossible in finger training through the device of the five-finger exercises. A five-finger position was foisted upon countless students, in which all keys were simultaneously depressed and individual fingers were raised so as to increase muscular power. No success has ever attended these efforts for the simple reason that Nature never intended such development through such means. No two fingers of the human hand are by nature equally strong or equally independent. The end sought should have been muscular control of fingers through purely nervous (mental) agencies. Technic proceeds from the brain to the fingers and not *vice versa*. The most competent teachers are now agreed that equality and control of finger action can be attained through judicious scale practice. But it is always the ear and the sense of touch which must act as true criterions.

The Most Important Consideration

The most important consideration in the act of piano playing is the necessity for relaxation of the entire playing mechanism, not only fingers, wrists, forearm, upper arm and shoulders, but of the entire individual. All joints are but shock absorbers. Undue contraction of muscles means impeding the free flow of mental energy. "Power through repose" should be the slogan of every serious student. Unless you are relaxed, your playing (with apologies to Shakespeare) will be a "Comedy of Errors," and will turn out not "As You Like It." Above all, do not become such a slave of time that your playing sounds like "Measure for Measure."

Relaxation

What is relaxation and how is it attained? This may be answered briefly by asking another question: What is naturalness and how it is attained? All self-consciousness, embarrassment and anxiety are forms of fear—and fear is the greatest deterrent in human action. Let it be emphatically stated that no muscles are ever absolutely relaxed—they would cease to be functioning muscles. The utmost degree of relaxation is attained when one enjoys sound and healthy sleep. Healthy muscles must have a certain degree of tension (fixation); and it is this condition which the student can attain by being natural and throwing off all elements of self-consciousness and embarrassment.

Man's Triune Being

Of all the arts, music expresses most effectively man's triune being, for it is an art requiring intellect, emotion and spirituality. Everything which is lyric belongs to the realm of the emotional; everything harmonic and formal, to the realm of the intellectual; while the conception of a work of musical art, as well as its total general effect, may belong to the realm of the spiritual. Rhythm is the expression of the physical in man and as such is encountered in the musical utterances of all degrees of civilization from the savage to the savant. The sequence of musical evolution is: first rhythm, then melody, finally harmony. The various types of music reveal single-voicedness (homophony) with simple accompaniment or harmonic background, to the highest, many-voicedness (polyphony) of the most highly educated. complexity of the tonal network, is, however, not necessarily an index to its inspirational value.

Time and Rhythm

Time may be money, but it is never music. Still, it is quite reasonable to assume that if a student is unable to play strictly in time, he can not have the power to play freely, that is, rhythmically. Comparable to the good, law-abiding citizen, he who is able to take orders is in a better way to eventually give orders than he who is not so trained. The best citizen is he who obeys the letter and the spirit of the law.

It is just as inartistic and anti-musical to play any composition in strict time, observing all metric divisions, as it would be to recite a poem by simply scanning it. In music, as in poetry, we must seek the sense-rhythm and this involves more or less of slackening or quickening (as the case may be) of the indicated tonal values and the rate of movement *(tempo)*. *Tempo rubato*, as this departure from the strict indications is termed, has unfortunately been the stumbling block for teachers and students alike, for the simple reason that it requires the play of imagination, not always possessed in high degree by the former.

Rhythm has the relation to musical expression that the human heart has to emotion. There never was a human being whose heart beat with clock-like regularity under all emotional stimuli. That would imply a being utterly devoid of emotion and, hence, not human. But as emotional processes differ in degree in different individuals, so the inner necessity for variation in movement and tonal intensity (which are the outward indices of emotion) must necessarily differ and vary with music-makers. There is the same difference between the caricature (distortion) and a portrait (likeness) as evidenced by the playing of the self-restrained, well-directed artist and the hysterical, undisciplined and immature student. Better, by far, to have a caricature than a blank.

Unity, Balance, Proportion and Symmetry

For where there is sameness, there is monotony—and monotony is the arch-enemy of all art-expression. On the other hand, just as the portrait is the artist's impression of his subject, seen through his individual temperament, with all due regard for outlines and colors, so the musical interpretation is the artist's impression of a composition with due regard to Unity, Balance, Proportion and Symmetry.

All of these elements enter into all dynamic and rhythmic variation and fluctuation. They are all interrelated. You can hardly have balance without symmetry and proportion; and you can hardly have unity without balance. The entire domain of style and charm draws continually upon two elements—rhythmic and dynamic variation. As seen in the previous installment, these are to a great degree the result of intuition. Everything that may be apprehended through physical senses is scientific in nature and scope. Only that which is perceived—a spiritual by-product—tends toward higher art values. You realize, then, that the entire process of musical interpretation is a highly complex and complicated one.

If there were only one thing to attend to at any given time, all of us could be great artists; but there are numerous considerations which must ever be kept in mind. A musical interpretation may thus conform to a number of given elements and yet be totally deficient in others. Unlike objects which may be perceived through the sense of sight, a tonal structure cannot be perceived in its entirety at any one moment. The art that appeals to the eye constitutes an excursion into space, while the tonal art constitutes an excursion in time. It is, therefore, justifiable to state that the variety of artistic interpretations of any musical work is far greater than the reproduction of anything perceivable through the eye, especially since one and the same interpreter cannot by any means exactly duplicate his renderings and their effect upon his listeners, even though he play a work twice in succession. Nor should he ever aim to do this.

Reproduction and Re-creation

The player-piano is a reproducer of music; the artist is a re-creator. Both reproduction and re-creation do, at times, dovetail. It is difficult to say with exactitude where reproduction leaves off and re-creation begins. That which makes the human being of great attainments a great re-creator of musical work is simply his sense of touch. This is as individual an attribute as the expressions of his face, his handwriting or any other emanation of his personality. Machine-made lace may be mathematically more precise and correct than hand-made lace, but it does not have the fine artistic "tone."

Tone and Touch

Tone and touch are interdependent. If the artist's mechanical mastery reflects his intellectual capacity for precision, it is his tone which reveals the movements of his soul. While the best types of player-pianos give exact reproductions of an artist's rhythmic fluctuations and, to a degree, his dynamic fluctuations, they do not, as yet, (and it is doubtful if they ever will) reproduce his touch. For that reason these wonderful devices never will supersede the artist in action any more than the movie will kill the spoken drama. The piano hammer lies but a short distance from the strings. What an undefinable mystery underlies the manipulation of the key, setting up a momentum which fairly baffles all attempts at analysis! The pianist suffers a great handicap in not being able to determine the pitch; but what an infinite variety of sounds are possible from the standpoint of quantity and quality! This very naturally brings us to a consideration of

The Pedals

Rubinstein very aptly called the pedals the very soul of the piano. No other musical instrument possesses this highly ingenious device. Without the pedals, the piano would indeed be a barren affair. The manipulation of the keys requires the highest exercise of intellectual mastery; the control of the pedals the highest exercise of mind and soul. While many a clever (intellectual) artist may possess head in playing the piano, he may be lacking to a great degree in soul. Such a one will hardly ever produce great beauty of tone or tonal charm.

The vital defect of most pianists is undoubtedly a lack of tonal charm. Music being essentially a lyric art, its highest ends are defeated if it lacks in sensuousness. To use the pedals continually produces precisely as colorless a product as not to use them at all. The student, then, who is not directed to look into the well-known phenomenon of sympathetic vibration and overtones has little chance of understanding the soul of the piano or producing a significant artistic result. The teacher who suppresses, ignores or neglects discussion and demonstration along these lines is criminally stunting the growth of his or her pupils. There are "common decencies" in pedal usage which all students may learn, irrespective of degree of talent. These should be mastered as soon as a fair degree of fluency in reading notes is acquired. The French have a very apt saying: *C'est le ton qui fait la musique*—which, translated, means, "It is the tone which makes music." Without the pedals the piano would hardly have a "tone."

Hearing Yourself as Others Hear You

You must, therefore, strive to hear yourself as others hear you, else you are destined to waste your best feelings and emotions on wrong or even bad sounds. You get out of the piano precisely what you

SIDNEY SILBER

put into it—whether consciously, unconsciously or subconsciously. To trust to impulse alone in musical expression is just as bad as having no impulse at all. The "hit or miss" method usually results in missing. He who trusts to luck invariably has bad luck. It is just as important for the aspiring pianist to hear himself as others hear him as it is for the actor to see himself as others see him. The analogy, in fact, between these two re-creative arts is striking.

Practice and Study

Rubinstein once aptly said: "Practice implies movements of the fingers; study implies movements of the soul." Various temperaments have various approaches to their mentalities and thus of making impressions upon the brain. The individual must find for himself the best and most convenient ways of impressing himself. It is not a matter of how many hours you practice or study but it is important how well you study. Above all, do not have the mistaken notion that long-continued periods will avail you as much as a number of short periods well distributed over the day. Remember that the human brain is like a storage battery. You cannot charge it in a few minutes. It requires at least twenty-four hours to charge properly a battery. Little by little the charge grows and finally is retained, ready for service. So, too, with the brain. Driblets of knowledge and information are conveyed to the brain; the aggregate then becomes very impressive. Remember that the mighty oak sprang from an acorn. Never work against Nature (for you will have to pay a penalty); always work with her and you will reap benefits and blessings.

Interpretation

Realize, once for all, that there is no one and only correct or artistic way to interpret any musical composition. The teacher who imposes so-called "traditional readings" is invariably looking backward. Briefly, it is the conception of style that marks the artist in his recreation of the essential tendency and spirit of a musical work. Style and charm are dependent upon two factors: rhythmic and dynamic variety as expressed through the medium of beautiful tone production. Without an exact knowledge of metrics and phrasing, and without definite accentuation, there can be no vivid and compelling rhythm. Above all else you must emancipate yourself from the rigors of the bar line and strict (metronomic) time. Declamation (speech) is needed—not articulation. There is indeed an interesting analogy between

Piano Study and Photography

Both of them are arts of suggestion rather than of representation. Here is one analogy:

Photography	*Piano Playing*
Lens	Eye
Focus	Concentration
Light	Enlightenment
Plate	Brain
Development	Study and Practice
Printing and Re-printing	Repetition

What a vast field for the exploitation of individual traits and gifts do these fields offer! We have the commercial photographer and the artist-photographer, who, gifted with the finest sense of perception and spirituality, together with psychological intuition, senses the personality and temperament of his subjects. By means of "illumination" he depicts and portrays character. His "finish" reveals his style, taste and personal technic. So, too, with the manipulation of the keyboard. The pianist may become a mere automaton, a strummer, bungler or a poet whose tonal messages and creations have epic and dramatic values. Here is a field of kaleidoscopic variety, offering subtle allurements for all ages and temperaments, requiring the interplay of all the faculties with which man is endowed—all for the purpose of taking man out of his humdrum, mechanical, daily existence into the realm of the ideal—a mean of spiritual, emotional and intellectual refreshment.

The Open Mind

More important than an artist's technic is his tendency. There are styles in piano playing as there are in musical composition. Styles change. It is imperative for forward-looking individuals to keep abreast of the times. Avoid conventionality.

Revere the past, value the present; but always look toward the future.

Maintain an open mind, liberal, susceptible and eager for all improvements and advances. Only in this manner is individual or collective progress effected. If you were not called or chosen to be a pathfinder, you can at least maintain that attitude of mind which gladly examines every new phenomenon without fear or prejudice. The radical is just as necessary to the growth of art as he is to political reform movements. Do not forget that the conservative of today was yesterday's radical; today's majority was yesterday's minority. Those masters, now acclaimed great, were once quite ignominiously maligned, misunderstood and misinterpreted.

Self-Help Test Questions on Mr. Silber's Article

1. *What is the most important consideration in piano playing?*
2. *What is rhythm?*
3. *What is the relation of rhythm to musical expression?*
4. *What relation have touch and tone?*
5. *What are the secrets of style and charm?*

Instantaneous Memories

By Rena I. Carver

Many students are well satisfied when they are able to play their pieces from memory without a mistake. They are delighted when they have them so well in hand that they can start at any place their teachers suggest. They are overjoyed when they find themselves ready to take up the theme again, after having been stopped for criticism.

A great European master wished his pupils to memorize their work so thoroughly that they could play the first measure; omit the second (just hearing and thinking it mentally); play the third; skip the next, and so on throughout the whole piece.

The pupils learned to do this. One student was even able to begin with the second measure instead of the first and skip every second one through the entire composition.

A Double Cure

By Blanche J. Stannard

If you suffer from too much flattery, or if you are bashful and nervous when performing before others, like so many students, here is your remedy. Paradoxical as it may seem, the same medicine cures opposite diseases! It is as good for a swelled head as for a faint heart! One type of youthful musical aspirant is bothered with that bane of teachers, family flattery. The other type suffers equally from entire lack of criticism, and never has the opportunity to perform before any audience.

A successful teacher of piano in New York city has found the cure for both conditions by providing for the pupil an audience of honest, helpful critics.

Periodically, sometimes as often as once a week, this teacher called together a number of her pupils in a class for concert work. Selections previously chosen for each one were supposed to have been worked up for this day. Then the advantages of playing before honest, kindly critics were explained to the class. This was done in a ten-minute talk.

Slips of paper were passed out to each pupil, and then one by one the performers played their selections and returned to the chairs of the audience to become critics of the next performers. When a number had been played the pupil in the rôle of critic wrote down his or her criticism of the performance and passed it in to the teacher unsigned. The critic, knowing that he would soon become the performer, was restrained from too harsh a criticism of a fellow-pupil, at the same time trying to make the criticism kindly and helpful. The teacher stressed particularly the point of telling what was liked about the performance. After the concert each pupil received the criticism of each member of the class on the slips of paper. Thus one afflicted with swelled head discovered where he or she was rated in the estimation of other students of music.

At the same time a timid performer, knowing the audience to be actuated by kindly motives and helpful desires, was inspired to do what can always be done before a friendly audience—his or her best. After a few class lessons of this sort timidity vanished and confidence took its place.

When the concert was over the teacher, having read the criticisms of each performance, epitomized for each one the main points of the combined critique.

At first many had a horror of these concerts. One girl declared she would not perform at the opening one. So friendly and helpful did the atmosphere become that she very nearly cried at the end of the concert to find that the teacher had taken her at her word and had not called upon her.

For the Teacher of the Adult Beginner

By W. L. Clark

1. Give more than the usual amount of time to scale practice, to strengthen undeveloped muscles and give agility to the fingers.
2. Be certain that the notes of the treble clef are well mastered before attempting to teach the notes of the bass clef.
3. It is frequently harder for the adult beginner to master the bass notes than to learn those of the treble; therefore, insist on adequate work for the left hand.
4. Employ tact and sympathy with the adult beginner. He will, as a rule, do all that is possible to correct defects when kindly urged by the teacher.
5. Strive for correct position of the fingers in playing; otherwise the adult beginner may become a very awkward player.
6. Strive for good finger movement.
7. Adhere to a good course of study in music, so that the student may measure progress.
8. Stress counting aloud.
9. Encourage adult beginners to appear in musical recitals.
10. Consider it worth while to teach the adult beginner. He may not have had the opportunity as a child, and is usually ambitious.

System in Practice

By Dr. Annie Patterson

Much has been written about methods of playing, but hazy notions prevail, as a rule, as to what may be termed "system" in the application of these methods. The student's practice hours are too often conducted on haphazard lines. No matter how gifted the executant may be, or what promise a pupil shows, *economy of time* as well as of *energy* is requisite if a high pinnacle of attainment is reached.

In the case of the instrumentalist, a scheme such as that which governs the laying out of an ordinary dinner menu may not be out of place. First, we will say, come the appetizers; the soup and fish, leading up to the strong meat courses, may be symbolic of preliminary finger and wrist drill of the "exercise" or study class. These should always form the first part of the practice hour. If students devote a quarter of their time to these, perhaps including a modicum of scales (major and minor, and in positions), a good three-quarters of the hour is left for piece-work. This requires also to be divided according to system. Preludes, fugues and sonatas should come first, whilst the performer's interest is fresh. Half an hour (or half the actual practice-time) is not excessive for this type of work. The remaining quarter, or fourth part, can then be allocated to the "sweets" of practice; the lighter pieces, and so on; whilst coffee or ices may typify ten minutes or so extra for "reading at sight"—always a diverting process.

Again, as the good diner never gorges, it is well in one's musical feasting to do all things in moderation. The reckless playing through of exercise or piece, regardless of slips made as one goes along, seldom produces any really good results. A few bars, or a short section, perfected daily, is worth a dozen pages rushed over in a careless manner, just for the sake of having to say that such-and-such has been "played through." Difficulties may even be isolated—a passage taken in segments, and preferably with separate hands—until the missed note or the imperfect chord is quite rectified. A little thought on these matters will save months of subsequent drudgery, as every conscientious pupil will allow.

Use Suggestion in Teaching

By Harold Mynning

Many music teachers do not realize the important part suggestion plays in music teaching. Impaired health has been greatly benefited by suggestion, and it can be of just as much service in teaching.

For instance, it will probably do very little good to tell a pupil that he should play a certain passage three times with the left hand, three times with the right hand and three times together. But have him play it this way in your presence and you will have impressed it on his mind. This is suggestion. Use it in teaching and you will get greater results. And results are what every teacher should strive for.

What to Teach at the Very First Lessons

By JOHN M. WILLIAMS

Section III.

This Series began in The Etude for January

Writing Music

I WISH I could impress upon the teacher the true value of *writing* music, as an aid to learning to observe. Even five minutes a day, for the first month, does wonders towards impressing on the child's mind the layout and make-up of the Grand Staff; the different kinds (values) of notes and rests, and other features of musical notation. Try it, and see for yourself.

Slurs

Explain slurs carefully. The first note of a slur is usually accented and the last note somewhat shortened. Thus,

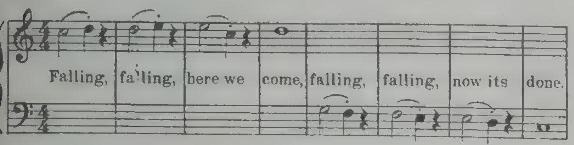
No. 1

Their correct meaning and execution is essential; and the pupils enjoy their performance. In slow tempo have the first note played with the down arm touch and the second note played with the up arm touch.

The long slur line is a *command* to play the notes underneath it in good *legato.*

Use the following little study for daily practice. It is splendid for the touch and for keeping a relaxed condition throughout the arms.

Ex. 2



Importance of Phrasing

Now we come to the most important subject in music—interpretatively speaking—phrasing. Just as, technically, the entire basis of piano playing is Controlled Relaxation; so, musically or æsthetically speaking, our interpretation of a piece is dependent upon our knowledge of phrasing.

The following illustration furnishes abundant proof that the study of punctuation is too important to be neglected. With one style of punctuation we have the following statement:

"Every lady in this land
Hath twenty nails upon each hand;
Five and twenty on hands and feet.
And this is true without deceit."

By a slight change of punctuation the true meaning becomes apparent;

"Every lady in this land
Hath twenty nails; upon each hand
Five; and twenty on hands and feet.
And this is true, without deceit."

Now play any piece of music, phrasing it both correctly and incorrectly. Observe the difference in the effect.

Phrasing

What is a phrase, and what is phrasing?

"A phrase is a musical sentence."

"Phrasing is punctuation applied to music."

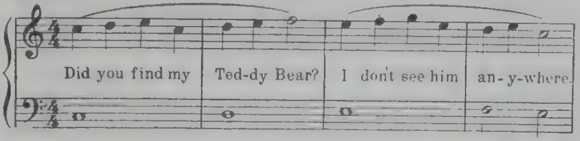
If music is a language—a language of the emotions—it must express something. How? By punctuation or phrasing.

Let us go back to our definition: "A phrase is a musical sentence." What is a sentence? A sentence is a collection of words expressing a complete thought. Correct. What is a phrase? Substitute "notes" for "words," and we have: "A phrase is a collection of notes expressing a complete musical thought." By joining several sentences together we form a story; and, likewise in music, by joining several phrases together we have a musical story or "piece."

How Can We Recognize a Phrase

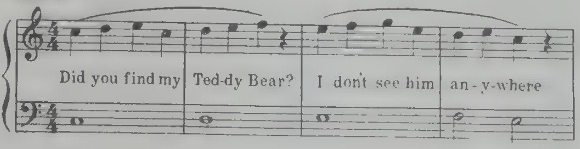
By the long curved line over or under the notes, called the "phrase line." Most modern beginners' books are very carefully phrased; and the curved line is used to denote the phrase instead of being used as a slur. Show the pupil how a certain number of notes (underneath the slur) denotes a phrase. Just as, at the end of a sentence in reading, the pupil is taught to let his voice "fall" or "drop;" likewise in music he should be shown that at the end of a phrase he should take up his hand—break the melody line. Thus, the following is written:

Ex. 3



and played

Ex. 4



When to Start Phrasing

When should we begin teaching phrasing?

When does the child at school learn his first sentence? Do his teachers wait several years, have to learn vocabulary all the time, and finally introduce him to a sentence? "No. How silly!" you say. A child attending a modern school is first taught the thought or sentence—later, the individual word. He frequently is in school several months before he knows the entire alphabet in sucession. And so it should be in music, but seldom is. How frequently we find children who have been studying music for several years, without even the slightest conception of what a phrase is!

Teach the child the musical thought, or phrasing, from the very beginning. Have him to memorize or practice every little exercise or piece, phrase by phrase, not measure by measure. (Some of the more "advanced" of modern thinkers along musical lines advocate doing away with bars as they have a tendency to cause the pupil to think measures instead of phrases.)

Interest Aroused Through Phrasing

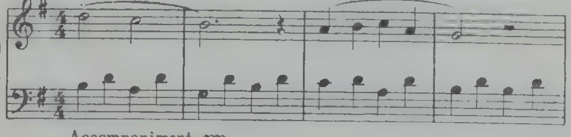
Just as some few scholars at school read along in a monotone, never seeing a period or a comma, so the majority of pianists play. And, we may add, the beginners in piano-playing are no worse offenders than a great portion of the so-called advanced players. The latter race through a Beethoven sonata displaying no more idea of developing its themes and phrasings than would a sewing machine. What is the use of talking "rhetorical pauses" to such a person?

At the risk of being accused of reiteration, I must reaffirm that in a large class in which this method is followed the poor pupils are the exception instead of the rule. Why? On account of their interest in the subject. Why are they interested? Because, from the very beginning they understand what they are trying to do. They are striving to translate words into sounds. They are trying to play *phrases* from the very first lesson; and they understand phrasing.

Tune in One Hand—Accompaniment in the Other

The average pupil, at the end of several lessons, will be ready for the next step—the playing of a tune in one hand and its accompaniment in the other.

No. 5



Accompaniment *pp*

It may be explained thus: When a violinist plays a "tune" or solo, he has someone to play the accompaniment for him. "Whom should you hear more distinctly—the violinist or the pianist?"—asks the pupil. "The violinist, of course," he answers. The same with a singer and an accompanist. The singer should be heard distinctly and the accompaniment should be kept in the background. But, it should be explained, we pianists have to do our own accompanying. We have to play the melody with one hand and the accompaniment with the other. In other words, we have to do the *work* of *two* people at once.

The pupil should first play the melody while the teacher plays the accompaniment *pp*; then *vice versa.* If the pupil plays the accompaniment too loud the teacher should refuse to sing (play) with him. Tell him you cannot "sing" unless you have a soft accompaniment. When each hand can be played easily, try them together, bringing out the melody well above its accompaniment. Pupils enjoy work with a definite object—rambling in the dark is what they do not like. Cease complaining about the bad pupils ("uninterested" is what it amounts to); look within and see if *your* work has been done correctly. Are *you* competent? If not, read, study, work—not on advanced repertoire, but on "How to Teach." Think. Experiment. Try to arouse the interest of your students. And last but not least, go to your Public Library and get out a few books on Psychology; and study them. Have you read "The Montessori Mother" by Dorthy Canfield Fisher? Apply to your music teaching the lessons taught therein.

Review Work

By the end of the second month the pupil should be able to drop reviewing the very first lessons and should begin this work farther on in the book.

First Technical Work

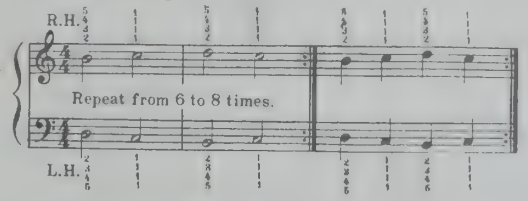
When the pupil has mastered eight or ten exercises like the last illustration, call a halt! Review, not from the beginning of the book, but the last eight or ten exercises studied. Work these up until they can be played easily and with freedom.

While on this review, do not assign new work in the book, but take advantage of this opportunity to begin technical work.

Crossing Exercise

The "Crossing Exercise" as given below is excellent preparation for scale playing. Put the thumb under quickly and softly. Play with high raised fingers and a deep, full tone. Tell the little children that the thumb is a burglar and the fingers are policemen. The thumb sneaks in (softly) and hides underneath the hand (quick thumb).

No. 6 - Crossing Exercises



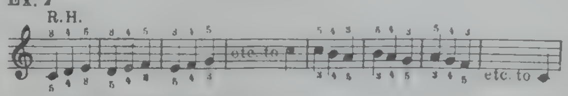
Value of Scales

The value of scales for technical practice is a question for individual decision. Just as "Practice does *not* make perfect," so it is with scales. Practicing scales with bad crossings or bad hand positions is positively detrimental to the pupil. Ask yourself, "Why do I practice scales?" The usual thought is: "To strengthen the fourth and fifth fingers (to equalize the touch, in other words) and for putting the thumb under and the third and fourth fingers over." Is this correct?

Take the C scale, two octaves, for example. Fifteen tones are played. In those fifteen tones we use the fourth finger twice and the fifth finger once—and we are supposed to be playing scales to strengthen the fourth and fifth fingers. To cross the thumb under three times we play fifteen notes. Is this efficiency? What would you think of a person who traveled fifteen miles to reach a place three miles away.

What, then, should we do. Use trill exercises for the fourth and fifth fingers, or the following:

Ex. 7



L.H. one octave lower.

Do not understand me not to believe in scale practice, because I do—in moderation—but *not* for equalizing the fingers, not for the benefits to be derived from the crossings. The following is a modern method of scale study and gets results.

The Scale

There is but one major scale. A scale may be begun on any of the twelve keys (black and white) on the piano; but the pattern remains the same.

Whole Steps and Half Steps

From one key to the next, if there is a key between (black or white), is a whole step. If there is no key between, it is a half step. Allow a whole lesson for drilling on whole and half steps.

Building the Scales

Draw the following pattern in the pupil's notebook and write, "The major scale consists of eight tones, the last being the same as the first."

1 whole 2 whole 3 half 4 whole 5 whole 6 whole 7 half 8
step step step step step step step

From one to two..........is a whole step.
From two to three.........is a whole step.
From three to four........is a half step.
From four to five.........is a whole step.
From five to six..........is a whole step.
From six to seven..........is a whole step.
From seven to eight.......is a half step.

All are whole steps except three to four and seven to eight. These are half-steps. Teach the pupil to *build* this scale, beginning on each of the twelve keys. Do not expect him to learn to play them with correct fingering; that would be asking entirely too much for one lesson. While learning to build them, and for several weeks afterward, the pupil should count aloud—not "one, two, three, four," but "one whole step, two whole steps and a half step, one whole step, two whole steps, three whole steps and a half step."

The keyboard must be made to fit the pattern—not the pattern changed to fit the keyboard. The pattern remains the same. When a major scale can be built beginning on any of the twelve keys (generally one or two lessons), then and not till then assign a certain number for practice. For convenience in fingering, divide them into three groups:

First group: C, G, D, A, E.
Second group: F, B-flat, E-flat, A-flat.
Third group: B, F-sharp, D-flat, G-flat.

Scale Practice

If the preparatory exercise (crossing) has been faithfully practiced, as it should for several lessons, the pupil is now ready for his first *scales*—not *scale*. Assign C, G, D, A, E, each hand alone, one octave. As the second finger plays its note the thumb should move under the hand quickly and be prepared to play its note.

Recite Signature

Before playing each scale the pupil should recite the following formula: "C major scale—signature no sharps or flats." He then plays the C major scale.

Next scale, recite: "G major scale—signature one sharp, 'F' sharped." This is then played; and so with the others.

When group one can be played easily, hands alone, assign group two (the flats), each hand alone, and have group one practiced with hands together. Later, group three. Always have the pupil recite the key signature before playing. This prevents halting and stuttering.

After several weeks on the one octave forms, teach group three in two octaves, then group two (two octaves). and last of all, group one. If the pupil has trouble with the latter, have them play nine tones for a week or two before extending them to two octaves. This familiarizes the second crossing, and is a great help.

Transposing

Just as soon as able to play easily the twelve major keys—one octave, hands together (it should take at the outside ten lessons from the beginning of the scale practice)—transpose each exercise into all twelve major keys. If the instruction book you use is written in five finger position it will be a joy, as the transposition will be easy. Be careful to begin your transposition work on an exercise in five finger position.

"Both diet and exercise are of first importance to the artist who wishes to give his best to the world. . . . As to exercise, I find that piano practicing, if properly undertaken, provides all the exercise I seem to need."
—PERCY GRAINGER.

Editorial

What is a Phrase?

(Comment on Mr. Williams' Definition)

IT is necessary to have editorial dugouts when the subject of musical nomenclature is discussed. For instance, the author of this article asserts that "A Phrase is a Musical Sentence;" "A Phrase is a collection of notes expressing a complete thought." In this he has the confirmation of no less an authority than Dr. Percy Goetschius, who says, "Perhaps the most correct definition is that the term phrase is equivalent to 'sentence' and represents the smallest musical section that expresses a complete idea; not necessarily wholly finished, and therefore independent of other adjoining phrases, but at least as complete in itself as the ordinary brief sentence in grammar with its subject, predicate and object" [*Lessons in Music Form*]. J. H. Cornell, in his *Musical Form,* based upon Ludwig Bussler's *Musikalische Form Lehre,* describes a phrase thus: "Every extension of a musical thought to four measures other than any such extension already noticed constitutes a Phrase or Tetrameter." Later in the work he describes a motive (or motif), which is really what most people regard as a phrase. W. S. B. Mathews, for instance, specifically says, in his *Outline of Musical Form,* "The Phrase is a fragment of melody having a well-determined motion and repose. The phrase always makes sense, but not complete sense." Thomas Tapper, in his *First Year Analysis,* describes the period as being divisible into two parts, each called a phrase. Thus the period expresses the complete musical thought and the phrases compose it. Bertenshaw, an Englinsh authority, in his *Rhythm, Analysis and Musical Thought,* says, "A sentence is a passage which ends with a perfect cadence and which consists of two or more parts called phrases."

Dr. Dunstan, a celebrated English authority, recognizing the various opinions upon the definition of a phrase states: "It is difficult to see how a whole musical sentence can fairly be called a phrase in the modern sense; but the whole terminology of musical form is almost hopelessly vague and indefinite and hardly two authorities agree completely as to the meaning of the terms used."

Dr. Hugh A. Clarke, of the University of Pennsylvania, defines a phrase in his musical dictionary: "Technically an incomplete musical sentence." Louis C. Elson, on the other hand, in his dictionary calls it "A short musical sentence; a musical thought or idea."

The great Grove dictionary gives the definition of Sir Hubert Parry thus: "One of the smallest items in the divisions which distinguish a musical work. Where there are distinct portions marked off by closes like full stops and half closes like stops of less emphasis (as often happens in airs, tunes, themes, etc.) the complete divisions are generally called periods and the lesser divisions phrases. The word is not and can hardly be used with much exactness and uniformity; for sometimes a phrase may be all, as it were, contained in one breath, and sometimes subordinate divisions may be very clearly marked."

All this confusion is unfortunate. After all, what makes a definition is currency. The widest usage confirms its employment and its value to the technical terms of the art. We should say, from nearly two decades of correspondence with musical people everywhere, that the idea that a phrase is a small section of a musical composition, expressing a thought, but often ending in a half cadence and therefore not necessarily expressing a complete thought, is a fair definition of the phrase. Certain phrases obviously demand other phrases to complete them; unless the composer desires to have them go uncompleted as did Schumann at the end of his exquisite song *Im Wunderschonen Monat Mai.*

There is another reason for desiring this definition in addition to that of widest adoption. The phrase in grammar may be a complete sentence; or it may be merely part of a sentence. Every school child knows this. If when he comes to study music he learns that a phrase is a complete sentence, he is immediately confused.

The plan of calling the musical sentence a period and its component subdivisions phrases seems, therefore, superior to us, in many ways. We are convinced that it is the conception of the term most widely employed and taught. Therefore it would be advantageous to adopt it as widely as possible to avoid the confusion that always comes with different definitions of the same thought. We therefore differ with Mr. Williams or Goetschius and others and give our readers the advantage of other opinions upon the subject.

"TRIFLES make perfection; but perfection is no trifle."
—HOGARTH.

Weeding out Mistakes

By Rena I. Carver

AT the beginning of the term paste sheets of blank music paper on colored cardboard. Then write the name of a pupil on each sheet. Mistakes that persist for more than two lessons are written on this card. Whenever a few minutes are at command or, perhaps, at the close of the lessons, have a short intensive drill on one or two mistakes. This brings them more vitally before the pupil's mind. As each mistake is conquered, put a picture of a flower over the black mark by the pupil's name at the head of the sheet. The child whose sheet has no mistakes recorded has a flower garden scene placed after her name.

Separate sheets are used for piano work, harmony, ear-training and history of music study. At class meetings or class lessons sometimes allow the children to dictate the work to each other from these cards, or permit a number of children who have almost perfect records to hear the others recite. From time to time make a list of all the mistakes on the cards and use them for a test.

Studying Melody Playing with Accompaniment

By Eugene F. Marks

IN the training of the little child at the keyboard he is called upon to use parallel or contrary motion in some of his first tiny studies. One does not go very far in the average instruction book before meeting with numerous exercises to train the little hand in this. What the child does not encounter is the fact that he must soon learn to look upon his hands as individuals, each capable of doing quite different things with ease and pleasure. Often a melody has to be played and sustained with one touch in one hand while the accompaniment is played with quite a different touch with the other hand. The melody is usually played legato, while the accompaniment is sometimes staccato or semi-staccato.

In order to attain the desired end and overcome the natural tendency of both hands to play after the same manner, as acquired through previous study, select a piece in which the melody is for the right hand. At first play very slowly and hold the melody note (even if you increase its time value a little) with the right hand; and at the same time lift the left hand, which plays the repeated note or chord, high in the air. Practice in this exaggerated manner until you feel no impulse to raise both hands at once. Then endeavor to play the exercise without raising the left hand so high, and continue in this manner, gradually lessening the height of the lift of the left hand until it gains a naturalness and independency of movement. When this technical achievement is secured, begin to work for the desired speed and rhythm.

Next, take up for study a piece in which the left hand must play the melody and the right hand the accompanying part. Treat it in a similar manner, lifting the right hand high in the air, while the left sustains the melody. By the continuation of this process of exaggeration of both time (slowness) and muscular action (lifting high), you will observe that not only will the arms secure independence of action, but also that the fingers will be greatly benefited and improved in their legato touch, owing to the opposition of the two touches, semi-staccato and legato, being brought into direct contrast and a favorable position for camparison.

The Simple Piece

By Harold Mynning

REINALD WERRENRATH, the eminent baritone, tells us that the most difficult song in his entire repertoire for him to sing artistically is the old English ditty, *Drink to Me Only with Thine Eyes.*

The consummate mastery of a little piece, such as Schumann's *Träumerei,* often reveals the real qualities of the great artist far more strikingly than does a Chopin Ballade or a Liszt Rhapsody.

It takes patience, endless patience, to work over and over again upon a little piece. It is far more difficult than it is to flounder about in a big work.

Pupils have a regrettable notion of the word "difficulty." Difficulty does not mean making mistakes in something almost impossible to attain. Difficulty is forcing the will power to concentrate upon something you can play passably well until you can play it superlatively well.

THE PUBLIC SCHOOLS AND MUSIC EDUCATION

How Music Found Its Way Into American Public Schools

By E. K. HILLBRAND, Ph. D.

Professor of Education, Dakota Wesleyan University

In order to understand the introduction of music into the Public Schools in the United States it is necessary to know something of the manner in which the place of music has changed with the factors controlling education.

The first phase may be called the Religious. This was a period when music was influenced by the fact that all education was connected with the Church and the teacher was the priest. The second phase may be called the humanitarian. This was the period in which came the growth of democratic influence of the 18th Century. The third phase may be called the Social-Economic, upon which we are now entering. During the first part of the 19th century four men especially were controlling factors in the music situation in Europe. Their influence spread to this country also.

Hans Georg Nageli (1773-1836), composer and teacher of music. Born in a village in the canton of Zurich. He, in 1810, with M. T. Pfeiffer, published—*Die Gesang—bildungslehre nach Pestalozzishen Grundsatzen* (Theory of Instruction in Singing on Pestalozzian Principles). This work had considerable influence on the introduction of singing as a regular school subject both in Europe and the United States, where it was introduced by W. C. Woodbridge and Lowell Mason.

Guillame Louis Wilhelm was director of music in the municipal schools of Paris, beginning 1819. Thousands of students passed through his classes and went out to found singing schools.

Mr. Hullah in England, on February 1, 1841, opened a school to teach schoolmasters of day and Sunday schools vocal music. It is said that 25,000 pupils passed through his classes.

Johann Heinrich Pestalozzi (1746-1827). It is taken for granted that the reader knows the remarkable history of Pestalozzi's influence in education. However, Pestalozzi's influence upon music education has not been stressed as it might be. Pestalozzi's method of teaching music was as follows: (1) To teach sounds before signs; to make the child sing before he learns the written notes or names. (2) To lead him to observe by hearing effects instead of explaining these things to him. (3) Teaching one thing at a time. Rhythm, melody and expression are taught and practiced separately before the child is called to the difficult task of attending to all things at once. (4) In making them practice each step until they are master of it before passing to the next. (5) Giving of theory and principles of practice as an introduction from it. (6) The analyzing and practicing of the elements of articulate sound in order to apply them to music.

The above are the principles of teaching music which Pestalozzi worked out in his various experimental schools. We shall see later how men came from America to see Pestalozzi teach and get acquainted with Nageli, who was associated with Pestalozzi in music work and whose articles on music appeared in the Weekly for Human Education sponsored by Pestalozzi from 1807 to 1821.

This popular teaching of music idea spread to America in very direct ways. We shall see the influence of Europe on early American Music as we outline the characteristic periods of music in the United States.

Music in America Before 1830

The period up to 1830 in America was a preparation for Public School Music. It developed out of private instruction under such men as Gottlieb Graupuer, who was the first imported teacher in Boston, a German trained musician, and G. K. Jackson from England. Singing schools were also started and these had for their purpose the improvement of church music by teaching youths and adults to sing by note rather than by rote as was the former custom. These singing schools were stimulated by private instruction, and interest in church music growing out of the crude psalmody of the Puritans.

The first formal Singing Society that we know of was organized at Strougton, Mass., 1786. The Handel and Haydn Society was organized in 1815. With this interest in private instruction and singing schools, came efforts to train children. In 1824 at Boston Mr. N. D. Gould organized classes for children. William Tuckey in 1753 at Trinity Church, N. Y., had organized classes for children. In 1827 Lowell Mason came to Boston and his efforts along this line will be told in detail later in this article.

The fact is, New England was, in the period before 1830, the center of primitive music. Here and there a private teacher had come from Europe. The music of the Church was in a poor plight. There were only a few song books and the musical notation was not the kind that we know now. Instead of notes there were letters or odd shaped symbols. The book most used was probably Aintworth's Psalter and also Steinhold and Hopkins' revised Bay Psalm Book. Seventy editions of the Bay Psalm Book were used in one century. Other books in order of their appearance were, John Tufts', 1712, a second one by John Tufts, date uncertain, one by Cotton Mather 1718, Walter's book, 1721, and Bailey's Book, 1762. In the churches the music was "lined out," that is, read and sung a line at a time. This condition of church music as well as music in general was due to the early attitude of the Puritans. The Puritans destroyed organs, music books, dissolved church choirs and chased musicians out of the organ gallery. Music was the invention of the devil and they shrank from its luring invitations to destruction. The Calvinistic idea was the repression as irreligious of all joyful and artistic instincts. Parker says of this condition, "All phases of art were neglected by the Puritans. Puritans habitually regarded religion and beauty as antagonists." This same attitude (in addition to anti-ritualism) explains the neglect of music in the church service. Since all aesthetic pleasure was deemed reprehensible, church music was accused of "bewitching the mind with syrene's sound." In the 17th century singing grew so uncommon in New England that only some eight or ten tunes were in general use. There were places where only the name of the tune was familiar, the music having been "miserably tortured and twisted and quavered into a horrible medley of confused sounds and disorderly noises." This neglect of music by the Puritans contrasts strongly with the interest in music which was continued in Germany, where the subject generally occupied an important place in the elementary school curriculum.

Concluding this section on Music in America before 1830, it will be seen that notwithstanding all the obstacles the colonists were really beginning to make progress during the latter half of the 18th century and the beginning of the 19th. They were singing in choruses music that was in the fugal style and also in the various parts. The church music and singing was improved and interest in music stimulated the writing of new tunes and tune books and private instruction together with public singing classes and congregational singing in the church and prepared the way for the introduction of Music into the Public Schools.

Introduction of Music Into the Public Schools

In New York, 1835, Darius E. Jones taught for some time in one of the schools with sufficient success to insure permission to continue at the option of the local board, provided no expense was incurred and regular studies were not interfered with. No permanent recognition, however, was given till 1853.

In Boston, then, was the earliest recognition, officially, of the introduction of music into the schools. We shall give the history of the introduction into the schools from several angles by citing the history of the men who had most to do with. We have seen that European influence was a factor in the preliminary period; but now we shall see the direct influence of Pestalozzi upon the men who went to study his methods.

W. C. Woodbridge (1794-1845)

Woodbridge was one of the early American travellers abroad, from New England. In 1820 he spent the year in Europe studying education and became deeply interested in Pestalozzi at Yverdun, and of Fellenberg, who was doing remarkable work in Geography, at Hofwyl. Woodbridge returned to Europe again and spent the years 1825-29 there. It is said he spent three months with Pestalozzi and Fellenberg. He was keenly interested in the study of vocal music and at the first meeting of the American Institute of Instruction in 1830 he read an important paper on the Pestalozzian method of teaching music. From 1831 to 1839 he published important articles on music in the American Annals of Education.

It was Woodbridge who first interested Lowell Mason in the work of Pestalozzi. Mr. Barnard has this to say of Woodbridge: "He was, if not the very first, one of the earliest writers in favor of instruction in the studies of physiology, and vocal music, into our schools. He drew from behind the counter of a country store, and introduced into the higher sphere in which he has done so great and useful work, the celebrated Lowell Mason, a service which alone would have made him a public benefactor."

Horace Mann (1796-1859)

Lowell Mason became associated with Horace Mann in the year 1837; and since Horace Mann had a direct influence upon the teaching ideals of Lowell Mason we will give here a brief sketch of his influence.

Music was introduced into the schools of Boston at about the time of Horace Mann's entrance upon his duties as Secretary of the Massachusetts State Board of Education. It is said by several writers that Mr. Mann, through his aid to Lowell Mason, made it possible to make vocal music a feature of public school work. During his office Horace Mann issued Twelve Reports on the conditions of Education in Massachusetts and elsewhere, together with discussions of the aims purposes and means of education. After the Sixth report was out Horace Mann went to Europe and visited Great Britain, Belgium, France, Germany and Switzerland. His Seventh report embodies the results of his trip abroad and the significant thing is that he included a few pages on Vocal Music, pp. 126-128, and said that he wished for more space to discuss the subject. This was the year 1844. In his Eighth report, 1845, he devoted pages 117-153 on Vocal Music in the Schools. In this he tells of music being taught in New Orleans. It is important for us to see that a man was in office who knew the importance of what Mason was attempting to do.

Lowell Mason (1792-1872)

Lowell Mason is considered the Father of Public School Music. He was born in Medfield, Mass., January 8, 1792. He taught in the district schools of Massachusetts and then went to Georgia, where he taught music and conducted choirs and singing societies. In 1826 he came to Boston trying to find publishers and was discovered by Woodbridge. One account says he gave lectures in the churches in Boston on the subject of Music in 1826. Through Mr. Woodbridge, Mason became interested in the Pestalozzian movement and went to Switzerland (1837) to study the work of Nageli and Pfeiffer. He brought home with him a collection of Swiss and German school books containing class music and songs. Woodbridge also helped Mason out by making translations of the important works of foreign men. It was also in the year 1827 that Mason became associated with Horace Mann, who helped influence him to go abroad. During the same twelve years that Horace Mann was in office, Lowell Mason trained teachers of common school music in the institutes and normal schools of Massachusetts. "His long continued work as a practical teacher, his rare tact in developing the vital principles of instruction, his sympathy with youth and childhood, and the perfect simplicity and elementary character of his teaching, gave him an indescribable power over his audience."

In 1832, however, Mason, with the aid of William James Webb, organized the Boston Academy of Music. In 1834 the Academy published a "Manual of the Boston Academy of Music," 236 pages, prepared by Mason. Mason and Webb started young people's classes and children's singing classes which met with such success that public school instruction in music came as a natural sequence. In the preface of the Manual mentioned above, Mason went on record as saying that the hoped "music would at no distant day take rank among the branches of common school education."

One account says that Mason and other officials of the Boston Academy of Music prevailed upon the School Board of Boston, January 17, 1832, to adopt the following resolution: "*Resolved,* That one school from each district be selected for the introduction of systematic instruction in vocal music under the direction of a committee to consist of one from each district and two from the standing committees." These recommendations were not carried out, but much interest was aroused. Several states wrote letters inquiring about the procedure. The Third Annual report of the Boston Academy of Music tells of letters from Georgia, South Carolina, Virginia, Tennessee, Ohio, Maryland, New York, Connecticut, Vermont, New Hampshire, Maine and Massachusetts.

In 1836 a second proposal was presented to the School Committee by the officials of the Academy, among whom was Mr. Samuel A. Eliot (father of President Emeritus Eliot of Harvard), who was president of the Academy throughout its existence from 1833-47. Mr. Eliot, who had been a member of the School Committee, enthusiastically supported the proposition; and while he was mayor of Boston and then chairman ex-officio of the board for three years, 1837-39. The above proposition, presented to the Committee, urged the propriety of making music a public school study. The Report was accepted by the School Committee, September, 18th, 1837, but the City Council failed to make any appropriation.

During this same year, in April, Mason had gone to Europe and returned in October; and now, without the appropriation, Mason consented to give instruction gratis for a year in the Hawes School, South Boston. A current publication says, "The beautiful succcess of Mr. Mason's experiment dispelled all doubts and removed all hesitation." All obstacles seem to have been overcome and on August 28, 1838, the final vote was passed officially endorsing the experiment instituted the year before. Mr. Mason was placed in charge, 1838, permanently. He kept the place till 1841. Musical Tract No. 1 published by the Boston Academy of Music, an evangelizing document which contained the full report of the Select Committee and an account of the steps leading to the introduction of school music in Boston, ends thus: "May it speedily be introduced as a branch of school instruction into every town and village in the land."

Period From 1840 to the Present

There are few historical records for this period and the following pages will be a preliminary sketch of what could be gathered here and there. Cubberly gives a little history in a quotation having to do with Pestalozzian methods of teaching. "When it (the Pestalozzian A B C method) is applied to the new subjects of writing, drawing and music, which really came in as elementary school subjects after about 1845 in Massachusetts, and more generally only with the Oswego work after 1860, we get this Pestalozzian principle in its extreme form. In music much drill was put on tone studies, scales and reading notes, but without much real singing."

From Boston the public school music idea spread to other States and we have noted the States that wrote letters inquiring about the plan in Boston.

After Boston music was introduced in the public schools of the following cities in the following order. These dates are in many cases disputed, but they will show the general tendency and direction of the movement: 1838 Boston; 1840 Pittsburgh; 1843 Buffalo; 1845 New Orleans; 1846 Cincinnati; 1848 Providence; 1848 Chicago; 1851 Cleveland; 1853 Louisville; 1852 St. Louis; 1852 San Francisco; 1858 Salem, Massachusetts; 1859 Baltimore; 1866 Lowell, Mass.; 1867 Washington, D. C.; 1870 Madison, Wis.; Fond du Lac, Wis.; Manchester, N. H.; Newark, N. J.; Philadelphia; Worcester, Mass., and Portland, Maine. The dates of these last named cities are only approximate.

In Cincinnati, Lowell Mason's brother, T. B. Mason, organized classes similar to those in Boston, which eventuated in the introduction of regular instruction into the public schools under the direction of William Colburn. Another account says that the Aikens, either Charles or his son, Walter, have been connected there with public school music since 1846.

Some sources may be mentioned in which the student of this subject will find meager material. (1) The addresses of the Music Teachers' National Association have some few historical facts in them from time to time. The M. T. N. A. was founded by Theodore Presser, of Delaware, Ohio. Mr. Presser called Mr. Warren into conference and formulated a program. Founded 1876 (Dana, William H., M. T. N. A., p. 179. Only account of founding able to locate). The M. T. N. A. joined N. E. A. and was given a special department in N. E. A. in 1885 at Madison, Wisconsin. (M. T. N. A. Report 1885, p. 369. No reports of the M. T. N. A. were published till 1906.) (2) An address by Joel R. Poinsetts quotes the practices in Germany, "National Society for the Promotion of Science" 1840. (3) Eben Tourjee made a plea before the N. E. A. in 1870 for Vocal Music in the schools. Eben Tourjee (1834-91) was a self-educated man and author of "Music in the Public Schools," and the "Church Choir." An account is given of him in Monroe's Cyclopedia of Education, p. 617. The report of the Commissioner of Education, 1871, p. 537, also gives an account of Tourjee's estimate of the amount of musical education taking place in the various cities of that time. (4) In 1870 Barnard examined the rules and regulations of 51 cities in regard to music. This account is found in Barnard's Jr. of Ed., Vol. 19, pp. 448-463. (5) In 1886 the M. T. N. A. had John Eaton to make inquiry about music in the schools by means of the questionnaire method. This account is given in the N. E. A. Report, p. 686, 1880. Also Bureau of Ed. Report, 1886, Bulletin, Ip. 52. (6) In 1889 Mr. E. O. Silvers gave a report before the Dept. of Music of N. E. A. concerning conditions in cities over 4000 population. Account in N. E. A. Report, 1889, p. 624. (7) In 1905 Mr. H. E. Owen, Chairman of the Public School Commission of the M T. N. A., made a report before N. E. A. on 1003 cities of 5000 or more in population. Account in N. E. A. Report, 1905. (8) In 1911 Baldwin made a report before the M. T. N. A. on Music in the H. S. Report of M. T. N. A., 1911, p. 217. (9) In 1914 Francis M. Dickey made a report on Music before the M. T. N. A., in which some of the early history is traced.

Self-Test Questions Upon Dr. Hillbrand's Article

1. *What four men in Europe were the controlling factors of the educational music situation during the first part of the Nineteenth Century?*
2. *When was the first formal singing society in the United States organized?*
3. *How did the Puritans regard religion and music?*
4. *What was the attitude of the great educator Horace Mann toward music?*
5. *In which American city was music first introduced into the public schools?*

Do you approve of the Self-Test Questions we are adding at the end of articles?

Do you want us to continue them?

Do you take The Etude for self-study?

We should be glad to have the opinion of our readers on this subject.

Scales in a Nutshell

By Teresa L. Gurney

As a rule, scales in music are difficult for the young pupil to learn unless he understands the why and wherefore of their formation. Where asked how many sharps the B Major scale contains or how many flats there are in the F Major scale, many students are unable to answer without consulting either their note books or scale books. Many of these have studied for years and admit that at one time they played and even memorized all the scales, but soon forgot them. This is evidently due to the fact that they were denied a full explanation of scales and consequently they always seemed vague and uninteresting. They merely took for granted what the scale book revealed.

Few persons are able to repeat, word for word, a paragraph of perhaps fifty words after the first reading or so. However, to repeat the main facts or object of the article is simple enough for the average person. It is the same with learning scales in music. Merely to play the scales written out in note form and then from this try to remember them is about as confusing for the beginner as attempting Chopin or Liszt after a few lessons.

The following outline facilitates the memorizing of scales and also explains them fully. All that it is necessary to memorize are the models given and the order of sharps and flats. After the pupil has that well fixed in mind, give him a pencil and paper and he can figure out accurately all the scales.

For the benefit of the pupil, here are a few hints on how to learn easily the details that are essential. For instance, keep in mind the simple word "BEAD" and then add GCF and we have the order of flats. For the order of sharps, remember FCG and then spell "BEAD" backward and the result is the order of sharps (FCGDAEB).

Model (Major Scales with sharps).

I(1) II(1) III(½) IV(1) V(1) VI(1) VII(½) VIII

The Roman numerals represent the successive notes forming the scale and the small figures indicate the difference of pitch existing between those two particular tones. For instance, between C and D there is 1 tone; between E and F, ½ tone or what is termed a semi-tone; between F natural and G sharp 1½ tones, termed an augmented second.

Note that in scales with sharps the fifth tone of the preceding scale gives the key to the next scale. In flats it is the fourth tone.

With Sharps

Model	I(1)	II(1)	III(½)	IV(1)	V(1)	VI(1)	VII(½)	VIII	Order of Sharps

MELODIC MINOR

Model I(1) II(½) III(1) IV(1) V(1) VI(1) VII(½) VIII

The Melodic Minor Scales run in order like the harmonic minor. This Model for melodic Minor scales is only for the scales going up. In going down play the sharped notes natural and the double sharped notes sharped (in scales with sharps.) In scales with flats, in going down play the natural notes flat and the sharped notes natural. These few rules simplify many seeming difficulties.

Where There's a Will There Is Always a Way

By Bertha M. Tribull

All teachers know a certain type of pupil—the child who is not really stupid, but who lacks the knack of quickly grasping an idea.

After eleven weeks of instruction, a pupil could not distinguish between "C" on the first ledger line below the treble staff and "D" in the first ledger space below the treble staff. I explained the difference between the two notes in every thinkable way. I simplified; I elaborated. The result was always the same. And yet, this pupil could readily name every other ledger note, both above and below the treble staff. Also, she proved to be a rapid reader.

I was ready to give up in despair. But one day I had an inspiration. The following week when my pupil arrived for her lesson, I brought forth a sheet of ruled paper and a pencil, and immediately set to work upon those two troublesome notes. I wrote down the notes, placing them in their respective positions below the staff, but did not attach their names to them. My pupil's lesson for the following week was to write those two notes fifty times, and place their names below them. And I kept her lesson book at my studio so she could not refer to it at home.

Did it work? Most assuredly. The following week when she came for her lesson, she handed me the sheet of paper with a smile. And my first glance convinced me that she had studied her lesson well. I questioned her, and this time the answer was given promptly and correctly. She has never forgotten. I do not know just why she failed to distinguish between the two notes; but I do know that her failing to do so caused me to be greatly troubled. But where there's a will there is always a way. And I found the way, and gladly pass it on.

"Music, rightly taught, is the best mind trainer on the list. We should have more of the practical subjects, like music and drawing, and less grammar and arithmetic."

—Dr. Charles Eliot.

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M. A.

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered department. Full name and address must accompany all inquiries.

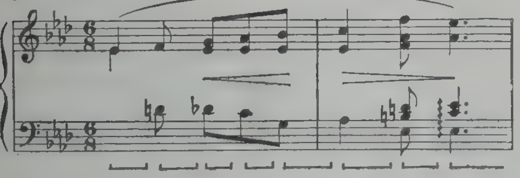
Use of the Pedal

> I HAVE been a student of music for about six years and am able to play fifth or sixth grade pieces, but my teacher tells me that I don't pedal correctly.
>
> She is always saying that my playing sounds "thick" and that it isn't as clean-cut as it should be. I myself realize that this is true, but I don't know how to remedy it. Could you give me a suggestion, please?—L. S.

When the right-hand pedal—to which you of course refer—is depressed, it lifts all the dampers from the strings, so that the latter continue to sound as long as their vibration lasts, or until the pedal is released again. Hence this pedal should be used only so long as the tones blend agreeably. Generally speaking, therefore, the pedal should be raised with each change of harmony, also whenever two tones of the melody would otherwise unpleasantly clash.

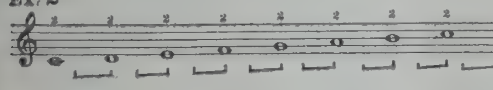
But it is even more important to depress the pedal at precisely the right point. In playing a succession of legato chords, for instance, the tone of each overlaps slightly that of the one following, so that if the pedal be depressed exactly as one of the chords is played, this chord will be heard disagreeably mixed with the one which preceded it. Try playing the first two measures of Chopin's *Ballade in A flat,* putting down the pedal exactly with each chord and releasing it a little before the next is sounded. You will have a discordant mixture in each case:

Ex. 1



Having thus discovered one of the chief causes of bad pedal effects, let us see how to remedy them. First, you must learn to depress the pedal well *after* sounding a chord, so that the danger of catching notes of the chord just before it may be avoided. I suggest the following exercise as an excellent one for cultivating this desirable habit:

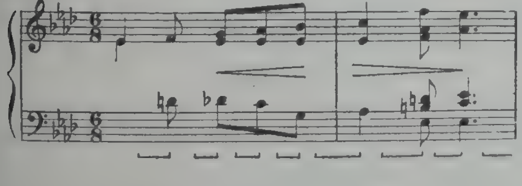
Ex. 2



Play up the scale slowly, using but one finger and striking each key firmly. Count two beats to each note, depressing the pedal on each second beat and releasing it on each first beat, so that the pedal rises as each key descends. The pedal movements should invariably be sudden and precise. If this exercise be properly done, the tones will be perfectly legato, although they are not connected at all by the fingers.

Next, play the passage from the Chopin *Ballade* quoted above, this time putting the pedal down always *just after* each chord is played, and raising it with the next chord, thus:

Ex 3



All the disagreeable mix-up of harmonies should now disappear; and in addition, each chord should develop a new singing quality, involving a little *crescendo* and *diminuendo* after it has sounded: ♩ < >
The *crescendo* effect is caused by the sympathetic vibration between various strings which occurs when the dampers are removed.

Remember, then, to put the pedal down *after* sounding a chord, certainly when there is the least danger of a clash with the chord which precedes it, and also to release the pedal promptly whenever there is danger of a clash with the following chord. Also, observe that it is always better to use too little, rather than too much pedal; for as someone has aptly said, "the pedal is a good servant, but a bad master."

Crescendo and Diminuendo

> Since I have been teaching piano I have always been puzzled as to how crescendo and decrescendo should be presented to a pupil for the first time. What must be done to arm or hand to produce the desired effect?—E. D.

You have hit upon a vital question, because it concerns two very important musical effects. I believe it was von Bülow who gave the famous definitions:

Crescendo means *soft.*
Diminuendo means *loud.*

Do you see what he meant? Well, then, in order to make a good crescendo one must begin softly, otherwise how can one grow louder? And conversely a good diminuendo (decrescendo) must begin with a certain degree of loudness, otherwise how can one grow softer? The symbol of crescendo: < is, indeed, misleading, because the tone should increase very slowly at first, and should swell out more rapidly at the close thus: < Stand beside a railroad track, if you want to hear a perfect crescendo. A train rumbles and grumbles in the distance for a long time, steadily but surely forcing itself more and more on your attention; and then, just as it is upon you, its noise swells rapidly to a deafening roar.

The sign for diminuendo: > is much nearer the mark, since it is usually desirable to diminish the tone at a nearly uniform rate; although sometimes one lingers over the last gradations of pianissimo, as in the ending of Grieg's *Berceuse.*

If a pupil understands these facts—particularly von Bülow's clever definition—it ought not to be difficult for him to control the tone properly. As a general rule, the tone should grow louder as the wrist is raised and softer as it is lowered; since a more direct and forceful downward stroke is possible when the wrist is held rather high. Try, therefore, having your pupil start a crescendo with a light finger touch and a somewhat low wrist, which is gradually raised to strengthen the tone. The contrary process will, of course, produce a diminuendo.

Early Piano Instruction

> What is the earliest age at which a child should start to study the piano? Is it advisable to begin with the theory and with exercises to develop his fingers away from the piano, waiting till the fingers grow stronger before proceeding to the keyboard? — E. S.

It is hardly possible to fix a definite age, because children are constituted so differently. Perhaps we may safely say, however, that six or seven is the earliest age at which regular lessons should begin; although some preliminary kindergarten work may be done, especially in the case of a bright and musical child.

I am old-fashioned enough to believe that the piano can best be studied directly at the keyboard; for not only is it important to form the fingers to the actual keymotions, but it is still more important to deal from first to last with the actual piano tone, in its infinite gradations. From the beginning, therefore, I should teach the child tonal discrimination, to make him think *musical tone,* rather than mere finger gyrations, which are only a means to an end. Even the youngest child, too, can be taught the significance of tonal progressions, and how to give meaning to even the simplest phrase by working it gradually up to its climax. Supplement his own manipulation of the keyboard by ear-training exercises, in which he fixes his entire attention on listening, and you will bring him up in the way he should go.

Curving the Fingers

> Can you suggest something to help a girl of twelve years of age to remember to curve her fingers? She has been taking lessons about three months and seems anxious to learn; but gets so interested in the notes that she forgets about her fingers.—C. P.

Get a good-sized base-ball, and have her hold it in her hand with the palms upward and the fingers curved tightly about it. Remove the ball, telling her to hold her fingers firmly in the same position when she turns the hand over and places the fingers on the keys. If this process be repeated occasionally, whenever her fingers show signs of limpness, it ought eventually to fix her attention upon the proper way of holding them.

Metronome Speed

> At what rate of speed should I require the average fourth grade student to play scales and arpeggios?

I always consider the mere rapidity of technical work a secondary factor; for if the student learns to practice his scales and arpeggios carefully and correctly, he is prepared to play them at any reasonable rate; just as an automobile, accurately adjusted in all its parts, may travel as fast as one desires. So speed should not be considered a vital point, but should develop naturally according to the pupil's ability. I often tell my pupils that while *prestissimo* means *as fast as possible,* it certainly does *not* mean faster than possible; hence it may indicate for a given pupil a very moderate pace.

If a fourth grade pupil can play scales at a metronome pace of 108 to 120, four notes to a beat, he is doing well. Arpeggios may be played somewhat less rapidly.

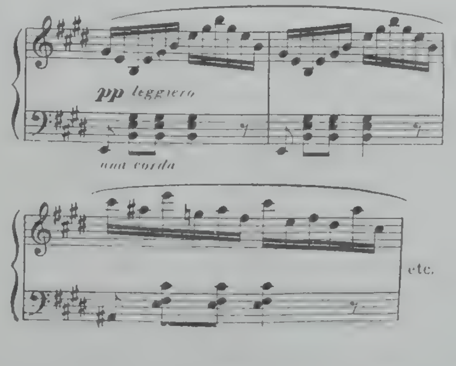
Use of the Una Corda Pedal

> Is it correct to use the *una corda* pedal in all passages marked pianissimo; for instance, in the softest parts of Mendelssohn's *Rondo Capriccioso,* or in the *Shadow Dance* by MacDowell?—E. D.

No, the *una corda* pedal (at least on the grand piano) should not be used indiscriminately for all very soft effects, because its office is not so much to soften the tone as to *change its quality.* Without this pedal such change is possible only to a limited extent, since the hammers always hit the strings in the same place. When the soft pedal is depressed, the piano action is moved along so that one of the three strings to a given note is left free to vibrate sympathetically with the other two, which are the only ones then actually struck. It is this sympathetic vibration that gives the tone its ethereal, far-away character.

Hence the soft pedal should be employed only when such an ethereal effect is desired. Sometimes, when a song-like section is repeated, for instance, the soft pedal may be applied with appealing effect, as in the third section of Rubinstein's *First Barcarolle in F minor,* where the initial melody reappears with a graceful, decorative figure above it. So also it may be used when a strain dies gradually into nothingness, as at the close of the Grieg *Berceuse.*

In the *Rondo Capriccioso,* about which you inquire, soft pedal may be used for a few bars beginning at measure 179, where the running passage which before was played loudly recurs as a kind of echo:



also at the end of the return of the theme, perhaps through measures 220-226, so that the contrast of the bravura passages which follows may be the more marked.

MacDowell was sparing in his use of the *una corda,* and has even given specific directions not to use it in some of the lighter passages. In the *Shadow Dance,* therefore, it may be employed through the middle section (measures 25-46) and possibly through the last four measures.

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

THE OPERATIC IMPRESARIO

In his amusingly informative book of essays, *Interpreters and Interpretations,* Carl van Vechten thus holds forth on the subject of impresarios: "I do not think a course of training will help out the operatic impresario. The father of a man I knew in college once insisted that his son skin a pig. 'You never know when experience of this sort may come in handy,' was the old man's explanation. So far as I know, it never has. . . . After all, the rôle of the impresario is to mould the forces under him together, to arrange about payments and the collection of moneys, to see that box-office receipts do not run too far below the expenses of the theater, and to humor recalcitrant sopranos.

"I have known many operatic impresarios. André Messager, once head of the Paris Opéra, is a composer of pretty, light operas—he is also a conductor. Andreas Dippel, who has headed both the Metropolitan and the Chicago Opera Companies, was at one time a tenor whose principal asset was an elastic repertoire which made it possible for him to replace any other tenor at twenty-four minutes' notice in almost any operatic rôle in almost any language. . . . Henry Russell, once a music teacher, gave America some of the most interesting performances it has had. Oscar Hammerstein was a cigar maker; Giulio Gatti-Casazza was a naval engineer; Heinrich Conrad was an actor; Maurice Grau, Colonel Mapleson—the list of impresarios is as long as one cares to make it."

It is as much a duty of this nation in the work of making the world well and strong and sane again to awaken the musical spirit of the nation as to use other agencies to that end.—Judge Guy.

GOTTSCHALK'S REPERTOIRE

Louis Moreau Gottschalk, a pupil of Chopin, still remembered for his compositions, *The Dying Poet* and *The Last Hope*, was the first great American pianist. In his *Musical Memories,* George P. Upton gives us an intimate picture of a "visit" he and Gottschalk had together. "Gottschalk was often criticized for the class of music which he played. It consisted principally of his own compositions, *Bamboula, Le Savane, Recordati, La Marche de Nuit, O ma Charmante, Le Mancilliner, Ojos Creollos*, the *Berceuse, Last Hope* and others. (Gottschalk was of Creole blood, hence the Spanish titles.) In reality the music which he played was not a fair test of his taste or his ability. He once told me that he played these and similar pieces because people liked them, and because he needed the money they brought him, for his own expenses were large, and besides that he was supporting five sisters and a brother at that time. Gottschalk was a great lover of Beethoven's music, especially the sonatas. How well I remember the last time I saw him! We spent an afternoon together in 1864, and he played for me in his dreamy way the so-called *Moonlight Sonata* of Beethoven, some of Mendelssohn's *Midsummer Night's Dream* music and his *Lieder Ohne Wörte,* running from one piece to another with hardly a pause except to light a fresh cigar or interview the merry widow Clicquot. I remember asking him why he didn't play that class of music at his concerts. He replied: 'Because the dear public don't want to hear me play it. People would rather hear my *Banjo*, or *Ojos Creollos*, or the *Last Hope*. Besides there are plenty of pianists who can play that music as well or better than I can, but none of them can play my music half so well as I can. And what difference will it make a thousand years hence anyway?'"

WOMEN AS MUSICIANS

Doctor Ethel Smyth, England's foremost woman composer, in her book *Streaks of Life*, comes boldly to the defense of the woman musician. Dr. Smyth was a militant suffragette in the days before women voted, and she is a little strenuous in saying what many of us think without being so very palpitant about it; but she is worth reading none the less. "Speaking as an artist, I agree with Mr. Newman and other thoughtful writers in thinking our music-life is in a very bad way—superficial, lowpulsed, and bolstered with make-believe. . . . The one element of hope lies, I think, in the gradual interpenetration of the life musical by women. I say this in no fanatical feminist spirit, but in all calmness, as the result of quiet and, I trust, sane observation of things in general, and of what is going on under my nose in particular. . . . Generally speaking, I find women more capable of enthusiasm and devotion, readier to respond and be spent emotionally than men—as I noticed in my dealings with stage-choruses long before the war. Their nerves, too, seem nearer the surface, more responsive to appeal, less deeply buried under that habitual resistance to the emotional appeal which, as I have said, is surely a post-Elizabethan trait. I cannot conceive of music as being an Englishman's religion—that is, a thing pure of financial taint—but in the case of an Englishwoman I can conceive it. . . . During the war it became impossible to carry on without admitting women to the orchestras, and few things more deeply impressed such as were capable of dispassionate judgment than the increased brilliancy and warmth of tone. A new and refreshing spirit, too, was perceptible—in part the result, no doubt, of sex rivalry of the right sort. Well do I remember the transfiguration of a certain elderly violinist who seldom used more than half his bow, and who now was making it bite into the strings as it had not bitten for years, in honor of the extremely capable maiden who was sharing his desk."

SCHUMANN'S PRAISE OF CHOPIN

Though Chopin apparently thought little of Schumann, the generous composer-critic was more appreciative of Chopin. Of Chopin's playing, Schumann wrote in the *Neue Zeitschrift* a letter after their meeting in 1836:

"Imagine an aeolian harp possessed of all the scales and these made to vibrate altogether by an artist's hand, with every kind of fantastic embellishment, but in such a manner that a fundamental bass note and a softly singing upper part were always audible, and one has a fairly good idea of his (Chopin's) playing. No wonder that one prefers those of his pieces heard from himself, and therefore let us mention in the first place the *A flat Etude*—more a poem that a study. 'It would be a mistake to imagine that he allows all the small notes to be distinctly heard; one was aware, rather, of the undulation of the A flat major chord, strengthened afresh here and there by the use of the pedal; but one was always sensible through the harmonies of the wonderful melody of the big notes, and, about the middle of the piece, a tenor part was heard distinctly from the chords. When the piece terminated, one felt as though, but half awake, one would like to seize a beautiful picture seen in a dream. It was impossible to say much, and praise was unutterable. He went on to the second in the book, in F minor, another which leaves an unforgetable impression of his originality—so seductive, so dreamy, so soft—something like the singing of a child to sleep."

THE WIG OF DR. FAUSTUS

In his book, *A Westminster Pilgrim*, Sir Frederick Bridge relates the following story told by Joseph Maas, the opera singer, concerning a certain George P—.

"P— was taking the title-rôle in Gounod's *Faust*. The contretemps to be related occurred at the moment when the actor's beard and stage-wig are whisked away down a trap-door, and relieved of the trappings of senility, the young and joyous *Faust* steps forward into the limelight in the bloom and beauty of youth. The opera had pursued its wonted course up to this point. P— had placed himself in position near the trap-door, and the super who worked the charge awaited his cue. It came. His hand shot out, but he grabbed more than was prescribed, for lo! there stood revealed a perfectly bald *Faust,* lacking even a tonsure. The zealous super had dragged away the actor's own private wig along with the hirsute property guise. P— realized the situation in a flash, and swiftly reclaimed his wig from the hand of the super.

"But the audience had seen, and, as audiences always relish unrehearsed effects, it roared and rocked itself with delight even after P— had replaced his locks and resumed his impressive part. He got through it, but he was disconcerted and furious. The cause of such sustained merriment seemed to him insufficient; but he learned the reason when, leaving the stage, he sought a mirror. In his agitation he had replaced the wig the wrong way round. If the actor was furious before, he was now mad with rage, and his wrath demanded chastisement of the '. . super', the cause of his mortification. Like Saul of Tarsus, he was yet breathing out fire and slaughter when the super appeared a huge man of brawn and muscle, in his shirt-sleeves and apron, just come from his work.

"'Hullo, Mr. P—,' cried he, 'do you want me?'

"P— was a small man. His bellicose intentions vanished with the rapidity of his wig not many minutes before. Looking his opponent up and down for a second, he gasped out, 'Yes, sir; d. . you, sir!' and ran."

ROSSINI'S "TAM-TAM" OF REJOICING

Everybody knows that Rossini, while still in his thirties, virtually deserted musical composition in favor of the gastronomic art. Living in Paris, his salon the meeting place of all who delighted in good music, lively wit and the best cooking obtainable, Rossini became a *bon vivcur*. Above all he loved the good things of the table, and according to Edgar Istel, writing in *The Musical Quarterly*, he thus expressed his quaint philosophy of life to Blaze de Bury:

"Next to doing nothing, I know no more delightful occupation than eating—I mean, of course, eating that may properly be called eating. As love for the heart, so is appetite for the stomach. The stomach is the conductor who mobilizes the grand orchestra of our passions. The empty stomach symbolizes only the bassoon or the piccolo, growling in displeasure or screaming in desire; the full stomach, *per contra,* is the triangle of delectation or the tam-tam of desire. For me, Love is the prima donna *par excellence,* the goddess who sings to the brain her cavatinas that intoxicate the ear and fascinate the heart. Eating and loving, singing and digesting—these are in very truth the four acts of the comedy-opera we call Life, evanescent as the foam of a bottle of champagne. He who lets it pass away without enjoying it, is a born fool!"

Conscientiousness and justice are stations which have been reached and passed before any fine work appears.

—William Hunt.

A REMARKABLE SENSE OF ABSOLUTE PITCH

Clara Louise Kellogg, a once-noted American prima donna, had a remarkable sense of absolute pitch, which once stood her in good stead at a performance of "The Star of the North." It occurred, she tells us in her *Memoirs of an American Prima Donna,* at a matinée in Booth's Theatre, New York. "There is a quartette by *Peter, Danilowitz* and two *vivandiéres,* almost without accompaniment, in the tent on the stage, and I as *Catherine*, had to take up the note they left and begin a solo at its close. The orchestra was supposed to chime in with me, a simple enough matter to do if they had not fallen from the key. It is surprising how relative one's pitch is when suddenly appealed to. Even a very trained ear will often go astray when some one gives it a wrong keynote. Music, more than almost any other art, is dependent—every tone hangs on other tones. That particular quartette was built on a musical phrase begun by one of the sopranos and repeated by each. She started on the key. The mezzo took it up a shade flat. The tenor, taking the phrase from the mezzo, dropped a little more, and when the basso got through with it they were a full semitone lower. Had I taken my *attaque* from their pitch, imagine the situation when the orchestra came in! My heart sank as I saw ahead of us the inevitable discord. It came to the last note. I allowed a half-second of silence to obliterate their false pitch. Then I *concentrated*—and took up my solo in the original and correct key. That absolute pitch again! Behrens expressed his amazement after the curtain fell."

MUSIC AS SHE IS HEARD

"What is that tune you are playing?"

"That isn't a tune. It's a sonata."

"What's the difference?"

"Well, with a sonata it's pretty hard for the average listener to detect mistakes. With a tune you've got to know pretty well what you are about." M. H.

Letters from Etude Readers

Reading the Notes

To The Etude:

This summer I have only one pupil, so I have experimented upon her. I wonder if the following plan is new to other readers of The Etude.

I had thought the lines and spaces had to be learned thus:

FACE ACEG
EGBDF GBDFA

Formerly I taught lines and spaces together. This time I did not *teach* them. I showed the pupil the A-B-C-D-E-F-G; then where the spaces and lines were in the treble and bass. Then she was told to notice in what direction the next note went, whether up or down; that, for the next space (after a space) one key is skipped, and that the same is done with the lines.

Also she was told to watch her fingering as often it would prove to be a great help in reading the notes. This idea was derived partly from having taught pupils to read without knowing their A B C's.

I have never had another pupil to read half so well. She has taken lessons less than a month and now reads better than some who had taken six months. There are so many confusing things for the young pupil to remember. I shall try to leave off other unnecessary things.

Mrs. Lawson Hughes, Tennessee.

A Novel Remedy for Stage Fright

To The Etude:

I was much interested in reading an article "How to Laugh at Stage Fright," but failed to discover the point at which the "laugh" comes in. At the age of 67 I look back upon the time when I was frequently asked to play the violin before an audience. I suffered terribly from stage fright. Usually last, or near the end of the program, I had the pleasure of listening to preceding performers, good, bad and indifferent, and often had to sit on the stage in full view of the audience. Constantly thinking of my number, my nervousness would increase more and more; and when finally, after filling my lungs with the longest of breaths I stood before the audience, I seemed to be in another world, with spirit completely detached from body, and the opening bars of the accompaniment sounded far away and as not meant for me.

At the first movement of my bow paralysis seemed to grip my arms; and it was only by the exertion of what will I had that I could play. I felt myself trembling throughout and used to wonder how it could be possible that my tones were nevertheless steady. Immediately thereafter the blood would mount to my head, a good long breath, and I was all right.

In speaking of my trouble to a physician friend he advised me to obtain from the druggist some *Amyl Nitrate,* which is a resuscitant and will immediately start strong heart action. This liquid is inclosed in small delicate glass shells, easily broken. I used to put one into a handkerchief in my inside coat pocket, and just before my number I would crush the glass by pinching my coat from the outside and after a moment or two inhale the fumes by guardedly holding back the coat so as to be above the pocket. The effect is instantaneous; one or two breaths and the blood will mount to one's head, and I always felt like I could fight a bull.

So here is to you, all ye poor victims of stage fright, instantaneous and harmless relief!

O. M. Pausch, California.

The Choir Master

Each Month Under This Heading We Shall Give a List of Anthems, Solos and Voluntaries Appropriate for Morning and Evening Services Throughout the Year.

Opposite "a" are anthems of moderate difficulty, opposite "b" those of a simple type.

Any of the works named may be had for examination. Our retail prices are always reasonable and the discounts the best obtainable.

SUNDAY MORNING, May 4th
ORGAN
Ave Maria .... *Schubert-Nevin*
ANTHEM
a. O Love the Lord.......... *Nevin*
b. Holy Spirit.............. *Nevin*
OFFERTORY
God's Roses Will Bloom for Us (High) .... *Bird*
ORGAN
March in A.............. *Ravina*

SUNDAY EVENING, May 4th
ORGAN
Swan Song .... *Blumenthal*
ANTHEM
a. I Lay My Sins on Jesus... *Berwald*
b. Make a Joyful Noise....... *Simper*
OFFERTORY
Rest (Low) .... *Bischoff*
ORGAN
Fraternity March.............. *Lacey*

SUNDAY MORNING, May 11th
ORGAN
Erotikon .... *Sjögren*
ANTHEM
a. Judge Me, O God...... *Neidlinger*
b. Always With Us.......... *Hosmer*
OFFERTORY
Hymn of Thanksgiving (High or Low) .... *Young*
ORGAN
Festival March .... *Nessler*

SUNDAY EVENING, May 11th
ORGAN
Evensong .... *Rockwell*
ANTHEM
a. When the Day of Toil is Done .... *Federlein*
b. Ye That Stand in the House of the Lord .... *Spinney*
OFFERTORY
O for the Wings of a Dove (Med.) .... *Mendelssohn*
ORGAN
Recessional .... *Sheppard*

SUNDAY MORNING, May 18th

Cross of Christ (Duet Sop. and Ten.) .... *Roberts*
ORGAN
March .... *Gounod-Roberts*

IVERS & POND PIANOS

An Ideal Home Grand

The satisfying simplicity of early American work, depending solely on beauty of line, material and finish for artistic effect marks the *Five Foot* Colonial Grand shown above.

Smaller grands are built, but at a sacrifice of tone, touch and line incompatible with *Ivers & Pond* standards. Larger grands involve an expense in money and space your needs may not call for. Let us mail you a catalog of this attractive piano.

Ivers & Pond PIANOS

are built in all desirable types and sizes, but in **one quality only—the highest.** Their acknowledged position in the musical world is evidenced by their use in more than 500 Conservatories and Schools and 70,000 discriminating homes.

How to Buy

Where no dealer sells IVERS & POND pianos we quote lowest prices and ship from the factory tho' your home be in the most remote village in the United States. Attractive, easy payment plans. Liberal allowance for old pianos in exchange. Every intending buyer should have our new catalog. *Write for it.*

Ivers & Pond Piano Co.
141 Boylston Street Boston, Mass.

The Singer's Etude

Edited by Vocal Experts

It is the Ambition of THE ETUDE to Make This Voice Department

"A Vocalist's Magazine Complete in Itself"

Edited for March by D. A. Clippinger

On the Making of Songs

THE makers of music have become a mighty throng and are operating industriously, almost feverishly, in every part of the habitable globe.

When we remember that the aim of music is to cheer, exhilarate and inspire the human mind, and to awaken pleasurable emotions through the sense of beauty, rather than to meet material needs, what the race spends every year for this psychological stimulant is amazing. It runs far into millions. Add to this what it spends for musical instruments and printed music, and the amount is staggering.

Considering the hold music is gaining on the entire population of our country, we wonder that some of our radical lawmakers have not seen in it a growing and dangerous monopoly and tried to curb it by legislative enactment. The making of songs is in itself a huge industry and its output ranges from the best to the worst, from the popular music hall ballad, the sale of which may reach a million copies, to the dry-as-dust, involved, utterly depressing, ultra-modern so-called art song, which scarcely anyone can either sing or play, and would not if he could, and which is seen by few save the composer and publisher.

I submit that the last-mentioned songs display no evidence of genius. Paradoxical as it may seem, it is not difficult to write difficult music. Further, to estimate a song by its technical difficulty is a case of mistaken judgment. Some difficult compositions are beautiful, others are not and never will be. Technic enables one to express what he has in mind, but it does not necessarily supply ideas.

The Popular Ballad

There has been of late a violent and no doubt righteous crusade against the makers and vendors of a certain class of popular songs. Evil may be perpetrated through various channels, and doubtless this is one of them; but righteous indignation alone is hardly likely to suppress such a nuisance. It must be replaced with something better.

The assertion that the singing of such songs degrades, demoralizes and finally destroys one's musical taste is not well timed. The people who sing such songs have little or no musical taste to destroy, else they would not be singing such songs. Neither am I quite prepared to say that such songs destroy permanently the desire for better ones; for songs which have no merit make but a short-lived appeal and soon something better is demanded.

The wave of jazz that I am told is sweeping the country is but a temporary phase of music. People of a certain age, or of a certain stage of development, are much inclined to overdo, to say and do things that are funny, or at least out of the ordinary; they react to things of the same kind; but this is no evidence that they will remain permanently in that stage. Jazz is a musical, or unmusical joke; and no joke can be perpetrated indefinitely without creating fatigue. The makers of good music are as busy and persevering, as are the perpetrators of the musical distemper just mentioned, and they are sure to win in the long run. Every year finds a larger number of lovers of good music. The problem is in process of solution and we gain nothing by being unhappy about it.

The legitimate publishers, we understand, are arrayed solidly against that class of composers that will set any kind of a poem to music overnight and who offer sudden fame and much pelf to unknown makers of poetry and music. But we wonder if the legitimate publishers are ever tempted beyond what they are able to bear and fall from grace by listening to the song of the siren of commerce. If their aim and purpose is to publish only that which has real musical value, then we must conclude that there are frequent errors of judgment.

A number of things. First is the poem. This should furnish the composer his inspiration; but a considerable percentage of the poems that are set to music are written by professional rhymesters who have learned the art of rhyming and will produce sixteen to thirty-two lines of rhyme on any subject at short notice. Most of it is a sort of sentimental effusion, as barren of the real poetic spirit as Pike's Peak is of pineapples. Only a Schubert could write beautiful music to such verse; hence it is not surprising that so many of the musical settings are commonplace. We wonder if there is ever a literary censorship exercised in selecting manuscripts for publication. Unless the poem contains something of merit, the song has but a slight chance of making any lasting public appeal.

Whether we admit it or not the life and usefulness of a song, when the poem is worthy, depend largely upon its melody. Singing is one thing and musical declamation is quite another. From the beginning of music the singing voice has made an irresistible appeal and will do so to the end of time. A beautiful voice singing a beautiful melody to a beautiful poem is the last word in vocal art. It may be possible to teach a student how to write accompaniments, but the ability to write beautiful melody is a divine gift.

Songs Without Melodies

In modern song-writing the absence of the melodic gift is too glaringly apparent. A melody need not necessarily be simple, that is, of the hymn tune or "Sweet By and By" variety, but there must be something in it that will catch the singer and carry him along like the current of a mighty river.

The test of a melody is the effect it produces when done without accompaniment. Schubert's "Serenade" or his "Ave Maria" are good examples. Strauss has a great melodic gift, and he can scarcely be accused of simplicity. George Chadwick has it in a marked degree. So has Arthur Foote—witness his "Irish Folk Song"—and many others could be mentioned.

As I write this I hear in the next room a piano pupil taking a lesson—a transcription of Schubert's *The Trout*. Why are Schubert's songs still sung and the piano arrangements still played a hundred years after they were written? The answer is because of their beautiful melodies.

Many of the modern songs that we are asked to give our pupils show no melodic gift whatever. To attempt to inspire a young singer with melodies as dead and dry as a harmony exercise means adding one more to the list of failures.

A composer once asked me, with tears in his eyes, why singers refused to use his songs. He was a profound musician; but his melodies were never more than ordinary. Singers looked at his songs and quietly laid them aside and asked for something else.

Nor is this all. Most songs are written by instrumentalists. Few singers ever learn enough about music to write a song; so the instrumentalists write for their own instruments and for singers as well. This is why we find so much in modern song-writing that is conceived instrumentally rather than vocally. It is instrumental music under a wrong label. It is a very common thing to find songs that are theoretically perfect but will not sing. Every singer will substantiate this. Such songs do not lie for the voice and show conclusively that the composer, unconsciously, perhaps, was thinking for an instrument.

The most important thing about vocal writing can be learned only by studying the voice. Like everything else, the voice has its limitations. There are certain things it can do and others that it cannot do; and these things can be learned only by studying it as a singer studies it. Schumann urged piano students to study singing for the effect that an acquaintance with the pure singing tone would have on their piano playing. If song-writers would study with a good singing teacher for a year or two we would have more singable songs. When I find a song with phrase after phrase in succession near the top of the staff, or an entire song with about nine out of ten notes above the middle of the voice, or, as I once saw, a skip from C-sharp above the staff to G below, I am forced to conclude that such composers have yet to learn the most important thing about vocal writing. Some of these composers have real genius for instrumental writing, but their vocal writing is stupid.

High notes for high voices are not out of place, but the human voice, no matter how well trained, cannot sing in the upper part of its compass indefinitely without fatigue. In the studio where voices are in process of development the greatest care must be taken in the selection of songs. and it goes without saying that songs of the kind just mentioned have no place whatever.

Co-öperation of Publishers

The willingness of publishers to coöperate with teachers and to supply them with good material is all that could be desired. They oftentimes do more than we feel we have any right to expect; but the employees of publishers are not voice trainers, hence the teaching material sent out is not always practical.

Voice teachers must be constantly changing their teaching material. The same list of good teaching songs cannot be used very long at a time. New songs that are musicianly and singable are always in demand; but the catalogs of all publishers contain, along with their good songs, far too many that have no teaching value whatever. We wonder how they ever found their way into print.

It would seem to an outsider that it would be better to publish less and have it better. Publishers report that many of their songs have no sale, and many others show little return on the investment. This ought to make them more careful in the selection of manuscripts.

More About the Right Idea

EXPLANATIONS often need explaining. Voice teachers have some reputation for riding hobbies, for being obsessed with one great idea. This may or may not be true. Let one discuss one phase of voice teaching and he is sure to mislead some one or more people who at once conclude that this is his one big idea. It is perhaps true that voice teachers are more inclined to the analytic than the synthetic. They can take the voice apart and examine it in detail; but when they undertake to put it together the right sense of proportion is not always maintained.

I have on various occasions expressed my conviction that, as the old philosophers held, everything exists first as idea, and that in all action or expression the character or quality of the idea determines the quality of the finished product.

In the training of singers I have held that the student must have the right idea of everything involved if he would succeed. He must have the right idea not only of what he is to do but of how he is going to do it. It seems, however, that when one discusses the psychology of singing, some of his readers jump to the conclusion that he ignores entirely the physical medium through which the singer expresses himself, a conclusion in no way warranted.

There are extremists on both sides of this question. Some never get beyond the physical. They seem to think that there is no voice until they create it by physical training. They proceed on the theory that the blacksmith swings a heavy hammer all day and thereby develops great strength. Therefore the development of the voice must come with heavy hard singing, always trying for the biggest tone possible. Every one knows the ultimate of this kind of teaching; but it still has some vogue. It is a wrong idea of voice training.

The Laryngscope

After the invention of the laryngoscope, which enabled teachers to look at the vocal organ instead of listen to it, there was a tremendous swing toward the physical aspects of singing; and it is only telling the truth to say that the last quarter of the nineteenth century witnessed some of the worst voice teaching in the history of the world. Beautiful tone seemed to be forgotten. It was juggling with muscle and cartilage with a hope that results would be satisfactory. I speak with some feeling on this matter for I was a victim. Now all of this was the direct result of wrong ideas; and so long as wrong ideas obtain similar results will surely follow. No matter where we touch the subject of voice training, success or failure is a question of right or wrong ideas at work.

A pupil is unable to sing phrases of ordinary length without breaking them. I find he has a wrong idea of breath control. He starts each phrase with a sudden relaxation of the diaphragm and in a few seconds he is out of breath. I explain to him that the diaphragm is the resisting muscle and must remain vitalized throughout the phrase, even when it is receding, which it will do the last half of the phrase. This does not mean rigidity; it means control. If he begins the phrase with a sudden letting-go, he has lost control. Acting on this advice he is soon able to sing long phrases with comfort. So long as the wrong idea was in control there was trouble. As soon as the right idea gained control the trouble disappeared.

Another pupil was asked what was the matter with his middle voice. He did not know. When he was told that it was breathy, consequently lacking in resonance, and was asked how he would correct it, again he did not know. He had no ideas, hence he was helpless. When it was explained to him that the vocal cords were not offering enough resistance to the breath to convert it into sound waves of sufficient strength to create resonance in the upper cavities, and he was shown how to practice exercises which caused the vocal cords to do their work properly, the breathy quality began to disappear and was replaced by what we call resonance. As soon as the right idea was in control that which was wrong disappeared.

The Vibrato

Another pupil was asked why her voice was so unsteady. She did not know. This voice had been forced until every tone sounded like an attempt to trill. When she was shown how to release her voice, form the tone on the lips instead of the back of the throat, using the vowels *oo* and *o* and practice with half voice or less, the tone immediately began to regain its steadiness and in time the voice was completely restored. As soon as the right idea became operative the improvement began.

Another one who was forcing her middle register up to G above the staff, resulting in a hard unsteady tone, was asked why she did not use her head voice. She replied that she had been told that she had no head voice and never would have. She was shown that she had a head voice as all sopranos have, and that she could learn to use it. At the end of a year she possessed a beautiful upper voice produced without effort and has been a successful public singer ever since. A wrong idea kept her out of her right place for years and the right idea restored her to it.

Cause and Effect

Unlimited space could be used telling of instances where the right idea has corrected wrong conditions. We may draw from what has been said that ideas are causative and that the effect is never better than the cause. In the struggle to make perfect voices out of imperfect ones the victory is always with the teacher who has right ideas.

Nothing uncomfortable or unpleasant is ever associated with a rightly produced tone. Whatever physical sensations there may be are comfortable and pleasant. If there is a particular sensation associated with a good tone it is the tone producing the tone.

One listening to a singer cannot have the singer's physical sensations to assist him in determining whether the tone is good or bad. He must rely entirely upon his ear, his concept of tone. No other one of his five senses can or should assist him.

There is no objection to telling the pupil that he will feel his upper tones in the head cavities, or that he should not hear or feel his tones in his throat. But often there is far too much made of such sensations. In many instances it is an attempt to produce the sensation rather than the tone.

If the student comes to rely on a sensation to determine the value of his tone it is a wrong idea operating; for if his ear tells him that his tone is smooth, steady, round, rich, mellow, resonant, sympathetic, in heaven's name, what more does he want?

Determining the Tone's Value

This determining the value of a tone by the way it feels is a part of the system of voice teaching that is always looking at the voice instead of listening to it; and the more one looks the less he will listen. That is, the more he is concerned with what he thinks lips, tongue, jaw, larynx and diaphragm should do, the less likely is he to bother about having right ideas of how it should sound.

There are too many undiscriminating ears among voice teachers—ears that are satisfied with almost any kind of tone if it is loud. Lack of a refined sense of hearing is directly responsible for many of the mistakes made in voice training. If one's ear is thoroughly refined, that is, is sensitive to the finest shades of tone quality, he can hardly be a bad voice teacher; for he will constantly hold before the pupil the perfect model, and the suggestions or instructions he will give to assist in gaining freedom and a right use of all parts of the vocal mechanism will be to facilitate the production of a perfect tone, which is at all times the most important thing to have in mind.

Self Accompanying

By Eugenio Pirani

EVERY singer and singing teacher knows the great importance of self accompanying at the piano, be it in daily practice or in the study of songs, arias, entire operas and oratorios; but very few indeed have acquired enough proficiency in this art to be able to use it at public performances.

There are some who are able to follow with their own accompaniment the voice, but it is only a suggestion of what this accompaniment should be and it seldom reaches artistic perfection. Even when the piano part does not offer great technical difficulty, one misses the complete mastering of the passages, rythmical precision, correct phrasing or dramatic expression; and therefore the singer prefers even a mediocre accompanist to self playing.

The result of this dependency is untold trouble. First, an accompanist must be found; and then, what harm, even disaster, can be caused by an inferior one!

Suppose, a singer has accepted an invitation to a social affair. After some preliminaries he or she is requested to sing some "little thing." Unfortunately she cannot pretend she did not know that she would be asked to perform, because she has brought with her a bulky roll of music which reveals "preparedness." They have in Germany a saying: *Unvorbereitet wie ich mich habe!* which could be translated: "Unprepared as I have myself!" This fact alone minimizes the charm of the improvisation and presents the little favorite comedy as follows:

"But, madame, I am not at all prepared to sing!"

"Oh, please do it. Everybody would be delighted."

The worst has still to come.

Who will accompany her? No pianist is available and the ominous roll of music will perhaps remain "unrolled;" all the vocal treasures which were scheduled to be poured down upon the expectant crowd will remain unearthed. What sad disappointment for the singer and for the audience!

But, let us assume that a pianist is present. He surely was not prepared for such an ordeal and, if he happens to be a tolerable player, he may be a very poor reader at sight. However, the landlady, the guests, singer, all in a chorus urge him to please help out of the strait.

"It is quite easy, you will see; a mere trifle."

"But, madame, I never saw the music before!"

"It doesn't matter; try, anyway!"

There is no way to escape. The poor pianist goes meekly to the piano with the same readiness as a condemned criminal is dragged to the scaffold. He looks bewildered at the unusual number of black notes and, making sure of the key in which the song is written, he improvises in the way of grand prelude a couple of totally wrong chords. The singer, alarmed at the

Marvelous New Nestle Invention

Famous Nestle LANOIL Home Outfit Safely Transforms Straightest Hair Into Lovely Permanent Waves and Curls

Wives Astonish Husbands with New Charming Curliness
Over 7,000 Unsolicited Testimonials in One Year

"Your Home Outfit Is Wonderful"

writes pretty BETTY MERRILL, 1426 E. Fox St., South Bend, Ind. "My bob was straight as could be before. Now I have pretty curls and waves ALL THE TIME."

The Nestle LANOIL Home Outfit in Use. The picture below shows two friends waving each other's hair in their home.

Easy Operation Delights Her

"I am delighted with the easy operation and perfect results of the Home Outfit," writes MRS. ONA BENNETT, Parsons, W. Va. "I often wonder now how I managed before!"

IN THE sensational success which his wonderful Home Outfit invention has met with everywhere, the eminent New York hair genius, Mr. C. Nestle, finds the *greatest* pleasure in knowing that already the dainty apparatus has transformed the straight hair of *nearly 1,000,000 women and girls* in ALL parts of world to real, naturally curly and wavy hair, such as you have *dreamed* of owning all your life.

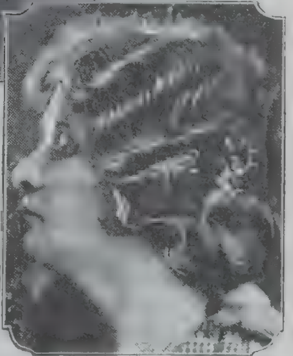
Illustrated Booklet Sent Free on Request

Formerly Had Straightest Hair

"Formerly straight, BEULAH now has marvelous curls," writes MRS. TRICKEY, of Watertown, N. Y.

Hair Benefitted!

MRS. ROSS, Salina, Kans., writes, "My hair was so straight, dry and fine, I could do nothing with it till I curled it with your wonderful Outfit."



Curls and Waves That You Can Wet

We, who have been distributing the Home Outfit for 19 months, have thousands of grateful testimonials similar to these lovely pictures and delighted letters, relating the thrilling joy which the Home Outfit brings wherever it goes. No more nightly curling kids, irons or fluids in *Home Outfit* homes. No more daily struggles with dull, unbecoming locks. For no matter how straight, stiff or dry your hair is now, a single application of the Outfit will give you, too, charming, soft, natural, healthy permanent waves, curls and ringlets—fresh and silky-bright. And water, perspiration, bathing, rain, fog or shampoos, all summer long, will only make them wavier and curlier!

And *not* just for you alone. The same Outfit will wave mother, sisters, neighbors. Little girls of 4 as well as grandmothers are waved with it in *perfect* comfort and safety.

Gentle—Safe—Quick

Mr. Nestle is known the world over as inventor of the famous LANOIL process, which has made permanent waving as safe and comfortable as a shampoo. In his two magnificent New York Establishments, over 300 women of fashion are now waved each day. But, in the privacy of their own homes, about *three thousand* women and girls find radiant happiness each day, through the clever, dainty Home Outfit, invented for those very people who cannot visit the professional Nestle LANOIL Permanent Waver.

30 Days' Free Trial to Everyone

And the best of it is that is costs you nothing to try the Outfit. If you prefer, you may *first* send for our free explanatory booklet. This contains dozens of additional photographs and letters from our happy customers. But as this means delay, why not send *directly* for the Outfit on *30 days' free trial?* Wave your hair with the free trial materials, following the simple directions. Then wait. Wash, brush, comb, test it in any way you see fit. If your lovely, soft curls and waves do not look and act exactly like naturally curly hair through every test, if they do not become prettier every day, no explanations are necessary. Just return the Outfit, and every cent of its cost of $15, deposited with us or with your postman, will be refunded *immediately*.

Naturally wavy hair can be *yours* at last! Send the coupon, or a letter, or a postal today, to have your Home Outfit sent you on 30 days' free trial *at once*.

Teachers—let me give you a regular 30c size tube of Kondon's— *J.H. Kenyon*

✓ We want school teachers to know and value Kondon's and to advise this healthy habit to their boys and girls. 3100 teachers accepted this offer last season

✓ Keep nose and head clear with Kondon's. It prevents infection, colds and catarrh. Just as important as cleaning the teeth.

✓ Send the names of 20 or more parents of your pupils. We will send you, not a sample, but a regular size 30c tube of Kondon's.

✓ Clip this ad. Mail it at once with the 20 or more names and addresses to **Kondon Mfg. Co. Minneapolis, Minn.**

Take these four steps for pupils' health

KONDON'S CATARRHAL JELLY SOLD BY ALL DEALERS

unexpected introduction, feels a peculiar obstruction in the throat and, rather confused by the strange chorus, which suggests all possible tonalities except the one in which the song is written, exhales faint-heartedly the first notes, which, evidently are out of tune, although the singer tries to conform as near as possible to the tonality hinted by the pianist. It becomes soon manifest that vocalist and pianist are disturbing each other.

The worst has still to come!

The pianist pays no attention to rests, to value of notes. Half notes, eighths, sixteenths, are all the same to him. He proceeds undaunted for his own account, independently from the singer. On the other side, the singer, becoming soon aware that the best she can do under that painful circumstance is to utterly ignore the wretched being at the piano, sings her part as if the accompanist were not in existence.

Only where the pianist has a solo and is no more protected by the voice, he feels completely lost and makes a deplorable mess of his instrumental intermezzo.

The result of this grotesque ensemble is an unrecognizable mass of daring dissonances and rythmical curiosities, a most bizarre piece of music.

The few connoisseurs hold their breath, expecting at every moment a catastrophe, until a loud, fully mistaken chord and a shrill high note, suggesting a locomotive whistle, announce the end of the stupendous performance.

Both singer and pianist are well aware of the butchery they have just perpetrated; but, nevertheless, accept with visible complacency the thundering applause of the audience. Both, however, in their heart regret the happening and know very well that those who have a little understanding of music have realized the massacre of which they were guilty.

That double crime could have been avoided if the singer would have known how to accompany herself. To that purpose she should not only be able to master simple accompaniments but, as well, more elaborate parts, as presented in modern compositions which, be it said, are often *piano pieces* with a rather insignificant "accompaniment of the voice," a world turned topsy-turvy. In few words she or he must be an accomplished pianist.

Also artistically this combination of singer and accompanist would create a *unity* of interpretation otherwise seldom obtainable except with a thorough musician.

There is not the slightest doubt that the intelligent self-accompanying singer would most faithfully support her own vocal part. Every change in dynamics, phrasing, every whim of the singer would find ready response in her own accompaniment. The singer would be doubled by a thoroughly reliable pianist. The result would be a genuine work of art.

I know several singers who accompany themselves well enough to satisfy a lenient audience, but very few who do it artistically enough to stand criticism. Marcella Sembrich accompanies herself at the piano wonderfully and, after having interpreted an elaborate program, seats herself at the piano and obtains her greatest triumphs. So does Galli-Curci.

This requires, of course, sound musicianship and great study. But every gifted singer can easily fulfill this double task. The teacher who could and would undertake the training of such a dual artist would have before him an inspiring mission. But bear in mind the fact: *It can be done!*

Learning to Hear

By D. A. Clippinger

IT IS a fact that one must learn to hear.

The average individual who has a good pair of ears will likely smile when he is told that he must learn to hear. He may take pride in asserting that nothing escapes his ears. He will even say that it is impossible not to hear whatever is going on around him. This is not strictly true. We all know that it is possible to carry mental concentration to such a degree that it will shut out completely all that is going on in one's vicinity, even to the extent of not hearing when his name is called. A similar concentration is necessary when one wishes to hear, for hearing is mental and we hear to the limit of our development.

People with equally good auricular organs do not hear equally well. I have often tested by asking a class to listen for overtones. Some would hear the first four. Others would hear one or two, and others none at all. However, I have seen those who in the beginning could hear no overtones, by practice learn to hear the overtones constituting a dominant seventh in any of the low tones of the piano.

This brings me to the point that can not be emphasized too strongly, namely, that of teaching the beginning voice pupil how to listen. We know as much music as we can hear, no more. We know as much about the tone as we can hear, no more. In the beginning of voice culture there are many things in the tone of which the pupil is unconscious, and which must be corrected; but he will never correct them until he hears them. I once had a long battle in getting rid of a vibrato, because the pupil did not know he had one. It was a long time before he learned to hear it; but we could make no progress in getting rid of it until he did. I said, sing the tone again and listen. Did you hear it? No. It was only after he had sung the tone eight times that he heard it.

In teaching the pupil to listen it is necessary to be continually impressing on his mind the elements of the pure singing tone. He must have something definite to strive for. Until he has, all tone qualities will sound pretty much alike to him. He will improve only as he develops a discriminating ear.

The faculty of hearing must be developed in the same way as our other faculties. It is not a fixed, or constant quantity, but like all or our faculties it is practically unlimited in its possibilities.

THE OTTO CINCINNATI ZIMMERMAN & SON CO. OHIO

As a means of contributing to the development of interest in opera, for many years Mr. James Francis Cooke, editor of "The Etude," has prepared, gratuitously, program notes for the production given in Philadelphia by The Metropolitan Opera Company of New York. These have been reprinted extensively in programs and periodicals at home and abroad. Believing that our readers may have a desire to be refreshed or informed upon certain aspects of the popular grand operas, these historical and interpretative notes on several of them will be reproduced in "The Etude." The opera stories have been written by Edward Ellsworth Hipsher, assistant editor.

"Die Tote Stadt"

Not since the time of Wolfgang Amadeus Mozart has any prodigy in musical composition attracted such world-wide attention as Erich Wolfgang Korngold. Indeed, Eduard Hanslick, the famous Viennese critic, dubbed the boy the "Little Mozart," when the child was only five years old. Both his father and his mother were musical and came of musical families. The father, Dr. Julius K. Korngold, became the music critic of the *Neue Frei Presse*, in Vienna, in 1892. Erich was born at Brunn, Austria, May 29, 1897. His father commenced teaching the child at a very early age. Soon, however, he realized the remarkable precocity of the boy demanded expert attention, and he was sent to Robert Fuchs, of the Conservatory, and Zemlinsky, conductor of the People's Opera.

The father realized that it would damage the child to exploit him at such an early age, but the boy's own genius was so great that it could not be kept under cover. When less than eleven years of age, he wrote music for a pantomime called *The Snow Man.* His teacher, Zemlinsky, became so enthusiastic over this work that he took it to several aristocratic homes, where it aroused so much interest that it was decided to have the work scored and given a presentation at the Imperial Opera. This Zemlinsky did unknown to the father, and rehearsals were well along before the irate parent knew of it. Even then he tried to prevent a public performance, fearing that it might injure, rather than benefit, the boy. The pantomime was given with great success, in 1910, and drew large audiences. The performing rights were also secured for many other cities.

Dr. Strauss and Dr. Niksich read his compositions with amazement, and it was realized that a new musical soul with great possibilities had appeared in the world. Since that time the boy developed into a youth and received excellent academic and musical advantages. His works, such as his *Overture* and his *Sinfonietta* and some of his piano pieces, commenced to receive wide attention in the musical centers of the world.

In 1916, despite the pressure of the war in Munich, a production was given of his two one-act operas, *Der Ring des Polykrates* and *Violanta.*

Korngold's greatest triumph came with the production of his Opus 12—his opera *The Dead City.* It was given in Vienna, in Hamburg (where Korngold accepted a position as conductor) and in other centers. On November 12, 1921, it was presented in New York.

The text of the opera was written by Paul Schoot, but it is based upon George Rodenbach's famous romance, known as *Bruges la Morte,* the story of a man devoted to the memory of his dead wife, who, after a lapse of years, is debased by another woman, and then is later restored to the sacred memory by a vision of his wife.

The Story of "The Dead City" ("Die Tote Stadt")

The Libretto is based upon Rodenbach's novel "Bruges the Dead." The ever-present background of the opera is "Bruges, the dead city, wearily dreaming of the past amid the mystic peace of its churches and cloisters, its bells, its weather-worn Gothic facades, its stagnant waterways and abandoned canals." Time, the end of the nineteenth century.

Act I. *Paul's* house. *Paul,* the hero of the opera, has erected an altar of sorrow and remembrance, sacred to *Marie,* the cherished wife whom he has lost. *Brigitta,* his servant, and *Frank,* his friend, discuss his queer conceit and recent change of spirit. *Paul* enters and tells how, in his accustomed walks by the canal, he has discovered the counterpart of *Marie* and that she is coming. *Paul* studies *Marie's* portrait and a strand of her golden hair. *Marietta,* a dancer, enters. *Paul* drapes about her a silken scarf and places in her hand a lute. As she dances about she brushes aside a curtain, disclosing a portrait of her counterpart, which casts a spell over *Paul* by which she is moved to leave. *Paul,* in a phantasm of conscience and disordered nerves, sees *Marie* step from the picture frame. At the end of a prolonged colloquy the vision melts and as *Paul* rushes toward it the curtain falls.

Act II. From a cloud of thick gauses the closing tableau of the first act slowly melts and a deserted quay of Bruges takes form in a late evening light. *Paul* waits outside *Marietta's* window. *Frank* appears and trys to induce *Paul* to leave, who renounces their friendship. A party of dancers approach by boat. They land and enact, in burlesque, the Scene of the Nuns from "Robert le Diable," in which *Marietta* plays the part of the dead woman rising from her grave. Her travesty enrages *Paul* and he flings at her that he has loved in her only the semblance of his dead wife, that he has felt for her no more than a sensuous desire. Her vanity wounded, *Marietta* leaps into the struggle in earnest, using her devilish arts to fascinate her weak admirer till when he wishes to accompany her home she cries, "No, to your home, to the home of the dead woman."

Act III. The Dream Vision continues. The night of love gone, *Paul* sees *Marietta* in the sanctuary of his relics. Fired by her triumph which she has exhibited even before the dead woman's portrait, she outrages his piety even to the demand of a kiss during the Corpus-Christi Procession. His attempts at defense but rouse her to new and more brutal attacks till, on being shown the door, she renews her struggle in which she snatches up the strand of the dead woman's hair, winds it about her neck and begins a dance. Frantic with rage, *Paul* throws himself upon her and strangles her with the hair. The Vision ends, *Paul* awakes, *Marietta* enters as in the first act; but *Paul* is "cured" and will leave Bruges to render unto life that which is life's.

What the Frank Piano Tuner told Mrs. Johnson

"Mrs. Johnson, I've worked on all kinds of pianos, but I never saw a cheap one that gave any real satisfaction. There's always something wrong with them. The quality's not there. Satisfaction requires quality, and quality costs money. But it's worth it. You never save a thing by buying a piano because it costs less."

To be a fine piano, the quality must be there. That's why in building Weaver Pianos, we have devoted our every effort not to quantity production, not to price reduction, but to giving the Weaver Piano quality through and through.

Own a good piano—buy a Weaver. Convenient terms are easily arranged, and a liberal allowance made on your former piano. Write us for the name of the Weaver dealer nearest you. And ask for the Weaver Catalog. Weaver Piano Co., Factory and General Offices: York, Pa. Weaver, York and Livingston Pianos and Player Pianos.

Blemishes

How you can free your skin from blemishes

Dust carries bacteria into the pores of your skin.

The result is an infection—a tiny abscess—and that disfiguring thing known as a skin blemish.

Free your skin from blemishes by this special cleansing treatment:

EACH night before retiring, wash your face with warm water and Woodbury's Facial Soap, finishing with a dash of cold water. Then dip the tips of your fingers in warm water and rub them on the cake of Woodbury's until they are covered with a heavy cream-like lather. Cover each blemish with a thick coat of this and leave it on for ten minutes. Then rinse, first with clear hot water, then with cold.

You will be surprised to see how quickly this treatment will clear your skin.

Get a cake of Woodbury's today, at any drug store or toilet goods counter. A 25-cent cake lasts a month or six weeks. *Or send six cents for sample cake.* Address The Andrew Jergens Co., 50 Spring Grove Ave., Cincinnati, Ohio.

Non-Attention to Phrasing

By E. F. Marks

Why is it that the average organist pays such little attention to phrasing? Frequently organists adhere to a continuous succession of tones without a cessation of sound, until the melody, unless very familiar, becomes almost unrecognizable. Their playing is simply an incessant, tiresome sounding of musical tones; and, if it were not for the harmonic background, would be unbearable. Only a short while since, MacDowell's *To a Wild Rose* was heard played in this perpetually continuous manner; whereas, it is a piece abounding in short phrases, and is surely incomprehensible unless these phrases are made distinct and clear, thus bringing out the beauties, not only of the melody, but also of the form. Analogous to the organists, many violinists are guilty of this uninterrupted flow of melody, even in the simplest pieces. In an amateur orchestra, the violinists (notice the plural) without exception recently prolonged notes and extended the end of one phrase into the beginning of the next, in some cases even disregarded the rests showing the end of the phrases.

All students of the pianoforte, when correctly taught are required to note carefully the beginning and ending of phrases; and even the motives receive some attention through the use of a variety of touches. While this exemplification of motives may not be entirely possible upon the organ, owing to the nature of the instrument, still there is no excuse for an organist not clearly defining the end and beginning of a phrase or sentence. The cadences plainly show where the endings occur.

We well know that in pieces of regular rhythm the cadences fall naturally into two, four, or eight measure rhythm; and from observing that these cadences come at equal distances throughout a piece, in the regular standard eight-measure rhythm, we will soon be able to discern the cadential endings when they occur at unequal distances, in which case the rhythm becomes irregular. In either case, whether regular or irregular rhythm, the phrases and sentences should be made perfectly apparent to the listeners.

A sentence or period of a composition is usually that portion ending in a full cadence (dominant harmony followed by a harmony on the tonic) and divided by at least one middle cadence into two parts or phrases. However, a sentence may at times be subdivided into two, three, four or more sections by cadences. As there is no limitation or restriction as to the number of phrases constituting a period, there must at the very least be two phrases in order to give a feeling of completeness, balance or poise to the sentence, analogous to a couplet in poetry.

As the period or sentence admits of division into phrases, likewise, phrases may be subdivided into motives, which consist of at least two portions or notes, to give the balance, one note or portion being accented the other unaccented. It is the duty of a performer to show, as far as his instrument will permit, the divisions and subdivisions of a composition. How can this elucidation be achieved through a continuity of sounds?

"My hands are like a day laborer's. All musicians' hands are, if they are successful musicians. Remember I have played more than two thousand compositions on the great outdoor organ in my home town. It takes muscle to do it. What could a delicate, shapely hand do wrestling with a great organ?"—Humphrey J. Stewart.

The Organist's Etude

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Magazine Complete in Itself"

Edited by Eminent Organ Experts

Scientific Hymn Playing on the Organ

By Charles C. Chase

Although we sometimes hear "Anyone can play a hymn," smooth and correct hymn-playing on the organ is no easy task and requires considerable careful practice.

For a hymn tune to be well played means that every note in each of the four voices shall be held down its full duration and pass smoothly to the next note in the same voice; that, except when the phrasing or rhythm requires a different treatment, a note must be held down if it begins in one voice and continues in another.

In order that there shall be no break in the continuity, there must always be a free finger for each succeeding note. This is generally accomplished by a great deal of changing of the fingers, in order to release a finger for a succeeding note. Therefore, a large part of the preliminary work in the instruction books for the organ is taken up with exercises for changing the fingers on one or more keys before proceeding to the next. This is more necessary when all four parts are played by the hands alone.

When the pedals are used for playing the bass part, a very efficient method can be used requiring very little changing of the fingers, and leaving the hands very quiet.

The trouble seems to be that in the instruction books the pupil has been expected to play both upper parts with the right hand, leaving to the left nothing but the tenor part.

The following rules will give a clear idea of a good method. This probably is nothing new to experienced organists, but may be useful to pianists who are playing in church, and to whom the best instruction is not available:

1. Couple the pedals to the manual on which the hymn is to be played.
2. Keep the little finger of the left hand on or near the lowest note in the tenor part.
3. Use the ten fingers of both hands like one large extended hand, playing the alto and tenor parts with the fingers that reach the notes most easily, regardless of which voice they are in.

Of course, the left hand does not need to keep a fixed position any more than a violinist's left hand; only it must not take a position where the lower fingers have nothing to do and the thumb and other fingers are in too low a position to be used to advantage.

This method is especially good practice for a pianist who finds it difficult to substitute the pedals for the lower fingers of the left hand in playing the bass part.

As a rule the notes below the treble staff will be played by the upper fingers of the left hand. As the alto and tenor have very much the same notes, the result will be notes held for a measure or longer as they alternate between the two voices. At times the left hand must take a higher position, just as the violinist shifts, allowing the right hand freedom to reach high notes in the soprano part.

Anyone practicing hymn-tunes in this manner will find it a splendid preliminary exercise for the study of fugues and all polyphonic music on the organ.

Voice Culture for the Boy

By John W. Barrington

The impression that vocal culture should not begin in early childhood is common. This is erroneous. Many faults arise which might have been avoided if the young voices had been properly exercised and correctly placed. This is especially true of the boy's voice. Generally speaking, children study sight singing without the vocal culture. Vocal culture should be first. It develops the mental powers and is of great assistance to the conversational voice. The voice expresses character and becomes a help in business and in society. Voice culture greatly improves both pronunciation and enunciation. It gives proper action to the lungs, therefore promoting vigor and health of body, and consequently of mind. It forms a pleasant contrast to other studies and helps to keep up the spirit of the school.

That it is useless to teach the school boy to sing, and that the boy's voice cannot be trained with good results are wrong impressions. Is it any wonder that we have difficulty in securing male voices for our church choirs?

In reference to the upper register of the boy's voice, those who have had much to do with vocal training have found that the practicing of high notes is less injurious than is generally supposed. The boy voice can be made powerful, and just as tuneful as the female voice.

Singing and Elocution should be combined. The elocutionist will have more expressive modulation and power of voice if he is a trained singer.

Vocal music should include the Art of singing at sight—a thing which is accomplished by only a small percentage of musical students. Many persons with excellent voices, who desire to take professional positions, are rejected because they cannot read music at sight. Unfortunately such cases too often exist in our Church choirs. Sight reading is usually more or less a sight guessing which never can take satisfactorily the place of actual knowledge. The art of sight singing can be acquired by all persons endowed with a voice and a normal ear; and it is wrong to think that a person cannot learn tones and musical intervals without first hearing them played, unless he is especially gifted. It cannot be denied that all these difficulties can be overcome if the singer has the knowledge of a Sol Fa method, and a realization that there is a mental effect to each musical design of the scale.

There are many genuine Sol Fa-ists to be found to-day. It is not to be doubted that these men are the best music readers, simply because of this solid foundation at the beginning. In choir work the Tonic Sol Fa system has been found to be a splendid and profitable study to precede the old Staff Notation. It is a complete system in itself and invaluable to the student; but its completeness does not in the least degree limit its value in any other method of music study. It works itself out step by step in a logical and comprehensive fashion; it cultivates every musical faculty through its constant appeal to the mind through the ear. Any study developed in this way is powerful, when *heart, mind* and *will* are the units in its upbuilding.

From this method we grow keen to the various harmonies, to rhythm, and to the many combinations in composition. It also unconsciously leads to the Movable Do System, to the reading of notes. With a training in the Tonic Sol Fa System, one can take up the study of the Movable Do System, or the reading of notes with much greater facility. A course of instruction in this line is equally valuable to children or to adult singers. A systematic training in the reading of music by a Sol Fa method need not in the least degree interfere with any established voice.

All musical intervals should be mentally anticipated before singing them. So many church choristers fail in this respect.

It is the first duty of the young musician to cultivate a pleasant voice, become a good music reader, and sing with a rythmic accent. Rhythm is being more understood and known to be of paramount importance as a vehicle of expression. Having in mind a rhythmic idea it unlocks many a musical mystery. The musical performers who stir you deepest, and exert over you the profoundest spell, are those who make the rhythm constantly felt.

The individual cannot build up a voice without having some idea of the fundamental structure of the vocal apparatus. The vocal apparatus may be divided into four sections:—(1) The Lungs or human bellows, (2) The Larynx or voice box, (3) The Mouth or organ of articulation, (4) The Nasal organs or resonators.

Numerous vocalists are compelled to undergo a course of medical treatment for the recovery of their vocal powers. This can often be avoided if only a few simple rules are observed. The first thing to be gained is a good control of the breath. This can be done by taking an erect position of the body and by the use of a few profitable breathing exercises.

There are three ways of breathing:—Midriff, Rib, and Collar-bone breathing. The right ways are Midriff and Rib breathing. The wrong way is Collar-bone breathing, because it produces the smallest amount of air and expands the chest the least. By improper breathing, everything connected with the voice delivery necessarily suffers. A few good and easy ways of breathing:—(1) Gently close the lips; inhale very slowly and expand the chest. (2) Inhale quickly; hold the breath about ten seconds; exhale very slowly. (3) Inhale slowly; hold the breath about ten seconds; exhale quickly. (4) While walking hold the breath for ten to twenty double steps; increase the number daily.

A good vocal tone is produced by bringing the tone well forward in the mouth, resting the tongue quietly at the bottom of the mouth, having a free easy movement of the paw, a supple open throat, and by not breathing hurriedly and insufficiently.

The less breath used in making the tone, the finer, the more resonant and more beautiful is the tone. The result of using too little breath causes the flattening of pitch and unsteadiness of the voice.

It is not advisable for the young student to use the tremolo effect with the voice, it is simply an imitation of old age. Attack the tones clearly, with firmness but no forcing, sustain them well, and end each tone crisply and in perfect tune. The shape of the mouth should not be changed before the tone stops, but should remain in position for an instant.

The consonants do not strengthen the tone but they must be distinctly sounded. Consonants are pronounced by means of the teeth, lips, tongue, and throat, or any two combined. The result of too much pressure on the first consonant of the word forms an explosive vowel tone and can be avoided by applying the rules of breathing. If too much emphasis is given on the final consonant of the word it will give the effect of an additional vowel sound and can be avoided if the consonant is ended crisply with the tone.

It is not necessary to sacrifice tone for articulation; the two can be satisfactorily combined without any sacrifice to either part.

Tone is produced by the vocal chords which are situated in the highest part of the windpipe or trachea, which is often called the voice box. These vocal chords form the entrance into the windpipe and also the exit from the windpipe into the pharynx. The pharynx leads into two channels—the mouth and the nasal tubes. The breath can be taken through either, but should be taken through the nasal tubes.

The pitch of the tone is produced by the tension of the vocal chords. The volume of the tone is produced by the amount of force with which the air is expelled over the vocal chords, causing the tone to be loud or soft. Tone is sometimes called "timbre." The quality of the tone depends upon the shape of the mouth which must act as a resonance box.

These vocal hints may be applied with advantage by the adult singer.

The Church Pianist

By B. H. Wike

Pianos in the churches are increasing in numbers. They are filling a great need, alternating with the organ for a change, or perhaps displacing it altogether, as is common in the smaller churches. Although this article is meant for the church pianist, it applies also to all who use this instrument at any religious service.

In the first place the piano in a church should not be played as if it were in some theater, and any use of it this way during religious services should be discouraged, except at times when it is necessary to arrive at certain effects.

There are a few things about the use of a piano in church services which many players overlook. Lacking the stops the organ has, the piano tone can soon become monotonous, if care is not taken in phrasing and to select the right kind of material to play. One thing is sure, and that is that organ pieces do not sound well on the piano without some re-arrangement, and *vice versa*. Often, though, you will find pieces that go equally well on both instruments without much changing. To be able to adapt piano music to the organ and organ music to the piano is well worth studying and practicing, in order that one may be prepared for emergencies; but even here care must be taken to keep the melodic and harmonic relations intact, which, of course, requires more or less knowledge of structure and harmony. I was once called upon to play the accompaniments for a duet at a church affair where there was a reed organ and was face to face with the proposition of adapting the piano arrangement of a new setting of "Hark, Hark, My Soul!" for organ use. The arpeggiated introduction of this is doubtless familiar to all who have used it in public. All chords spread out in note groups were played as straight chords, drawing them out and sustaining where the need was felt or shortening them correspondingly. The duet was a success for the singers, which surely depended a great deal upon the adaptation of the piano part to the organ. If it had been played on that organ as written, it would doubtless have been a failure. The same process inversely might have been used had the accompaniments been originally organ and required adaptation to the piano.

Actual organ voluntaries, offertories and postludes, used on a piano, sound flat and insipid. Pieces especially good for the piano in church work are: Variations and transcriptions of familar hymns, slow movements from the classics, marches played somewhat more slowly and quietly than on other occasions, idylls, reveries, selections along these general lines. By all means choose with care; for the church pianist, like the organist, comes in for no small amount of responsibility for the dignity of the religious service in which he plays.

Start Your Boy on the Road to True Manhood

Get **The Boys' Magazine** for him. He needs this great boys' periodical. Parents owe it to their sons to give them clean, interesting and instructive reading that will make them self-reliant, manly and courageous.

A SIX MONTHS' SUBSCRIPTION FOR ONLY 25 CENTS!
(This is ½ the regular price)

Each issue of **The Boys' Magazine** contains the very best stories by the world's best writers. Special departments devoted to Radio, Mechanics, Electricity, Athletics, Physical Training, Stamp Collecting, Amateur Photography, Cartooning, etc., etc. Beautiful big pages with handsome covers in colors. A big lot of jokes and comic drawings.

Just think of it! A SIX MONTHS' subscription for only 25 CENTS. It means six months of pleasure, entertainment and instruction for your boy, or for some boy in whom you take a particular interest.

Remit in stamps if more convenient.

The Miracle of
Maybelline
Makes Every Face More Beautiful

A touch of MAYBELLINE works beauty wonders. Scant eyebrows and lashes are made to appear naturally dark, long and luxurious. All the hidden loveliness of your eyes—their brilliance, depth and expression—is instantly revealed. The difference is remarkable. Girls and women everywhere, even the most beautiful actresses of the stage and screen, now realize that MAYBELLINE is the most important aid to beauty and use it regularly. MAYBELLINE is unlike other preparations, it is absolutely harmless, greaseless and delightful to use. Does not spread and smear on the face or stiffen the lashes. Each dainty box contains mirror and brush.

Two Shades: *Brown for Blondes, Black for Brunettes.*

75c at Your Dealer's

The Underlying Principles of Piano and Organ Tuning

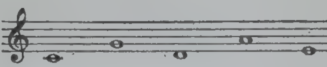
By Carl F. Schmitt

How many pianists and organists have any real conception of the acoustic relations of tones to each other as they are fixed by the present-day system of equal temperament tuning? Comparatively few, even among professionals, are aware that our system of tuning is only a compromise, that is is impossible to tune even one scale on a keyboard instrument in such manner that all of its chords are pure.

This is because the twelve keys in an octave must each do duty for more than one tone. For instance, we use the same key for C-sharp and D-flat. In reality these are different tones when considered acoustically and mathematically, C-sharp being a shade lower than D-flat. And so with the rest of the keys, some of which must do duty for three tones; for example, A, G-double-sharp, B-double-flat. But the difference between these enharmonic tones is small; and, by dividing the octave into twelve equal parts, we arrive at a system of tuning known as equal temperament, in which, although no interval except the octave is pure, they are sufficiently near it to be used in musical performance. By this system all fifths are slightly diminished, all fourths slightly augmented, all major thirds considerably augmented, and minor thirds considerably diminished, and so forth.

Previous to the beginning of the eighteenth century this system of tuning was not used, certain tonalities being favored at the expense of the rest; and playing was confined to keys having few sharps or flats. Music in four flats, for instance, sounded atrociously out of tune. Later J. S. Bach put his powerful influence behind the equal temperament and wrote his *Forty-Eight Preludes and Fugues* in all major and minor keys, mainly to show the advantages of "tempered" tones. Hence the name *Well Tempered Clavichord*.

Near the beginning it was stated that not even one scale can be so tuned as to give all its chords pure. This is because tones reached in tuning by fourths and fifths differ from those reached by thirds or sixths. For example, the tone E, reached as follows,



is a little higher than the same E when tuned directly as a pure major third. A striking experiment may be made by anyone familiar with tuning. Take middle C as a starting point. Tune E above it as a pure major third (without beats). Then tune G-sharp above the E likewise as a pure major third. Next tune A flat below middle C as a pure major third to said C. Now compare A-flat with G-sharp. The latter will be found disagreeably flat, nearly a quarter tone.

Various keyboards have been proposed to produce pure intervals in all keys; but the complexity of such contrivances would make the playing of all but very simple music impossible. Besides, no keyboard instrument would remain in tune long enough to make it worth while to construct so complicated an apparatus. Many of the most beautiful and striking modulations would be impossible were the equal temperament abolished.

The question now arises why, then, is piano and organ music endurable to the ear when no interval except the octave is pure? The answer lies in the fact that the ear, like the eye, takes no note of minute discrepancies in works of art when these remain within certain limits. A photograph, when examined under a microscope, consists of minute dots merging into each other, giving a blurred effect. If these dots do not exceed the one-hundredth part of an inch in diameter, the photograph appears sharp and distinct to the normal eye, at a distance of twelve inches. In a similar manner the sounds produced from a properly tuned and voiced piano or organ are within the limit of such errors as the ear recognizes in the performance of a musical composition, and are therefore acceptable and enjoyable. Furthermore, in traveling through the air sounds are smoothed out to some extent. It is for this reason that music sounds better at a little distance than close by, also that the damper pedal can be used more freely in a large hall than in a small room.

Bach—Parratt—Chess

By D. L. Ford

Sir Walter Parratt, for years one of the most scholarly of the great English organists, would put "kinks" into the notions of some who think of music as an accomplishment for light minds.

When organist at Magdalen College, Oxford, he one day transposed the entire of Wesley's monumental setting of *The Wilderness,* to accommodate a new chorister, afterward acknowledging that it was "just a bit embarrassing," as he did not happen to have a copy of the work in the organ loft.

From early childhood his memory was phenomenal. At ten he played the entire *Immortal Forty-eight* from memory and later in life had the entire organ works of his favorite composer, Bach, at his finger-tips.

His pet diversion was chess, by which he was so enamored that he has been known to admit that next to winning at the game his greatest pleasure was in losing at it. Among his friends it is reported that Bach and chess are so familiar in his thoughts that he can sit at the organ and play a fugue of the great "Cantor of Leipsic" and at the same time dictate the moves in a game of his favorite recreation.

New Music Books

Better Music in Our Churches. By John Mann Walker. Cloth bound; 214 pages. Published by The Methodist Book Concern; at $1.25 per copy.

A book full of interest for the church musician in any field of the work. Its chief value lies in that it does not stop at telling what ought to be done to improve the music of the church service but goes right to the rock bottom and explicitly directs in how to do the thing. It is no mere voicing of theories, but an exposition of experiences of men and women who have made notable successes in the various lines of endeavor about which they write. Every church Pastor, Choirmaster and Organist should be acquainted with the context of this book.

String Tone. By Frederick H. Martens. Cloth bound. 360 pages. Published by the Frederick A. Stokes Company, at $3.00 per copy.

In a series of talks with the leading players of the various stringed instruments, the author has produced a book of real worth to the students of them and to the reader desiring an intimate knowledge that will assist to the understanding of their technical peculiarities as well as the interpretation of their literature. Both solo and ensemble playing are presented in a lucid manner; and especially the string quartet, which recent years have brought into such favor, receives careful treatment. Barring the rather frequent self-introduction of "the writer," the style is bright, readable and even enticing. A book which should have a place in any musical library.

The Russian Opera. By Rosa Newmarch. E. P. Dutton and Co. 401 pages; bound in cloth. Sixteen half-tone illustrations. Price, $2.50.

The most authoritative book upon the Russian opera from the pre-Glinka composers to the present day. Many of the opera plots are given in detail; and desirable biographical material difficult to obtain otherwise is incorporated in the book. The author is a good friend of Chaliapine; and many pictures of the great Russian bass are given in the book.

Music Appreciation with the Victrola for Children. Issued by the Educational Department of the Victor Talking Machine Co. 287 pages. Bound in cloth. Price $1.50.

A handsome volume giving the teacher a rich fund of information upon how to conduct the regular grade work in musical appreciation; citing hundreds of records and giving material which should prove especially valuable in juvenile club work and elementary classes. It may be recommended for classes and clubs where the individual members are using such a work as The Standard History of Music. The average teacher conducting such classes is seeking a book in which material of this kind, furnishing hits for supplementary work, is given.

Question and Answer Department

Conducted by ARTHUR DE GUICHARD

Always send your full name and address. No questions will be answered when this has been neglected.

Only your initials or a chosen nom de plume will be printed.

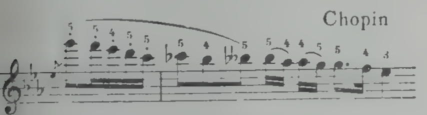
Make your questions short and to the point.

Questions regarding particular pieces, metronomic markings, etc., not likely to be of interest o the greater number of ETUDE readers will not be considered.

b Nocturne, Op. 9, No. 2 (Chopin).

Q. *What is the correct fingering of the ollowing passage, according to the composer imself? See Nocturne in E♭, Op. 9, No. 2.*—ARTIE, Providence, R. I.

A. Finger as indicated above the notes:



ubdominant and Submediant.

Q. *What is the reason for calling the fourth ote of the scale (Fa) the subdominant? Is t because it is just below the dominant? If o, then I cannot understand why the sixth egree is called the submediant? Please enighten me.*—PUZZLED, Greenville, Texas.

A. The dominant is the fifth *above* the onic, the subdominant (under dominant) is he fifth *below* the tonic; the mediant is the ote *midway* between tonic and dominant, the ubmediant (under-mediant) is the note midway between the tonic and subdominant, deending from tonic.

ccidentals.

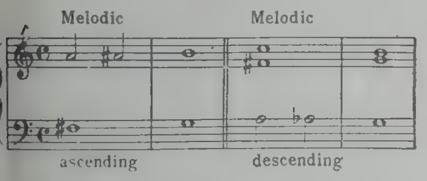
Q. *When are these signs to be considered s accidentals:* ♭, ♯, ♮, 𝄫, x, ♮♮?—A. M. G., oston, Mass.

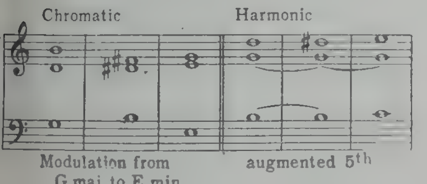
A. When they do not form an integral art of the scale of the composition or movement.

hanging a Note's Pitch.

Q. *What is meant by the term "changing he pitch of a note," and in how many ways an it be done?*—I. STUBBS, East Providence, . I.

A. The pitch of a note may be modified, ithout changing its position on the staff, y the use of sharps, flats, double sharps, ouble flats, and naturals. The modification ay be chromatic, ascending or descending, elodic or harmonic, and affect one or more otes of a chord:—





Modulation from G maj. to E min. augmented 5th

o Eradicate or Not to Eradicate—Tonsils.

Q. *Does having the tonsils removed affect he quality of one's voice? I sing, and the octor advises having my tonsils removed; o you?*—A. D. L., Alexandria, La.

A. Yes; if the operation is well performed, ou will have a better voice after it. However, you should tell the operating specialist hat you are a singer, in order that the reatest care may be taken not to injure he *pillars of the fauces.* The majority of he best world-singers, even including the ate Adelina Patti, have undergone it, not nly without injury but with actual benefits. . B: Refuse all application of caustic nitrate of silver) in any form whatever.

egree of Doctor of Music.

Q. *Is it possible for one to study for lus. Doc. degree in an University? If so, lease enlighten me what course to take; hat is, after having passed matriculation, is necessary to become a Bachelor of Music? indly give me some idea of the requireents.*—"Student," Johannesburg, South frica.

A. To obtain the Mus. Doc. degree it is ecessary, in any reputed university, to pass he Entrance (or Previous) Examination, to eep certain terms, to pass the Mus. Bac. xamination, and to give proof of musical istinction by submitting not more than hree musical works to the Chairman of the pecial Board of Music. For example, Camridge University (England) requires that lus. Bac. candidates shall keep nine terms y residence and pass an examination in two arts consisting of Accustics; Composition, oth instrumental and vocal; Counterpoint n not more than five parts, including double counterpoint; Harmony; Canon in two parts; Fugue in two parts, especially as to the relation of subject and answer; Form as exemplified in the Sonata; knowledge of the Organ (stops, quality, pitch) and of all orchestral instruments; Analysis of some classical composition in harmony and form; Playing at sight from figured bass and from vocal and orchestral score; Musical history; a general knowledge of standard classical works of the great composers.

Next higher to the Mus. Bac. is the degree of Master of Music. The Mus. Doc. degree is not conferred upon persons under thirty years of age. For other particulars write to the Chairman of the Special Board of Music, Trinity College, Cambridge (England), or to the Registrar of any other University.

"Head" Tones—Head Placement—Soprano and Tenor.

Q (i) *I would like to know just what a "head tone" is in singing; (ii) also, if it is possible to sing all the tones, in a natural range of voice, with head placement? (iii) It appears that in a soprano or tenor voice, the tones below second F above middle C are all sung with one placement, and those above the same F are sung with an entirely different placement. I would like to know the difference between them. These questions are of vital interest to me.*—MARGARET M., Parkway Blvd., Alliance, Ohio.

A. (i) The terms "head-voice" and "chest-voice" are misnomers, misleading and, by their adoption and consequent endeavors to force a voice at or in those localities, responsible for many constricted tones, congested throats and ruined voices. The voice is really a throat-voice (be careful not to call it "throaty!") because all voice is generated there, in the larynx—without which you could not sing. Simultaneously with the attack of the note, it is swiftly impelled by will-power into the mouth cavity, nasal and frontal sinuses, according to the pitch, lower or higher. Want of space prevents a full description of these processes. (ii) If soprano, sing all your tones up to C♯ (third space, treble) in your natural voice, *mezzo-piano* (or *mezzo-forte*—both terms meaning the same). When you reach D, D♯ or E, a difference in sound is noticed, brighter, purer, better—caused by the natural rising of the larynx and, usually, a movement of the soft palate. (iii) The tenor voice experiences a similar change, *one octave lower*, the male voice being one octave lower than the female. This crucial subject cannot be treated adequately in these columns.

German Names of Notes.

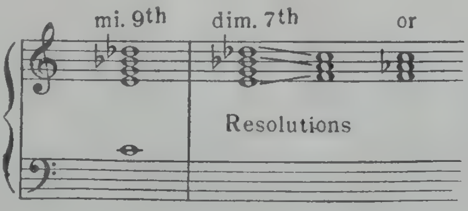
Q. *What is the meaning of "Ces" and what language is it?*—B. C., Cincinnati, O.

A. "Ces" is the German name for C♭—"Cesses" is C𝄫. Thus: As is A♭, Ases is A𝄫; Des is D♭, Deses is D𝄫; Es is E♭, Eses is E𝄫; and so forth. Rule: For flats add *es* to the note-name; for sharps add *is* to the note-name.

The Diminished Seventh.

Q. 1. *Does the chord of the diminished seventh occur only in the minor mode? 2. Define it. 3. Explain the resolutions of the chord.*—ARTUS, 42nd St., New York City.

A. The chord of the Diminished Seventh may occur in any mode, major, minor, or chromatic. The question, however, most probably means "does the diminished seventh belong to a major or a minor chord?" It belongs to a minor chord. 2. The best definition is that it is the first inversion of the dominant minor ninth, with the root omitted. Its best description is that it consists of three superposed minor thirds. Thus:



The root of this chord is C, which is the dominant of F major or minor. 3. The regular resolution, the dominant minor ninth (otherwise, the diminished seventh) falls one degree; the minor seventh (the dominant seventh of the root) falls one degree; the leading note E (the third of the root) rises one degree. The interval of a minor third is very useful for enharmonic changes; therefore this chord of the diminished seventh is, of all the chords, the most prolific in enharmonic changes. It will be noted that, as the root (C) of the dominant chord is omitted, the note above it (the leading note) becomes the root of the chord.

KIMBALL

"The Instrument of Yesterday, Today and Tomorrow"

"IDEAL in tone and perfect in action" was the enthusiastic praise of SOPHIA SCALCHI, the famous contralto, in the days of this artist's greatest success.

Today EDNA RICHOLSON SOLLITT, American pianist, who speaks with authority in her chosen profession, says, "KIMBALL Pianos are all examples of how good pianos can be."

Whether of the past or the present, musicians unite the years of achievement with continuous tribute to the excellence of the KIMBALL—the piano of imperishable fame.

The Solo Violinist

By Robert Alton

Almost every player of any experience aspires to the art of solo performance; and there is little doubt that the grandeur of the violin is best displayed by the efforts of the fine soloist. But it is not every soloist who has given sufficient attention to the subtle reasons for the performance of valuable solo workmanship.

It must not be supposed that technic alone will enable the player to become a successful soloist. There are as many faultless technicians as there are few fine soloists. Technic is one thing, fine solo playing is another.

It may be readily conceded that the great masters of composition were inspired when they produced their masterpieces. But it is often forgotten that technic alone will not procure inspiration; and if the solo violinist is to attempt to render those masterpieces, how shall he accomplish it without at least some spark of that inspiration which produced the masterpieces in the first place. Technic he must have; but there is something more. Unless the violinist can interpret by means of his art the eminently human attributes of passion, joy, sorrow, and spiritual force, he will never be a great soloist.

The road of high endeavor is open to all violinists, and the roughness of the road is supremely necessary, because that roughness is the great teacher which will enable the traveler to sense something of that noble inspiration experienced by those great musicians who have all traveled on that road. Herein lies the secret of their greatness. The true artist is nothing if he be not noble. And nobility of character will as surely make itself felt through the violin of that player as meanness and indifference will betray itself through the same medium.

This has nothing to do with technic. Most violinists are prepared, after the usual courses of study, to undertake any piece of music of ordinary degree of difficulty; but how many violinists can play *successfully*, as an unaccompanied solo, Gounod's *Ave Maria*, or Tschaikowsky's *Chanson Triste?* And yet neither of these pieces of music is technically difficult; only, *how* difficult to render correctly and to put the spirit of the composers behind the music! Study of technic, without the spirit of humanity and sympathy with the sufferings and trials of our own race, will make a tricky, clever player, but never a great soloist.

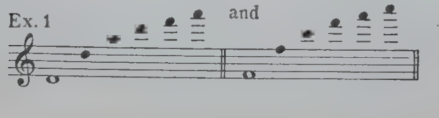
That D Minor Chord

By Ernest J. Farmer

Why do accompanists play the D minor chord when soloists wish to tune their instruments?

This question has been asked often in print, but not answered. Apparently most of the querists do not expect an answer, but are only having a fling at what seems to them a senseless convention. A certain proportion of violinists say, however, that it does seem easier to tune to an A played as the top of a D minor chord than to an A played in any other way; and for this feeling there is a scientific reason.

When a note is sounded on any stringed instrument, its upper partials or harmonics are also sounded, though faintly. The natural harmonic scales of D and F as far as the sixth note (fifth upper partial) are:



The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Graduation of Steps

By Frank S. Hart

That the steps and half steps taken by the fingers must be made gradually smaller as the notes rise in pitch on each string is a point in violin technic too often neglected. Unless a beginner possesses a very fine ear he will naturally make all steps and half steps the same size as he begins to find the notes on the fingerboard.

Some teachers seem to think that this subject is too complex for a child to grasp, so they do not mention it and trust that the beginner will "catch the trick" in their effort to make things sound well.

In a recently published book on the subject of violin technic in all its branches, the writer does not touch on this subject until he reaches the article on octave playing and then he says, "When the violinist begins to familiarize himself with the third, and all higher positions, he discovers that the more closely he approaches the bridge the smaller is the distance of all the intervals on the finger-board. (A great time to find that out! I should hate to have to listen to his playing previous to this discovery.) To go on with the article, he then makes the astounding statement that "This peculiarity of violin technic does not greatly concern him, and if he assiduously devotes himself to scalework, the difficulties of intonation arising from this peculiarity give way naturally and by almost imperceptible degrees." This last is quite true, but how much better it would be to instill the fundamental fact in the mind of the young player when he first begins to find the stopped notes, that to shorten a string one twelfth of its length will raise the pitch one tone. Even a child will understand that as he progresses upward he is dividing a smaller and smaller object; therefore, the portions must be smaller. For example, if a teacher in school told a row of boys that she would pass a stick of candy 12 inches long up the row and that each boy was to cut off, for himself, one-twelfth of the stick when he received it, it is easy to see that the first boy in each row would get the most candy. The first boy cuts off one inch, but the next boy must not cut off one inch too, because the stick is only eleven inches long when he gets it and surely one-twelfth of eleven inches in not one inch. (Note: The writer is aware that taking one-twelfth of a string is not scientifically correct; but, since the string on a 3-4 violin is about twelve inches long the mental calculations are easier with this fraction. It should be about a ninth.)

Players often acquire the habit of making their steps smaller with the 3rd and 4th fingers without any knowledge of this law. Since nature has fashioned the hand with the 3rd and 4th fingers shorter than the rest, the beginner naturally makes the steps smaller with these fingers as it would be a hardship to do otherwise. We must bear in mind that the average youngster is not greatly concerned over something he happens to do correctly but does not understand. A player who makes the distance smaller between the 3rd and 4th fingers only because the fourth finger is short will invariably have the weakness of not making the first step large enough.

Lay Solid Foundations

By Ben Venuto

Not many years ago, when a young violin-student, so unfortunate as to have been taught by a second-class teacher, placed himself under the instruction of one thoroughly qualified and conscientious, invariably the position of his hands and arms and the whole style of his bowing would be found to need revision. In the present time, however, thanks to the greater spread of knowledge, the principles of a good technic are more commonly understood and properly taught, even by many unknown young teachers working in remote places.

In the place of this evil, which is so happily vanishing, a new one seems now very much in evidence—the advancing of pupils to the study of the higher positions before they are well grounded in the technic of the first; often, before they even understand rightly the elements of notation and the principles of time keeping. This leads inevitably to playing out of tune, and often to a carelessness as to correct style of bowing, even when (as is usually now the case) the latter has been properly taught in the earlier lessons. Following the same mistaken urge for rapid advancement, as soon as the pupil has *nibbled* a little at the upper positions, difficult pieces are often given haphazard; sometimes the pupil is permitted to choose them for himself, bringing week after week new pieces from a certain cheap and poorly edited edition with no further care than to see that they do not run in compass higher than his (very superficial) experience of the positions. A pupil of this kind, on coming to a good teacher, must of necessity be put back into the elements: a circumstance which occasions much discouragement and often distrust.

One source of this trouble lies in the ill-judged ambition of some poorly-established teachers to be able to boast of their pupils' "rapid progress," but the public is sure to find them out sooner or later; and they defeat their own end. Occasionally, however, the young teacher has merely been misled by the material in certain instruction books and his ignorance of the proper manner to supplement it. As a concrete example, I have in mind one young teacher who puts his pupils through the first book of DeBeriot, page after page, without the use of other material, following it with various pieces chosen almost at random. In the first few lessons he really teaches an excellent bow-arm, but afterward the pupil's style degenerates steadily, owing to his premature struggling with untimely difficulties.

Now DeBeriot's book is an excellent one, but not designed for that kind of use. First of all, it was not written for pupils *entirely* ignorant of the elements of music, but for those who had studied sight-singing or else piano. Second, *before leaving the first position, one should study through a quantity of material sufficient to give a thorough grounding both technical and musical.* Without any intention of claiming the sole superiority for his choice, the present writer will merely name here what he considers good to study in the first position before going farther: Wohlfahrt, Op. 74, *Fifty Easy Melodious Studies* (Book I only); Pleyel *Duos, Op. 8, Favorite Old Time Tunes for Violin and Piano* (Presser Ed.); the scales, through *all* the major and minor keys. For less talented or very young pupils, Richard Hofmann, Op. 25, book I, *The First Studies for the Violin in the First Position,* should precede Wohlfahrt. (Many prefer Kayser's studies, but I find them a little too difficult for beginners, other than the most talented.)

When all this material (or its equivalent) has been thoroughly mastered, and not before, the student may be properly advanced to the third (not the second) position, and should remain on material not passing further until it gets to be as easy as the first position. I would suggest Book II of the Wohlfahrt opus named above, and Pleyel's *Duets, Op. 48.* Mastery of the remaining positions should progress by the same gradual stages, with abundant use of outside material of suitable grade.

It is possible, by the way, to find instruction books which are properly graded and contain such an abundance of material that nothing outside is needed until the pupil is ready for pieces—Hermann's, for instance, or Henning's (both old stand-bys); or any one of several large modern works which I might name—but the more recent ones are very expensive, and all, both old and new, are frightfully dull and discouraging to a young pupil. Hohmann's is excellent through the first position (the first three books), but the fourth and fifth books, dealing with the upper positions, are less satisfactory.

The well-informed reader may consider me, perhaps, not strictly up-to-date because I have said nothing of Sevcik whose various books of violin technic are now so famous, but there is a reason Sevcik's Method is perhaps the most thoroughly efficient ever designed, but is really only suited to "professional" pupils who can give their entire days to practice. I used for the common run of pupils, i should be taken only piecemeal, with special intent to correct and strengthen certain particular weak points.

Elementary Bowing

By Marion G. Osgood

While striving to impress a violin beginner with the importance of drawing th bow in a line with the bridge, it is wel to inculcate also the importance of slantin the bow a little away from the bridge, toward the finger board. This slantin causes the hair to lie upon the strings i the way best suited to the tone productio It also encourages (indeed, it rather compels) that wrist curve so essential t good bowing.

The flexible wrist, the slant of the bow and the bow moving in line with the bridg these may be called three movements; ye distinct and separate though they seen such is their dependence upon each othe that unless the three are working harmoniously together the result is an exceeding poor quality of tone. When all three movements are made correctly the sense c separateness is lost. The player's bowin then becomes one movement, a movemen of harmonious grace.

The student who has reached this stag has taken an important step toward bow control.

Easy to PLAY-Easy to PAY

The Saxophone is the easiest of all wind instruments to play and the sweetest in tone. In an hour you can learn to play the scale and soon play popular airs. Nothing can take its place for Home, Lodge, Church or School Entertainment.

BUESCHER TRUE TONE SAXOPHONE

Is a marvelous instrument—the only one with convenient "snap-on pads." Easy payment terms can be arranged if desired, making it very easy to pay. Six days' free trial allowed. Write for Free Book about the Saxophone and Complete Catalog. (80)

IT'S REALLY SURPRISING HOW

Stuber's "Instrumental Music Course" has met with the warm approval of supervisors and teachers.

The coming school year will find this course forming the backbone of public school instrumental music in many of the more advanced cities. Its practicability has been proven by four years' use in public schools. Constant revision keeps it up to date in every particular.

We would appreciate the opportunity of sending complete copies on approval to supervisors and teachers.

Mere Age in Violins

It is astonishing what store the general public puts in mere age in violins. In the many letters which people write to The Etude about their violins, there is hardly one but which lays stress on the length of time it has "been in the family." They set forth at great length that it is 20, 30 or 100 years old, that it was brought over from the "old country" by their great-great-grandfather, or that it was discovered in Uncle Joe's attic where it had been for 50 years. Because some of the greatest violins in existence are very old, people jump to the conclusion that the "older they are the better they are," and that an *old* violin must necessarily be a very *good* violin.

The truth of the matter is that mere age is of far less importance than people think. If a violin was not well made according to the correct principles of the art, and by a master violin maker, it will never be a high-class instrument, no matter how old it is. A badly made violin, made of poorly selected wood, and with a rough, screechy tone, will never be any better, no matter what its age.

Of course it goes without saying that a violin will have a better tone, when the last particle of sap has dried out of the wood, for moisture in the wood acts like a mute on the tone, and detracts from the resonance. But it must be remembered that good violin makers of the present day make their violins from wood which is perfectly dry and free of sap, and which is old in the bargain. Many a new violin of the present day is made of wood 100 or 200 years old, or as old as the wood of the oldest Cremona. This being the case such new violins of to-day, made of this very old wood, start out on a par with violins made 100 or 200 years ago, as far as the mere age of the wood is concerned, and are really "old violins," in the sense that the general public thinks of old violins.

Some of the best violin authorities are very doubtful that mere age has much to do with the improvement of violin tone, provided the violin was made from thoroughly dried, seasoned wood, from which the sap had long evaporated. It is much more likely that much playing has improved the tones of old instruments. Every violinist knows that a new violin, which is in continual practice by a good violinist, shows a great improvement after the first years. Otto, the German violin authority, in his "Treatise on the Violin," gives an account of experiments which he and his friends made in trying to improve the tone of new violins by playing on them.

Otto's method was to improve a violin by playing chords on it in fifths. For instance, he would start with the first finger placed across the G and D strings, in the first position making the notes A and E a chord of the fifth. He would continue to play this chord with long steady bows for two hours or more a day. Then he would advance to the next two notes, always at an interval of a fifth, and so on in the entire compass of the violin and on all the strings. He states that he found that after this continued playing each of the tones comprising one of these chords of the fifth, would take on a better resonance, and give a finer, more sympathetic tone, after being continually played in this manner. He gave several instances of violins which had been sold at an increased price through being treated in this manner.

Another violin authority is of the opinion that the continued vibration of the wood, in long years of playing, causes a change in the fibres of the wood, which makes the tone given forth more resonant and of finer quality. This is only a theory, however, as the most powerful microscope fails to show any change in appearance of wood of a musical instrument which has been subject to much vibration.

Relaxation in 'Cello Playing

By Charles Poore

The principles of weight and relaxation, for so long applied to piano and violin playing, are just as applicable to the 'cello, and in fact are taught by the best teachers of that instrument.

An analysis of the difficulties that confront the 'cello student shows that these become surmountable with the attainment of perfect relaxation—that is, a relaxation so complete that the player is conscious of no tenseness anywhere.

Tenseness seems to inhere in certain definite places and to these the student must give his attention.

For example, the right shoulder. Perhaps the most commonly met hindrance to ease and facility in 'cello playing is in the inability of the student to relax the right shoulder in playing from a higher string to a lower, as from the A string to the G string. Watch this point of tenseness; and, if there is difficulty there, work it out. A good exercise for "loosening up" the right shoulder is daily playing of all the major and minor chords, as the change across the strings is more abrupt in these chords than in scale playing.

After the right shoulder look out for the right elbow and forearm. The 'cello player in his effort to produce a big tone, is always tempted to "saw away" at the frog of the bow. Playing so doesn't affect the right shoulder, but it does prevent any freedom of movement in the forearm. A good exercise for gaining freedom in the forearm and elbow is the Second Exercise of Dotzauer, Op. 47, devoting a week to each bowing. As there are some sixty bowings in this exercise, a year could be spent on it to advantage, and with permanently good results.

The development of the left arm and hand is equally important, and its discussion requires perhaps more extended comment than in the case of the right arm.

Josef Hofmann

FIVE MINIATURE MASTERPIECES

By THIS MASTER PIANIST

(Mignonettes—The Children's Corner)

Cat. No.	Title	Grade	Price
18690	**Lonesome**, *Song Without Words*	3	$0.30
18691	**Wooden Soldiers**, *March*	4	.30
18692	**Lullaby**, *Berceuse*	3	.25
18693	**Sister's Dolly**, *Polka*	4	.30
18694	**Nocturne**, *Complaint*	5	.30

These numbers are big enough musically for the recital programs of the greatest pianists and yet "easy" enough for pupils in the medium grades. They will prove a source of delight to all pupils or pianists playing them. Each one is of an engaging character with clean melodic outline.

Violin Questions Answered Personally

By Mr. Robert Braine

Late Preparation for Teaching.

A. S. H.—I am afraid it would take some one who is more of a fortune teller than I am to tell whether a piano teacher, commencing the study of the violin at 42 years of age, could become a good teacher of the instrument. At that age a student could hardly hope to become an artistic player, although a great deal could be learned in a theoretical way and a certain amount of more or less crude technic acquired. As it is very difficult to teach *what one has not himself experienced and mastered*, I should say that such a teacher might be able to teach up to a certain point but could hardly expect to develop really artistic pupils. Still I have often seen teachers, who were themselves indifferent performers on the violin, meet with considerable success in teaching.

Hill Violins.

M. R.—If you play the pieces and studies which you name really well you have made rapid progress in four years and have a good chance to be ready for professional work in two or three years of further study. It all depends on how well you play them. I could not advise definitely without hearing you. 2. Joseph Hill, London, 1720-1775, was one of the best English violin makers, and good specimens of his work are valuable, if genuine.

Giuseppe Odoardi.

M. M. K.—If your violin is genuine, it was made by Giuseppe Odoardi, Ascoli (Italy) in 1785. The value of the violin would be considerable, if genuine. H. Bauer, in his "Practical History of the Violin," says of this maker: "He died at 28 years of age, and left over 200 violins of unsurpassed beauty. The Italian writer, Galeazzi, says that this maker would have reached the highest artistic standpoint of the great Cremonese makers if he had lived long enough. His violins, after his death, were fitted with Cremonese and Brescian tickets and sold as famous master violins."

"Stainer."

C. D.—While it is quite impossible to say definitely just what your violin is, or its value, without seeing it, I should judge by your description that it is an imitation "Stainer." Its value would depend on just how good an imitation it is. Well-made copies of famous makers are often valuable.

The "Artist's" Preparation.

J. J. B.—Your letter states that you wish to become a violinist of the first rank. If so, your only course would be to go to one of the large cities and study under a first-class teacher. You can, of course, learn a limited amount by yourself, in a more or less crude way, but if you hope to become an artist, you will have to have a big broad education under a good violin teacher in one of the large music centers.

If you cannot leave home you will have to do the best you can by yourself. I would advise you to get the book "Violin Teaching and Violin Study," by Gruenberg. You might also get Dancla's "Conservatory Method for the Violin," as that has a great deal of explanation accompanying the exercises. Hermann "Violin School," Vol. II, also would be good for you.

Unconventional Scrolls.

E. L. C.—Violins which have carved heads of lions, griffins, etc., instead of the conventional scroll, are very common, and are usually factory-made violins of no great value, although there are some exceptions. However, I cannot give you an opinion without seeing your violin. You could ship it to an expert for an examination, but the chances are you would go to useless trouble and expense.

Becoming a Virtuoso.

V. F. S.—To become a really great violinist or pianist one must commence in childhood, and practice persistently under the guidance of a good master. However, a talented pupil can often accomplish a great deal even commencing later. It is quite impossible for me to advise you intelligently without hearing you play and knowing you thoroughly. The five years of violin study you have done will help you to a certain extent, from a musical point of view, in your piano study, if you decide to make the piano your principal instrument, but not so much in a technical way, as violin and piano technic are widely different. As you live near Los Angeles, I would advise you to play for leading teachers of both instruments in that city, and get their opinion on the matter. From what your letter states, you no doubt have excellent talent for music and could accomplish a great deal on either instrument; but I am afraid it is somewhat doubtful whether you could become a great virtuoso on either instrument.

"The Swan."

G. R. T.—You speak of the "Swan," by Saint-Saëns as an easy little piece. In this you are wrong. There are no rapid scale passages and violinistic fire works in this little composition, it is true; but it requires an excellent artist to make it effective. It must be played with a fine, sonorous tone, of refined and singing character; and this is always difficult. First hear a first-rate solo concert violinist play it, and then listen to the attempt of an amateur, and you will get my meaning.

Paolo Albani.

K. H.—Paolo Albani, 1650-1700, a well-known maker of the Cremonese school. His violins are valuable. There are many imitations, so you will have to have your violin examined by an expert.

"Simon" or "Landolphi."

J. G.—Franz Simon, Salzburg, while not one of the great makers, made some good instruments. I could not give an opinion without seeing the instrument. You probably did not pay too much, if the violin is one of Simon's best instruments. It will likely improve with use. 2. Landolphi was a much greater maker, and his violins are in great demand, at comparatively high prices. A good Landolphi, in a good state of preservation would be extremely cheap at $300. The instrument which was offered you at that price may be only a copy. I would not buy it until I had obtained an opinion of an expert that it was genuine and in good condition. You could send the violin to one of the dealers in old violins who advertise in The Etude, and get his opinion.

Violin "Fantasias."

K. L.—The Fantasia on airs from the opera "Carmen" by Bizet, arranged by Sarasate, is a very beautiful and effective solo composition, but it is very difficult and only intended for virtuoso violinists. At your present stage of progress, I am afraid it would be a waste of time for you to attempt it. The Sarasate arrangement of "Faust" is also difficult.

Violin Labels.

M. L. B.—Genuine and imitation labels in old violins usually read the same, for it is easy to make an exact counterfeit of the original. So many people seem to think that if the label in their violin reads correctly it must be genuine. There are hundreds of thousands of these imitation Stainers, so I cannot hold out much encouragement that your friend's violin is genuine. Still, it is not impossible. You could ship the violin by express to a good expert for an opinion, but I have no doubt it would be going to useless trouble and expense.

A Repaired Maggini.

J. F. A. V.—Your violin is no doubt an imitation Maggini. Maggini was one of the most famous Italian makers. He worked at Brescia, a town in Italy. The first part of your label is in Italian. The latter part is in German and reads: "Repaired by Joh. Reiter (Pupil of Joh. Vauchel) Mittenwald on the Isar, 1896." Reiter and Vauchel are quite unknown to fame.

There is less than one chance in a hundred thousand that your violin is a genuine Maggini. You will have to show it to an expert if you wish to know definitely.

"Violin Making."

P. O. M.—"Violin Making" (Strad Library No. IX), by Walter S. Mayson, is an excellent and practical work on violin making, and would no doubt be what you want.

Schweitzer Violins.

R. F. T.—Joh. Bapt. Schweitzer was a famous Hungarian violin maker who made a large number of violins of excellent character. His violins are valuable, but have been widely imitated, so it may be that yours is not genuine. Get an opinion from an expert.

Lifting the Bow.

L. B.—In some passages the bow is lifted for the rests, and in others not. I would have to see the specific passage to give you a definite answer.

Age and Value.

L. T. C.—Mere age of itself does not make a violin valuable. If it was badly constructed out of unsuitable wood in the first place, it would not improve, no matter how old it was.

Natural and Tempered Scale.

R. O. K.—F double sharp on the piano is exactly the same as G natural, but not on the violin; that is, if the violinist has a refined, sensitive ear, and plays according to the intervals of the natural scale instead of the tempered scale according to which the piano is tuned. The difference is very slight.

Starting at Sixteen.

H. S.—While a start at the age of sixteen might be too late to admit of your becoming a great violin virtuoso, it is not too late to allow your accomplishing a great deal. I have known of instances of students becoming excellent violinists, starting at that age. It will depend on your talent and industry. The amount of practice will depend on your other duties. As you are going to school, probably an hour and a half or two hours is all you can get in. Later, if you devote your entire time to the violin and expect to make it a profession, you might do from four to six, depending on your strength.

Carrying the Violin.

K. B.—A girl should carry her violin case by the handle, or under the arm, or in any convenient manner. 2. If you play the compositions really well that you name, you have made good progress for the time you have been studying. It all depends on how well you play them. I could not tell without a hearing.

OPERETTAS and CANTATAS

For Spring and Commencement Production

IT WILL give us pleasure to send any of these recently published Operettas and Cantatas for examination. A wide choice is offered in these new suggestions, but if they do not cover special needs, let us know and we will seek out such works as will be suitable and send them for examination.

THEO. PRESSER CO., 1710-1712-1714 Chestnut St., PHILA., PA

A Delightful, Amusing Musical Play By Favorite Writers

The Crimson Eyebrows

A Fantastic Romance of Old China in Three Acts

By May Hewes Dodge and John Wilson Dodge

THERE are many excellent things that may be said of this musical comedy, as it is one of the best offerings for an amateur organization: Such productions are most successful when they entertain and amuse while pleasing the ear with melodious settings, and all this is possible in a presentation of "Crimson Eyebrows." The music is really delightful and the dialog and situations amusing. Two sopranos, one contralto, one tenor, three baritones and one bass are required for the solo parts. The size of the chorus may be governed by talent available. The stage manager's guide gives drawings of costumes with making instructions and all other needed hints upon staging, action, etc., are given.

Vocal Score with Full Dialog $1.00
Stage Manager's Guide, $1.00 **Orchestral Parts may be Rented**

A Bright, Tuneful and Fascinating Operetta By Paul Bliss

The Ghosts of Hilo

Hawaiian Operetta for Young Ladies

By Paul Bliss **Accompaniment of Piano, Gong and Tom-Tom**

THE writer of this very excellent musical play needs no introduction. The charm of his melodies is known to many who have sung or heard other operettas and cantatas from his genius inspired pen. "Ghosts of Hilo" may be given in one or two acts, and it is unusual and picturesque in many respects. The costuming and staging is easy, but can be made very effective. The two-part chorus work is not difficult, but is especially beautiful and in many places is certain to evoke applause. There are four principal characters, three sopranos and one speaking part. Suitable for indoor or outdoor performance.

Vocal Score, including all Dialog, Music and Stage Manager's Guide, $1.00
Orchestral Parts may be Rented

A Delightful and Unique Operetta for Children

Let's Go Traveling

By Cynthia Dodge

THIS is just the kind of a musical entertainment children will enter into with enthusiasm. It is virtually a "rainy day" story in song and action. The boy and girl performers in presenting it can have as much fun as their audience. The singing is in unison and the melodies are good and easy to remember. The quaint and curious costumes are illustrated and are easily made.

Vocal Score, including all Dialog, Music and Stage Directions, 60 cents

---

A Charming Cantata for Children's Voices

BOBOLINKS

For Two Solo Voices and Three Part Chorus

By CARL BUSCH **Price, 60 cents**

HERE is a new short cantata requiring about fifteen minutes. The words are by Christopher Pearse Cranch, and the setting is gay and rippling, with melody and musicianship ever present. The initial performance of this cantata by a large chorus of juveniles in Kansas City brought words of highest praise and enthusiasm from the newspapers and other critics.

An American Indian Legend

Set to Music as a Cantata

MON-DAH'-MIN

Cantata for Treble Voices

By PAUL BLISS **Price, 60 cents**

WOMEN'S clubs and advanced organizations of children and young people will find this an attractive work. The score is with piano accompaniment and is in two and three-part setting with an occasional obbligato. It requires about a half-hour to present this setting of an interesting Ojibwa legend upon the growing of corn.

A Cycle of Songs for Three Part Chorus of Women's Voices

Peter Pan

By Mrs. H. H. A. Beach

THE real music lover will be more than delighted with this artistic musical setting to the words by Jessie Andrews. An ideal fifteen-minute contribution to the program of any women's club chorus, girls' colleges or other women's singing societies. **Price, 50 cents**

Latest Song

"Don't Want to Know"

Words by FRED C. BOWLES

HIGH VOICE—Range C to G—Cat. No. 19483
LOW VOICE—Range d to D—Cat. No. 19484

Price, 60 cents

"Don't Want to Know" is a carefree lilt that is captivating. It is such a song that an artist can make one of the most charming numbers on a program and yet its simplicity endears it to any who love to sing. That it is from the pen of one of the foremost composers of the day further recommends it to those seeking new songs.

Study Bible Now!

Better Than College Course

William Lyon Phelps, A. M., Ph. D., professor of English anguage and literature at Yale University says:

"I thoroughly believe in a university education for both men and women; but I believe a knowledge of the Bible without a college course is more valuable than a college course without the Bible."

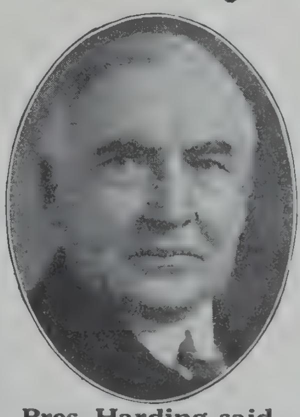
"Everyone who has a thorough knowledge of the Bible may truly be called educated; and no other learning or culture, no matter how extensive or elegant, can form a proper substitute."

Correspondence Bible study is better than any oral teaching can possibly be. Let us show you. More than 7,000 persons of 40 different occupations are now enrolled in one or more of the

Moody Bible Institute's Correspondence Courses

To really know the Bible is an education out of which springs the fullest and best development of one's powers in any vocation. This marvelous Book has moulded earth's loftiest characters. It meets man's deepest needs. It charts the only path to real and lasting success.

Enroll NOW You will be a personal pupil—time, place and amount of study under your own control. Low cost—courses not sold for profit. No better time to start than NOW. Send the coupon at once.



Pres. Harding said
"I have always believed in the inspiration of the Holy Scriptures, whereby they have become the expression to man of the world and will of God."

Letters of warmest appreciation are constantly received from students and graduates. For example:

"It has never been my privilege to be fascinated with Bible Study as I am with this course."

"I finished the Scofield Bible Course about three years ago. It has been of greater value to me than any other training I have ever had, though I spent four years in College."

Choose Cantatas And Choruses For Commencement Now

Those who have not as yet decided what musical numbers are to figure in the commencement program, should get acquainted with some of the many cantatas and chorus numbers embraced in our catalog. We have a specially prepared list of commencement music which may be profitably consulted, but for prompt results we suggest giving us an opportunity to furnish a generous assortment of appropriate material for examination. No program of this kind can be safely undertaken without allowing ample time for practice. We therefore urge patrons to let us know at once just what sort of material is wanted so we may send copies on approval.

Basic Principles In Pianoforte Playing
By Josef Lhévinne

This brochure will preserve in more permanent form the unusually clear and constructive outlines of the principles of modern pianoforte playing as indicated by the famous pianist, Josef Lhévinne, in a series of conferences upon the subject. Mr. Lhévinne's mind is fundamental in its grasp of essential elements. He goes right to the root of a thing and diagnoses the difficulty, and gives a real remedy. The book will be published shortly; but by ordering in advance you may secure a copy immediately upon publication by sending the special introductory rate of 30 cents, postpaid.

New Easter Music

Choirmasters who have not yet made up the Easter program will find excellent material in our New Easter Music.

Solos: *Come See The Place Where Jesus Lay,* Medium Voice, by Paul Amrose. *He Is Risen,* Medium Voice, by Paul Ambrose.

Anthems: An outstanding addition to our catalog is the new scriptural anthem *Lo, the Winter Is Past,* by Preston Ware Orem. It is scored for full choir and will find favor with directors looking for an interesting and thoroughly modern setting of a poetical Biblical text. Mr. Stults has given us a new setting for *Christ Our Passover,* and *Sing With All the Sons of Glory. Rejoice and Be Glad,* by Berwald, and *Today The Lord Is Risen,* by Kountz are attractive anthems of medium difficulty.

Recent organ numbers suitable for the Easter services are:

Ceremonial March, by C. Harris
La Chanson, by M. P. Hoffman
Finale in C, by C. Harris
Onward Christian Soldiers, Sullivan-Lemare.

Our "On Sale" plan will bring any of the preceding numbers to your home where you will have ample opportunity of trying them out. Make up your list and write us today.

Band and Orchestra Music

One of the most successful features of our Order Department is the section devoted to the sale of Orchestra and Band Music. This branch of our business has been developed steadily during the past four years and is now in a high state of efficiency. A complete stock of the classic and standard orchestra and band numbers and all popular successes is at the service of our patrons. The wide-spread and growing interest in ensemble playing on the part of amateurs and school organizations has encouraged us to carry a liberal assortment of music of this class specially arranged for non-professional players; all styles of music are now available for this purpose; single numbers or in collected form. In addition to our own publications of this class we have all the orchestra books issued by other publishers. Liberal examination privileges are offered to directors interested in obtaining effective and playable music of any specified grade or character. Let us know what is needed and be surprised how well we can take care of your wants.

By the way, are you acquainted with O'Hara's popular song *Dreaming of My Old Home Sweet Home?* This song is being sung everywhere and there is an effective orchestration for it. We will send the song with complete orchestration to any address for 50 cents cash with order. This is a song of the kind that never gets old or out of date.

An Ideal Award or Gift For Music Students

A very pretty Lyre design pin is featured on page 198 of this issue. It is of 10K Solid Gold and its quality is made more apparent by the neat hand chasing which is rarely seen on a pin at this low price. To prevent loss of the pin the manufacturer has supplied a patent safety catch. This same design may be had in Heavy Gold Plate or Sterling Silver; a very pretty award for meritorious work or a birthday gift that will be appreciated by the recipient.

Album of Scales For the Pianoforte

This useful volume is almost ready to be sent to the printer but we will continue the special offer during the present month. This volume will be very much in line with the one we have just issued on *Trills* and will be followed by the *Volume of Arpeggios.* The pieces lie in the second and third grades; they are not mechanical exercises but are musical pieces containing scale passages. It must not be inferred that this is a purely technical work. With every pupil the successful teacher never loses sight of the idea of some useful technical work in even the most simple of pieces. The volumes in this series are intended to add pleasure to music study and at the same time offer an important contribution to education. The success of the *Volume of Trills* assures the success of this one. We strongly advise teachers to procure at least one copy of this useful volume.

Our special advance price is 30 cents per copy, postpaid.

Four Melodies for Violin Alone Or with Piano Accompaniment
By Frederick MacMurray

For the violinist who wants something "different," the *Four Melodies for Violin* alone or with piano accompaniment by Frederick MacMurray will surely fill the bill. They are written entirely in double stops and can be played by the violin alone or used with the piano accompaniment. Two of these melodies are originals, while the other two are very clever transcriptions of well-known, favorite old songs. They are not easy numbers to play and the violinist who wishes to put new life in his repertoire will do well to get a copy of *Four Melodies* at the special price of 50 cents, postpaid.

In Foreign Lands—Cantata
By Richard Kieserling

We have never published a cantata that has met with more approval on the part of our publishing department; its graceful, charming melodies and its clean and musicianly part-writing make it a number that can be taken up with any average body of singers in an institution or school and it is not at all difficult. This cantata is written for a two-part chorus of women's voices and is in four divisions or four different tone pictures, No. 1—"On to Spain," with its Bolero Tempo, followed by No. 2—"Egyptian Moonlight," a languorous movement, No. 3—"A Tea Party in Old Japan" and the last number a fiery "Gipsy Song."

The special price in advance of publication is 30 cents, per copy, postpaid.

The Dawn—Easter Cantata
By William Baines

We have just published an Easter Cantata by William Baines which is sure of receiving an enthusiastic reception. It is scored for treble voices only and in two parts, soprano and alto. The music is melodious and interesting and the text has been selected to include the salient points regarding the Resurrection. The solo passages are not difficult and may be sung in unison by the soprano section, when the cantata is rendered by young voices. Be sure to obtain a copy of this cantata while it is being offered at the special advance of publication rate of 25 cents a copy. One copy only may be had at this price.

What To Play—What To Teach
By Harriette Brower

Miss Brower started out to make a book of collections of recital programs in all of the different grades, with educational comments upon the recitals. Then she collected and annotated a great many programs of famous virtuosos. The result is, that she has produced a book showing the best in pianistic music of the past and present, and enabling the student and the teacher to select those compositions which are of actual value to them in their work. It is the kind of a book to which the owner will find constant opportunities for reference. The advance of publication price is 75 cents, postpaid.

Hymn of Praise Sacred Cantata
By Frederk Wick

Choir-leaders continually ask for a cantata suitable for use at any time of the year and we are pleased to announce that we are about to publish a new work by the well-known composer and chorus conductor, Mr. Frederick Wick, entitled, *Hymn of Praise* that will answer this demand.

This cantata is for general use throughout the year and is particularly suitable for Thanksgiving. There are solos for soprano, tenor and baritone. It requires about 40 minutes in rendition and lends itself to the use of a large chorus. It is not an easy work to render. It requires serious study and is worth it.

Every ambitious choir-leader should take advantage of the opportunity to become acquainted with this work by obtaining a copy at our special advance of publication price of only 30 cents, postpaid.

Little Folks' Music Story Book
By James Francis Cooke

Here is the story of music, told not merely in very simple words but with language pictures which fire the child's imagination. It is designed to precede the *Standard History of Music* and is the most elementary book of the kind we have yet seen. The illustrations come on a separate sheet to be cut out and then pasted in the book. There are so many charming features in this new work that we are at a loss to know how to describe them in a paragraph of this kind. The advance of publication price is 50 cents, postpaid.

Young Folks' Opera Gems For the Pianoforte

The foregoing is the title which has been adopted for the *Easy Opera Album.* This work is now on the press. It is a comprehensive collection including the favorite opera selections from the great composers from Gluck to Mascagni. All of these melodies have been arranged in a playable manner without any frills or additions. Some of the numbers included are: The *Waltz, Flower Song,* and *Soldiers' Chorus* from Gounod's "Faust;" the *"Aria"* from Saint-Saëns' "Samson and Delilah;" *Sextette* from Donizetti's "Lucia;" the *Intermezzo* from Mascagni's "Cavalleria;" and many others, twenty-seven selections in all, in a volume of sixty-four pages.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Stories Notes Can Tell
By Frances Terry

This little book is now ready but the special introductory offer will be continued during the current month. This is a set of six little characteristic pieces, each one of which has real music value in addition to its usefulness as an easy teaching piece. These six pieces are in the second grade (almost first grade), and the keys used are *C, G, F,* and *A Minor.* Young players will be delighted with these numbers.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Four Seasons—Cantata
By R. Kieserling

Singing organizations of women, of any age, are always on the alert for something that is really musical, that will repay their effort and time, and yet that will not make too great demands in the way of rehearsal and in this Cantata we have secured just such a work. It may be given either with or without scenery and costumes. Also the part allotted to each of the seasons may be performed separately, so that for club use it might furnish a serial attraction for several meetings. It is written for three-part singing and the complete work may be performed in about twenty-five minutes.

One copy of this composition may be secured at our advance of publication price of 35 cents per copy, postpaid.

Principles of Expression In Pianoforte Playing
By Adolph F. Christiani

It must not be forgotten that this work s one of the most important works on pianoforte playing that has been issued in many years. It made a tremendous impression on the entire teaching world when t was first issued. This book has been out of print since 1920 but up to that date, we alone had sold over 600 copies and we now expect to revive it. It is possibly the very best book on phrasing extant. There never has been a book on phrasing equal o it, in fact, the work should have been called, "Phrasing in Pianoforte Playing." It analyzes the various phases of accentuation, *Rhythmical Accents—Metrical Accents—Melodic Accents—Harmonic Accents*—These four parts bear directly on phrasing. The book is admirably adapted as a text book for class work for pupils from the third grade up, We strongly recommend this work to all our readers and are sure they will thank us for urging its purchase while it can be had at a reduced ate.

Our special advance of publication price s $1.50 per copy, postpaid.

The Castaways—Operetta For Women's Voices
By Fay Foster

Fay Foster has not only written charming music throughout this play but has ept it within the capabilities of fairly ood singers, although there are solos for sopranos and mezzo-sopranos, which may e considered worthy of the best artists. The staging is very easily done and the costuming is simple.

The Plot has enough mystery and also umor to hold the attention and the dialog is most clever. The Castaways, modern women, shipwrecked on an island inhabited solely by native women find a ceremonial dance going on. Their experiences and the finding of a white girl among the natives furnish material for the story of the play.

Our advance of publication price for one copy only is 40 cents, postpaid.

Knight of Dreams or Modern Pygmalion and Galatea
By May Hewes Dodge and John Wilson Dodge

A musical comedy requiring an entire evening for production. "Knight of Dreams" is for mixed voices and is very amusing. The story of the "poor artist life" is always interesting and here we have a new plot in which our hero dreams the entire second act. The story appeals college students as well as all audiences and, because of simplicity in construction, may be given by any body of amateur performers. The Stage Manager's Guide gives full descriptions of every situation and all directions as to the play. The music is unusually attractive and catchy while the costumes and situations provide most pleasing contrasts.

Our advance of publication price for one copy only is 35 cents, postpaid.

Musical Readings
By Clay Smith

If every reader of this note having use entertaining pianologs was familiar with the professional work of Clay Smith, the advance sale of this collection at the advance of publication price of 50 cents would be record-breaking. Clay Smith is one of the leading Lyceum and Chautauqua artists and with the famous Smith-Spring-Holmes Quintet has given musical treats to thousands throughout the entire Western Hemisphere. One of the delightful contributions to the program of this concert party is the group of monologs or recitations with piano accompaniment given by Coyla May Spring. Unquestionably many ETUDE readers must have been among some of the many audiences that have heard these clever readings to music and those who can find use this class of entertainment material will certainly want this collection. Many concert singers use numbers of this character occasionally as encore novelties.

Rainbow's End Operetta for Children
By Cynthia Dodge

The story of this charming operetta is about two children, Joan and Peter, who are very poor and half believe there may be a pot of gold at the Rainbow's End. They befriend an old woman who in turn tries to help them and the story of their experiences is most interesting. There is a splendid moral at the end and the constantly changing stage pictures make it a charming entertainment.

The music is quite attractive and very easily learned. This operetta is in three short scenes and is inexpensive to produce.

Our advance of publication price for one copy only is 40 cents, postpaid.

Reverie Album For the Piano

Pieces of the *Reverie* type have such a popular appeal that the demand for them is always excessive. To meet this we have compiled an album of these dreamlike pieces, using only such numbers as have already met with wide public favor. The church Pianist will find this a most valuable acquisition to his library; for it will be filled with just the style of pieces that are most appropriate to either the church or Sunday school service. For parlor use we have no more entertaining album in our catalog. No pieces beyond the fourth grade will be included, so that the pianist of average ability will be well cared for; and yet the selections will be of such musical worth that the advanced musician will find much of interest in the collection.

Our special advance of publication cash price is 35 cents, postpaid.

Music-Writing Book
By Anna Heuermann Hamilton

This is a rather unusual writing book, more comprehensive than any so far published. Instead of being a mere series of patterns to be worked out by the student it gives the theoretical as well as the practical side of each step. This gives the student abundant opportunity for original work. It is not an advanced writing book from the beginning and it may be taken up to good advantage by students who are but little past the elementary stages.

The special introductory price in advance of publication is 20 cents per copy, postpaid.

The Amateur Musician
By Russell Snively Gilbert

The book that will enthuse the beginner is one of the most valuable contributions that can be made to the teacher's literature. This is just what Mr. Gilbert has accomplished. In a work that is calculated to satisfy the one who has just passed the Kindergarten stage the author has created materials that will carry the early student on to a good working knowledge of the rudimentary elements of notation and of execution at the keyboard. Along with this he has provided for the development of the musical imagination, by writing the beginning parts of little pieces which must be completed by the student. Every wide-awake teacher should examine this book.

Our special introductory, advance of publication, price is 30 cents per copy, postpaid.

New Instruction Book
By John M. Williams

This new work is now well under way, but the special introductory offer will be continued during the current month. The increasing numbers of modern teachers who prefer to start off with both clefs at once, cannot fail to be pleased with this book. Everything grows right out from *Middle C.* Mr. Williams has accumulated the material for this book through years of practical teaching. Everything that he uses has been tried out, and only the most successful numbers have been retained. The book is well adapted for very young beginners and it moves along progressively and logically by easy and pleasant stages.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

What the Vocal Student Should Know
By Nicholas Douty

Of course if one were to set down what the vocal student should really know it would take a set of books as big as the Encyclopedia Britannica to encompass it. But Mr. Douty has contended himself with certain indispensable essentials; and he has set these down with the fidelity of the true artist teacher who has also had years of experience as a singer. At the end of the book he has provided six sets of daily exercises, one each for Lyric Soprano, Dramatic Soprano, Tenor, Contralto, Baritone and Bass. These exercises are "bread and butter" work for the singer. They are partly original and partly collated from the exercises of masters of *bel canto* of the last two centuries. In themselves these carefully compiled exercises are well worth the price of the book. The before publication special price is 50 cents for which we will gladly reserve and mail a copy of the first edition to you the moment it is off the press.

First Lessons in Bach
By Walter Carroll —Book

This little volume is prepared by a well-known English educator and the selections are within the reach of the youngest pupils. It contains the very easiest pieces of Bach. Of all the easy Bach collections, none is more used than this one. It may be taken up during the second year of study. It contains very short minuets, marches, etc., generally two on a page. They teach first of all, accuracy of note-reading, time and fingering. Close attention to phrasing must be given. These little pieces are excellent for expression and speed and with the more talented pupils, nothing could be better for memory training. If you have not introduced into your curriculum any of Bach, we would highly recommend this little volume by Walter Carroll.

Our special advance of publication price is 20 cents per copy, postpaid.

Songs for Girls Album

Many parents, teachers and schools, wisely avoid feeding the romantic imaginations of girls and the many requests for songs not mentioning love have caused the compilation of this album.

The songs selected are not trifling nor childish but in place of texts of sentimental character are worth-while songs dealing with flowers and other beauties of Mother Nature. There are also songs of humor, good cheer and other things that make desirable song subjects for girls that are being trained in the proper use of their youthful, vibrant voices. The variety of musical composition is good and in addition to supplying fine study material these songs are ideal for the girl singer in entertainments. It will not be long before all the editorial work is completed upon this album and after that it will take very little time to get it through the printer and binder. Those wishing to secure a copy at the low price of 40 cents may do so by placing an advance of publication order now.

Vocal Studies For Low Voice
By George Whelpton

Each class of voice, with its characteristic compass, requires studies adapted to the development of its particular timbre. Merely to transpose an exercise so that it is within the range of this voice is not sufficient—it must meet the needs of the moment. And so the author of this new work has drawn upon his extensive experience and collated principles and exercises which he has found best to serve the purposes of the characteristically low voice. Of course there are certain principles of breath control and *bel canto* that have been used for foundation work for centuries, and these Mr. Whelpton has had the good judgment to retain. So practical is this book that only the most satisfactory results can follow its use.

Order your copy at the special advance of publication price of 30 cents, postpaid.

(*Continued on Page 210.*)

World of Music

(*Continued from Page 145*)

The Famous "Mozart House," in Salzburg, has fallen into a state of disrepair so that the leaking roof is endangering the valuable collection of mementoes of the great master. The citizens of Salzburg being too much reduced in finances to undertake the necessary restorations at this time, Swedish musicians and music lovers have volunteered to raise the necessary funds so that the repairs may be made without delay. Hats off to Sweden!

The First National Music Week will be held from May 4 to May 11, 1924; and hereafter the first Sunday of May will be the official date of the opening of this paramount event in our musical life. Governors of thirty-four States and Hawaii have already accepted membership on the Honorary Committee of State Governors.

Kate Douglas Wiggin, one of the best known of American writers, died at Harrow, England, August 23. Though her popularity rested mostly on her literary works, Mrs. Wiggin was also an accomplished musician and her volume of songs, "Nine Love Songs and a Carol," was well received among musicians.

"Music Day" and General Musical Activities were conspicuous features of the Canadian National Exhibition at Toronto from August 25 to September 8. Musical contests, a week of Grand Opera and concerts by a chorus of 2300 trained singers were outstanding events.

Eugene Bonn, of Rochester, New York, holds a probably unique record among church musicians. For thirty-five years he has been organist of St. Patrick's Cathedral, during which time he has played about ten thousand high masses and about four thousand minor services.

Don Lorenzo Perosi, widely known Italian oratorio composer, whose "Transfiguration" created a sensation, has announced that he will leave Italy to make his home indefinitely in London, where it is said that he will make a study of the creed of the Church of England.

Karl Scheidemantel, long one of the leading baritones of the concert and operatic stage of Germany, died recently in Weimar. He was also well known for his excellent translation of foreign operas into the German.

Mendelssohn's "Elijah" has been recently performed in Petrograd, after an absence of seventy years. His "St. Paul," Brahms' "Requiem," and Bach's "St. Matthew Passion" are announced. These concerts have the sanction of the Soviet; but notification of them must be sent individually by mail, as their public advertisement is not permitted.

A $2,000,000 Building Program for the Cincinnati Conservatory is planned, including an auditorium, a dining hall, and four buildings devoted to studio and dormitory uses. They are to be grouped about a quadrangle, in the English university style, and when finished will give this school first rank among similar American institutions, so far as housing accommodations are concerned.

Princess Catherine Yourievsky, youngest daughter of Czar Alexander, who was assassinated in 1881 soon after the birth of the Princess, has made her debut as a singer at the London Coliseum.

The 103rd Anniversary of Jenny Lind's Birth was celebrated at the Aquarium in Battery Park, New York, by the Jenny Lind Association on October 6th. Plans were discussed for the placing of a statue of the "Swedish Nightingale" near Castle Garden, where she gave her first concert in America.

The American Orchestral Society of New York, organized with the idea of training young American orchestral players and leaders, is in its third successful season.

Bulletin of the Presser Home for Retired Music Teachers

On Monday evening, January 7th, the residents of The Presser Home for Retired Music Teachers were favored with a humorous "Talk on Imaginary Things—Commercialism and Hypocrisy" by Rev. Forrest E. Dager, D.D., Rector of St. Paul's Reformed Episcopal Church, Broad and Venango Streets, Philadelphia. This was a very amusing entertainment, an excellent antidote for insomnia.

On the evening of January 15th, "Mother Moore" brought—besides Miss Rutter, a fine impersonator, and Miss Schieck, violinist—fifteen members of the Navy Yard Band. We enjoyed a varied and most pleasing program.

Tuesday evening, January 29th, brought us Mr. J. K. Thompson, Secretary of the Dickens Fellowship of Philadelphia, who favored us with an address upon Charles Dickens and readings from his works.

Contemporary March Album

A collection of Military, Parade and Grand Marches for all occasions

An exceptional collection of march music. Just issued, but its success was immediate. Price $1.00

THEO. PRESSER CO., 1712 Chestnut St., Phila.

From My Youth—Twelve Characteristic Sketches
By R. Krentzlin, Op. 85

Richard Krentzlin undoubtedly is one of the best living writers of piano pieces with real educational value. In this set of easy pieces each one brings in some special point in elementary technic. Each piece is interesting from a musical standpoint and of such a character as to make it attractive for the piano student's practice. There is a gradual progress in these twelve pieces which start with grade two, then some are about grade two and a half and several touch grade three.

This set of pieces is especially recommended to those teachers who find best to acquaint the pupil with clinging legato, light velocity, rhythmic accuracy, triplets, style and expression, broken chords, trills, etc, through the use of pleasing pieces covering these phases of elementary technic. The advance of publication price of this work is 30 cents and since everything is ready but the printing of the cover a quick delivery may be expected.

Thirty-Six Studies or Caprices for Violin
By F. Fiorillo

We have in preparation a new edition of the Fiorillo Studies or Caprices, edited by Mr. Otto Meyer, former assistant to Professor Ottakar Sevcik. Mr. Meyer has just been appointed by Professor Sevcik to represent him in the United States. His experience in teaching under such a famous Master well fits him to edit such a book as the Fiorillo Studies. These studies or caprices are very important in the training of the thorough violin student, giving him work in double stops, and stretches of the left hand, smooth passage work, etc. They are very musicianly and attractive, some of them, in fact, having been used as concert pieces by certain famous artists. We are offering this work at the very low price in advance of publication, of 35 cents a copy, postpaid.

New Theory Book
By Preston Ware Orem

When one has mastered the use of the common chords and of the dominant seventh, a knowledge of the remaining harmonic devices should come readily enough. But this is best obtained by actual practice in writing. This new book treats of the building up of melodies and their accompaniments, of the practical uses of modulation and of the application of all harmonic knowledge to the principles of elementary composition. The work is carried on along lines similar to those pursued in the author's *Beginners' Harmony Book.*

The special introductory price in advance of publication is 60 cents per copy, postpaid.

New Recital Album For the Pianoforte

This is a collection of pieces not having been used heretofore in other volumes, all especially adapted for recital playing. The pieces range in grade from three to five and they are by standard, modern and contemporary writers. These pieces are calculated to appeal alike to trained and untrained listeners and at the same time all have educational points which render them well worth while for serious teaching purposes.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Standard Vocal Repertoire

This will be a new volume in the series made up from the special large plates. It will contain a splendid assortment of sacred and secular songs for all voices, chiefly by contemporary writers. The book will be similar in size and scope to our earlier and very successful publications, the *Standard Vocalist* and the *Standard Song Treasury.* All of the songs in this volume are especially adapted for teaching purposes.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Concerto No. 1 Violin and Piano
By J. B. Accolay

Our edition of this well known Concerto is being prepared with the greatest care, and with a view to making it as attractive as possible to the young student. The Accolay Concerto is a standard teaching number and serves as an introduction, as it were, to that large, wonderful form of composition, the concerto. After going through a certain routine of studies and pieces, the student is ready for serious work in concertos; and the problem is to find something that will be attractive and at the same time be of real value. The Accolay Concerto is just such a number. It is built after the form of the other big concertos and has a varied assortment of violin technic. It makes an admirable stepping stone to the concerto work. Our fine new edition of this work will soon be ready, the advance of publication cash price being 35 cents, postpaid.

Scene de Ballet For Violin and Piano
By Charles de Beriot

This is a very fine new edition of a standard teaching piece which we are sure will appeal to student and teacher. While the Scene de Ballet is considered a teaching number, it has been used very effectively as a serious concert solo, and with good results. It contains many of the real technical difficulties of the instrument and when well played is sure to please every audience. This new edition is being edited by Mr. Thaddeus Rich, the eminent Concert Master of the Philadelphia Orchestra. The special introductory price, in advance of publication, is 30 cents a copy, postpaid, a very low price for such a fine edition of a standard solo.

Holberg—Suite for Piano
By E. Grieg, Op. 40

Grieg's Suite, Op. 40, is a very clever idealization of some of the dance forms of the classic period. All the numbers have the true flavor of the old dances while still showing traces of Grieg's characteristic harmonic idioms. This suite has always been popular but latterly it has been played more than ever. The *Rigaudon*, is the best known movement but the *Prelude* has been used a great deal in teaching. This complete work will be one of the new volumes in the *Presser Collection.*

The special introductory price in advance of publication is 25 cents per copy, postpaid.

Album of Piano Pieces For Six Hands
By A. Sartorio

This volume is now on the press and this will be the final month of the special introductory offer. This will be the best six-hand collection ever published. Among Mr. Sartorio's original compositions may be mentioned, *Jota Aragonesa—Dancing and Singing—Smiling Springtime;* among his arrangements from other writers are, *Impromptu,* (Schubert)—*Remembrance,* (Schumann)—*Aria,* (Gluck), *March,* (Weber); popular numbers by other writers are, *Sylvan Sprites,* (Englemann) —*May Day,* (Rathbun)—*Through the Meadow,* (Spaulding)—and others.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Album of Compositions For the Pianoforte
By M. L. Preston

This Album is very nearly ready but the special introductory offer will be continued during the current month. The many admirers of the teaching and drawing-room pieces of Mrs. M. L. Preston (M. Loeb-Evans), will be glad to find all their favorites grouped together in one volume. We have had a wealth of material from which to make our selections and all of the most popular pieces have been used. This will prove a most desirable third grade album.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Lemare Organ Transcriptions

No man in the field of organ composition and virtuosity has shown the gifts that have marked the transcriptions of Edwin H. Lemare. They are so extremely ingenious, so characterized by good taste and musicianship, that they cannot be passed off as "clever"—they are far more than that. Lemare has taken these wonderful melodies and made them live again as in a new incarnation. Whether it is a simple folk song or a part of a Wagner Opera, the melodies are virtually "reborn" in organ land, so that they sound as though they had always been written expressly for The Organ. The advance sale upon this important book has been very large because organists know what the name Lemare means. The advance of publication price is 50 cents a copy, postpaid.

Twenty-Five Selected Violin Studies Kayser Second Violin Part (in Score)
By Charles Levenson

The violin studies by H. E. Kayser, Op. 20 are a very important item in the course of every violin student. We are publishing an edition of these studies with a second violin part, in score, by Charles Levenson. Twenty-five of the best of these studies have been selected and to them has been added a very effective second part. It will create a new interest on the part of the pupil to have the teacher play along and make an attractive duet from what might seem to be a very dry exercise. This book will be useful in class work also. The progressive teacher will not fail to avail himself of the opportunity to secure this book at the special introductory price, in advance of publication, of 40 cents a copy, postpaid.

Advance of Publication Offer Withdrawn—

Alleluia Easter Cantata. By R. M. Stults.

With this new Easter cantata by R. M. Stults the call of many choristers for new Easter music within the ability of the average choir is answered. This is a fitting setting of the joyous Easter-tide story, and there is satisfying work for the solo voices along with fine choral passages for the choir. Easter church-goers will feel repaid after hearing a choir sing this cantata,—Price 60 cents.

Delayed Etudes

There has been a little delay in getting out the past few editions of the Etude. We thank our friends and subscribers for their forebearance. If, however, any numbers have gone astray during the holiday rush, drop us a card and we will duplicate them without charge.

Beginning with the March issue and thereafter, there should be no serious delay in delivery.

Let Etude Plant Your Garden

You can make your garden the envy of your neighbors without a penny cash outlay. Read our advertisement on the back inside cover of this issue

Magazines Clubbed With Etude

If your friends overlooked you during the holidays and you did not receive your favorite magazine, here's the opportunity to buy it at a cut price if ordered with "Etude." We have selected only real magazines to combine with ours and you are bound to be pleased with them and incidentally save a substantial sum.

ND THE SPRING
OMES AGAIN
MAKING THINGS SO GAY.

O IN MARCH
WILL PRACTICE
MORE THAN OTHER DAYS;
ND I'LL SING
O GREET THE SPRING
THAT'S THE BEST OF WAYS.

Musical Terms (No. 3)

THIS is the third list of musical terms. opy them in your note-book, for they are ll important and you find them frequently n your music. They are arranged alphaetically.

anzonetta—A short song, or a composition in such style.

hant—A short form of melody for sacred words, to which the psalms, etc., are sung or recited. The principal forms are the Gregorian and the Angelican.

hromatic—Moving by semitones, or halftone steps.

oda—A short section added to a composition after its natural close.

on—Italian word for "with," as "Con expressione," with expression.

oncerto—A composition for a solo instrument with orchestral accompaniment.

horale—A form of sacred composition, similar to the hymn, to be sung by fourpart chorus of mixed voices.

rescendo—With a gradual increase of tone.

ounterpoint or **Contrapuntal**—A style of composition in which several independent melodious parts move simultaneously.

Letter Box

EAR JUNIOR ETUDE:

I have been taking music lessons for three onths and my teacher lets me read THE TUDE stories and letter boxes. I can play ales with both hands and can sing several ngs from memory. My teacher is going to t me sing in a concert next month, so I n practicing very hard every day.

I take a lesson for an hour every day. I ke to have lessons every day because then y teacher can keep me from making misakes. I find that it is easier to play with y fingers curved and my wrists not too w or too high.

From your friend,
DORIS PARSONS (Age 9),
Nova Scotia.

Letter Box List

Letters have been received from the folwing:

Alys E. Harvin, LaVerhne Mann, Blanche arker, Alice Fisher, Nancy Johnson, Jane anley, Enella Ellertson, Ardith Baldwin, lice Young, Opal Holcombe, Mary N. Wehe, ildred Post, Elizabeth Moody, Ora Louise rrington, Eleanor Morrow, Pauline Hamon.

One Way to Listen

By Marion Benson Matthews

"GRANDFATHER," cried Amy, who had just returned from a lecture on how to listen to music, "how do *you* think people ought to listen to music?"

"In silence!" answered grandfather promptly, with a twinkle in his eye.

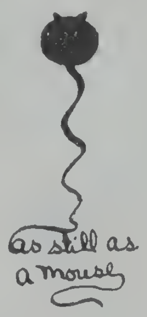
"Now you're joking," said Amy, a bit doubtfully, for it was hard to tell when grandfather was joking and when he was'nt.

"No, I am not joking," said grandfather, "I am very serious. In all the lectures I have heard, and all the articles I have read on the subject, that seems to be one point that is generally overlooked; and it seems to me an important one. I have been to many concerts and recitals lately, and at every one I have noticed certain persons who seem unable to keep from whispering, rattling papers, or even speaking aloud, occasionally; in an undertone. They can have no idea how disturbing it is to those real music-lovers who become absorbed at the very first note."

Amy felt rather guilty, remembering a little whispering on her own part, at a recent concert.

"But, grandfather," she protested, "it's so hard for young folks to sit as still as mice, and never make the least little bit of a noise."

"Bless your heart!" said grandfather. "We don't expect you youngsters to keep as still as *mice*—just half as still as that will do very well. Besides," he added with a smile, "the grown-ups make the greater part of the disturbance, I'm sorry to say."



Amy laughed. "Now, grandfather," she said, "if you admit that, why don't you lecture the grown-ups, instead of beginning with me?"

"As the twig is bent, so the tree is inclined," quoted grandfather, his eyes twinkling again. "If we begin with the youngsters, who knows but what we may have a generation of perfect concert-goers?"

Bugle Tunes

OF course you have often heard a bugle, haven't you? Perhaps you have tried to blow one, and have discovered that it is very hard to play until one knows how.

You know, they sound only the tones of the major chord—do, mi, so. Sometimes the tones are repeated higher or lower, but no other tones may be added.

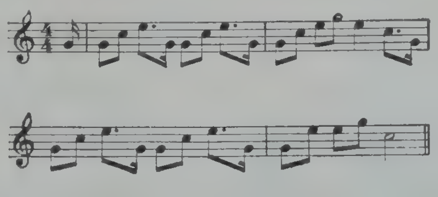
Pick these tones out on your piano and play with them, repeat them in the next octave, or invert them any way you like. (Do you remember what invert means?)

See how much rhythm and spirit you can put into them to make a tune. You know rhythm is very important in bugle music, for sometimes a change of rhythm makes the same tones seem like something quite different, and as the tones or the harmony can not be changed, the rhythm is the all-important element.

You can mark your rhythm by playing an octave on Do in the bass, and making it sound like a drum.

You will be surprised to find how many good "peppy" marches and fanfares you can make on these tones.

One well-known is as follows:



Ears to Hear

Do you use your ears when you practice? You may think that fingers are the important things, when it comes to practicing; but really, ears are almost as important, and they have a great deal to do.

They must listen for good tone, and they must be trained to recognize and demand good tone.

They must be trained to recognize good pedaling, and not allow any lazy foot work or "fuzzy" pedaling.

They must be trained to listen for phrasing, and demand beautiful phrasing.

They must be trained to recognize correct notes, and allow no false ones to creep in.

They must be trained to recognize even and smooth passage work, and allow no rough spots or clumsy places to slip by.

They must be trained to recognize a perfect legato, and require the hands and fingers to make it.

So you see that little thing called the ear has a very important job to perform, and it has to be the judge and the boss of all the departments of beautiful piano playing.

And if your own ear does not judge your own playing, and help you to do well, other people's ears will judge you, and perhaps harshly, and perhaps they will not even take the trouble to listen to your playing at all.

So when you practice, keep your ear "on the job" all the time.

John Sebastian Bach

B-ACK in the seventeenth century Bach was born in a very musical family.
A-nd once he walked all night to hear an organ concert.
C-an you wonder that he grew up to be such a wonderful musician and great composer?
H-ard worker all his life, died blind and worn out.

Birthday, March 21 (1685).
Play one of his pieces on his birthday.

Foreign Contest

MANY, many times the JUNIOR ETUDE has received letters from readers outside of the United States, expressing the wish that they could enter the monthly contests; but as they live so far away, the contests close days and sometimes weeks before they even receive their magazines. Therefore they ask if the closing dates might be extended so that they can enter.

It is impossible to extend the closing dates of the contests for those living in the United States, but the JUNIOR ETUDE is going to have a special contest for those living outside of the United States—any place in the world!

The contest will be in every way exactly like the regular monthly contests. Read and follow the rules carefully and take advantage of this opportunity to enter.

RULES FOR FOREIGN CONTEST

Subject for story or essay: "Why I Love Music." Must contain not over one hundred and fifty words.

Put your name and age on upper left corner of paper, and address on upper right corner.

Mark "Foreign Contest" distinctly at top of page.

Do not use typewriters.

Contributions must be received at JUNIOR ETUDE Office, 1712 Chestnut Street, Philadelphia, Pa., U. S. A., before April 10, 1924.

Results of contest will be published in the June or July number.

Any boy or girl under the age of sixteen may compete (whether a subscriber or not), provided they live outside of the United States of America.

N. B. The above rules also cover the Puzzle-Answer Contest.

Those not following *all* of the above rules will not be considered.

Playing Thirds

By Elmore Hoppex

The tones are climbing up
Like feet upon the stairs,
All up and down and 'round
About they go in pairs.

They chase each other fast—
As fast as they can go—
But never fast enough
To catch quite up, you know.

JUNIOR ETUDE—Continued

Junior Etude Competition

The Junior Etude will award three pretty prizes each month for the best and neatest original essay or story and answers to puzzles.

Subject for essay or story this month: "Regular Practice." Must contain not over one hundred and fifty words. Any boy or girl may compete, whether a subscriber or not.

All contributions must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pa. Winners and their contributions will be published in the May issue.

Put your name and age on upper left corner of paper, and address on upper right corner of paper. If your contribution takes more than one sheet of paper do this on each sheet.

Do not use typewriters.

Competitors who do not comply with *all* of the above conditions will not be considered.

MUSICAL GENIUS

(Prize winner.)

Musical genius is a God-given thing. It is to be developed by human means, such as instruction and practice.

Happily, a person does not have to be a musical genius to be a good musician. A desire for music can be created in one, and it can be polished and perfected until one plays well; but music that is inborn—created within a human being by God—can not be drowned, but will come forth no matter what the surroundings.

The world has had a number of musical geniuses whose music has been a blessing to humanity, but I am thankful that we have also a great many excellent musicians who are not geniuses, for it gives us courage to work to become good musicians, too.

Melba Mewhinney (Age 12),
Texas.

MUSICAL GENIUS

(Prize winner.)

Genius is the superior inborn power of mind, the special inborn faculty of any individual.

Without talent or a love for music, one cannot become a real musician; but genius is not a necessity to become a good musician. There were many geniuses among our great musicians; but it is not the best policy to place too much faith in genius. Hard work and determination are the most important factors toward winning success; and that is the power we attain when we give to the world our best.

Esther Ridenour (Age 15),
Ohio.

MUSICAL GENIUS

(Prize Winner.)

In my estimation, musical genius is something that cannot be acquired by any one; it is a musical instinct or power born within the person. There are very few who are blessed with musical genius; but closely related to genius is musical talent, which is more common, and can be developed more fully, and to a certain extent it can be acquired. But those possessing genius cannot develop their genius. Wagner was one of the greatest geniuses the world has known. Another great genius was Beethoven. He relied on his imagination for his great musical conceptions, on account of his great handicap, deafness. We cannot all be musical geniuses, but those gifted with talent, be it great or small, should develop their talent and daily strive toward the goal of a musical genius.

George Knudson (Age 14),
North Dakota.

Honorable Mention for Compositions

(This list includes only those who followed all the rules.)

Antoinette Sonnen, May Stewart, Dorothy Cowgill, Katherine E. Dealy, Mary Pooles, Muriel Coltrane, Frances Fusfeld, Ruth Thomas, Frances Loftus, Martha Anding, Betty Anne Williams, Margaret Mary Kelly, Gladys Porter, Ida Scharpel, Katherine Lavanier, Gertrude Naegle, Dorothy Buckley, Ralph Goetz, Cleora Kremer, Sylvia Broering, Theodore Ochs, Jack Kearney, Eleanor Brophy, Robert Mann, Helen Daley, Beryle Greene, Helen Allen, Margaret Cronin, Madeline Boos, Frances Carroll, Arthur Carver, Laurence Quill, Dorothy Nash, Robert Kearney, Mary Agnes Fiester.

Grandfather's clock
Can sing a song,
And keep good time
The whole day long.
Can You?

Puzzle Corner

ANSWERS TO PUZZLES IN JANUARY

1, Apt; 2, cat; 3, under; 4, ten; 5, urn; 6, green; 7, towns; 8, basin; 9, rakes; 10, pit. Musician, Paderewski.

Prize Winners

Harry Harlem (Age 13), New York.
Maurice Stack (Age 11), Kansas.
Olive Chase (Age 14), Vermont.

Honorable Mention for Puzzels

(This list contains the names of only those who followed all the rules of the contest and sent in neat work.)

Johnnie E. Riner, Leila Honley, Frances Gunning, Faye Sutton, Alice M. Roggenmusser, George Knudson, Rose Cohen, Clare Harner, Elsie A. Schmidt, Edith De Witt, Jemel Pierce, Margaret Way, Esther Lundquist, Helen Stockard, Ruth Lofgren, Francis W. Collin, Floreine Harvey, Hazel Heywood, Antoinette Sonnen, Claire McCrary, Catherine Lavanier, Mary Hicks, Alice Wheeler, Jeremiah Higgins, Gertrude Naegle, Ralph Goetz, Cleora Kremer, Ruth Elizabeth Bernath, Ruth J. Bullock, Richard H. Crowder, Jr., Margaret Walters, Theresa Buckantis, Esther Jones, Margaret Mary Kelly, Nellie Goodman, Frances Hurt, Gwendola Landsness, Doris Mason, Rosylyn Roth, Lawrence Quill, Ruth Gosiger, Mary Louise Hughes, Sylvia Broering, Frances V. Brown, Frances Rowan, Theodore Ochs, James Laffery, Jack Kearney, Marie Wellstead, Genevieve Bardo, Eleanor Brophy, Katherine Mitchell, Louise Seebock, Emma Hartsell, Helen Kearney, Rose Riley, Dorothy Turner, Mary Soloman, Frances Sullivan, Luettia West, Florence Leiter, Ruth Dicken, Mary Margaret Cronin, Margaret Messner, Josephine McVay, Ruth Ashmore Brown, Madeline Boos, Roland Fulle, Burdelle Lawyer, Betty Anne Williams, Alice Abel, Alfred Lombardi, Veronica Helpling, Mary Louise Fox, Irene Norberg, Alice Kalness, Hugh J. Hamilton, Esther Allbright, Aurelia Zawadzki, Miriam Mund, Ruth Cacek, Melba Mewhinney, Frances Waken, Mary Bales, Doris W. Stevens, Martin Murphy, Dorothy Ellsworth, Inez Helen Christianson, Sophia Nelson. (Many of the above were almost prize winners; but, as only three could win prizes, ages and neatness were the determining factors.)

Composers' Square Puzzle

Start any place in the square and move in any direction; skip no letter, and do not move diagonally. How many composers can you find?

Question Box

Dear Junior Etude.

Why is it that my *Minuet in G* is marked fast, when most violinists and pianists play it slow?

J. W. B. (Age 11),
Vermont.

Ans.—Since the metronome, as we have it today, was not in general use in Beethoven's time, the speed indications have been given by publishers and editors and are not always reliable. It would seem that 120 is rather fast for this piece, but remember that is not Beethoven's mark. The middle section of eighth notes is frequently taken a little faster than the rest of the minuet. Try to hear some good "records" of this piece and notice the speed the artists have adopted.

Franz Liszt

Born at Raiding, 1811. Died, Bayreuth, 1886.

The pianist without a rival. He made technic a matter of course and the artist to be judged by his interpretative ability. Creator of the "Symphonic Poem." As an artist and man he is one of the grand figures in musical annals.

LET ETUDE MAKE YOUR GARDEN A JOY THIS SUMMER!

Fruits, Flowers, Vegetables, Seeds Given in Exchange for New ETUDE Subscriptions

10 SUPERB : : : EVERBEARING STRAWBERRY PLANTS

COLLECTION NO. 24

This variety has been on the market for a long time and is not a novelty. It is practically the only ever bearer that is widely used for commercial planting. It is a very heavy yielder. A small row across your garden will net you a nice income. Not only will you have thhe fruit which is a big item, but each of these plants will have dozens of new plants which can be replanted to increase the size of your own bed, or sold to your neighbors at a good profit as plants of this variety are always in great demand.

Let us send you enough plants to keep you in fruit from early spring or until late in the fall. No garden is complete without a row of everbearing strawberries, and the plants we offer are large and heavy rooted. We guarantee them to grow.

With this collection will be sent our folder giving complete instructions as to planting and care of strawberries.

ALL FOR ONE NEW SUBSCRIPTION

Plant these Two-year-old Vines and Pick Grapes Next Year

COLLECTION NO. 23

We are offering in this collection five 2-year-old grape vines. Think of it! They will bear some fruit next fall, and lots of fruit the year after. With proper winter protection grapes can be grown successfully in nearly all parts of this country. The variety listed below is the best that is grown for table use and for the making of grape juice. We will send you five two-year-old Concord grape vines.

ALL FOR ONE NEW SUBSCRIPTION

6 CUMBERLAND BLACK RASPBERRY PLANTS The largest and best black cap grown, these plants will grow in any climate, one new subscription.

6 ELDORADO BLACKBERRY PLANTS. Berries are large, very sweet and of delicious flavor. It has never known to winter-kill, one new subscription.

16 PACKETS FLOWER SEEDS

10 Beautiful Shrubs
ONE YEAR PLANTS

COLLECTION NO. 27

These shrubs will give you continuous bloom from early spring until late fall. The planting of this collection will add many dollars to the value of your home, besides making it a place of beauty where you will enjoy living. This collection contains the following shrubs:

One Purple Lilac—Its fragrant purple flowers need no description.

Two Golden Bell — Bears tiny bell shaped flowers in early spring.

Two Rose of Sharon—Bears a profusion of large double blossoms from August to late fall.

Two Hall's Japan Honeysuckle—An ornamental climber with fragrant blossoms and pretty foliage.

One Spirea Van Houttei—An early bloomer famed for its handsome foliage and clusters of pretty white flowers

Two Flowering Catalpa—A ornamental tree with large leaves and bearing large clusters of fragrant white flowers.

ALL FOR ONE NEW SUBSCRIPTION

5 NEW VARIETIES OF DAHLIAS

In this collection we are listing only the splendid new varieties and types of Dahlias. The newer forms are far superior to the older types and you will never know the real beauty of the Dahlia until you try them. You will be sure to have the finest Dahlia collection in your neighborhood if you grow the varieties below. You get one each of the following Dahlias.

Golden Gate. This variety is considered the best yellow show Dahlia. The plant is a vigorous grower and the flowers grow on long stems.

Red Hussar. The color of this Dahlia is a dazzling cardinal scarlet. The flowers are large and form a full ball shape. The prettiest red on the market today.

Dreers White. This variety is a leader among the white show Dahlias. The flowers are very large and commence to bloom early. The petals are quilled and pure white.

Jack Rose. The best rose colored Dahlia for cut flowers. Comes into bloom early and will produce from 25 to 50 large blossoms on long stems.

Sylvia. The flowers of this variety are a beautiful deep pink shading lighter to the center. Blooms over a long season and is a very vigorous grower.

ALL FOR ONE NEW SUBSCRIPTION

5 LOVELY ROSES. one year old, strong, healthy, with good roots:

2 Joan of Arc, beautiful white.

Persian Yellow, a magnificent brilliant yellow rose and an exceptionally vigorous grower and prolific bloomer.

Gruss an Teplitz, flowers of bright red which are borne in clusters.

1 Blue Rambler. This is a fast growing rose, bearing beautiful clusters of bright blue roses.

You will not fail to add this wonderful novelty to your collection. All for one new subscription.

12 ASSORTED ORNAMENTAL BULBS, 2 Hyacinths, 4 Narcissus, 4 Tulips, 2 Freesias, only one new subscription.

12 THUMBERY BARBERRY ONE YEAR PLANTS. This is not the Russian barberry, but is a very beautiful plant and is used for making ornamental hedges, one new subscription.

8 BERRY PLANTS, 4 Lucretia Dewberry, 4 St. Regis Red Raspberry, one new subscription.

The above offers are made without reservation. We have selected only reliable nurserymen to fill our orders and you can depend on each plant to be healthy and in growing condition when received by you. The only stipulation is that subscription must not be your own.

Independence, a tall stately flower of a brilliant red. All for one new subscription.

PLANT THIS FINE APPLE AND PEAR ORCHARD

COLLECTION NO. 33

We will send you these eight fine apple and pear tree grafts and one choice one-year-old French Seedling apple tree. This tree is not a graft but a one-year-old tree. You will want this orchard for the garden.

2 JONATHON APPLE. This apple ripens in October and is one of the best eating apples on the market. Red in color with a waxy skin.

2 WEALTHY APPLE. This is the most popular fall apple grown. A wonderful eating and cooking apple with deep red and bronze skin.

2 DELICIOUS APPLE. This variety makes a vigorous growth and will surprise you with the short time it takes to bear beautiful red apples. It sells for the highest price on the market.

2 BARTLETT PEAR. This is one of the best eating pears known. Yellow skinned, sweet and juicy.

1 FRENCH SEEDLING APPLE TREE, One Year Old. Some of the best varieties of apples have originated from these Seedlings. They are vigorous growers and the fruit is different than any other variety.

SCHOOL FOR THE PIANOFORTE—VOL. ONE

Used More Extensively than any other Elementary Instructor for the Piano

The simplicity of this work has enabled many teachers to achieve speedy results with even the youngest beginners. This is a "first reader" in piano study. Large music notes are used to aid the child eye and the grading is very gradual so that no discouraging difficulties arise. The first grade of study, up to, but not including the scales is covered by "Beginner's Book." The whole work is bright and interesting, little pieces and duets being interspersed among the studies, and the writing exercises to cover notation needs also hold the pupil.

"Beginner's Book" makes an Excellent Introduction to any Course or System of Piano Study. "Beginner's Book" is the Instruction Book with the Red Cover that is Familiar to Thousands of Pupils and Teachers.

Price $1.00

SCHOOL FOR THE PIANOFORTE—VOL. TWO

A Work that Aids the Pupil to Progress because it Presents Interesting Material that the Teacher can Use Successfully

Takes up the subject just where the "Beginner's Book" leaves off, and is, of course, intended to supplement that excellent instructor, but it can be used very successfully for any student who has done the work of the first grade, up to, but not including the scales. The pupil is well grounded technically and at the same time musical taste is developed. A complete treatment of the major scales up to and including four sharps and four flats forms the center of the work. Grace notes, broken chords, arpeggio, syncopation, hand crossing, etc., are given special attention.

Price $1.00

PLAYER'S BOOK

SCHOOL FOR THE PIANOFORTE—VOL. THREE

A Superb Offering for the Instruction of Progressing Young Players in the Various Phases of Piano Technic

Pleasing study material arranged in progressive order, treating somewhat in detail trills, octaves, two notes against three, the pedal and other matters necessary to technic. Memory study and ear training are specially stressed. Pleasing pieces are used to supplement each group of studies. Altogether the contents of this volume are such as to satisfy more completely the experienced teacher than any other work of this grade.

Price $1.00

Teachers may secure any of these volumes for examination. These volumes are sold by leading music dealers everywhere.

The World of Music

The Nine Hundredth Anniversary of the invention of Musical Notation as we have it to-day is to be celebrated this year in various places. Nine centuries ago Guido d'Arezzo, if he did not really invent all the features, at least so modified and arranged existing characters as to produce a staff, and notation upon it, practically as we use them to-day.

The University of North Dakota has its Philharmonic Orchestra with full instrumentation and an Oratorio Society which give a regular season of subscription concerts.

One of the Largest Organs of the World, has recently been inaugurated at Cologne, Germany, in its Concert Hall. The instrument has five manuals, one hundred and thirty speaking stops, and approximately eleven thousand pipes.

The Famous Carillon of Dinant is to be heard again. The war-destroyed clock tower which contained it is being rebuilt.

Gilbert and Sullivan Operas are to have a sixteen weeks series of revivals at the Princess Theater in London.

Musical Fund Hall of Philadelphia, built in 1824 and at that time one of the very finest auditoriums of America, is about to be razed. For many years in the heart of Philadelphia's most exclusive residential district, as this moved westward "commerce and even disreputableness have crept about the historic building until its managers have been forced to rent it for cheap dances and basketball games." And yet its past is almost sacred through its association with such public idols as Jenny Lind, Ole Bull, Bayard Taylor and William Makepeace Thackery.

Massenet's "Le Roi de Lahore" had its New York premiere on Friday evening, February 29.

Tschaikowski's Last Residence in the little town of Klin, about forty miles from Moscow, has been taken over by the Russian government and converted into a museum to the memory of the composer.

"Parsifal's" Premiere at Parma was the event of the recent opening night of the season in that Italian center of music.

A Choir of Ten Thousand Singers with an orchestra of five hundred and sixty pieces will be a feature of the approaching Empire Exhibition at Wembley, England. Dr. Charles Harris of Canada is to be the leader; and the music to be used is said to weigh two tons.

What Will Be The World's Largest Carillon is being made at Croydon, England, to be installed in the Park Avenue Church in New York. It is a gift of John D. Rockefeller, Jr., in memory of his mother and will consist of fifty-three bells of which the total weight, without frame, will be fifty tons.

A Scottish "Caruso" has appeared at Glasgow in the person of Matthew Dickie, a taxicab driver who "deputized" for a popular tenor who was indisposed. Moving his hearers to enthusiasm, he was given a real ovation.

Arthur Bird, well-known composer, organist and pianist, died suddenly of apoplexy in Berlin, late in December. A native of Cambridge, Massachusetts, he was born July 23, 1856. He was educated in Berlin, being a pupil of Loeschhorn, Rhode, Urban, and later of Liszt. Except for short visits to America, he had spent most of his life in Berlin.

King Albert of Belgium is to reorganize, at the conservatory of Brussels, the class of high vocal virtuosity which was founded about the middle of the last century and of which the first French incumbent was Malibran.

Mme. A. Pupin passed away at The Sisters' Hospital of Los Angeles on January 14th, at an advanced age. A native of New Jersey, she was educated in New York and at Leipsig where she was a pupil of Carl Reinecke. Returning to America, she made many appearances as soloist with the Theodore Thomas Orchestra, became a prominent teacher, the author of booklets on musical topics and a regular contributor to musical magazines, especially to The Etude.

The Philadelphia Civic Opera Company made its debut at the Metropolitan Opera House, March 26. "Carmen" was the work chosen for the event; and, with Marguerite Sylva, Henri Scott, Ralph Errole and Helen Stanley as guest artists, a large audience was well pleased. With the backing of three thousand associate members and a subsidy of $15,000 from the city, its success would seem assured.

The Centenary of Beethoven's Ninth Symphony is being celebrated by performances of this great work in nearly all musical centers.

Merrie England is leading Giddy America a merry chase in the wild game of frivolity. On New Year's Eve between four and five thousand people were dancing while less than one hundred attended the concert of the Bournemouth Municipal Orchestra, at that fashionable resort.

Twenty-Seven Thousand Dollars were taken at the box office for a recent Paderewski concert given as a benefit for the Illinois Children's Home and Aid Society, at the Chicago Auditorium.

Tschaikowski's "Mazeppa," which has never been given in Germany, is now under preparation for performance in several theaters there.

Ferrucio Busoni, Italy's most distinguished pianist, is reported to be seriously ill and with very limited resources. Among his pupils have been such present artists as Percy Grainger, Augusta Cottlow and Mme. Maria Carreras.

A Radio Music Fund Committee has been organized in New York. It is making an appeal to wireless users to contribute to a fund to pay artists of standing for their services so that they may be heard on radio programs, a thing that has hitherto been impossible because their contracts with managers forbid their gratuitous giving of services.

Forty Thousand Persons, approximately, have heard the last four orchestral concerts at the Metropolitan Museum of Art, New York, under the direction of David Mannes.

$500 for a Musical Pageant. This prize is offered by the Tuesday Musical Club of San Antonio, Texas. Particulars from Mrs. Clara Duggan Madison, 207 Richmond Avenue, San Antonio.

Stravinsky's "Le Sacre du Printemps" had its first performance in New York on January 31st, by the Boston Symphony Orchestra under the baton of Pierre Monteux, when it aroused the audience to the greatest enthusiasm.

The Curtis Institute of Music will soon be opened in Philadelphia by the Curtis Foundation, richly endowed by Cyrus H. K. Curtis, publisher of the *Ladies' Home Journal*, *Saturday Evening Post* and several other magazines and newspapers. Mr. John Grulle will be the director.

An Organ Scholarship at the School of Music at Fontainebleau, France—to cover living, transportation and tuition for the summer course—is offered by The Estey Organ Company, through the Aemrican Guild of Organists. Particulars from Frank Wright, 48 Grace Court, Brooklyn, N. Y.

Helen Dudley Campbell Del Puente, widow of Giuseppi Del Puente, the famous baritone of the last generation, died January 30th at her home in Ogdensburg, New York. Born in Louisville, Kentucky, in 1856, she became a prominent contralto in concert, opera and oratorio, and in her later years was a successful teacher in New York.

Tullio Serafin is announced by M. Gatti-Casazza as the successor of Roberto Moranzoni as conductor of the Metropolitan Opera Company. Signor Serafin comes with the best of successes to his credit when he has done similar work at La Scala, Covent Garden Theater, the Opera of Paris and the Colon Theater of Buenos Aires. He at present is conducting a series of special "Parsifal" performances at the Teatro Regio in Parma.

Sir Alexander Campbell Mackenzie has announced his retirement from the position of Principal of the Royal Academy of Music of London, to become effective at the close of the summer term. Of this, the oldest music school of the British Empire, he has been at the head since February, 1888, and has had much to do with the high standards of work which it has maintained. Among students of the institution whom he has watched successfully climb to professional success, are Gertrude Peppercorn, Myra Hess, May Mukle, Irene Scharrer, York Bowen, Robert Radford, Harry Farjeon, Aldo Antonetti and Joseph Holbrook, to name but a few at random. Sir Alexander Mackenzie is to be succeeded by Mr. J. B. McEwen, another native of bonnie Scotland.

Dr. Adam Geibel recently celebrated the fiftieth anniversary of the publication of his first compositions. In honor of the occasion Lit Brothers broadcasted a program from their Philadelphia station on the evening of March 1; and the John B. Stetson Company, with which Dr. Geibel has been long employed, planned a testimonial concert on March 27. Dr. Geibel was born at Neuenheim, September 15, 1855. He was brought to America in 1862, and, having lost his sight at nine years of age, was educated in the Pennsylvania Institute for the Blind. Since 1885 he has been organist of the J. B. Stetson Mission and conductor of the Stetson Chorus. The Geibel & Lehmann music publishing firm was established in 1897 but dissolved in 1906, since which time Dr. Geibel has been President of the Adam Geibel Music Company. Temple University conferred on him the degree of Doctor of Music in 1911. He is the composer of numerous cantatas, songs and pieces for the piano.

President Coolidge has accepted the Honorary Chairmanship of our National Music Week Committee for 1924.

The Fourteenth Annual Philadelphia Eisteddfod will be held at the Academy of Music on May 17, as a principal feature of Philadelphia's Third Music Week.

The Morgan Library, one of the finest private collections of books and manuscripts in the world, was presented to the people of New York in February, by J. Pierpont Morgan, in memory of his father. It contains many rare musical treasures, including the first known music book containing printed notes.

Wagner's "Nibelungen Ring" has been produced as a moving picture in Berlin and is reported to be intended for an American production.

Helen Keller, although deaf and blind, recently "heard" Beethoven's Ninth Symphony by lightly touching with her highly sensitive fingers the diaphragm of a radio. She describes vividly how she realized the surge of the music and especially of the voices in the great finale.

Eugenio Pirani's Orchestral Suite, "Heidelberg," had its first public performance at the Sunday Concert of the Metropolitan Opera House, New York, on the 24th of February, with Giuseppe Bamboschek conducting.

A "Prelude" by William Croft (1677-1727) was programmed at a recent Gertrude Peppercorn recital as a New York *novelty*.

Leo Sowerby, a Chicagoan who is now a fellowship student of the American Academy of Rome, has been awarded the grand prize in the competition of the Daily News Music Contest lately closed, by the "Suite for Violin and Piano." Helen Dallam, also of Chicago, won second prize with her "Indian Legend"; while Horace Van Norman of Minneapolis took third prize with his "Arabesque."

The New Opera House of Berlin, built on the site of the once famous Kroll's Theater, was dedicated on January 20, with a performance of "Die Meistersinger."

Henri Scott will head a company next season presenting Mozart's "Impresario" under the management of William Wade Hinshaw.

Bulletin of the Presser Home for Retired Music Teachers

With Mrs. Edwin B. Garrigues, president of the home, as hostess, members of the Matinee Musical Club gave us a very beautiful program of piano, 'cello and harp selections on the evening of February 11th.

On the twenty-first Mr. George C. Krick and his Mandolin Club entertained the Home residents delightfully.

On the twenty-eighth Rev. Addison A. Ewing, D.D., Pastor of Old Swede's Church, and Miss Helen Blaylock, reader, gave a most interesting evening of selections from "As You Like It." At this event we were also honored by having as our guest Miss Violet Oakley, Philadelphia's distinguished artist.

New Publications that will serve Many Branches of the Music Profession

The Presser Policy is to Issue Only Those Book Publications that have Merit and are of Real Value to the Profession. With Compilations and Teaching Works the Aim is to Make Each Work One of High Standing in its Particular Classification. YOU MAY PROVE THE MERIT OF ANY OF THE NEW WORKS ON THIS PAGE BY SECURING A COPY FOR EXAMINATION.

NEW PIANO TEACHING WORKS

Album of Trills

STUDY PIECES FOR SPECIAL PURPOSES No. 1

Price, 75 cents

The trill is an interesting and effective technical accomplishment that is often required in piano playing. No little attention is required to develop properly ability to handle all the various forms of the trill in piano playing, and trill study through the use of interesting trill pieces will gain the pupil's interest far better than coldly presented trill exercises. This album contains eighteen pieces, each employing some form of the trill—about six different forms of the trill appearing throughout the book. Teachers will find this an exceptional help and pupils in the medium grade can be induced to accomplish much in trill playing with the pieces in this album.

25 Melodies for Juveniles

By Mana-Zucca **Price, 75 cents**

Here one of the foremost women composers of the day has written delightful little melodies for delighting young pianists. Starting with the most easy type of a piano piece the numbers progress in a nice, gradual manner. Clever texts that aid in holding the pupil's interest accompany many of these pieces.

From My Youth

By R. Krentzlin **Price, 75 cents**

Special attention is given in these pieces to the development of style, rhythm and technic. Each piece is interesting from a musical standpoint and of such character as to make it attractive for the piano student's practice. The first of these dozen pieces start in grade two with gradual progress in later numbers to grade three. One number brings out *Clinging Legato*, others *Light Velocity, Rhythm Groups, Rhythmic Accuracy, Staccato, Triplets, The Trill*, etc.

Stories Notes Can Tell

By Frances Terry **Price, 75 cents**

These are charming early second grade piano pieces. They are characteristic numbers that delight young players. The key variety will interest many teachers since these six short easy pieces use the keys *C, G, F* and *A minor*.

INTERESTING NEW PIANO ALBUMS

Young Folks' Opera Gems

Price, 75 cents

This is a comprehensive collection of fairly easy arrangements of the favorite opera selections from the great composers from Gluck to Mascagni. The aim in each of these numbers has been to present a playable piano solo of an opera air, frills and variations having been avoided. There are seventeen composers and twenty-three operas represented in the twenty-seven selections in this album. Most of the numbers are in grades two and three.

Contemporary March Album

Price, $1.00

A collection that is useful to many. It answers many demands upon the school, lodge and church pianist. Schools will find excellent material presented for the accompaniment of drills, marches, calisthenics and other gymnastic work. There are dignified march numbers covering other needs also included in the thirty numbers making up this album. All are effective march numbers of their individual types, yet all are within the ability of the average pianist.

Stratford-on-Avon

By Phyllis Boulton **Price, 75 cents**

There are twelve Morris dances in this collection. They are modern piano sketches of the old-fashioned English rustic dances and are interesting from the standpoint of the average pianist as well as from the veiwpoint of the teacher looking for attractive numbers to interest piano students of a few years.

A NEW PIPE ORGAN ALBUM

Lemare Organ Album

TRANSCRIPTIONS AND ORIGINAL COMPOSITIONS

By Edwin H. Lemare **Price, $1.50**

Mr. Lemare displays master musicianship at the instrument, and the same master ability is displayed in his compositions and transcriptions. In addition to several fine original compositions there is in this album a generous lot of folk song, hymn, operatic and other favorite melodies that have been transformed into effective solo numbers for the pipe organ. An excellent album for theater and concert organists.

MANY SINGERS AND PIANISTS WILL WELCOME THIS NEW PUBLICATION

Favorite Musical Readings and Pianologues of Coyla May Spring

Written and Compiled by Clay Smith

Price, $1.00

Clever entertainment material is presented in the numbers making up this album. Coyla May Spring is one of the foremost artists in the Lyceum and Chautauqua field and these numbers are picked from a most successful repertoire of musical readings and pianologues. There is humor and philosophy in these numbers and the piano accompaniment lays just right for playing one's own accompaniments.

Everything in Music Publication

THEO. PRESSER CO.

1710-1712-1714 Chestnut Street Philadelphia, Pa.
Established 1883

Every convenience for the teacher seeking music supplies is offered in our Mail Order Service—Liberal Examination Privileges, Low Professional Prices, Convenient Charge Accounts and Prompt, Accurate Service are Enjoyed by Our Thousands of Patrons Everywhere. Helpful Catalogs Supplied to Teachers.

VIOLIN WORKS RECENTLY ISSUED

Polyphonic Studies for Violin Classes

By Oscar J. Lehrer **Price, $1.00**

The *Ensemble Method for Violin Class Instruction*, by Oscar J. Lehrer, met with such immense success and it filled such a place with violin teachers that it was necessary to produce a book that would carry the class students further. This volume provides material in three part harmony progressively arranged for the learning of the third position, for the changing of positions, the Portamento and the double stops. Violin teachers will do well to become acquainted with both these remarkably fine volumes.

Four Melodies

FOR VIOLIN ALONE OR WITH PIANO ACC.

By Frederick MacMurray **Price, 75 cents**

There is something "different" in these numbers that will interest many violinists and violin teachers. They are written in double stops, making effective numbers for the violin alone, or they can be used with the piano accompaniment. Two of the melodies are original compositions by Mr. MacMurray and the other two are very clever transcriptions of well-known, favorite old songs. These numbers are not easy. They will give the interested violinist some good material to "work up."

NEW CHORAL PUBLICATIONS

Four Seasons

FOR THREE-PART CHORUS OF TREBLE VOICES

By Richard Kieserling **Price, 60 cents**

About twenty-five minutes is required to present this work, which is really a cycle of four exceptionally attractive choruses for treble voices, the writing being in three parts. The work is effective, yet can be presented with few rehearsals. Women's Clubs, High School Choruses and other groups requiring choral material of this kind will find *Four Seasons* enjoyable to sing and enjoyable for audiences to hear.

A NEW CHILDREN'S OPERETTA

Rainbow's End

AN OPERETTA FOR CHILDREN

By Cynthia Dodge **Price, 60 cents**

This is a mighty good operetta for children. The music is attractive and very easily learned and the story is charming with a splendid moral at the end. The operetta is in three short scenes that are easily arranged and full directions are given for inexpensive, yet effective, costuming of the juvenile participants.

A CLEVER MUSICAL COMEDY

Knight of Dreams

or

A MODERN PYGMALION AND GALATEA
A MUSICAL COMEDY IN THREE ACTS
Books, Lyrics and Music By
May Hewes Dodge and John Wilson Dodge
Vocal Score, with full dialogue, Price, $1.00
Stage Manager's Guide, Price, $1.00
Orchestral parts may be rented

This is quite a worth while musical comedy that will more than satisfactorily cover an evening's entertainment. The solo parts are for two sopranos, one tenor, one tenor or high baritone, one baritone, one baritone or bass and two contraltos. The choruses are made up of art students of both sexes. The music is "catchy" and the action is lively. It is easily staged, scenery and costuming being easy to arrange.

THE ETUDE

APRIL, 1924 Single Copies 25 Cents VOL. XLII, No. 4

"The Generous Profession"

Musicians are for the most part notoriously generous. There have been a few who seemed to have their pockets lined with fly-paper; but you will find a great number who are "generous to a fault." Some are hopelessly and foolishly improvident with their generosity. They sometimes carry their giving to a reckless extreme and find themselves impoverished in their own old age.

Calve, in her interesting autobiography, "My Life," says: "Practically every one of my comrades supports a number of dependent relatives or unfortunate friends. It is considered a disgrace to allow any member of one's family or clan to go uncared for, no matter how distant the connection may be."

We have known most of the great artists of our time and we have often marveled at their lavish generosity. One famous singer told us once that she actually was supporting no less than twenty-one dependents. Often the dependents are little better than loafers or beggars. We have known of some instances where they were actually plotting against their benefactor or abusing her for failing to give them more money.

We feel a little proud of the fact that musicians are generous. It means that they value human quantities, both good and bad, more than they value money. With all their improvidence they stand just a little higher in the scale than those to whom the chief joy of life is in holding on to every last cent and diverting it to selfish gratification of personal aims.

A Prize Contest Worth While

Last month when we announced a prize contest upon the symposium, "The Ten Great Musical Masterpieces," in which twenty-six famous musicians, representing twelve countries, participated, we were careful not to mention a money prize, as we did not want to make it mercenary. We shall publish the winning article of from 2,000 to 2,500 words, and we shall pay for it precisely as though it were written by one of the foremost musical writers of the day, who regularly contribute to The Etude. The prize is far more than money. The winner can not help adding to that precious something known as "reputation." For this reason, we were anxious to secure judges of the highest standing in the musical world. Full particulars of this contest, which closes on September 1st, 1924, were given in connection with the Symposium last month.

The judges who have consented to honor The Etude upon this occasion are:

Dr. Leopold Stokowski, Conductor of the Philadelphia Orchestra.

Mr. Felix Borowski, Director of the Chicago Musical College.

Mr. Harold Randolph, Director of the Peabody Conservatory, Baltimore.

Dr. Frank Damrosch, Director of the Institute of Musical Art, New York.

One hundred and twenty dollars an hour is the price which one teacher with crowded classes is said to be receiving now. Gee whiz! Twenty-five years ago we had a sneaking feeling that we were committing grand larceny when we asked five dollars a lesson. Music lessons are going up like dollars in Berlin. Of course the reason is "supply and demand"—a venerable teacher of great fame with whom violinists everywhere are clamoring to study largely for "the name."

Methods or Madness

"Now," said Jack Hopkins, "just to set us going again, Bob, I don't mind singing a song." And Hopkins incited thereto by tumultuous applause plunged himself at once into "The King, God Bless Him," which he sang as loud as he could, to a novel air, compounded of "The Bay of Biscay," and "A Frog He Would." The chorus was the essence of the song, and as each gentleman sang it to the tune he knew best, the effect was very striking, indeed."

Thus at Bob Sawyer's unforgettable party did Charles Dickens write the recipe for the Futuristic Music of to-day into "The Posthumous Papers of The Pickwick Club." Surely many of the inane jumbles we have heard sounded like a "free fight for all hands." Some, we have been convinced, were inspired more by method than by madness. They have impressed us as the ballyhoo of composers incapable of attracting public attention in any other manner.

Stravinsky, Debussy, Ravel, Cyril Scott and a few others in Germany, have made scores that have employed new musical pigments, new designs, unconventional, though none the less beautiful. But much of the other futuristic music we have heard has sounded to us more like a license given to the performers to "play the tune you know best."

Can it be that the King of Siam, or the Sultan of Turkey, or the Rajah of Wotnot or whoever it was that preferred the tuning up of the orchestra to the regular program was right, and that we who have gone on eagerly admiring the gorgeous tone tapestries of Beethoven, Bach, Chopin, Wagner and Brahms, are wrong?

Character and the State

"Character is the only secure foundation of the State."
—President Calvin Coolidge.

Our President made this historic utterance at his famous address in New York city, when he stated his intention to let nothing stand in his way to prosecute any one who had assumed a public trust and had proven a traitor and a craven in failing to guard the sacred responsibilities which such a trust imposes upon all.

We rejoice in the "granite integrity" of our President, confronted as he is with one of the most disgraceful governmental scandals that has ever stained our national honor. God give him strength to prove to the world that "Character is the only secure foundation of the State," and that the character of the great body of the American people stands for honesty to the last drop of the nation's blood.

The Etude is particularly interested in our President's famous phrase, because it emphasizes the work which we were permitted to suggest in what has now become nationally known as "The Golden Hour" ideal. This plan of teaching character as a part of the regular work in the public schools and teaching character with a wonderful stimulating background of music, was never more necessary than now. Music inspires; and when the child mind has the problems of character and the principles of right-living presented to him with the inspiration of music, an indelible impression is made.

The Character of the United States of America tomorrow will be the character that we teach our children to-day.

What is of greater importance to you than this?

Every day make it a part of your life work to insist upon this until the schools of your city have a regular program of music and character building. Thousands of schools have already introduced this in their work. It is your job and your responsibility to see that the "Golden Hour" plan is introduced in your schools. Never mind the name. Call it anything. The main thing is the principle.

The city of Philadelphia has at present, in General Smedley D. Butler, "The Fighting Quaker," a chief of police who attracted national attention in a day. All honor to him and to his drastic methods of rooting out crime. But, at the best, General Butler and all like him correspond to "swatters" in a campaign to get rid of flies. He can capture a few criminals and imprison them, but in order to clean out the breeding places of crime, we must begin with the education of the mind of the little child.

Ten thousand General Butlers can never safeguard the State in the future, unless we all start to-day to lay the foundations of character through training our children at home, in the church, and in the "Golden Hour" periods in the public schools.

What the Music Clerk Must Know

All big music firms are continually approached by musicians who desire employment. They seem to feel that because they know technic and the art of music, they are likely to become fine music clerks. One day in a lively music store would astonish them. Their musical knowledge would amount to little; but they would be plied with a thousand and one questions about editions, and so forth, that only very few musicians are able to answer. The capable music clerk has a fund of information that would make the ordinary musician stagger. He ought to, of course, know something of music. With a view to encouraging the clerk to build up his musical knowledge, the publishers of The Etude conducted a prize contest among a large group of employees. The contest was based upon the following questions. Some scored 90 per cent. of correct answers. How would you fare in such a contest.

1. *Name the composer of "Sonata Tragica."*
2. *Give Opus number of "Rondo Capriccioso," by Mendelssohn.*
3. *Name three Ultra Modern composers.*
4. *What two books would you recommend for the study of American music and composers?*
5. *How can you tell in what key a song is written?*
6. *Who made a concert arrangement of Schubert's "Military March?"*
7. *Which are the most popular of Liszt's "Rhapsodics?"*
8. *From what opera does Handel's "Largo" come?*
9. *Mention five leading living American composers.*
10. *Mention three leading living opera composers of the world.*
11. *Mention five Salon composers living, similar to Bohm, Behr and Heins.*
12. *What does M.M.=124 mean?*
13. *Name some coloratura songs.*
14. *In what opera does "The Last Rose of Summer" appear?*
15. *Name a Finnish composer.*
16. *Who composed the "Devil's Trill?"*
17. *Name three works on musical history.*
18. *Can you name three famous negro composers?*
19. *Who was the first American composer?*
20. *Name three standard editions of Chopin, giving editor's name of each.*
21. *What are the signatures of G♯ Minor, F♯ Minor, E♭ Minor, F♯ major, and C♭ major?*
22. *Name three modern French composers?*
23. *What is the Opus number of the "Minute Waltz" by Chopin?*
24. *Were Beethoven and Mozart contemporaries?*
25. *Who are the three great B's in music?*
26. *Name four great classic song writers.*
27. *Name the three most popular sonatas of Beethoven.*
28. *What is the English translation of the word Opus?*
29. *Name some South American composers.*
30. *How many Peer Gynt Suites did Grieg write?*
31. *What is the difference between American and European, or English fingering?*
32. *What studies would you substitute for Heller?*
33 *Mention some well-known modern technical studies.*

The Gifts of the Gods

Who will explain inspiration? Certainly we shall not try. If we sought to become really great in the field of composition, we should all feel that it was necessary to work hard and long to acquire the technic of writing; but we should never deceive ourselves into thinking that this might produce a masterpiece. We should want to go into the silences and prayerfully invoke the Almighty to part the veils of immortality, and let us have a glimpse of that world from which the heavenly works of art must come.

How else can we account for such a thing as the famous *Midsummer Night's Dream Overture*, of Mendelssohn? Mendelssohn lived to be thirty-eight years old. When he was seventeen, he wrote: "To-day or to-morrow I shall begin to dream the Midsummer Night's Dream." Dream, he did; and in one month a great masterpiece was complete. During the remaining twenty-one years of his happy life, he produced a surprising amount of excellent music, some of it very serious, and very earnest, indeed. But what musician will dare to say that anything that he wrote transcends that which the Gods gave to that high-minded youth of seventeen.

Yes, technic is important, and Mendelssohn had developed a remarkable technic before he reached manhood. Yet it was sheer inspiration which enabled him to produce his first and greatest masterpiece. He was probably surprised with the attainment himself. All inspirational writers are. They repeatedly wonder how they were enabled to do it.

The answer is on high.

Systems of Memory

The pages of popular magazines for many years have advertised systems of memory by which one is led to believe that, upon payment of so much down and the balance in interminable monthly installments, it is possible to expand one's intellectual reservoirs from the size of a teacup to a veritable ocean. These systems depend almost exclusively upon so-called Mnemonic helps or tricks of association of ideas. According to most psychologists, they are invariably disappointing in producing memories of real worth. Bolton, in his *Principles of Education*, says:

"As a means of memorizing ideas, they are a delusion and a snare."

In memorizing music there is no trick. *The way to memorize is to memorize.* This means focusing and refocusing down the attention to the most accurate degree.

It means discarding any effort that is purely mechanical.

It means photographing and rephotographing what you desire to memorize over and over again, until the permanent print is recorded.

Note those words, "*Permanent Print.*" They are significant. A permanent mental print cannot come from a repetition of innumerable, imperfect prints. Every repetition must be perfect. One of the reasons why some folks say that they can not memorize music is that every brain negative they make is slightly different from the one that precedes and the one that follows it. The result is always a blur. Like the composite photographs.

Perhaps this thought may help you if you are one of those who keep on saying:

"It is useless for me to try to memorize music."

If all studio portals were surmounted by Lord Chesterfield's motto, "Whatever is worth doing at all is worth doing well," musical instruction in America might witness a great advance.

If Franz Liszt Should Come Back Again

An Interview Secured Expressly for THE ETUDE with the Famous Piano Virtuoso and Liszt Disciple

MORITZ ROSENTHAL

Biographical Note

Moritz Rosenthal was born in Lemberg, Poland, December 19, 1862. His musical instruction began at the age of seven, with a local teacher named Galath, who was a viola player. His talent was immediately noted and ere long he commenced to study with Chopin's famous pupil, Mikuli, who was then head of the Lemberg Conservatory. At the age of twelve he became a pupil of Joseffy in Vienna. His debut occurred in Vienna in 1876. His success was instantaneous, and after a tour of Roumania he was made Court Pianist of Roumania when he was fourteen years of age. From 1878 to 1879 he studied with Liszt at Weimar and Rome. In fact, he was associated with the great Hungarian master much of the time until 1886, when Liszt died at Bayreuth. He studied with him from 1884-1886. Feeling that a good classical training was necessary in his work as an interpreter, he studied at the Staats Gymnasium in Vienna and at the University, where he was a pupil in philosophy under Von Zimmerman and Brentano and in esthetics under Hanslick. In 1884 he appeared again in Vienna amazing the public and the critics with his enormous technical achievements. His high intellectuality and long study of esthetic values have given him a wide reputation for his masterly interpretations. In 1912 he was made Kammervirtuoso for the Emperor of Austria. Mr. Rosenthal is a cousin of Mme. Fannie Bloomfield-Zeisler. His compositions are mostly for the pianoforte, the best known being his "Butterflies" and his wonderfully ingenious arrangement of the "Minute Valse" of Chopin (Opus 64, No. 1).

Has Piano Playing Progressed in the Modern World?

"ANYONE who had the great good fortune to study with Franz Liszt for any considerable period was so captivated with the marvelous individuality of the man, his wonderful musical gifts, his memorable playing and his vigorous mentality that the mere mention of the name conjures up a picture of one of the few really great masters in the long history of musical art. Listz's playing was supreme in its day. He usually exhausted all of the superlatives of the critics; and with this naturally grew a kind of halo that I of all people should loathe to dispel. Art, however, is truth; and the artist is one who sees clearly, hears clearly, understands clearly and portrays clearly. All that I may say hereafter is done with heartfelt recognition of my personal debt to my master, but at the same time in the interests of the tone-art.

"Liszt, if he lived today, would probably be the greatest of living pianists. His powers and his genius would make him that. But the Liszt that I heard, in 1876 and thereafter, and came to know as my friend and my teacher, has been surely equalled, if not surpassed, in technic and tone by several pianists of the present.

Liszt Would Delight in Advance

"If Liszt were living now, he, with his broad grasp, would be among the first to recognize this; and he would immediately set about to place himself at the top. Naturally, around a great man there grow traditions, legends and one might almost say superstitions. Liszt, himself, was thoroughly human in every sense. He was a man, first of all; an intensely human, thoroughly brilliant man, with a leaning toward religion, occultism and the mystic, but quite as mundane in some ways as any of the rest of us.

"If Liszt should return to us now he would be not only surprised, but also delighted with the tremendous advance in musical art—particularly in piano playing. He would be amazed at the great number of virtuosos. He would be fascinated by their musicianly tone and he would be astonished at the tempo with which certain of his compositions are ordinarily played in our concert halls.

"Take, for instance, Liszt's own *Don Juan Fantasie*, considered by some to be among the most difficult compositions ever written for the piano. In the *Champagne Song* it was the custom to play much slower than the air is sung upon the stage. When I was twenty-two years old I played this for Liszt and he marveled at my speed. If I should play it to-day at the same speed as I played it then, people would think me to be very cautious—perhaps losing my powers.

"If Liszt should return now and come to America, he would stand amazed at the great demand for music in the new world. He would be amazed at the numerous fine halls, the music schools springing up everywhere, and it would delight the soul of this most progressive of all true and great pianists.

How Liszt Identified Genius

"What Liszt would say of the musical modernists is hard to tell. It must be remembered that Wagner had no greater champion than Liszt, when most of Europe was laughing at the works of that transcendent genius. Liszt's penetrative mind realized the enormous genius of Wagner when others were deaf to it. At the same time, Liszt was not to be fooled. He was able to distinguish between great genius and men who merely pretended to be geniuses. He would want to "land" somewhere and not feel that he was forever staggering or swooning. Yet, I say, he would see the beauty in Debussy and Scriabine; and, with his penetrative mind, he would see the beauty before anyone else.

MORITZ ROSENTHAL

"There is much music to-day which I am sure Liszt could never grasp, because it is written outside the pale of human musical comprehension. A great genius—a Michelangelo, a Velasquez, a Corot—has a God-given sense of determining the permanent, the immortal in art. Liszt had this in music, and that is why he regarded some of his own original compositions, which had the note of immortality, higher than he did his numerous piano arrangements, written around other men's immortal melodies to suit the musical market of the day. Of course, a great many of these arrangements, transcriptions and fantasies have become part of the most valuable pianistic literature of the concert platform. Yet Liszt would be delighted to see artists of the present day playing more and more of his original compositions. Fortunately, in recent years this has been the case. Few composers since the time of Liszt have approached him as a composer for the piano.

Superior Methods of Study

"The music student of to-day does not have to work in the way in which many of the students of my day were obliged to work. The whole matter of pianoforte education has been very much more carefully systematized through graded courses of study. The pedagogical methods are infinitely better. Thirty years ago, the teacher told you to bring this or that piece for your lesson. After you had played it you were told it was either good, bad or indifferent. The teacher's parting injunction was, 'Now practice hard; and come again in a week and I'll hear you play it.' Very seldom the teacher played the piece. There was little in the way of analysis, little in the way of the careful development of detail, little in the study of the harmonic construction of the work. The pupil was dosed with technic in much the same way. There were the notes; what did one have to do but play them on the right keys in the right time. That constituted the average lesson. Of course, there were exceptional teachers, but they were few.

Students Now Able to Accomplish More

"The advance in the demands upon all who play the piano has been so enormous that the student has to work to-day almost four times as hard as when Liszt held his master classes at Weimar. But the student to-day, by means of better pedagogical methods, is able to accomplish so much more. He has so many other helps which are of value to him. The number of concerts is one thing. In Liszt's day the really great pianists could be counted upon the finger of one hand. When one had enumerated Liszt, Chopin (marvelous genius, but restricted in his pianism though his physical weakness), von Bülow, Rubinstein and Tausig or Henselt, it was difficult to go farther.

Arm Weight in Tone Production

"Another advance that Liszt would notice, if he were to attend a succession of recitals at Carnegie Hall, is the occasional employment of arm weight in the production of singing tone. This I attribute to the influence of Rubinstein, who developed it more and more in his playing as he advanced in age. Rubinstein used his arms much more than Liszt in this respect. The beauty of the result is indisputable, but has not been adopted universally.

The Syncopated Pedal

"Liszt would also be filled with the keenest pleasure by witnessing another advance in piano playing. I refer to the general adoption of the syncopated pedal, that is, putting down the damper pedal after the note is struck rather than when it is struck. Only in this way can a beautiful cantilena be preserved in melodic passages. Liszt knew of this. However, it was not widely used until the last twenty years. It has made a vast difference in the beauty of piano playing generally; and I consider it the most distinctive differences between the piano playing of forty years ago and of to-day.

"Liszt would also be immensely gratified to find musicians, on the whole, giving a great deal more attention to general culture. Liszt was a broad-gauged man who saw the unwisdom of superficiality. He was cultured; and by culture he did not mean a few accomplishments, but, rather the serious study of the important problems of life and art.

Dr. Hanslick and Pure Music

"The emotional side of music made a strong appeal to Liszt. At the University of Vienna I studied for some time with Dr. Eduard Hanslick, the influential author of many works, including, *On Musical Beauty: A Revision of the Esthetics of the Toncart.* Hanslick was born in 1825 and died in 1904. Like many music critics, he studied music itself for a time, with a master, in his youth (Tomaschek); but never was a professional, practicing musician, in the larger sense. He surrounded himself with iron-clad theories of beauty, so thick that he could not see out to view the beauties of Wagner. I was repelled by his theories and left him very soon. Therefore I do not find myself in accord with Hanslick in any way. His theory—that music is *'Ein Reihe Bewegte Tone'* (a range of moving tones), like the little bits of colored glass in the kaleidoscope, and nothing more, is hopeless to me. He tried to make the world believe that beauty in any musical masterpiece had nothing to do with any emotions, but lay in the musical tones themselves. This takes away the whole significance of music.

"Music is the expression of the emotions through a serious and gorgeously beautiful medium. Behind every melody there is the soul of a great personality. By the melody you can judge the greatness of the master's emotional stature. It is the surge of a colossal heart and mind. So it is with Beethoven and Chopin's music. It is the emotions of Beethoven and Chopin interpreted in tone. Hanslick would have us believe that music is recreated by the interpreter as an artisan puts together a mosaic, every stone in its place. Yet, in music, the interpreter recreates every time he plays, and his recreation depends not merely upon his digits or upon his mental conception of the piece, but also upon his emotional sympathy and understanding of the creator's life and mood and inspiration.

"Thousands have read Hanslick's works, which were translated into many languages; but I beseech the readers of THE ETUDE not to be misled by them as was their author when he said, "The few flowers of the later Beethoven are surrounded by a contrapuntal picket fence." Any theory that leads to such a conclusion as this, or that the *B Minor Sonata* of Chopin has only one really enjoyable movement—the Scherzo—had better be avoided. Far safer was the ideal of Liszt—a musical mentality beside which Dr. Hanslick was a pigmy.

Liszt Would Have Been Delighted

"As I have said, Liszt would be delighted with the modern use of the pedal. In some modern music, with its whole tone scale and its augmented chords (which by the way are trumped out before us as novelties, when Monteverde discovered them and Chopin and Wagner knew and used them judiciously) the pedal is sometimes used for 'atmosphere.' The result, only too often, is a fog as opaque as any of which London ever boasted. One must be extremely cautious of the pedal in such works and also in polyphonic works, such as Bach, where a blur or a smear follows the confusion of tones.

"I rarely use the middle pedal on the grand piano. In fact, I find that very few pianists employ it. Very much the same effect may be obtained by depressing the damper pedal a very short distance. That is, the chords in the bass are sustained while those in the treble are not.

A Target for Amateurs

"Liszt was bored by indifferent playing of any sort. His commanding position naturally made him the target for the world. He was forced to hear many very terrible amateurs. I recollect one instance of a Countess who had a son who persisted in playing the Chopin *Valse,* Opus 64, No. 1 *(Minuute Valse),* over and over again, until Liszt dreaded the sight of him. He played the *Valse* fairly well, and Liszt was at a loss to know how to get rid of him without insulting the Countess, with whom he was very friendly. He asked me to play immediately after him my own arrangements of the *Valse,* in which the famous first theme appears in thirds and sixths and is combined with the second theme in one movement. This is done in two ways: First the cantelina theme is in the left hand and the running theme in the right and then this is reversed. This multiplies the difficulties of the performance about ten times, to the average pianist. The young man listened to my arrangement of the *Valse,* with his mouth open, and never again bothered the master with his amateurish performances. Liszt summoned me very often afterwards to play this study for him and his visitors with the words: 'Do play us now your Chopin with sauce piquante *á la Rosenthal.*'"

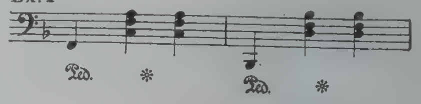
Use of Damper Pedal for Young Pianists

By Olga C. Moore

As all know, one object of using the damper pedal on the piano is to connect tones which cannot be connected with the hands. In teaching, it cannot be too strongly impressed upon pupils that they must *listen* carefully to the effect produced when using the pedal.

So when an accompaniment reads:

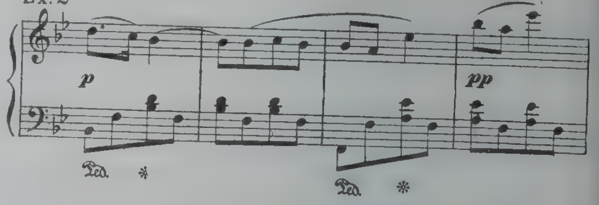
Ex. 1



(no matter how the printed pedal marks are given) the pupil should press the pedal down soon enough, after the first quarter note, to hold the tone over to the first chord; then, lifting the pedal immediately after first chord is struck, allow the hand to take the second chord, without blurring. Thus one makes the first tone a quarter note as written instead of a dotted half-note blurring all through the measure. Pupils have wondered why, if a quarter note is written, does one hold it clear through the measure (as printed pedal marks so often indicate) thereby making it a dotted half-note.

In *The Tulip,* by Lichner, is an example of where if the pedal is pressed down immediately after the first tone, held, and lifted as the double notes are struck, a pretty effect is given; where to hold through two measures spoils it.

Ex. 2



Pedaling according to this example, allows clear, sweet tones in the treble also.

The Stiff Thumb

By H. Kammerer

ONE of the most common faults the piano teacher has to cope with is that of the stiff thumb. This is usually caused by the pulling inward, towards the center of the hand, of the joint that attaches the thumb to the hand. This pulling inwards may, under certain exceptional circumstances, be necessary; but for almost all of our piano-playing, and particularly in the case of beginners, this joint should show a slight bend outwards.

This stiffness of the hand joint of the thumb may be corrected, and with the beginner it may be precluded by the following series of exercises:

First. Examine the thumb. Notice that, unlike the other fingers, it has only two phalanges or sections, the phalange on which the nail is situated, called the "nail phalange," and the phalange next to the hand, which is call the "hand phalange." The joint connecting these we call the "nail joint," and the joint connecting the thumb with the hand we call the "hand joint." The fat part of the hand that comes between the thumb and the wrist is called the "first metacarpal." We notice that this bone, unlike the other metacarpals of the hand, can move quite freely by itself, so, for practical purposes, we will consider it a part of the thumb, too.

Second. Rest the arm, finger-tips and thumb comfortably on a table. With the wrist always on the table, raise the first metacarpal as high as it will go, and take great care that both the hand joint and nail joint show a bend *away* from the hand, or outwards. Then suddenly relax the metacarpal, which means that the whole thumb drops back to its resting place on the table. Notice what it *feels* like when the thumb relaxes. Do this a little every day until it is very easy.

Third. Hold the hand with the palm facing the body. Watch and feel the metacarpal move back and forth instead of up and down. Try to touch the base of the little finger with the tip of the thumb. Move the thumb very slowly, and make the phalanges of the thumb move in this order:—first the little nail phalange bends over towards the little finger, the metacarpal and the hand phalange being as far away from the little finger as possible, and the hand and nail joint showing their bend outwards. But the nail phalange soon needs the hand phalange to help it to make its journey across and then, last of all, when they cannot move far enough by themselves, the fat, lazy metacarpal helps a little by moving over as far as it will go. Now move the thumb back to its original position thus:—first the metacarpal goes back to its original position, which is as far away from the hand as possible. It pulls along the other two phalanges with it, and when these are allowed to relax they simply fall into their original positions, too. This should be done a little, carefully, every day.

Fourth. Do the same exercise with the back of the hand towards you, so that you cannot see but only feel what the thumb is doing.

Fifth. Place the right hand in position on the piano, with the thumb on C, second finger on D, and so on. Move the thumb slowly from C to G, making sure that it *feels* the same as in the fourth exercise; then back to C. Let the hand and arm move gently back and forth to help the movements of the thumb; that is, as the thumb goes under, the wrist and elbow move away from the body and consequently the hand and arm slope inward toward the finger-tips. As the thumb goes back to C the wrist and arm relax to a position near the body. Try this also moving the thumb shorter distances, as from C to F, from C to E. Notice the *feel* of the wrist and elbow when they move out and relax.

Sixth. Same as fifth, but with an important exception. This time keep the wrist and elbow out all the time, whether the thumb is on C or G, with a consequent slope of the hand and arm away from the body and towards the fingertips.

Seventh. This time press the keys gently instead of just placing the thumb above them. Notice that the nail joint has possibly been bending more than is necessary to use the key comfortably and adapt the bend of the nail phalange to a convenient position.

Eighth. Apply the above to scale playing. The scale must *never* be played without preparing the thumb. For example, in the scale of C, as soon as C and D are played, the thumb must immediately turn under in the correct way and have its tip waiting on F for the next time it will be used. If the thumb is left on C, it may stiffen in sympathy with the work of the other fingers; in fact, almost invariably does so for a beginner; then, when it is time for it to turn under, it relaxes enough to turn under with a jerk. A carefully prepared thumb means that the thumb is almost always turned under; and it is impossible for a thumb to be properly turned under and stiff at the same time. This should be applied also to arpeggios and any piece or exercise that entails the turning under of the thumb.

Scales for the Little Ones

By Jessie Atkins Greene

WHEN teaching children scales it is a good plan to tell them first why all scales sound alike, especially in the major mode. Use the C scale as a model, and tell them that all the major scales are formed after this pattern, just as a dress is cut from a pattern.

Show them that a whole tone (some authorities prefer to call it a whole-step) consists of two half-tones, the black keys indicating the half-tones, with the exception of the scale of C, which has no black keys. Then tell them that there is a rule for building the major scales, namely: First come two whole-tones, then a half-tone; then three whole-tones, and lastly a half-tone.

Now play C-D, and the pupil says "Whole-tone;" D-E, "Whole-tone;" E-F, "Half-tone;" and so on till the entire scale is built.

Then continue, "Now we can start on any one and build a major scale, if we but remember the rule about whole and half steps. Tell the pupil to start on G and build the scale. When she comes to E remind her, "A whole-tone," and she invariably plays F-sharp, and, having done it herself, remembers it.

"Now you see," you will say, "why we have sharps and flats. They are to alter the tones to make the intervals come right."

Have the pupil write in her notebook all the major scales, using a little bowed line to connect all the intervals and placing "½" under the half tones. $\underbrace{\text{CD}}\ \underbrace{\text{DE}}\ \underbrace{\text{EF}}_{\frac{1}{2}}\ \underbrace{\text{FG}}\ \underbrace{\text{GA}}\ \underbrace{\text{AB}}\ \underbrace{\text{BC}}_{\frac{1}{2}}$. Pupils have invariably built all the scales correctly, after understanding the rule about the intervals.

If the pupils learn just how many whole-tones come before the half-tones, they always remember to place the half-tones correctly. In this way they learn to play scales chromatically, after they have once learned them, beginning with C, one right after the other.

This is not claimed to be an especially new idea of scale building except that this method carefully avoids reference to the "third and fourth" and "seventh and eighth." If students absolutely understand what constitutes a whole-tone and half-tone, and know where they come, the sharps and flats have no terrors for them.

Now is the time to plan for a summer of joyous musical study. Many musical workers owe their present success to intensive summer study. Hot weather work pays cold weather dividends.

Distinctive Traits of Great Masters

By REV. F. J. KELLY, Mus. Doc.

Father F. J. Kelly has made exhaustive studies of the working methods of the masters and his clear and faithful pen pictures are of real interest to all students.

At a time when art and literature are daily taking a stronger hold on all classes of society, and are obtaining by degrees their proper recognition and position, it follows naturally that a steadily increasing interest is felt in the personal history of great artists and authors, and that people who delight in their works should wish also to know something of their lives, their habits, and modes of working. In this there is nothing but what is most just and reasonable.

Few men can see a work of art without caring to know who or what like was the man that made it; few can resist the spell of sympathy that is exercised by the artist; and the first consequence of yielding to the charm is a very natural curiosity about the artist himself. No details of his life or tastes seem too trivial to his devoted admirers; his words, on small as well as on important occasions, are remembered; his looks, his actions are observed and carefully set down; and anecdotes, more or less authentic, are recorded to gratify the appetite of the curious. Locks of his hair, his shoe buckles, are treasured as though they retained some portion of the personal charm of their former wearer. That his portrait, or his letters and manuscripts, should be scrupulously preserved is yet more natural; and from the latter, of course, a new light is very frequently thrown upon his works, as we before possessed and knew them. To understand an artist's character cannot but help us to understand his works more thoroughly than they could be understood without some such knowledge of himself; for, as no human action can be properly valued for good or bad unless we clearly see the motives which dictated it, so no work of art can ever be truly appreciated except with a clear comprehension of its author's purpose.

Life Influence on Musical Art

It is, perhaps, not too much to say that the habits of life, the health, the circumstances, and the consequent temperament of an author must surely influence the tone and spirit of his compositions and stamp upon them the result of the multitudinous causes which have affected his own disposition. From a man like Beethoven, leading a life of retirement, a prey to ill-health and constant worry of domestic troubles, and struck down in middle life by the catastrophe of deafness, having but few, and perhaps not desiring to have many friends—from an artist so situated, who would expect the production of music of a generally gay and cheerful character? And indeed, though relieved occasionally by strains of heavenly joy and brightness, the clouds of melancholy and gloomy grandeur are never broken for very long by such gleams of sunshine.

The strongest characteristic, on the other hand, of Mendelssohn's music is the exact opposite of this; and we constantly perceive in it the counterpart of his bright, loving and lovable nature, his buoyant spirits, seldom-failing gaiety and even his occasional petulance, tempered as were those qualities by profound study and the methodical application of its results. To such, therefore—and we believe they are the majority among lovers of art—as feel this desire to become acquainted with the peculiarities of character that mark the masters whose works they never read or hear without a new delight and enjoyment a few facts relating to their habits and mode of composition will not be unwelcome.

The first masters, writing as they did for the services of the church, drew their inspirations in the seclusion of the cloister, and gave appropriate music to the hymns in daily use, composed in seasons of fasting, prayer and meditation. Beyond this little is known of their habits. Allegri, Anerio, Palestrina, Leo, Bai and Durante, who founded church music and enriched its next succeeding era, are known to us by their works chiefly, and of their lives we have but few particulars.

The Stradella Tragedy

It is impossible to separate our sense of the beauty and earnestness of Stradella's music from the memory of his romantic history, his devoted attachment and tragic end. Being engaged in the service of the Republic of Venice, to compose operas for the carnival, he achieved a great success, both with his compositions and his splendid voice. A Venetian noble, whose mistress was a passable singer, invited Stradella to give her some lessons; and between the master and his lovely scholar there soon sprang up an affection which led eventually to their escaping together one night and setting out for Rome. The noble, enraged beyond measure, immediately hired assassins to follow the fugitives and put them to death. The ruffians soon found Stradella at Rome, where he was on the point of giving an oratorio at one of the churches; and, as the story goes, waited through the performance for a fitting opportunity for putting their purpose into execution, but were so melted by the wondrous beauty of Stradella's voice and music that they relented and, with many tears, confessed to him what had been their mission, and protested that they were incapable of the crime of robbing Italy and music of so great a genius. Warned by this adventure, the lovers fled to Turin, whither they were pursued by the implacable vengeance of the Venetian; and Stradella was attacked and wounded by three assassins. From these injuries he ultimately recovered, and perhaps thought himself safe from further danger, but the anger of his persecutor was not to be so easily appeased; and, shortly after, Stradella having taken his Ortensia to Genoa on an excursion, the pair were barbarously murdered in their apartments about the year 1681. "So perished," says the biographer, "the most excellent musician of that day in all Italy."

In Germany, only three or four years later, was born the greatest of the next century of musicians, Johann Sebastian Bach, who wrote more, perhaps, than any other man of that or any age. The number of his works is prodigious; and yet he never wrote anything that he did not correct as often as he had to recopy it. Hence it is by no means uncommon to find copies of his compositions which differ very essentially from all other known versions of the same. He seems to have spared no pains to render as absolutely perfect as he could all that flowed from his pen, voluminous and elaborate as it was. His great contemporary, Handel, though he frequently recurred to what he had written on previous occasions and for other purposes, and used again subjects and often whole movements of his own or of other compositions for the work before him, was an exceedingly rapid writer. Pages of his original manuscripts still show from top to foot the sand with which he dried them, proving that they were wet all over at the same time.

Handel's Method of Composition

Handel's handwriting was sometimes very fine and delicate, the heads of the notes being no bigger than pinpoints; while at other times it was massive and large, with heads like bullets to the crotchets. He too, like Bach, frequently reviewed and amended his work. He rewrote four times, for instance, the air, *How Beautiful* in the "The Messiah." At his death few of his works were found as he had originally written them; scenes and even bits of recitative were altered, scored through, or covered with pieces of paper gummed on and bearing a new version of the passages so concealed. In composing, he wrote with the greatest facility, beginning to set the words of an oratorio before he had received more than the first act of it. When engaged on the "Rinaldo" of Aaron Hill, Rossi, the translator of the libretto, was unable to do his part quickly enough to keep pace with Handel, who set his translation to music faster than he could write it down. "The Signor Handel," he says, "the Orpheus of our age, in setting to music this lay from Parnassus has scarcely given me time enough to write it; and I have beheld to my great astonishment an entire opera harmonized to the last degree of perfection in the short space of a fortnight by this sublime genius."

Handel's celebrated countryman, Gluck, on the other hand, is said never to have put pen to paper until he finished and elaborated in his own mind. This is also the case with Gounod, whose prodigious memory enabled him to retain a whole opera in his head, without making sketch or memorandum, until every detail was in its place and ready for committing to paper. But to return to Gluck. "He has often told me," says M. Corenses, "that he began by going mentally over each of his acts. Afterwards he went over the entire piece; that he always composed imagining himself in the centre of the pit; and that his piece thus combined and his airs characterized, he regarded the work as finished, although he had written nothing; but that this preparation usually cost him an entire year, and most frequently a serious illness." It is related of Handel that being asked about his idea and feelings when composing the Hallelujah Chorus, replied: "I did think I did see all heaven before me, and the great God Himself." He would frequently burst into tears while writing, and is said to have been found sobbing uncontrollably when in the act of setting the words "He was despised." His servant who brought his coffee in the morning often stood in silent astonishment to see his master's tears mixing in the ink as he penned his divine notes.

Sarti, a composer as cultivated as he was charming in the suavity of his airs and his sentiment of scenic effect, required a spacious, dark, dimly-lighted room; and it was only in the most silent hours of the night that he could summon musical ideas. In this way he wrote "Medonte," the rondo "Mia speranza" and his finest air, "La dolce compagna." Cimarosa was fond of noise; he liked to have his friends about him when he worked. It was thus that he composed his "Orazii" and his "Matrimonio Segreto," for long the finest serious, and the first comic opera of the Italian school. He would write in a single night, the subject of eight or ten charming pieces, which he afterwards finished in the midst of a circle of friends.

It was after doing nothing for a fortnight but walk about the environs of Prague, that the air "Pria che spunti" (Matrimonio Segreto), one of the loveliest ever penned by any composer, suddenly entered his mind when he was not thinking of his opera.

Hadyn's Art Life

Haydn was wont to sit down at his piano and in a few moments to soar among the angelic choirs. He lived entirely for his art, exempt from all cares. A singular effect of his retired life was that he, who never left his home town, was for a long time the only musical man in Europe who was ignorant of the celebrity of Joseph Haydn. As if fate had decreed that everything ridiculous in music should originate in Paris, Haydn received from a celebrated amateur in that city a commission to compose a piece of vocal music; some select passages of Lulli and Rameau being sent with a letter as models. These he returned, replying with simplicity that "He was Haydn and not Lulli or Rameau, and that if music after the manner of these great composers was desired, it should be demanded from them or their pupils; that as for himself, he unfortunately could only write music after the manner of Haydn." His life was uniform and fully occupied. He placed himself at a small table by the side of the piano each morning, and the hour of dinner found him still seated. In the evening he went to the rehearsals or to the opera, which was given four times a week in the prince's palace. Such was the course of his life for more than thirty years, and this accounts for the astonishing number of his works.

The Unsystematic Mozart

Like Haydn, Mozart devoted the early part of the day to composition. When an idea struck him, he was not to be drawn from it. If taken away from the piano, he continued to compose in the midst of his friends and passed whole nights, pen in hand. At other times he had such a disinclination to work that he could not complete a piece till the moment of its performance.

In the well-known case of the famous sonata for violin and piano, which he wrote in hot haste at Vienna in 1784 for Mlle. Strinasacchi, Mozart had time only to write out the violin part, and performed the work the next day without putting his own part on paper. He had before him the violin part, with the accompaniment staves below it mostly blank, but with here and there a few bars to indicate a change of figure or modulation. These occasional bits of accompaniment may still be seen in the autograph manuscript, written in pale ink. The remainder, which he filled in afterwards, are in black ink. The overture to "Don Giovanni," perhaps the best of Mozart's overtures, was written only the night before the first performance and after the general rehearsal of the opera had taken place. He had arranged that the copyists should come in the morning at seven; and by the time they arrived the overture was finished. They had however scarcely time to write out the orchestral parts before the performance, and the players had to execute it without a rehearsal. Some critics profess to point out in this overture the passages where Mozart fell asleep and those where he suddenly woke again during its composition.

Beethoven's Method of Composing

Beethoven used to sit for hours at the piano improvising the thoughts which he afterwards jotted down and subsequenty elaborated into the music with which he astonished the world. If he discovered that he had been overheard at such times, he was incensed to the highest degree. In another mood, and especially after he had become deaf, while working out a subject in his mind he would leave his house at night or in the early morning and walk for many hours through the most remote and solitary places, through woods, and by lakes and torrents, silent and abstracted. When engaged in his magnificent *Sonata Appassionata,* he one day took a long walk with a pupil. They walked for hours, but during the whole time Beethoven spoke not a word but kept humming up and down the scale. It was the process of incubation. On reaching home he seated himself at the piano without taking off his hat and dashed into the splendid Finale of that noble work. Once there, he remained for some time, totally regardless of the darkness, or the fact that he and his pupil had had nothing to eat for hours.

When composing in his own room at home, he would sometimes walk about in a reverie, pouring cold water over his hands alternately, till the floor of the room was inundated and the people came running up stairs to know the cause of the deluge. At his death he left besides his finished works a quantity of rough sketches containing, doubtless, the germs of many more works, which never passed the stage in which they appear there. The first draughts of his well known compositions show the successive alterations which their subjects suffered before they pleased him; and these form a most interesting study, as exposing his manner of working. Even when completely finished and perfected to his own satisfaction, his manuscript presented many difficulties to the reader, and his copyists and engravers are said to have had a hard time of it. In one of his letters, in which he gives his publishers the corrections of some proofs of a string quartet, he concludes by saying that, "It is four o'clock. I must post this; and I am quite hoarse with stamping and swearing."

The handwriting of Mendelssohn was beautifully neat and his manner of correcting the proofs of his printed work excessively careful and painstaking. In composing he made few sketches, but built up the whole in his mind, and then, when writing down the score thus mentally prepared, rather invited his friends' conversation than otherwise. "Pray, come in," said he on one occasion, "I am merely copying." On the other hand he was fastidiotis to a fault in allowing his music finally to leave his hands for the publisher. The beautiful *Italian Symphony* was kept back by him till his death, the *Walpurgis Night* nearly as long, and some of the finest numbers in "Elijah" and the "Hymn of Praise" were added after the first performance. No musician more thoroughly appreciated that maxim, that what is worth doing, is worth doing well, or more consistently carried it into practice.

Mastering a New Piece of Music

By C. B. Neff

Five ingredients enter into the mastering of a new piece of Music.

Ambition—the sincere desire to do the thing, and to do it well.

Courage—The sure feeling that you can master it; and the determination to "stick to it" till you can play it well.

Mental Rehearsal—Before attempting to play it, give a good half hour to its mental rehearsal. Play it over mentally, trying to hear the melody of the piece from beginning to end.

Study—Master the meaning of every word, sign or character used in the printed representation of the composition.

Practice—Commence to play it at a moderate speed; but do not stop for mistakes. "Hit or miss," play it to the end. Then retrace your steps, picking out the mistakes you have made and working on these passages till the errors disappear. Nothing ever was accomplished in music without practice. Practice, and practice hard; but do not over-exert yourself. If the fingers become stiff, or you feel tired, take a rest till you feel refreshed, and then take up the work anew.

How a Great French Poet Inspired a German Genius

Wagner's Letter From the Poet Baudelaire

By E. H. P.

A highly interesting letter from the French poet, Charles Baudelaire, to Richard Wagner, written at the time when the latter was going through a series of most disheartening struggles and failures in his attempts to obtain musical recognition in Paris, has recently been unearthed from the collection of M. Jacques Doucet and published in *La Revue Musicale.* The original letter is, of course, in French: we think it well worth translating for the readers of The Etude (omitting merely a few paragraphs where the author seemed to virtually repeat himself).

Friday, Feb. 17, 1860.

Dear Sir:

I have always figured to myself that a great artist might not be insensible to a sincere compliment, when the compliment was like a cry of recognition. * * * First of all, I wish to tell you that you have given me *the greatest musical enjoyment that I have ever experienced.* * * *

The first time that I went to hear your works I was very ill disposed and, I must confess it, full of evil prejudices; but I am excusable; I had been many times duped; I had heard so much of the music of charlatans of great pretensions. By you I have been conquered all at once. That which I have experienced is indescribable, and if you will deign not to laugh, I will try to interpret you. At first sight I had a feeling that I knew this music, and reflecting on it later I understood from whence came this illusion; it seemed to me that this music was *mine,* and that I recognized it as every man recognizes the things he is destined to love. * * *

After that, the principal characteristic which struck me was grandeur. It represented what was great, and it uttered what was great. I recognized throughout all your works the solemnity of great sounds, of the grand aspects of nature, and the solemnity of the great passions of men. One feels at the same time elevated and subdued. * * *

I have felt the majesty of a life larger than ours. Yet another thing: I experienced many times a feeling of the strangest nature; to conceive pride and joy, to let a really sensuous pleasure invade me, penetrate me—a pleasure like mounting in the air or rolling on the sea. * * * For example, helping myself to comparisons borrowed from painting, I suppose before my eyes a vast stretch of somber red. If red represents passion, I see it arriving gradually, through all transitions of pink and rose, up to the glow of a fiery furnace. It would seem difficult, impossible, in fact, to arrive at anything more glowing; nevertheless a last rocket comes and traces a track whiter than the whiteness which forms the foundation. It shall be, if you please, the supreme cry of a soul lost in a paroxysm. * * *

After the day when I heard your music, I kept saying to myself, especially in unhappy hours: *If I only might hear this evening a little of Wagner!* There are without doubt other men made like me. * * * Why don't you give some concerts again and add new pieces? You have given us an advance-taste of new joys; have you the right to deprive us of the rest? Once more, sir, I thank you; you have recalled me to myself, and that grandly, in unhappy hours.

Ch. Baudelaire.

I do not give my address, because you might think I wanted to ask favors of you.

* * * * *

It would be hard to overestimate what such a letter as this may have meant to a man who, like Wagner, was fighting with his back to the wall. It may have been the very thing that turned the scale, giving him just the bit of extra courage that was needed to hang on a little longer until his luck changed.

Doubtless our readers will be interested to see a copy of the very program of Wagner's music to which Baudelaire listened. Fortunately it is still in existence:—

I. Overture to "The Flying Dutchman."
II. March and Chorus from the Second Act of "Tannhaüser."
III. Introduction to the Third Act, "Tannhaüser."
IV. Chorus of Pilgrims and Overture from "Tannhaüser."
V. Prelude to "Tristan and Isolde."
VI. Prelude to "Lohengrin."
VII. *The Awakening of Morning,* "Lohengrin."
VIII. Introduction to the Third Act of "Lohengrin."
IX. Wedding Music from "Lohengrin."

* * * * *

Wagner alludes pleasantly to this letter in his *Autobiography.* Speaking of his Parisian friends, he says:

"Another most interesting acquaintance was that of the poet Baudelaire. It took place through a letter in which he spoke of the sensations which my music had caused him to experience, which suggested those of colors rather than of sounds. * * * To his signature he added no address, * * * but just the same I set about to discover him, and delayed not to add him to the circle of acquaintances which gathered at my home every Wednesday evening."

Wagner was at this time nearly fifty years old; Baudelaire about forty. Wagner nowhere mentions Baudelaire's poetry: Probably the poet understood the musician better than the musician did the poet.

How Much Technic?

By Leonora Sill Ashton

In the process of all education the vital point to be considered is how to reach the middle way between the spirit and the letter. In the teaching of music, especially, this subject is most important.

Does a steady diet of technic tend to make a "machine" of a player? Is it true that spontaneity is lacking in our seriously minded students of music to-day? These are important questions.

It is evident that, in the case of the beginner, technic pure and simple must be applied for the formation of the hand, for the strengthening of the fingers, wrists and arms, and for the general physical development of the playing muscles. As the pupil advances comes this question: Shall he find his technic in his pieces or not? Someone said to me the other day, "I get all the technic I need in Chopin's Etudes." No doubt she did; but one cannot give Chopin's Etudes to every one in the place of other studies.

First let us think of the mental viewpoint. Technic alone is the tool by which our playing is made clear and intelligible. Do we wish to use the great masterpieces of musical literature as tools and thereby dull the edge of the imaginative and intellectual force which is primarily the object for which they were written? If he is the true musician, feeling instinctively the cadences, the melodies, and the harmonies of Chopin's Etudes, for instance, then give them to him without fear. If, on the contrary, the pupil is of a more sluggish musical mentality, then think twice before doing so.

In the practice of the C minor Etude, for instance, he will have plenty of technical exercise. But do not put the idea in his head that it is for that you have given it to him. Attach his notice to the wonderful resolution of chords, to the surge of the arpeggios up and down, to the world of despair that the whole composition denotes. If the technical part seems at first to overwhelm him, make up an exercise yourself of a resolution of arpeggios that will serve an apprenticeship for the actual playing of the etude.

On no account give one of the masterpieces of music as a technical work or even label it as such, to an unmusical pupil. In the other case it may be given safely to the one who instinctively feels its beauty. The subject all resolves itself into the old question of studying your pupils, their aims, their natural gifts and their ambitions.

With the very young pupil too much technic is, of course, distasteful. It must be given sparingly, with a clear explanation of the result it is intended to obtain. Much may be gained by the single aim which it promotes. I gave a peculiarly sensitive little musician a five finger progression exercise and she exclaimed, "O, I like that; I don't have to think about it." She performed it perfectly, feeling instinctively the clear physical action it was meant to promote and, young as she was, realizing the relaxation from mental activity.

Here is a valuable point to be gained in clarity of thought and understanding. It seems a good rule to follow would be, "Technic for technic, and music for study."

If a pupil has any particular weakness, a frail outside of the hand, an awkward thumb, a stiff wrist, an uncertain touch; give him technic to build up these weak spots, just as you would give a dose of medicine for a bodily ailment.

Finally, the spirit and the letter of music may well be likened to a walk in the autumn woods.

The vigorous physical exercise strengthens the body and puts the whole frame into a state which fits it for any work it may wish to do, just as technic fits the fingers to their task. The coloring of the leaves, the brisk, invigorating air, the charm of the season, go hand in hand with the physical effort, making a form of complete and combined mental and physical stimulus.

So it is with the study of the masterpieces. When the mind and fingers have been trained to work together to a greater or a less degree, then give the Chopin Etudes and musical literature of a like calibre to your pupil, and you will find they can do double duty for his musical welfare.

"In Tune with the Laws of Sound"—Voices Are Born and Then Made

By GEOFFREY O'HARA

Geoffrey O'Hara, born in Canada, with an obviously Irish name, speaks with a French-Canadian lilt, sings beautifully, talks charmingly and during the recent war was one of the most successful of all the song leaders who did so much to cheer the men going to the front. As a composer, his long list of songs runs the gamut from the most dignified of sacred solos, such as "There Is No Death," to the very frivolous "K-K-K-Katy," which was sung by millions.

O'Hara's serious songs have been sung with very great success by many of the world's greatest singers, including Caruso and Werrenrath. His most recent song success, "Dreaming of My Dear Old Home Sweet Home," was of the kind that "caught on" immediately. He is well known as a Chautauqua speaker and singer, and has been a decided success both on the concert stage and in vaudeville. At one time he was commissioned by the Department of the Interior to make notation records of the music of the Navajo Indians. The following article upon the voice should be especially helpful to all who use the voice in speaking or singing.

OUR ears are tuned to hear and appreciate the beautiful in nature, just as our eyes judge color, our palates, taste.

A great pianist draws from the combined vibration of many strings "harmonious" vibrations which are pronounced beautiful. To produce the effect the mechanism of the piano works practically the same with all pianists, *i. e.*, the hammers hit the strings and rebound, allowing the strings to vibrate. This is all the hammers can do. We are sometimes amused to see pianists go through funny affections on the keyboard, rather as if they thought they could "color" the tone by caressing the keyboard *after* the chord has been struck. Silly. A beautiful tone emanating from the piano has its component parts coördinated naturally in accord with the laws of sound. The great art is to "display" the chord. This can be done at only one moment and that is when it is struck.

The Pianist's Mind

The great pianist's mind has learned what this vibration (commonly termed tone) is; and his muscles have been trained to obey his mind. The closer he can get his mind to the truly beautiful in nature; or, in fact, the closer he can harmonize his mind with Nature Herself; the more "soul" he will have in his playing. But all he can do in playing the piano is to produce a combination of vibrations, whether in scales, runs, chords, or arpeggios. Our ears grasp and appreciate a beautiful tone or combination of tones called chords.

Likewise, the violinist's mission is to produce a vibration from his instrument. He has an initial vibration to produce, which he does by means of a bow (well rosined) which causes the strings to produce sound. Here we have friction making the initial vibration which is enhanced and enlarged by means of the body of the violin. The acoustics of the instrument help to beautify the tone. But the greatest factor of tone production, and upon which must rest the results, is the *initial* vibration. We can enhance and beautify it by the surrounding vibration material, but if the initial vibration is bad, the result will be bad. As with the pianist, the violinist can do but one thing and that is to produce an initial vibration of the strings whch will be close as possible to the beautiful. The word "beautiful" here pertains to the law of vibration, which is Nature. His mind must perceive and appreciate the most harmonious vibration. This is an attribute of man. It is a law of Nature which is every man's property but owned by no man.

The Violinist's Bowing

The old violin masters kept pupils bowing for six or seven years. Why was this? Because the fundamental of violin playing is in the bowing. To please the wonderfully sensitive ear of the great masters, this was necessary. Their ears were so in tune with the wonderful and exquisite laws of vibration that they knew (but not scientifically) when the proper tone was produced. They showed their pupils how to hold the bow, showed them that for the best tone the bow must all the time be kept as closely as possible at a right angle with the strings, showed them how to pull it across the strings to produce that wonderful tone; and then it took years to do it. To do what? To train the mind to perceive this wonderful subtlety, to train the nerves to hear the message of the mind, and to transfer the same to the muscles. His every wish would then be interpreted by the strings. This is the "soul" of the artist dictating to the nerves, thence to the muscles to make those strings vibrate in a certain way and the muscles put it into execution.

Now consider even a simpler case—that of the cornetist. What is the action here? Anyone may experiment with the initial vibration which is produced (generally speaking) by blowing an imaginary hair off the tongue. Try it. What do you find—no more nor less than the initial vibration of the cornet, which the brass develops and enhances. Now what constitutes a beautiful tone on the cornet? To answer this I must skip over many valuable laws and refer to them as the laws of Nature, as heretofore. As with the violinist, the mind of the cornetist conceives the beautiful tone for which he is striving. By coaxing and persistency, the membrane and the muscles of the lips together with the air-propelling muscles (which need not be gone into) gradually learn the message the mind is striving to have them hear, and the result is that they gradually imitate the vibration, and the cornet does the rest. Work and close observation and study of the tone is responsible for great advancement. Those who were born with much more musical ability than others, combined with persistence, become what we call artists.

The Worn-Out Membrane

Violin strings wear out and must be replaced, likewise the membrane on the lips, but this replaces itself. Scientists tell us that the flesh and the muscles of the entire body change every seven years. If so, how many times would the soft membrane of the lips be worn out and replaced in the course of seven years, an average good term for a diligent cornetist to become something really more than the ordinary? How many times? That can be arrived at by guesswork, but it is safe to say "a great many." Now, as I have said before, the *mind* of the cornetist conceives the beautiful tone. Very often he has heard it elsewhere and tries to imitate it. His mind commands his lips to make the initial vibration. They refuse at first, not simply because they have not learned the knack, but principally because *the material of which they are made is not yet the proper material necessary to make the vibration called for*. But it is wearing down rapidly and it is being replaced and cultivated in its regrowth; a better and finer material is taking the place of the old. Cultivating anything means the wearing down and dying of something and the replacing of it with something derived from itself, of new and finer material. Just as the quality of wheat is improved by cultivation, so is the membrane on the lips. Just as the quality throughout, from father to son in families who have lived up strictly to Nature's immutable laws, can be and has been improved for generations, just so by this wonderful evolution can and will every part of man be elevated by degrees.

GEOFFREY O'HARA

Tissue is worn down and replaced with other material and this material will be better or worse than the original, as per the state of mind and body of the individual?

Now in the case of the human voice, what de we find? First, the production of sound is the result of friction of air against the edges of vocal chords, which is produced by resistance of the vocal chords and an air pressure behind them. This is precisely the action that takes place with the cornetist, that is to say, the resistance of the lips and tip of tongue and the pressure of air against them.

Now just as we have seen that primarily the great tone of the violin and of the cornet is the result of the *initial* vibration, so in the case of singing, the initial vibration of the vocal chords is the one greatest thing in the cultivation of the voice. Many think that the vocal chords "just work." The reason of this is probably because they can't *see* the vocal chords; and the result is that the initial vibration has been too much *taken for granted*. If a singer displays what is known as resonance, in other words, a great deal of intense tone, he is credited with having a "natural resonance" or a "naturally powerful voice" or a "born resonance," and the subject is dismissed under this cloak of ignorance.

The Voice an Instrument

The human voice, guided by the mind, is a mechanical instrument working on a series of fulcrums and levers. Some think it blasphemous to say that the voice is a mechanical instrument. They prefer to think that it "emanates from the soul." So it does, in one way, but don't forget the mechanism of it; for without that working correctly, all the mind and soul in the wide world cannot produce a beautiful tone. Remember the derision that was thrown at Bach and Handel when they resolved music to a science? People laughed at them, and, according to the degree of education and enlightenment the people had at that time, were perhaps justified in doing so. We have seen the errors two hundred years ago and must profit by them.

The relation of the production of sound between the violin, the cornet and the human voice is so very close that they afford a beautiful comparative study.

Some prodigies have the "perfect" mind, as we say "born," so that the cultivation of the coördination of their mind to their nerves and muscles is all that is necessary, which has in some cases come almost immediately. In some "born" singers the vocal apparatus has worked correctly almost immediately, just as the violin prodigy bowed immediately, as some great swimmers have broken swimming records with little or no instruction, and athletes have "tumbled into the knack" immediately.

Now what does all this lead up to? To this—that the material of which the vocal chords are made is the first requisite of a glorious voice; that this material is constantly wearing down and being replaced; that the *mind* dictates the quality of the new material; that the mind must be taught to discriminate by listening to beautiful tone; that, while the proper coördination of the whole body is necessary to a good voice, this is all secondary to the material of which the vocal chords themselves are made; that there is "hope for us all," that all voices may be improved by mentally Coué-izing—"day by day in every way my voice is getting better and better;" that it is only partly true that "voices are born and not made."

The truth is that, the world over, many thousands of wonderful voices have been born and then ruined, either by the teacher or the pupil, or both. The truth better stated would read: "Voices are born and *then* made."

Fun in Music

By W. F. Gates

"Let's have some fun," says the child.
"We want excitement," adds the youth.
"We must have an avocation," says middle age.
"Give us peace and contentment," sighs old age.

And it's all a matter of having fun. Fun simply is the short name for relaxation, enjoyment, temporary substitution of pleasure-giving activities for necessitous grind.

Different people get their fun out of different things. For some there is no greater fun than the pursuit of the dollar. They have dug their rut deep. Others get their fun in games, in sports, in play. Some people even enjoy putting money down a prospective oil well; some prefer to have the hole labeled, "gold mine." Some get fun out of making people miserable; others derive joy from making them happy. It all depends.

Fun has an immense place in the human economy. It means relaxation, change, rest, renewal of youth, rejuvenation of forces, mental and physical. The muscular worker may get his fun mentally; the mental worker may derive his physically. The dealer in serious things needs the tonic of froth and soap-bubbles.

Passing other forms of activity, the musician who would pass his musical life in tonal glooms and tragedies, loses half his life. Besides the deeper things in music, there is vivacity, joy, happiness—even fun.

It has crept into the music of the greatest composers, at times. Even in austere and mathematical old Bach, we may find a touch of fun at rare intervals. We may find humor in Handel, though generally unconscious on his part. Mozart was full of the joy of living and had a fine appreciation of fun. Beethoven had a grim humor that peeped out at times—note the Scherzo of the Sixth symphony.

Wagner, generally soaring in the clouds with his gods and demi-gods, when he came down to earth presented in "Die Meistersinger" the most elaborate bit of musical humor—fun—in the operatic repertoire. Richard Strauss gives his best efforts, at times, to ponderous humor. And as the years go on less and less do composers think it beneath their dignity to laugh in their music.

The teacher who would make his musical instruction all serious and formal overlooks a good part of the psychology of youth. The great desideratum is to make play out of work—that is, to put the same zest into work that it is so easy to put into play. And to this end it is a mistake to overlook that "bit of nonsense, now and then." In other words, the more playful bits of music, the joyous, the humorous. These things tend to keep the studio attractive, rather than a place to be led handcuffed.

Music is no less instructive because it has a bit of joy, humor, fun in it. In fact these features may furnish the sugar-coating with which to make palatable many a necessary pill. And the wise teacher makes use of every possible assistant to create interest and enjoyment in the work in hand. Don't overlook fun.

Who Wrote "Amaryllis"?

"*Amaryllis,* an old French court dance composed by Henri Ghys . . . was composed by a favorite musician of the court of Henry III (of France), and was first played at the wedding of his daughter, in 1581." The foregoing statement recently attracted our attention, because of its very apparent anachronism.

Henri Ghys was living in Paris as late as 1910, and not since the days of the antediluvians have we had records of longevity which would permit the possibility of his having spent the days of even his most precocious compositions, in the court of Henry III.

The documentary history of this once very popular tune follows:

The air, first printed in 1582, and often erroneously ascribed to Louis XIII, was known as *Le Son de la Clochette* (*The Sound of the Little Bell*), and the first eight measures of it were used by Baltasar de Beaujoyeulx (an Italian whose real name was Baltazarini) in the "Balet comique de la Royne (Ballet of the Queen)" staged for a royal festival.

Henri Ghys, the son of Joseph Ghys, a well-known violinist who died in Paris in 1848, used this air in a set of piano pieces, his Opus 10. It is Number Two of the set and had the title *Air de Louis XIII*. Published in 1870, it became very popular, was later known as *Gavotte de Louis XIII* and finally as *Amaryllis*. Only the opening phrase of eight measures is from the original source, the interludes between the repetitions of this seeming to be of Ghys' invention.

"Observation and practical experience have thoroughly convinced me how great and beneficent an influence art can and should be in the lives of the people."—Otto H. Kahn.

* * *

"Music is no longer the pastime of the dilettanti. It ministers to the majority, and it is recognized as the most associative and distributive of the arts."—*Public Ledger* (Phila.).

* * *

"Music is wine to the imagination. And the essence of music, originally and in this respect, is rhythm, or the regular recurrence of a pleasant stroke."—Max Eastman.

* * *

"The man who likes bad stuff (music) can come to detest it; the man who has learned to like good stuff has become a lover of it for ever and ever."—Percy Scholes.

* * *

"With the turmoil of the world today, music can do more than any other force to satisfy the longings of the soul. It does so because it so consistently takes its treasures from all sects and creeds and communions."—Grace W. Mabee.

* * *

"An eminent teacher in conversation once spoke slightingly to me of MacDowell's music. 'It is not piano music.' Yet I think I would prefer being the composer of *To a Wild Rose* and *To a Water Lily* than of wagon-loads of scintillating stuff kept alive by teachers for the sake of technical merit."—Ernest Austin (English critic).

When Should Pupils Discontinue Music Lessons

By Earl S. Hilton

A promising pupil once remarked, "I am stopping my music lessons because I think I can play well enough to entertain myself and friends; and, besides, I don't want to be a music teacher."

The question comes to us, "Should a student of piano, who plays fairly well a number of fifth-grade compositions of the better kind, find it necessary to discontinue music lessons because she does not want to become a music teacher?"

The inexperienced teacher might answer, "Of course she should stop taking lessons if she plays so well and does not want to be a music teacher."

The unenthusiastic teacher will remark, "If the pupil grows self-satified and wants to quit, let her quit!"

The thoughtful teacher might answer, "The pupil should go on with her studies, but how can we prevent her from stopping?"

We answer out of experience with the pupil mentioned, "Even if the pupil does not want to be a music teacher, she should continue music lessons, as she has only reached the stage of progress where a little extra effort will send her toward higher things worth while."

In most instances the pupil's discontinuation of lessons is the teacher's fault. Lack of Ambition, Purpose, Enthusiasm and Energetic Effort are the main reasons for desultory pupils. When the pupil is weakest, he needs encouragement. But if the teacher is indifferent, how can the pupil be expected to express other than indifference?

When should pupils discontinue music lessons? It is time to discontinue lessons when your teacher ceases to create enthusiasm in you for higher ideals of acomplishment. But, after discontinuing, be sure to find a good teacher who, for some reason does fill you with a desire to go on to the heights.

"It is impossible ever to be too refined or too intellectual, provided the refinement and the intellectuality are the artistic means and not the artistic goal."

—W. J. Turner.

Common Musical Sense

By Arthur W. Boynton

"I'd give almost anything to be able to play the piano even for my own enjoyment." How many times have you not heard the above remark?

Now, playing the piano, perhaps well enough for others than yourself to enjoy, is not so difficult as it first might seem. We will take it for granted that you know nothing about music, except that you would give "anything" to be able to play.

First of all a piano is necessary. The best piano you can afford is the one to choose, whether it be a new or second hand one. Have it tuned twice a year, after the heat has been turned off in the spring and after it has been turned on in the fall.

The next step is to select a teacher. The best one you can afford is the one, taking for granted that the better the teacher, the higher the price. Take one-half hour lessons from a first class teacher rather than hour lessons from a fair teacher.

You must begin your lessons with a determination that you *are* going to play. If you possess the love of music, patience and perseverance you *will* play. Undoubtedly you will be a little nervous. Everything seems so new and your hands so awkward. You must remember that there are many small undeveloped muscles in the hands and arms which are not used to any extent. As we begin to play the piano these muscles come into action. Technic, to a certain extent, is the proper development of these muscles which enables us to have them under control so that we can use one without affecting the other.

Compare your progress with the development of an infant. First of all the babe tries to sit up. Does it give right up if it doesn't succeed? No! it tries and tries until it is able to do so. Then he creeps; tries to stand up; walks by hanging on to things; and finally when confidence is gained the babe who couldn't sit up is running.

That is the way we learn to play the piano. The first exercises seem difficult, but if you will practice and persevere there will come a time when they will seem perfectly simple. The teacher is your guide who shows you the correct way of accomplishing the quickest results. This is the one road which leads to correct playing. I do not believe it is possible to become a self-taught pianist. When an exercise is analyzed by your teacher, it ceases to be difficult. You should begin practice with a perfect understanding of what you are expected to do; then adhere strictly to that. If you experience any pain in your hands stop at once and rest. Bathing the hands and arms in hot water tends to relax the muscles and is beneficial. Never try to practice when you are fatigued You must feel fresh to accomplish results. Lie down for half an hour, if necessary, before practicing. An hour or an hour and a half is long enough to practice at one time.

Many young men and women did not have an early oppportunity to study music. Later they could and would do so but for the dread of starting. Now none of us is too old to learn. Some exceptionally fine pianists did not begin study until thirty years old.

If you are a true musician you will always have the desire to play better and better and you will realize that the greater part of that ability lies within yourself What you are able to do shows the result of how much you have worked. The artist who renders a program much to our admiration, shows the result of years o hard conscientious work.

Nothing furnishes as much enjoyment as music. To be able to give pleasure to others, as well as to acquir refinement and culture is only taking advantage of one o the greatest gifts of God to man.

A Motet That Stopped Storms

By D. E. Delarey

It is not surprising that music was assigned a super natural power in the middle ages. The superstitions o the people were unbounded. When the Flemish composer Orlando di Lasso, was employed by Albert V, Duke o Bavaria, he was expected to lead his choir accompanie by the church dignitaries in a procession around the tow as was the long established custom on Corpus Christi da The day arrived and a terrific tempest arose. It was im possible for the procession to leave the church. It wa then decided to have the ceremonies in the church. Th choir marched ahead, singing the new motet of di Lasso when is reached the portals the tempest abruptly stoppe and di Lasso's motet was thereafter credited with havin the power to quell tempests.

What to Teach at the Very First Lessons

By JOHN M. WILLIAMS

Section IV.

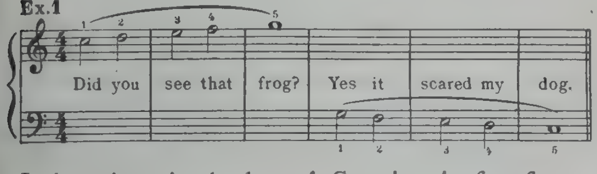
This Series began in The Etude for January

The value of transposition cannot be easily overestimated. In the first place it gives the pupil a feeling for tonality that is invaluable. In the second place it utilizes the knowledge gained in scales from the earliest stages of pianoforte practice. How seldom do pupils utilize such keys as F-Sharp, D-Flat and B-Major in the first three years or more of their piano work! By using the first exercise for transposition purposes the student plays in all twelve major keys at every lesson. In sight reading in the more remote keys later on, this is a wonderful help; and technically it gets the pupil away from the key of C major—"a consummation devoutly to be wished" (the great fault of the Czerny studies). These are some of the benefits to be gained by transposing, not to say a word of the benefits gained through a thorough review of the entire book, played in all twelve major keys. In this second review the teacher gets a splendid opportunity to stress expression, exactness in reading rests, notes, phrasing, general musicianship and ease in playing pieces up to time; because the mind of the pupil is free from some of the annoying details and can be concentrated on other important phrases.

How to Teach Transposition

How should you teach transposition? It is very simple. Explain that in every key No. 1 of the scale is the key note. Thus in the key of C, C is No. 1, D is No. 2, and so on. Take the following exercise:

Ex.1



It is written in the key of C major, in five finger position. Place the five fingers of either hand over the D position (D-E-F♯-G-A). Read from the fingering, not from the notes. As the finger used in the right hand in these exercises corresponds to the scale number, the pupil is really playing from the scale numbers. At the first lesson assign the keys of C, D, E, F, G and A, but not B because this has a difficult hand position. Later do all twelve major keys.

Recite Key Signature Aloud Before Playing

If you ask the pupil to transpose to the key of D major, he should recite before playing, thus:

Teacher: "Play it for me, in the key of D major."

Pupil: "Signature, two sharps, F and C."

He then plays it in that key. This is important, as it keeps the child from feeling around for his sharps and flats. The seat of all technic, after all, is in the brain and not in the fingers; and, if the pupil thinks correctly he is very apt to play correctly.

Take a new exercise each week and transpose all exercises written in five finger position throughout the book. Later review and take the others. The children like this work very much—it partakes of the nature of a puzzle and they enjoy working out puzzles. Try it and see.

Pupil Should Recite Key and Time Signature

As soon as the pupil has learned his scales he should recite about each piece or exercise he studies—for instance, thus:

"This piece is written in the key of G major. Signature, one sharp, F-sharp. Time, 4/4, which means four counts to a measure, and a quarter-note gets one count."

If a piece of sheet music, he should begin with:

"The name of my piece is 'The Happy Farmer,' written by Robert Schumann," for instance, and then continue with the remainder of the recitation. The value of the pupil telling these things to the teacher, instead of *vice versa*, cannot be overestimated. It teaches the child to observe; and if he does this the first year of his musical life he is very apt to continue it. The pupil who is in the habit of observing these things before beginning to play will naturally be a careful reader and observe things equally important further along the page. Besides, there is no sense in the teacher having to tell such things at each lesson. If the pupil does not know it, the sooner the teacher finds it out the better. It should then be remedied.

Teaching Six-Eighth Time

Before beginning the study of 6/8 time, 2/4, 3/4 and 4/4 time should be thoroughly understood. Keep a few exercises in 6/8 time in daily practice for two or three months. *While on the subject, teach it thoroughly.* To explain a matter to a child, once is not sufficient. Reiteration is what counts.

You may teach it thus:

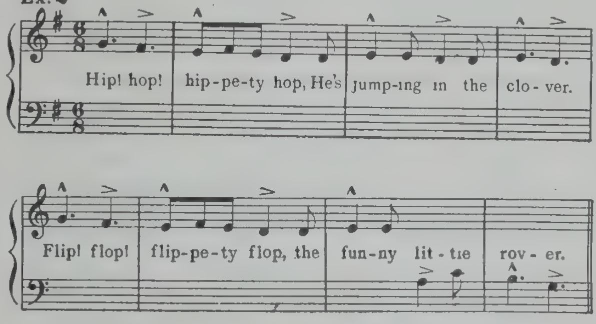
"In 6/8 time there are six counts to a measure and an eighth note gets one count. A quarter note will now get two counts and a dotted-quarter note three counts."

This should be recited by the pupil at each lesson. *Telling is not teaching;* and it is only by endless repetition that a point is finally impressed firmly and unforgetably in a child's mind.

Next, explain that there are *two* accents in 6/8 time—a primary accent on count "one" and a secondary accent on count "four." In other words, the rhythm, or pulse, is "two" to a measure. This is important.

When the pupil can play exercises (like the one below, for instance) perfectly and easily, counting six counts to each measure and accenting "one" and "four," place a gold star by the left hand side.

Ex.2



Later, perhaps the following week, explain that instead of six counts to a measure, 6/8 time may also be counted *two* counts to a measure, counting the "pulses" or "beats" (one and four). *This gives the correct rhythm and is invaluable.*

Slowing wading through 6/8 time is both laborious and incorrect. Have all exercises in 6/8 time played at sufficient rate of tempo to make the rhythmic pulse—two beats to a measure. When this can be done easily place another gold star on the right hand side of the piece. Pupils who have had a good standing in 6/8 time in their foundation work are a joy to teach in the later stages.

A Dot After a Note

Perhaps the next difficulty we will have to face will be the teaching of an exercise with a dot after the note.

Definition: "A dot after a note increases its value by *one-half the value of the note.*"

A dotted whole note (𝅝.) gets 6 counts.

The whole note gets 4 counts; the dot gets ½ of 4, or two counts, making a total of 6 counts.

A dotted half note (𝅗𝅥.) gets 3 counts.

The half note gets 2 counts; the dot gets ½ of 2, or 1 count; making a total of 3 counts.

A dotted quarter note (♩.) gets 1½ counts.

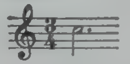
The quarter note gets one count; the dot gets ½ of 1, or ½ count; making a total of 1½ counts.

The Pupil Should Count the Note and the Dot Separately

For instance: In counting a dotted whole note, the pupil should look at the whole note and count four, then transfer his sight to the dot and count two more. This forms the habit of observing the dot; and that is, at least, something.

Some teachers advocate writing dotted notes this way;

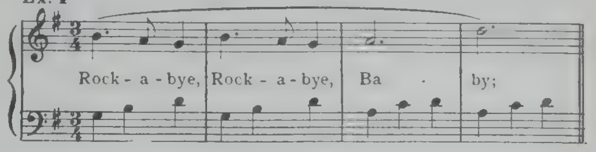
Ex.3



that is, placing the dot in the approximate place in the measure where it is counted. Caution: Do not leave the pupil with the idea in his head that "a dot adds *one* count."

Doubtless you will be teaching exercises like the following:

Ex.4

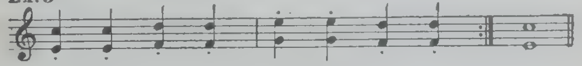


Do not count "and" for the eighth note. Use either of three words "hush a bye," "Rock a bye," or "Bob-o'-link." In each case the second syllable is spoken lightly "Bob'-o-link" for instance, not "Bob-o'-link." The music should be accented exactly as the word is spoken. Many pupils either stop the time in the left hand or "punch" the eighth note, making it stand out instead of playing it softly. Music has light and heavy notes just exactly as a language has light and heavy syllables; and it is just as incorrect in playing the piano to accent the wrong note as it would be to stress the wrong syllable in a word when speaking or reading.

Wrist Staccato

Speed in staccato passages requires either finger or a wrist staccato. The former is not advisable in the very beginning. Have the following little exercise kept in practice for the first year's work; played with pure wrist stroke. The pupil may be told to imagine that he has a pair of springs at the wrist, which pull the hand back quickly at the wrist like a "jack in the box." Or you may pretend that the keys are red hot and tap them lightly, the hand springing back at the wrist (using the same action with which you test a hot iron). A quiet forearm is desirable, but you will find that a rather peculiar quality of this exercise is its tendency to cause the pupil to stiffen the elbow. Watch it carefully.

Ex.5



The First Piece

I refuse to hazard a guess as to the psychology of it, but for some reason or other adults as well as children love a piece of "sheet music." The same identical piece in an album or a book has an entirely different effect. It *must* be "sheet music!" The wise teacher will capitalize this enthusiasm and assign pieces regularly, after about the first three months of lessons. At least as much may be learned from a carefully selected piece as from an etude or exercise. I have a selection of a dozen or more that I have worked many years to get together—I must have sifted several thousands for these few. But they are pieces that are "tried and proven." The test has been applied. What test? *The child is the court of last resort.* These pieces have been able to arouse his interest. This is the indispensable. Do not use stuff like "My Ma's Waltz." It is an insult to the intelligence of even a child. *Memorize all pieces.*

How to Select Pieces

For this purpose THE ETUDE is a gold mine. Naturally, being a magazine with an universal appeal, it has to minister to the needs of different tastes. Perhaps some of the material cannot be used; but in nearly thirty years of constant reading of it, there has never been an issue from which I have not been able to get something. When you find a good number write it down in a note book—composer, grade and other information—and order several copies.

Classical Versus Standard Teaching Pieces

As I have said before, a modern idea much in vogue at the present moment is "service"—something of use, practical. The old-fashioned, cold, stiff, formal parlor or drawing-room, with its closed doors, except when company came, has given way to the nice light, comfortable, everyday living room. Do you not think it is about time that we music teachers did away with some of our antiquated ideas, and gave up trying to make Johnny Jones play a Bach Invention or Clementi Sonatina—a piece which when he starts to practice, father gets up and leaves the room, sister makes scathing remarks, and Mother "endures" in silence—not to say a word about Johnny hating it himself?

"But," you answer, "Bach is so beautiful," you love it so yourself. "It is good for him;" "it elevates his taste," Perhaps—and, perhaps? *Is* Bach beautiful, the way Johnny is playing it—at his very best too? Would it not be better, if murder is to be committed, to commit it on some good standard teaching piece, instead of on Messrs. Bach, Clementi and their fellow-composers? The chances are ten to one that the pupil will learn to play the "Happy Farmer" or the March from "Faust" correctly and with enthusiasm, when he will halt, stutter and generally ruin his Clementi or Bach. "Inculcate a love of the classics while young," is tommyrot. You are doing just the opposite. You are inculcating a hatred of the very name of the classics. I know. I have investigated the case thoroughly. And, I might add—I agree with Johnny Jones. The F major invention of Bach is a lovely little tit-bit when played by Harold Bauer, and perhaps when played by you. But, as "executed" by the average pupil—it is the opposite of "art" or beauty.

Face the facts. Be practical. Which does the more good all round? Is not a light, attractive, melodious number by Friml, Huerter or Rogers—which gives joy at home, arouses the interest of the pupil himself and a demand for more—of greater value than all your pure classics abominably played and with the natural consequences? Not only that. A love of the classics is generally a growth. Does not the Bible say something about "casting pearls before swine?" Should we not love our classics too much to allow them to be murdered?

If a pupil's musical intelligence is only up to "Black Hawk" Waltzes, it is folly to put a Bach invention before him. What should you do about it? Save your classics and use them later. To play a little Clementi Sonatina easily and beautifully, up to tempo, pearly runs and other attractions, takes quite a fair rate of advancement—third or fourth year at least. When thus played, they are beneficial, and the pupil is very apt to like them. Most teachers give such things too soon. Wait a while—lead the pupil into such things. In your selection of pieces appeal to the child's imagination. Use plenty of folk tunes also—and they do not have to be German, Austrian, Russian, or French, to be folk tunes. We have a few, like "Old Folks at Home," "Old Black Joe." Children and adults alike enjoy playing things of which they know the tune, and so do you—note your rushing to buy the score of something you heard played at a concert last week. Be sensible, be practical; and, above all, be human.

It is sometimes a matter of wonder if some music teachers do not pride themselves a little bit too much on being "different" or "highbrow." Remember it was not beneath Brahms' dignity to sit down at a party and play a Strauss waltz!

Self-Test Questions on Mr. Williams' Article

(1) What are some of the benefits derived from practice in transposing?

(2) Where is the seat of technic?

(3) What is the value in having the pupil "to tell things?"

(4) How should the pupil count a dotted-note?

(5) What shall be the criterion in selecting the pupil's pieces?

Some Don'ts for the Teacher

By Hope Waters

Don't count for the pupil: he can do that for himself.

Don't keep time with your feet while the pupil plays.

Don't tap on the keys or any part of the piano with a pencil: it disturbs the pupil.

Don't talk in a loud voice: it gets on the pupil's nerves.

Don't begin the lesson by severe criticism of the manner in which the selection is rendered.

Don't be afraid to praise the pupil when he has prepared the lesson well: it will not make him vain, but will encourage him to work harder the next time.

Don't keep consulting the clock or watch as the end of an hour draws near: the pupil is apt to notice this and hurry through a composition in order to be "out of the way" of the next pupil.

"Music, rightly taught, is the best mind trainer on the list. We should have more of the practical subjects, like music and drawing and less grammar and arithmetic."
—Dr. Charles Eliot.

Idealism in Music Teaching

By Winifred Katzin

Sometimes, in far corners of the earth are found rare and beautiful things for which one might look in vain in less unexpected places. Coleridge-Taylor might have been the only great West African outside of West Africa, but I have met a native school teacher in Sierra Leone whose knowledge of European art was profound and whose appreciation of it was more discriminating than many a real artist could boast. In a certain mountain village of the Rhone Valley, so high up and far away from the beaten track that the villagers there do not see strangers more than once in a lifetime, I have talked with a priest with the soul of Saint Francis of Assisi and ten times his learning.

In another remote place on the globe, I know a teacher of music who is a practical idealist. Amongst many colleagues to whom the recompense of artistic satisfaction is inconsiderable, compared with the money their work brings them, he has held for close on twenty years his opposite philosophy. Others have grown richer and more popular; he has contented himself with something less than a fortune, yet his name, wherever he is known, is a synonym for all the best than can be said of a teacher and artist.

In course of time many of his pupils leave him to complete their training in Europe, and the difference between his pupils and those of his colleagues is that, after years of study in famous schools and under eminent masters abroad, they still feel themselves *his* pupils, and feel not only that he knows more but also that he *is* more than they are ever likely to know or be.

This man in his own sphere has achieved more than success; he has achieved greatness. But when he hears himself praised he says, "That is all nonsense; there is nothing wonderful about me at all—I am simply a man who has respect for his work." He is no doubt only this, but the kind of respect he has for his work amounts to genius. If chance had made him an Italian of a few centuries back, he might have been another Del Sarto; had it made him a shoemaker he would have been an artist shoemaker whom his apprentices reverenced in the spirit of disciples. There is no quality so compelling as idealism, none more talked about, none less practiced; and yet it is a star every pupil would follow if every teacher would lead the way.

The following is, in brief, something like a summing up of this man's attitude towards his work:

When you come down to its practical expression, idealism in teaching means willingness on the teacher's part to spend a great deal more time over his pupils than he actually need. It is not enough merely to concentrate during the lesson, giving the whole best to each pupil twenty minutes twice a week; spare hours must be devoted to scheming new means of developing their minds, cultivating and directing their taste, widening their outlook, encouraging their originality. Time must also be spent in keeping pace with the passing hour, lest the teacher himself fall behind and so lose contact with the onward-moving generation by being unable to talk to them in their own modern idiom. Most exacting of all, he must find time to keep his own playing up to standard all the while. And when you come to do all these things, there is still room in the twenty-four hours for golf, and movies, and reading, and idle moments here and there.

Try out pupils with something new all the time, put them to every test ingenuity can devise. Go to the trouble of eliminating the marks of expression from a couple of hundred works, from Couperin to Selim Palmgren, and give each pupil a chance to figure out his own ideas on at least two of these shorn copies in the course of, say, one month. Nothing will be found a better proof than this of how much true and spontaneous musicianship is in him; and in the subsequent comparison of his own ideas and the composer's the whole meaning of musical color will dawn upon him with new significance.

Play to them; show them why the things they study are good; and always find out what they think of works they learn and hear. How seldom one meets a teacher who can tell off-hand just what kind of music best suits each of a very numerous list of pupils. The reason is that most teachers take more stock of fingers than of personality, and of a general ability to grasp than of predilection. The best teacher is the best observer of his pupils' temperaments and the most tactful considerer of their likes and dislikes; which is not to say that he is to fall in with their whims, but that he must to a certain degree follow their lead.

Send them to concerts with instructions to bring back their programs marked to show which numbers they most appreciated, and get them to tell you why. It is often possible to give them some idea of the principal works announced for performance by the recitalist they are going to hear or, in the case of orchestral works, piano reductions of most of the great symphonies and symphonic poems have been so admirably done that no student need go to his first hearing of them uninformed as to their character and general effect. His enjoyment will be increased tenfold if he knows what is coming next in a work which might otherwise be difficult, even bewildering, to follow.

Out of any average five hundred pupils two, as a generous estimate, may be born musicians; fifty may be what is generally understood by "musical;" three hundred may be intelligent, and the rest will be the inevitable leaven of indifferent or definitely hostile victims of their parents' misguided notions of what is necessary for the social equipment of girls and boys. This unwelcome element cannot, alas, be cast out by the unfortunate teacher who, like other men, has his living to get; but he knows their case is pretty hopeless and contents himself with doing his best for them as they are. As for the three hundred intelligents, if he does not turn them out fine executants, they can at least leave his hands trained in the true essentials of musicianship, familiar with and responsive to the idiom of every school and period, and musically conscious. That is how this man's pupils leave him; and in any local assembly of students all talking "shop," you can pick them out infallibly by their clearer judgment, their superior comprehension.

By similar methods, and by the stimulus of his own enthusiasm, any teacher could get as much out of his pupils so that it might be said of him as truly as a very great virtuoso once said of the man I have been writing about, "His pupils are not all good performers, but they are all good musicians."

Simplifying Tempo Rubato

By Margaret Wheeler Ross

Bobby had been using the metronome freely on scales and dance pieces for the purpose of developing speed and accuracy; but when we took up a composition of a serious character and encountered a theme marked "Tempo rubato" he had trouble. The difficulty was met in this pleasant manner:

"Bobby," said I, "suppose you go to the post-office, and your chum, Jim, with you. Now the post-office is just five blocks from here, and you have fifteen minutes for the trip. That is three minutes to the block. Now, you and Jim need not walk side by side, with even steps, so many to the block, like a pair of tin soldiers. It will make no difference if you run ahead of Jim a little, or if he gets ahead of you. Neither will it matter if you run all of one block and loiter in the next, nor if you sit down for a minute or two under a shady tree, provided you *make up* the time when you go on, because you must get to the post-office in fifteen minutes."

"What's that got to do with this rubato thing?" put in Bobby.

"Everything," I answered. "That is just what a composer does when he starts you out on a composition. He says this piece must be played in so many minutes. Now if you go an even pace you will get there in so much time, but it will be very precise and very mechanical. But if you loiter a little in some measures and then hasten a little in others to make up the lost time, you can finish your piece in the given number of minutes. Thus it will have more expression—just as the trip to the post-office will be more enjoyable and interesting if you vary your mode of travel. If your right hand keeps the time, like Jim, while your left saunters behind a little, as you might do, and then your left keeps the time while your right hangs back a trifle as it lingers on some lovely tones and then catches up; and then if the two hurry on a bit, or make an effective pause, like sitting down under a tree, only to start on again with fresh life, you have made your piano piece like your trip more interesting.

"Every composer has a definite conception of the tempo in which he wishes his composition played; but he does not expect you to keep exact, precise time, like a soldier. He does, however, expect you to keep the average, and to arrive at the end in the time marked. He is perfectly willing that you put something of yourself into its interpretation; and he wants you to have a good time while you are playing it. Tempo rubato is 'borrowed or stolen time.' Remember, you can *borrow* or *steal* the time, but you must make it up, and get there in the given period the composer sets."

"Bully!" exclaimed Bobby. "Here's where Jim and I go to the post-office, tempo rubato."

High Lights in a Congress of Musical Thinkers

Stimulating extracts from many excellent addresses made at the last session of the Music Supervisors' National Conference.

[From a wealth of musical addresses published in a recent report of the Conference. THE ETUDE selects just a few vital paragraphs]

KARL W. GHERKENS

Ex-President Music Supervisors' National Conference, Professor of School Music, Oberlin College

Music must not, however, be thought of principally as a mind trainer, as a therapeutic agent, or, as a religious or socializing force. Its prime function is to arouse in a man a more highly spiritual attitude as the result of a definitely esthetic reaction and because of the sensation afforded by such attitude when once roused, to raise the general level of his whole life to a higher plane. All these other things are valuable, but they must be considered rather as by-products than as principal ends.

The function of school music is to cause the rank and file of our boys and girls to maintain, if possible, to increase, the interest which they felt when they first heard and took part in music; and to give them suitable opportunities for growing constantly more appreciative and more intelligent when listening to good renditions of standard music. It also should fit them to take such part in the rendition of good music as their varied capacities and inclinations may make possible and desirable.

CHARLES H. FARNSWORTH

Professor of Music, Teachers' College, Columbia University

Longing for beauty is as fundamental as that for truth and for goodness. False theories and false creeds make us often dogmatic and bigoted; but because they do we are not justified in following further in false lines. What we do if we are genuine is to seek to get back to truth and to goodness. Only in so doing can we clear ourselves of the fogs that we get into. Is it not the same with beauty? Can we say that we will make the technical ability of reading our first step, and let the ultimate beauty that we desire come later? Can we say, "Let us get enthusiastic singing, a love for noise and rhythm, and let the beauty which we wish to express through music take care of itself?"

If we keep constantly in view beautiful expression, we will have the most effective compass to guide us along a golden mean through the many complex demands of the art—on one side the technical demands, such as sight reading, tone production and articulation; and on the other side, the emotional and sensuous demands in the hearts of the pupils, which just as much as the technical need wise training and guidance, if a true affection is to be awakened for beauty, and not merely for physical thrill.

WALTER DAMROSCH

Conductor New York Symphony Orchestra

Music is the language for expressing these emotions and it is therefore a language with which we should all be conversant.

A human being without emotions might as well be dead. We should all know how to feel, how to feel intensely, and to be able to give enthusiastic expression to our emotions, and for that, music is the best vehicle.

It is extraordinary, my friends—as you, no doubt, have experienced as often as I, and many of you more than I because you have concerned yourselves more continuously with the education of children—how soon a child realizes the connection between music and emotions. A child can feel joy, a child can feel sorrow, a child can feel pride. It can feel humility, it can feel patriotism. It can have the same thrills as we when it sees our Stars and Stripes, even *though* its knowledge of what the flag stands for may not be as complete as ours.

And so it seems to me that even when we try to educate children we should make music speak to them in such terms as they can understand.

WILLIAM ARMS FISCHER

Editor of the Oliver Ditson Company

To quote from an editorial in the most widely circulated music magazine in the country—"No course, series, institute or private business can ever exercise a proprietary control over education in America and tell teachers they may teach or may not teach." When a few years ago the Supervisor of Music of one of our great cities, standing before this very body, openly protested against the attempt of some publishers to dominate, control and label Music Supervisors, under the guise of educational progress and normal training, a few winced, but the great body applauded him to the echo.

The right of every American child to a complete education, and the recognition of the value of properly conducting music study as *mental discipline*, together with the granting of school credit for music study, have at last brought Music bodily into the schools of America, where it belongs; and brought it to stay.

Conditions have changed so rapidly in the last decade that we are almost breathless. It is as if some mighty unseen force were sweeping us along. It is the sense of this and the beckoning of larger things that make these annual conferences so inspiring and stimulating.

C. C. BURCHARD

Publisher

Only a short time ago I was talking with a brilliant pianist who complained of pains though the shoulders. I said, "Why don't you try Coue?" and he said, "I have been Coue-ing to beat the band, with no result." We were in the lobby of the Commodore Hotel at the time and I said, "Sit down and do as I tell you while the orchestra plays the next selection." Fortunately the music that followed was of a mood well adapted to our purpose, and an excellent piece of music at that.

Not three measures had been played when we were both transported into this twilight state of consciousness, and spontaneously the words, "I am well and tranquil" came to my mind, which I said aloud and told my friend to repeat under his breath a la Coue. These words went positive and negative, back and forth in the rhythm of the music until the music stopped, and when the music had stopped, in the silence, as we had planned, the words were allowed to vibrate back and forth in the same way for ten or fifteen minutes, after which, if you will believe me, my friend acknowledged that he had the first relief from pain in several weeks. Right then and there he had discovered the secret of Coue and its application through music.

DR. GEORGE H. GARTLAN

Director of Music, Public Schools of Greater New York

The piano is capable of so many different effects that a review of some of them would no doubt prove very interesting. We have first the solid, crashing effect which comes as the result of chords played in succession, either slowly or rapidly. Again we have the singing effect produced by a single melody line in the right hand against the flowing accompaniment in the left. A Chopin Nocturne will illustrate this point. The music-box, so pleasing to children, is important because its delicacy is in distinction from the virility of other styles of playing. Then the arpeggio effect, in imitation of the harp. Next the organ tone produced by playing in the low register of the piano to a certain type of simple harmonization which is meant to represent the solemn intoning of the sanctified music of the church. All these and more are capable of performance in the hands of the pianist who realizes that he has a very important mission to perform. The supervisor who enters school music without a thorough equipment as a pianist is starting with a handicap. It is not sufficient to give instruction by precept in this case, it should be by actual example. The supervisor should serve as a model of intelligence and artistic performance.

DR. HOLLIS DANN

State Director of Music, Pennsylvania

Thirty years of experience in the schools of one community have proven that every child, practically, became a singing child, that interest and enthusiasm increased from grade to grade, that there was music in every home, a chorus choir in every church, and that seemingly the whole community gradually became lovers and patrons of music. Why cannot a great State have the same beneficent uplifting and transforming experience? With music happily and intelligently taught in every school, practically every child *does* become a singing child; every singing child becomes a singing adult and a patron of music. With instrumental classes and orchestras in every grade school, bands and symphony orchestras are assured in every high school; vacancies in our great symphony orchestras will be filled by talented American boys discovered and given their fundamental training in the public schools and perfected in their art by American teachers.

With every child given a chance to read and write the tone language, music illiteracy will disappear, and the world of musical literature will become an open book to a greatly widened circle. With every child listening daily to the gems of good music, preference for the beautiful in music will follow as dawn follows night.

GLENN H. WOODS

Supervisor of Music, Oakland, California.

There is little doubt that the next decade will see the standardization of instrumental procedure in the public schools, that all the children of all the people may secure at public expense such fundamental training in music as can be consummated in the twelve years of school life, in conjunction with the academic subjects which everyday existence and educational requirements demand.

This leads us to consider music as a vocational subject, a phase which has not received much consideration. The demand for experienced performers upon the usual and unusual instruments is as great today as in the past and the augmented orchestra much in vogue in the white-screen theatre is commandeering all the available players.

The American boy is just as well qualified to become a proficient performer upon the oboe, bassoon, French horn and similar instruments—not included in the solo four—as the boys of France, Russia, Italy or Germany. Given the same opportunities for musical instruction it is safe to state that the American boy can become an expert as his foreign cousins and bring to his art a corresponding equivalent in education, morals, manner and musicianship.

O. G. SONNECK

Editor of the Musical Quarterly

The point I wish to make is that the development of music is not exclusively a matter of inspiration. Worldly circumstances and conditions of all kinds, what one might call the factor of art-economics, entered into the genesis and evolution of things musical much more than is realized even by the teachers of musical history or musical appreciation and the writers of books thereon. In other words the sociological aspect of music has not received sufficient attention; and it is precisely this sociological aspect of music which requires encouragement in every way in the strategy of musical education. In that respect the existing literature, and that means incidentally the library as the custodian of literature, does not supplement the personal work of the teacher of appreciation of music sufficiently without further effort on his part. If the central point of view, as here maintained, interests him at all, he will find himself obliged to add research to his manifold other duties. At any rate, he will find himself obliged to use the library and have it used by his students from an unconventional angle of educational purpose rather than the prevailing traditional one.

To assume that such an objective approach to the problem of appreciation of music would rob the subject of the very important and effective element of interest in individual genius would be an error. Even in the field of ermenutics the personal equation will always remain supreme. While for instance the contemporaries of Brahms employed very much the same method of expression, Brahms had his own way of saying the things common to him and his by now mostly forgotten contemporaries. Superimposed, or if you prefer, underimposed on the spirit of a period and its technic is the individual spirit and technic. The synthetic analysis of the individual tendency in relation to the collective tendency constitutes appreciation of music in its most fruitful stage. The codification of such tendencies furnishes the material which systematizes the study of music proper, that is, the appreciation of music as such. Technic is merely the individual ability to do justice to a musical idea within the limits of the chosen tonal media. Hence, the study of technic (in its broadest sense) is a study of such individual ability with whatever lessons may be derived therefrom for other individualities, few or many.

Thomas James Kelly
Cincinnati Conservatory of Music

Archbishop Richard Chenevix Trench had stated the matter clearly in his utterances years ago that "Every word has two existences, a written existence, and a spoken existence." Simplified spelling destroys the record of the written existence of the word. Ever since the sixteenth century there has been a recrudescence of his reform and simplified spelling business. It is not a modern thing at all.

I remember in Chicago at Orchestra Hall one night they were singing "My Bonnie Lies Over the Ocean," and they sang "La Snite as I Lay on My Pillow, La Snite as I Lay on My Bed;" and I said, "What is a snite?" Then they all laughed and sang it as it should be sung "Last night," and it was beautiful and they liked it so well that they applauded themselves for five minutes. You see they had temporarily lost the letter "t."

Again, we are losing the letter "r." One of the most interesting things in a party like this is to watch the audience. About half of you are saying "That is so;" and the other half of you are saying, "That's not so;" but when you get home and begin to watch the neighbors you will find that they do it. I don't think that you do it, of course.

One day I said to a little girl at the conservatory, "See the little squirrel out there on the lawn?" She said, "What?" I said, "See the little squirrel-squirrel-s-q-u-i-r-r-e-l." She said, "Oh, you mean squrl." Many more such instances were cited.

Choosing Pupils' Pieces

By Dr. Annie W. Patterson

Whilst all are aware that pupils vary greatly in their likes and dislikes, as regards both pieces and composers, there is still among teachers and schools too strong a tendency to keep students at a too dead level of selection so far as their practicing repertoire is concerned. This is particularly so in institutions where frequent examination tests require that particular pieces shall be prepared, and not much width of choice in these is allowed to the candidate. The result is that students' acquaintance with the classics is nearly always too limited, unless they be of a resourceful nature and have the courage to try over anything and everything that comes in the way, at least at intervals in the practice hours.

The consequences of all this are by no means wholesome. In the case of the ordinary learner, the possible dryness of a merely technical "set" piece—which must be learned willy nilly may often result in paralyzing a budding musical taste. Even the most apathetic young person should occasionally be allowed a choice of two or more pieces of a similar degree of difficulty, or by a particular composer. More interest in the number thus self-chosen is sure to result, with undoubted better results all round. Then, again, in the case of really good and promising students, how often one discovers that these have been all the time restricted to the same set of pieces, knowing in the end only a limited selection of the masterpieces of the great composers.

To remedy this, would it not be worth a teacher's while, even once a month, to give a semi-private recital to all these pupils, at which a program of as much variety as possible might be rendered in, say, any one grade of efficiency? Then the students might be allowed to decide as to which number each individual liked the best. Thus, let us imagine that a group of Chopin (short) items were submitted to this students' gathering, the choice of each would, no doubt, show a wide range. The preceptor would need to be a skilled interpreter (not always the case with the best teacher); but even this difficulty might be overcome were one or more of the advanced pupils prepared to furnish the entertainment for those who had yet to win their laurels as performers. In regard to the lighter variety of pieces, and especially so-called "modern" items, the need of a tribunal of choice is self-evident, and all really earnest teachers would be wise to give their circle some option in the matter of selection. The Etude itself is a real means to an end in this respect. A monthly Students' Recital of leading items in this admirable musical magazine would undoubtedly afford both pleasure and profit to all taking part, and one type of piece might suggest another, thus catering to all sorts and conditions of taste and ability.

An Opera Pay Roll

The Paris Opera gives a livelihood to singers, musicians, dancers, machinists, scene-painters, and administrative employees to the number of eight hundred. Royalties and representation rights are paid regularly to authors of the operas produced or to their heirs, and a percentage of the price of each ticket sold is set aside for the benefit of the poor.

Three Musical Heresies

By Mathilde Meyer Chapman

1. Playing by Ear Is an Important Aid to Memory

Playing by ear has been strongly condemned by many teachers; and I am well aware that it is to be frowned upon in the case of beginners who are not well grounded in the use of chords. But in the case of pupils who have had several years of study, playing by ear should be fostered rather than condemned.

Have you ever thought of playing by ear as an aid to memory?

Children who play by ear form the habit of remembering melodies, the first requisite necessary for memorizing compositions of any sort. If they have been well trained in the use of simple chords, they are also able to harmonize these melodies; thus they soon learn to know instinctively the proper chord for any tone of the scale.

I once had a pupil whose early training in memorizing had been very much neglected. He could not remember even a simple melody. I tried to get him to memorize the right and left hands of very simple pieces separately, but, boy-like, he was uninterested and the work was for him utter drudgery. I then hit upon the idea of permitting him to play the popular street melodies by ear. This tickled his fancy at once—more particularly, I suppose, because he had been accustomed to look upon it as forbidden. After he had played the melodies by ear, I showed him how to harmonize them by means of simple chords. By imperceptible degrees, and without realizing what was being accomplished, he soon became more proficient in remembering melodies, and in choosing the proper chord for a particular melody note. Best of all, he was *interested,* and his ability to memorize serious compositions increased correspondingly.

2. Operatic Transcriptions Have Their Uses

Operatic transcriptions, to be sure, used to be overdone by the old style teacher. Many of us have vivid recollections of our own youthful days, when we were asked to "play a piece" at the school entertainment, and responded joyfully with a medley of airs from "Martha" or "Il Trovatore." It was overdone, hence the present interdict. But in those days we knew our operatic airs. Who can say the same of the most present-day piano pupils?

Children in small towns have no opportunity of hearing music of this kind, with the exception, perhaps, of an occasional phonograph record. How, then, is a knowledge of opera to be brought to students of this class?

The small town teacher, if she uses these transcriptions in connection with the libretto, so that the pupil gets the words and music at the same time, cannot fail to arouse interest and extend musical knowledge in this direction. Pupils who have played the operatic airs and who know the accompanying words intimately will never be satisfied until they have heard the operas themselves.

Most small town students sooner or later gravitate cityward, and even in the cities the teaching of an occasional opera transcription in connection with the libretto would stimulate in the student a desire to make use of the many advantages for hearing operatic music which he is but too prone to neglect.

3. The Use of Pieces with Arpeggio Variations

This is the most alarming heresy of all, for it deals with the judicious use of such old-style pieces as *Monastery Bells, Con Amore, Lily of the Valley* and *Aeolian Harp*—pieces which, as we know, have for some time been taboo among the better class of teachers. And yet, the children love them! So (whisper it cautiously) do their parents!

It is a well-known psychological truth that interest stimulates the will; a child who is interested will work several times as hard as one who is not. Now, of course, we all teach scales and arpeggios separately; so far, well and good. But how do we apply them? By the use of studies, and more studies, and yet more studies! And we must admit that the average pupil is not interested in studies.

How much better, then, to hand him his pill sugar-coated! Where can one find as many scales and arpeggios to the square inch, and in a form so interesting to both parent and pupil, as in these old-style pieces? I find that pupils who greatly dislike scale and arpeggio studies are quite willing and eager to take their medicine in this fashion, and that they soon, by this means, acquire a respectable scale and arpeggio technic.

Broaden Your Music Study by Learning Languages

By S. M. Charles

The cultural and disciplinary value of languages, classic and modern, has long been recognized by educators; and in spite of the fact that this is an age of specialization, and most people are expected to do one thing well, there is a universal demand for a broader general culture. Since the study of languages is one of the best means of acquiring this culture, it may be worth while to consider in what way it may benefit a music student.

It is fundamentally true that the best educated are the best equipped for life's work, and the more cultured a musician is, the better artist he will be. We may cite the case of Wagner, Liszt, Mendelssohn, Saint-Saëns, Schumann, MacDowell and others, as a proof of this assertion. Music does not occupy a separate sphere, as many imagine, but demands of both teacher and performer a liberal education. Practicing ten hours a day in a secluded room does not make her superior musicianship; there must be time and opportunity for intellectual development also along other lines.

To be a well-rounded man or woman, the musician ought to devote considerable time to the study of languages, ancient and modern. Of the ancient languages, Latin and Greek, the former is by far the most important, for from it have sprung the chief Romance languages, French, Spanish and Italian, which have contributed so much to the world's best literature. Of the Spanish language seventy-five per cent of words are of Latin origin, while French and Italian have an equally high per cent, so that they are easily acquired by one who is conversant with Latin. Study the English dictionary and you will find that fully one-half of the words are derived from the Latin. Hence it is that a knowledge of Latin leads to a more exact and effective use of our own language and enables the student to express himself with clearness and force in his mother-tongue. Being an inflected language, it throws light upon language structure in general, and lays an excellent foundation for all grammatical study. Moreover, few who have struggled with the intricacies of Latin composition, with the numerous rules and exceptions, will contest the assertion that it gives as much discipline to the mind as the study of mathematics.

What a handicap to a music teacher or student to be unable to pronounce correctly the French, German or Italian names or words, which he meets so frequently on the music page, or to be obliged to consult the dictionary constantly for the meaning and pronunciation of musical terms, or directions given in a foreign language. The teacher who is able to pronounce these terms correctly inspires respect and confidence. Language study is especially important for the singer who aspires to the concert or operatic stage. How can he give adequate expression to the text if he does not understand the meaning of the words? True, he may study a translation, but if he does not know the meaning of the individual words, and understand the idiom of the language, there is always danger of misplacing accents or making other ludicrous mistakes.

Goethe has said: "A man acquires a new soul with every language he learns," and Victor Hugo: "A man is as many times a man as the number of languages he speaks." The testimony of these and other great men is a strong argument in favor of language study. The music student should therefore constantly bear in mind, that he cannot afford to neglect any opportunity of acquiring languages, both ancient and modern. But let him not imagine that a mere smattering will do. I have personally dealt with high school pupils who, after having "sat through" a four-year course in French, were nonplussed when asked the meaning of *"main gauche,"* and floundered hopelessly trying to pronounce *Berceuse* or *Chanson d'Amour.* Systematic application will make language study easy, and when once the student becomes conscious of the pleasure and profit derived therefrom he will be fully compensated for his labor.

Getting Down To Musical Bed Rock

How to Build Upon the Real Foundations of Security and Accuracy

By LAURA REMICK COPP

IN the great cities of the new world a modern industry, dealing exclusively with building foundations, has arisen. Corporations, with capital involved running into hundreds of millions of dollars, do nothing but make the colossal sockets in the earth which support the skyscrapers of today. Months are spent in laying the most substantial kind of a foundation. Quicksands, subterranean streams, all sorts of obstacles are met before the Bed Rock is reached.

The teacher of beginners is a builder of foundations. Upon her depends the student's future success, in a very large measure. In one large American city a huge industrial plant in course of construction has just been condemned because the Foundations were sinking. It cost the builders twice the sum to lay new Foundations. Every year thousands of students are finding that it is necessary to lay new foundations in their musical work. It is the purpose of this article to find what is the bed rock that the music teacher must seek and then find how it may be reached so that the musical career of the students will forever rest upon a solid base and not on a shifting quicksand.

Platitudinous as it may seem, the bed rock is perfection —perfect playing from the very beginning. Now do not take issue at once and say that such an exaction is either needless or impossible. Perfect is not too ideal, too Utopian, for the beginner. Whether you are studying by yourself or whether you are a teacher leading others, you will find that the main principles of developing perfection through character will be helpful to you. A Foundation can be laid so that perfection is a natural and inevitable result. But this cannot be done through music alone. It may demand an entire reform of the life habits of the individual.

Habits and Character

To many, accuracy is a gift, but one need not weep disconsolately, if slighted in this regard; for, possessing strength of character, one can supply what was omitted and laugh at the fates that smiled upon him. Accuracy is largely a matter of habit; and that can be formed, so if one wishes to be correct, has a strong desire, and will be strict with himself, that most wished-for of qualities, and indispensable to an artist, may be his. It is necessary to do anything only enough times alike to impress the subconscious mind, and then-presto-it has to be thought of no more; for that great silent servant of ours attends to it for us and we are relieved of any conscious effect; the habit is formed and experience teaches that it is hard to break.

A child coming in from play threw her wraps on chairs in the living room. She was old enough to do differently, so the mother thought it time to instill order into her mind. She told her little daughter to hang her hat and coat in the hall. The child rebelled as most of them do at any restraint; but the mother insisted, leading her little one along into the hallway. Then she was told one of the hooks on the hall-tree was her own and every time she came in from out-of-doors she would be expected to hang her wraps upon it. Rather pleased with the privilege the youngster happily and with some degree of pride hung them up. But the next day she came in and, forgetting the waiting hook, threw down her play-togs again. The mother chided and the most of the scene was re-enacted, but she won. After a few more such evenings, the child finding she was expected to obey went on her own initiative; the habit was formed and a cornerstone, an important one, laid in her character, for is not order heaven's first law? So if you were not born accurate it is not too late, become so now.

The "enough times alike" is the first requisite and for many the hardest. If one has to play c-e-g-a-c and he strikes c-e-f-a-c the first time, d-e-g-a-c the next, and so on, he will not use the required notes "enough times" to be sure of them. Psychologists tell us that little grooves are formed in the brain by thinking. If we want to impress anything upon our minds we must think the same way "enough times" and hard enough to make a groove; then the train of thought runs smoothly along the track made for it on the cerebral surface. There are students who do not realize what a sufficient amount means and that each section must be played again and again, so that it is mentally fixed. Naturally, a difficult passage is to be gone over much more than an easy one. Keep the mind active and fully upon the task in hand, lest some of the precious "times" be wasted. The better the concentration the fewer repetitions necessary; but there must be the number needed to make a vivid impression. Play with full *realization* each tone, each phrase; let no detail escape.

Then, too, when the attention is lax mistakes creep in. It seems as though they perch themselves beside us, waiting longingly for the chance to spring upon the artistic fabric we are weaving so lovingly and to tear it to atoms, but after quiet concentrated study becomes for us an attainment they will surely turn away dejectedly and disconsolately to find some other less wary and guarded a struggler. Not only "enough times" but "alike" and, of course, right. Small wonder that it takes the closest care!

Leschetizky's Famous Test of Perfection

Leschetizky was fond of telling this story of his early efforts: When a young boy his father was trying to make him understand good practice, so he told him to take six dried peas and put them in his coat pocket. When he had played the piece in question, without a mistake, six times in succession, he could transfer the peas to the other pocket and call his practicing finished. The lad thought it was easy and he would soon be through his usually arduous morning's task, so started off triumphantly. The first time went correctly and one of the peas was put in the other pocket, also the second went as well; so, quite elated and in rather a swagger fashion, he began the third. But, alas for his high hopes, he struck false notes and had to put the two peas already in the second pocket back into the first. Rather a crestfallen little player began all over again and as he said, "I never put in such a forenoon's work before, but I finally performed that piece six times in succession perfectly and had at last all of the peas safely bestowed in the other pocket."

Well, it is a task, but there are many aids, the first and most important being slow playing, which gives the brain time to act, the ear to hear, the eyes to see, the fingers to prepare. Many do not realize that this first practice must be different from any that will ever be needed again on the same material because it is new and unknown and its acquaintance yet to be made, just as in forming friendships among people. Later on going so slowly as in the first few readings will not be required since the ear, eye, brain and fingers will then know *what to expect*. When one rushes heedlessly along and cannot watch all proceedings, trouble ensues; for, in order to impress the brain and make a furrow, it is necessary to think hard and with great concentration.

LAURA REMICK COPP

Wasted Practice Time

No good dramatic reader would expect to render at sight a difficult selection, as he would not know the thought of the writer; but how many music students wait for this? The crying need of the average pupil is foundational practice or the right kind, at the beginning. What comes later is the result of what happens at first. Many think, "Oh, after I have learned it all will be right and there will be no mistakes; of course, there have to be some when I don't know it." Which reasoning is very illogical. The accurate learning should come at the start, so as to avoid falseness, then there is none. Why is it necessary to learn errors "in" and then learn them "out" again? A good definition for a mistake is "wasted time."

If pupils really practice they will not err, but they confuse *attempts at performance* with practice. When one reads at sight he is expected to try to take in as much as he can and go right along playing in tempo, but this is not practicing. Sight reading has its proper place and it is an excellent acquisition, but no good musician will sight-read a composition he expects to finish and have in his repertoire. That will be *studied* instead, and so avoid all of the inaccuracies that would creep in with too rapid reading or trying to play it. Few know what real, I might say, artistic study is. Music demands a scholarly brain and calm, deliberate calculation even as other subjects. Study a new piece, instead of sight-read it, and see the difference.

Exact knowledge is another aid. First know the key, the time, and count some measures ahead mentally, then read the notes, attend to the fingering, touch and phrasing. All of this is to be done before a note is played and the passage is to be heard in the head before placed upon the keyboard. But some one will surely say, "I want to hear how it sounds. I want to see if it is pretty; oh, I just can't wait for all that." Well, if you are going to make a fine musician you will have to learn to wait; and the difference in the quality of what you hear after you have learned foundational practice will repay. Possibly your teacher will play the piece for you or you can hear it at a concert; but, anyway, wait until you know what is required before attempting it. You must play in the key, in time, the correct notes and fingering, with attention to touch and phrasing; but you are not expected to do so *in tempo*. The speed with or at which you practice and the one eventually used are two different matters, as all should know; and *attempting* a piece is not learning it.

Study the Left Hand First

Each hand should be studied separately, preferably the left first. If one is a student of harmony and can analyze chords, so much the better. In the key of B-flat, if he knows that B-flat D F spells the tonic, or first chord of the key, E-flat G B-flat the sub-dominant or fourth, and F A C E-flat the dominant seventh, or fifth—merely naming the most common chords—reading and memorizing both are much simplified. Play the left hand part consciously, thinking each note, watching it weave a pattern on the keyboard; and this is most important, going at a tempo no faster than accuracy will allow. A child learning to walk does not do so at once but takes one step, then another, and another, until he feels he can walk. As proficiency, a readier knowledge and the ability to think more quickly come, speed may be undertaken; then if all goes well a little more, and so on. If the contrary prevails, one must retrace his steps.

Take a portion of the right-hand part, the same way, consciously, with full attention upon every detail, and practice tempo. Then put the hands together. And now the crucial moment has arrived; for, if one went slowly before, he must go much more so now, having two hands instead of one to watch and the going-together to consider. As previously, play a tiny bit faster and then a little more as is consistent. If you make a mistake go back and repeat at same tempo or a slower one before increasing it.

The metronome is an excellent aid for this kind of work, as it marks the augmentation of speed so gradually that errors cannot be made. If each time the passage is perfectly played nothing can go wrong—and this is not difficult to do if one is willing to go slowly enough

—concentrate and work up by slight degrees. Most pupils do not know what the letters s-l-o-w spell; at least, they play as if they did not.

Study in small sections. "Don't bite off more than you can chew." Four measures are enough to do at one time; which will be astonishing news to many who read page after page or clear through a composition at once. Better do four measures and do them well, then four more and eight are done. In that way genuine progress is made and our goal of perfection reached.

Mark Repeated Sections

Look through a piece and put in parentheses all repeated sections; then count the number of entirely new and different measures, and oftentimes it is surprising to see how few four-measure groups there really are. Some passages are transposed, which helps and often figures are repeated over and over. Four measures perfect, then four and then four more, until the whole work is united, well-rounded-out and symmetrical; for even as the composer put it together bit by bit and worked over it, toiling here, polishing there, even so must we, his co-laborers, take it apart analytically and recreate it part by part until our interpretation becomes a thing of art, of consummate beauty because it has been completed with loving care.

Beginners should learn this mode of study in the first few lessons; then they will have the advantage over more advanced players who do not know how. Those who are advanced and have practiced badly need not be discouraged, they can reform. Suppose a man aspired to be an architect and had design, color, ability to sketch and draw, all other requisites, but was weak in mathematics. If he really loved his work and felt the inner urge to outward expression along this line, would he not brush up on his "math"? And so in technical requirements and modes of study, if there are bad habits to be broken and new ones formed in their places, shall it not be done? It is well worth the effort and the satisfaction of one piece perfectly practiced until correctly learned will prove it.

Interpretation should not be attempted nor thought of until all of this foundational work is out of the way, and the better it is done, the sooner it is disposed of. Enthusiastic temperaments will have a struggle to hold themselves in check; but remember that a display of temperament or temper sometimes is not necessarily art; and, when one rises from the instrument very much heated, with hair disheveled and, if you are a man, with necktie awry, it does not mean always that you have played like a god. You probably have enjoyed yourself but you may have played like the ——, well, very, very badly. You have let loose your feelings and expressed yourself; but what of your auditors and art? Learn foundational study and beware of over-self-expression.

Cold-Blooded Practice

Practice must be analytical, cold-blooded, studied and worked over until one knows his ground; then, last of all, comes interpretation, bringing out the soul of the music and its divine message to us mortals here below. We should undertake this with clean hands, a pure heart and mind and with ear unsullied by false notes, wrong time, inaccurate fingering and all of the ghosts, which rise out of imperfect practice to mock and deride us in moments meant for the soul's exaltation.

There are many roads to Parnassus, and good, too; but one that surely will lead far up the mountain-side, till the climber can gain a broad view of the valley below and reach the summit by easy approach, is foundational practice.

"There is, perhaps, no more vital problem for the young musical person than to find out the occupation for which he is best fitted by talent."—Charles H. Farnsworth.

* * *

"The longer I play, the more I lean to the old masters as against the modernists. It is not such a limited field as one might think; and, after all, no two of us play them alike."—Efrem Zimbalist.

Isolating the Rhythm

By Eugene Di Pirani

Music is, or should be, composed of three elements: Rhythm, Melody and Harmony.

Modern music tries to emancipate itself from these three "tyrants" and, to a certain extent, has succeeded in so doing. It really is difficult to discover in modern musical concoctions any trace of these constituents—no rhythm, very scanty melody and instead of harmony, complete discord!

The good old classics and the more reasonable portion of the contemporaries, however, do not believe in throwing to the rubbish heap these integral parts of music and stick faithfully to them "until death do them part."

Let us speak today of dear, time-honored Rhythm.

There are musically gifted students who are lacking in rhythmic feeling. Especially when it comes to syncopated figures, to intricate pauses, they are at a loss to understand and perform them. That is bad enough if the pupil is playing *alone;* but, at least, it does not interrupt his performance; and, in spite of the faults, he can continue his playing. The case is, however, aggravated in *ensemble* playing, where other performers are affected by the blunders of one. Like the "Siamese twins," if the one dies the other must share his fate. In our case, if the one stumbles, all the others must stop; all must start again from the very beginning. There is nothing more exasperating than a player without exact rhythm; and I have often pondered ways and means to instill some rhythmical feelings into those who are lacking them.

First I had the pupil make rhythmical exercises with a pencil, beating on the table. That expedient helped some; but it proved tedious. I had to find something more pleasing, more "palatable," and found that the *Tambourine* answered the purpose better than anything else. It has a pleasing sound; it is inexpensive (one can buy one for one dollar); it has great rhythmical possibilities, allowing the execution of trills, repeated notes, tremolos and all kind of florid figures; it is, furthermore, as Meredith said, "a satisfying instrument, because of its rotundity." Haydn had a great partiality for the drum (*Tamburino* means little drum).

The pupil has one tambourine and the teacher another. Let them perform in strict time and with strong accentuation, counting loud, first very slowly and then gradually increasing in rapidity the following set of exercises.

For the strong accented notes I use four fingers (2, 3, 4, 5,) together, for the weaker notes the thumb. Thrills and repeated notes are played with a rapid side motion of the hand, like the tremolo on the piano.

After having gone through these exercises I have the pupil "drum" on the tambourine entire parts of pieces, where the rhythm offers unusual difficulty. In this way I "isolate the rhythm" and present it to the pupil divested of the two other elements, the melody and the harmony. "Divide et impera" was the motto of some old tyrant. We do the same thing in music, although with a more peaceful and noble end in view. We divide one friend, the rhythm, from his two pals, and thus, isolated, we overpower him.

With my pupils the tambourine has now become a craze. They have a lot of fun with it and so "ridendo" they learn to master one of the most difficult branches of music.

Fundamental Music Forms

By Alfredo Trinchieri

In all writing, whether literary or musical, the first consideration, of course, is to have something worth the saying, and, after that, to choose the form in which this thought shall be expressed.

In music a form may consist of one or more periods. When more than one is used, they must be sufficiently related to create homogeneity and yet be more or less contrasted for the sake of variety and interest, the last one ending with a full and decided close.

A composition containing but a single form is said to be in unitary form. It may have almost any number of periods, though usually not more than three are used, and of these the first and last must be similar. Single church tunes and folk songs are in unitary form. The slow, introductory movement of the "Der Freischutz Overture" is a noteworthy example in a single period; while Schumann's *Träumerei* and Mendelssohn's *Hunting Song* are more elaborate illustrations.

A binary form is composed of two unitary forms. These may or may not be joined by intermediate passages or transitional periods. They stand in the relation of principal and second, the principal standing at the beginning, and also following the second, thus creating a spirit of unity. Chopin's *Valse in D flat, Op. 64* and Schubert's *Scherzo in B flat* are illustrations easily analyzed.

A ternary form contains three distinct unitary forms. These will be united by short interludes or transition passages. The Rondo is the most common form of this nature. Excellent examples are the *Adagio* from Beethoven's *Sonata Pathetique* and the *Rondo* from his *Sonata in C;* also Schumann's *Kreisleriana, Op. 16, No. 2.*

An Inspiration From the Past

By Harriet B. Pennell

While studying with a well-known teacher, it occurred to me that his remarks, if jotted down while fresh in mind, might prove of interest in the future. To this end, as soon as possible after the lesson, I would enter in a blank book a detailed account of the lesson as nearly verbatim as memory would permit.

To-day this little book, containing the valuable comments and advice of a famous teacher, is one of my treasures. To bring back the very atmosphere of his lessons I have only to turn to its pages, select the piece of music I was studying at that time, and go through it with his criticism before me—often in his exact words.

This musical diary serves to fix the lesson more firmly in mind at the time and from my own experience I can recommend it as a valuable addition to one's musical library in future years.

(The Pianoscript Book, compiled by Alberto Jonas, offers a ready-made means of recording precisely such notes as the author suggests.—Editor.)

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M. A.

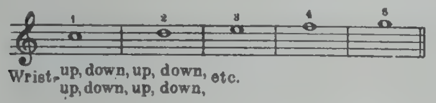
This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered department. Full name and address must accompany all inquiries.

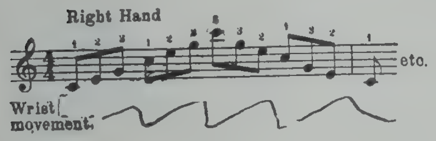
Tightened Muscles

I have a very nervous little boy whom I cannot teach to relax. He continually depresses his knuckles. While one hand is playing he uses the other to hold onto the piano or keeps it in a cramped position at his side.

I have given him finger and wrist exercises to be done on a table. He has learned to relax while doing these, but as soon as he goes to the piano he tightens up again. It is agony for him to try to play hands together. Are there any hopes for him?—"ANXIOUS."

One of the chief difficulties in acquiring muscular control is to keep the fingers firm while the wrist is still relaxed. Have the boy hold a large baseball firmly in his hand. This will give his fingers the proper shape relative to the back of his hand. Then, keeping the fingers firmly in this position, let him hold a key down with each finger in turn, while he works the wrist up and down as far as possible, using the fingers as a kind of hinge, thus:





This exercise should be repeated whenever his knuckles tend to fall inward. If you keep the baseball before his mind, perhaps he will sit up and take notice!

Pedaling and Fingering

Pedaling has often confused me. Should the pedal marks be followed precisely, as to lowering or releasing the damper pedal, or should one study the effects for himself? I have been taught to press down the pedal after a given note has been struck; but in some cases the pedal marks indicate clearly that in many instances the pedal is to be pressed down before the note is struck. Can you recommend a book on the subject?

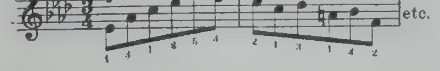
In regard to fingering, not considering misprints, should only the fingers that are marked be used?—E. S.

Both of these questions concern the markings which are found in edited piano compositions. Generally speaking, one should regard such markings as a possible help, but in no case as absolutely decisive, since they are always subject to printers' mistakes or to errors of judgment on the part of the editor.

Take the matter of the proper use of the damper pedal, for instance, for which the ordinary marking is *Ped.* where it is to be depressed and * where it is to be released. As far as the first sign is concerned, one might press down the pedal anywhere over the three letters, so that the direction is hopelessly vague. Another kind of marking that is much more definite is either | ⁄| or |___/, the vertical lines showing just where the pedal is to go on or off. Separate notes, placed beneath the staff, are sometimes similarly used, though they are open to the objection of confusion with the regular staff notes.

All such markings, however, should be tested by one's own judgment and æsthetic sense. In most cases the pedal should be depressed directly after the note which is to be sustained is sounded; in this way, confusion with the preceding note is avoided and life is added to the tone by the addition of the sympathetic vibration of other strings. But in quick tempo, where the measures are separated by staccato notes or rests, it may be well to use the pedal directly on the first beats of the measures. I can think of no reason why the pedal should ever be depressed *before* its note is struck. For a book on the subject, consult *The Pedals of the Pianoforte*, by Hans Schmitt (Presser).

Again, as to fingering, I teach my pupils to use the fingering that is given unless I change it for them specifically, or unless they can find for themselves a fingering that is obviously better adapted to their hands, in which case they should mark the alterations definitely over or under the notes. After all, the best fingering is that by which the effect desired is gained in the simplest possible way. What this way is, is often a matter of individual opinion: hence we find the same passages fingered radically differently by different editors, all of whom obviously cannot be right. Take the following right-hand passage from Chopin's *Ballade in A-flat:*



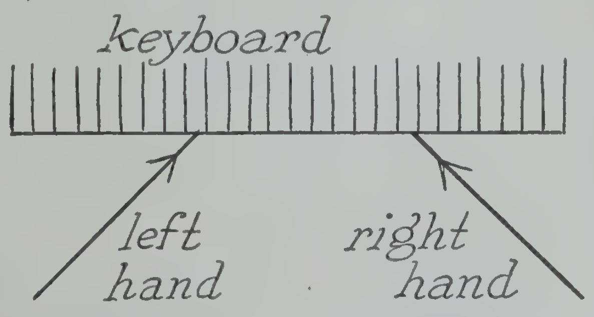
Above this passage is indicated the fingering generally employed; and below it is the fingering suggested by Mark Hambourg in his book *How to Play the Piano*—a fingering which he justifies on the ground that it substitutes stronger for weak fingers, eliminating the fourth finger entirely.

There are many such theories about fingering, some of them resulting in fussy and awkward motions. Weigh them all carefully, and let your own common sense cast the deciding vote.

A Nervous Pupil

I have a pupil nine years old, who is of a very nervous disposition, so that I have trouble in getting her to use the correct movements in playing. What would you advise? She is continually twisting her hands about.—I. G.

Don't worry too much about irritating motions, but gradually eliminate them by suggesting better positions. Perhaps the greatest cause of such twisting is in putting the thumb under the other fingers or the other fingers over the thumb, especially in playing scales. A valuable aid toward quietness is in keeping the hands continually turned toward each other, as though they were "toeing in," thus:



This position is perfectly easy when the hands are near together and directly in front of the body; but it becomes increasingly difficult as they separate, especially when the right hand is playing the highest notes; so that this is where your pupil will need the most careful watching.

Otherwise, keep her wrist relaxed; see that, by using the easier forearm rotation, she avoids jumping her wrist up and down; and exert a calming influence over her refractory nerves by every possible means. Nervousness will do no great harm if it can only be kept above the arm, and does not run down into the wrist and fingers!

Studies and Counting

(1) Please print a list of studies suitable to be used in connection with the Presser books or Matthews' Graded Course, from Grade I to Grade V, inclusive.

(2) Should the teacher insist that the pupil count aloud?—I. G.

	Grade
(1) Gurlitt, Op. 117: *The First Lessons*	1
Loeschhorn, Op. 65, 3 books	2-3
Brauer, Op. 15	3
Berens, Op. 61, books 1 and 2	3-4
Cramer, books 1 and 2 (von Bülow edition)	5
Heller, Op. 46	4-5

(2) Counting aloud should be required until the pupil has mastered the rhythm of a composition. After he has reached this point he may be released from this harrowing occupation. I have known pupils so addicted to the 1-2-3-4 habit that they kept it up even when playing before friends or the public!

Steadiness of Tempo

How should one develop in a child a capacity for imagining a basic speed and returning to it after an accelerando or ritard?

M. B. B.

The whole matter resolves itself into the question as to how to develop a child's power of realizing and controlling tempo; for if he is able to do this, he need have no difficulty in returning to a tempo after it has been once established.

We often hear it said, and perhaps say ourselves in a moment of despair, that such and such a person has absolutely no sense of rhythm. But this cannot be true, if the person is able to walk steadily along the street; otherwise we suspect him of having violated the Volstead law. Every person has a pretty reliable metronome within him, in the regular pulsations of his heart; and it is this inward monitor that makes it possible for him to walk steadily, to hammer with even strokes, or to play in an orchestra without receiving a rap from the conductor's baton.

So the trouble arises not from a lack of the rhythmic sense, but rather from a failure to pay attention to the demands of that sense. And, I regret to say, this failure is generally the fault of the teacher, who is so occupied with correct notes, finger-motions and fussy details that he overlooks the most vital factor of all, namely the measurement of the music; just as though one should stock a dry-goods store full of all kinds of wares, and should omit to provide yardsticks, allowing the clerks to measure cloth by guess-work!

Hear what Tobias Matthay, in his *Musical Interpretation* says on this subject:

"Believe me, no one ever plays 'out of time' if he really *attends* to time. The fault is that pupils *do not attend,* nay, even find it impossible to attend—but only because they have not learned to do so. It is precisely such attention which you have to teach them, every pupil you have, and all the time.

"The only way to teach them is unremittingly to insist on their attending to their own sense to Time-throb or sense of Rhythm while you have the chance. Do not allow their rhythmical attention to flag for a moment while they are with you. Moreover, you, yourself, will have to be alert all the time, else your own Imitative-sense will cause you unconsciously to follow their lax pulse-feeling, and you, yourself, being misled, will fail to notice their aberrations from Time-continuity. You must be alert all the while so that your own Time-sense may remain unshaken, and so that you may compare your pupils' doings (in this respect) with what you feel is imperative."

Let me add that Mr. Matthay practices what he preaches; that every instant while he is giving a lesson he is either following intensely the throb or the rhythm, or is pouncing on the pupil for neglecting it.

From the beginning, then, teach the child to feel accurate and even pulses; and do not allow him to introduce modifications of tempo until he has acquired the proper time-stability. Give him exercises in marching, clapping his hands, beating time, and counting out loud. Teach him the rhythmic patter of each piece by having him drum it out with one finger, on a single tone. Also play the part for one hand while he plays that of the other.

And remember, too that the most stabilizing factor is *accent.* I have heard pupils play at recitals with perfect equality of notes, but in a stupid, monotonous style that was unbearable. Accent, more than anything else, evidences attention to the beat, and vitalizes the whole performance. So insist on accent continually: too much of it is far better than too little.

Is the metronome a help, you ask? Sometimes, yes. Finger exercises and purely mechanical studies may employ it with advantage, to a limited extent. But used too much, it will take away the pupil's self-reliance, just as a cork artificially buoys up the swimmer. To quote Matthay again:

"You see, the pupil has to learn to play to a pulse-throb of his own making all the while; it is therefore of very little use indeed learning to pay obedience to an outside, machine-made pulse-throb. And in any sense, a metronome is apt to kill the finer time-sense implied by Rubato."

THE PUBLIC SCHOOLS AND MUSIC EDUCATION

Improving School Music Conditions in the South

By PAUL JOHN WEAVER

President Southern Supervisors' Conference, Director of Music, University of North Carolina

BEFORE we can discuss the improvement of school music conditions in the South, we must examine the present state of the work; and we must determine the causes for the present condition. If we find some unsatisfactory conditions, we can improve them only by removing the causes.

To begin with, we must claim for the South an almost universal love of music. Every southerner loves to sing or fiddle or pick on his banjo; and the humblest musician is sure of an appreciative audience. There is something intangible in the spirit of the South which puts this love of music in the souls of its sons and daughters, that intangible something which was given its best expression in the simple and much-loved songs of Stephen Foster. One would naturally expect to find in such a music-loving country a high development of the subject in all of its aspects. We are concerned here only with school music; and let us see what stage of development has been reached in that field.

A Specialized Subject

It need hardly be stated that school music is a highly specialized branch of teaching, requiring preparation both in music and pedagogy. The subject can be adequately taught only by teachers with special equipment along these two lines. Some time ago the writer made a study of the number of special music teachers employed in the various States of the country, comparing the percentages of cities of over three thousand employing such teachers. It was found that in 1917 two States (South Dakota and Montana) ranked one hundred per cent; that is, they had special music teachers in every city of over three thousand population. Of the other States, thirteen ranked above twenty per cent, and all but ten ranked over fifty per cent. The significant fact here is that of these ten States with the least number of special music teachers, nine were Southern States. A study of more recent figures is under way, and indicates improvement in most of these lowest-ranking States.

What has been the effect of this condition? In the main, it has meant unsystematized and sporadic music teaching, with emphasis on music for special occasions and with an enormous neglect of serious work of the more technical sort. The lack of technical work has confined teachers and pupils to the use of simple material which has often had no musical value; and the result has been low standards musically and artistically.

A Primary Cause

The primary cause for this state of affairs is to be found in the recent history of the South. Only in the last few years has this section of the country been emerging from the post-war reconstruction period. School boards have had such small funds that only the "most essential" subjects could be taught, and even then the teachers were greatly underpaid. In some places schools have been closed for lack of funds. The school year has been short, and even now some southern states have only seven grades in their schools.

But what has been the case in those Southern cities where there have been special teachers of music? Many of these cities now have music work on a par with the best country. But we must admit, with regret and chagrin, the work in other cities has been only a name and not a fact. The reasons for this are the inadequate preparation of the teachers, the over-crowding of children to the point of pandemodium, and the great under-paying of the teachers. All three of these causes come from the same source: the school-board's lack of funds.

This primary source of our troubles is curing itself. The people of the South are in a more secure financial position to-day than they have been for generations. This financial well-being is a bearing fruit in all lines of educational work, and the rate of improvement of conditions is rapidly increasing. In music, the improvement is being shown along several lines: the enlargement and extension of courses for the training of school music teachers, the increase in the number of these teachers, the increased interest in the work on the part of civic bodies, the awakened consciousness of the school music teachers themselves.

A Powerful Agency

If the colleges and normal schools are to be blamed for the inadequancy of the training of our Southern school music teachers in the past, they are equally to be looked to as a most powerful agency for the improvement of this condition in the future. As they have been given more and more financial support, they have put in new courses, added to and lengthened by their old courses, brought in efficient trainers of teachers and given assistance to many public school systems. It is now possible for the student to receive in the South as good training in public school music methods and practice as she could get anywhere else in the country.

The most encouraging sign of improvement at present and hope for improvement in the future are to be found in the attitude of the Southern supervisors themselves. That they are awake to present conditions, and that they are fighting to better them, are shown most plainly in the organization last spring of the Southern Supervisors' Conference. Over a hundred supervisors attended the meeting for organization, and a more earnest, widewake group of teachers could not be found. Several hundred attended our first meeting in Atlanta, December 14th to 16th, 1923.

But the greatest hope for improvement in our field lies with the Women's Clubs, the Music Clubs and the civic and semi-civic bodies of the South. If these groups are awake to the value of school music and to our need for more and better school music, our task will be made easy. For they are the source of power in our communities. The supervisors are organized for a great campaign for music education. They know that they will receive the support of these other powerful organizations.

Let us exemplify this whole situation by looking at conditions in North Carolina, which will be, on the whole, representative of those of the whole South. From the end of the Civil War until the time of the World War, North Carolina was gradually rebuilding her strength and improving her conditions. At the outbreak of the World War she was one of the poor States of the union; at the end of the World War her crop values were surpassed by only three other States in the whole country, and last year they were surpassed by only eight or nine other States. This new wealth has had an immediate effect upon the educational system of the State, to the point of almost revolutionizing it. New school houses have sprung up everywhere; schools have been consolidated and busses provided for children living at longer distances; salaries have been increased, and a system of certification introduced which makes the rate of pay correspond with the amount of preparation and experience; the newer subjects have been introduced for the first time in many schools, and have been encouraged and strengthened where they already existed.

The Etude and School Music

THE ETUDE has been systematically developing an interest in music in the larger sense in the Public Schools. Its policy is to print from time to time regular articles from the leaders in this field, not merely for the advantage of the public school teacher but to enable the student, the teacher and the parent to coordinate the musical work in the home with that of the school. Many fine articles are to come including one in September from Mr. Glenn H. Woods on bands and orchestras in public school. Mr. Woods has made a national reputation in this field.

A Rapid Change

In music the change has been so rapid and the improvement so great that it can not be accurately measured at the present time. The State Board of Education has made music compulsory in all of the grade schools of the State, paying part of the salary of the special music teachers as it does of the other teachers. A city of fifty thousand, which had never had any school music up to three years ago, now has a remarkable development, comparable in quantity and quality with anything in the country—four very capable supervisors, several bands and orchestras with ten thousand dollars worth of new instruments, two thousand five hundred dollars worth of new phonographs and records, and most important of all, the entire community thoroughly interested in and heartily supporting the work. Another city of twenty-five thousand, which has had one supervisor so overburdened that she could not work efficiently, has increased its force this year to five special music teachers. The largest training school for teachers in the State has put in a four-year course for music supervisors; and the State University has built up large classes in school music in its summer session for teachers—a development so rapid and so enormous that it can hardly be realized.

In this whole growth and improvement, the music teacher of the South should be very zealous to preserve the folk-music of the section. This folk literature is one of the most valuable musical assets of the country. It is of two main types—the Negro song and the music of the old white settlers, handed by word of mouth down from generation to generation. The North Carolina Folk-Lore Society, mainly through the efforts of Dr. Frank C. Brown of Trinity College, Durham, North Carolina, has collected at least three thousand different folk-songs of these two types. They include examples of all sorts of Negro music, examples of most of the old Scottish and English folk-songs and a mass of material that seems to be purely native in origin. If folk music is such a vital part of our music education program, as most of us believe, what a wealth of material we have in the Southland that is our very own profession! The Southern music supervisor is awake. He realizes the condition of his work; he realizes the difficulties he has to overcome; he realizes that a great change is in progress; and he realizes most of all the opportunities he has before him. He can not be discouraged, but looks with satisfaction to the improvement he now sees and with eagerness to the improvement he knows must come in the near future.

Self-Test Questions on Mr. Weaver's Article

(1) How do the people of the South rank as lovers of art?

(2) How do the Southern States rank in their teaching of music in the public schools?

(3) Has there been advance in this line in recent years; and, if so, how much?

(4) What facilities do the colleges of the South offer for the study of public school music?

(5) How do the Southern States rank in the production of folk music?

A Lesson Analysis of Schumann's Träumerei

By CLAYTON JOHNS

Professor of Pianoforte Playing, New England Conservatory

IN the days of Theodore Thomas and his traveling orchestra, Schumann's *Träumerei* was one of Thomas' favorite small pieces, played with muted strings, or "sordini." Most violin students know about sordini, and most piano students *ought* to know about the so-called "soft pedal," by means of which in modern pianos the hammers are shoved over to two strings, instead of three, thereby producing a muffled tone.

In old times the pianoforte had only two strings for each tone, and one of the two strings, having been muted, the term of "una corda" (one string) had a real significance, but now-a-days it is a misnomer, as the sign or term, instead of "una corda," should be "duo corde" (two strings). The old sign remains, but everybody understands, now, that "una corda" means the "soft-pedal," with two strings. Since a dreamy effect is produced by muted strings, there is no wonder that Mr. Thomas chose to place Schumann's *Träumerei* after a brilliant piece by way of contrast. Schumann never thought that his little piano piece would ever come to such glory; nevertheless, it still sheds glory to all music-lovers all around the wide world.

Träumerei is only *one* of the "Kinderscenen" (Scenes of Childhood), but to play it *well* demands a high order of musicianship. Schumann loved to write dreamy music. In his sets of short movements, you generally find one or several dreamy ones among them. *"Träumerei,"* is No. 7 of the Kinderscenen, and the author of this article quotes from a copy edited by Clara, the wife of Robert Schumann. The edition is therefore well authorzed.

Let us now analyze this piece in detail hoping to bring out some of the beauties, and to lend a helping hand to a young student. To begin with, the piece is written in he key of F. If it were in G, or in E, the effect would e entirely different. The key of G, or E, is rather rilliant and high pitched in quality, where the key of F as a quieting influence, superinducing dreaminess. This, ombined with the use of the "soft-pedal," establishes the roper setting.

The next step to be taken is to consider the quality of one. Since it is taken for granted that *Träumerei* is a leasant dream, the tone, therefore, should be pleasant; not aving any real accent, only having pressure touch with ingers and wrists well relaxed, molding the form, not chiselng it. The Schumann edition has but one "p" mark, three ritards" and five slight "crescendos." The rest of the inerpretation must be left to the musical instinct of the tudent.

Now, for a cut and dried analysis (neither Schumann nor is music was ever cut and dried). *Träumerei* is such a hort piece; it is printed in full, and excepting for a little ngering and a little pedaling, the text conforms closely to 'lara Schumann's edition.

The measures are numbered. The first eight measures re repeated, so the second part begins with measure 17. Vith measure 17 and the next seven measures, are all moduatory with measure 25, the *theme* returns and continues the end.

In the old order of things musical compositions were enerally made up of sections and phrases, multiples of vos, fours and eights. Schumann often broke the rule, dding or subtracting one or more measures to or from phrase; but in *Träumerei,* the phrase divisions are enrely "according to Hoyle." As you see, the thirty-two easures are strictly mathematical (four goes into irty-two eight times). If you divide each phrase of ur measures, you will find each sub-division, what is lled a section; the first section of the two is something ke a question, and the second section is something like e answer (only, "something like," because the real swer comes at the end of the piece). In *Träumerei* e first section ends on the third beat of the second easure, and the second section ends on the third beat measure four. The beginning fourth beat corresponds the fourth beat of each section; therefore each secon begins on the fourth beat and ends on the third, us completing the number of beats in each section or rase.

Imaginary Breaths

If you take an imaginary breath at the end of the first ction, you might place a comma after it. And after the cond section, place a semi-colon; Another comma after e third section, often a colon after the fourth section, cause the eighth measure ends on the dominant, so of urse, the piece is only half done. In such a short piece, ere would be only *one* period, or full stop, and *that* one uld be at the end.

With measure 17 the second part begins, like the measure the first part; but with measure 18 both melody and rmony set forth to explore new paths, but after exploring em, through measure 18, they come to a halt, harmonically, landing in G minor, at the beginning of measure 19. In measures 19-20, the adventurer looks round to see what he can see in the way of variety until, with measure 21, he becomes more and more inquisitive and again looks round from a higher point of vantage measure 22. Having seen a very different landscape and feeling a little tired, he decides to come down the hill, and returns home, measure 24, beat 4. After his wanderings he is content to *remain* at home and apparently thinks there is no place like home, measures 25, 26, 27, 28. Compare measures 25, 26 27, 28 with measures 1, 2, 3, 4. If, with measure 30, beat 3, the traveler should ever be tempted to stray from his own fireside; after a pause, long enough to consider his mistake, he comes back for good and all, and never goes away again.

In all melodic compositions the melody is the chief thing. In *Träumerei* the melody must stand out and above the harmony, excepting the imitative passage. measures 15 to 16, which becomes more prominent, with measure 17 the melody is resumed and continues through measure 18 until the next imitative passage comes, measure 19 to 20. The next phrase of four measures, 21 to 24, is very much like measure 17 to 20, only a little more progressive. Returning to the theme, with measure 25, the student can apply the melodic principles for himself to the last eight measures. The finality of the melody touch is very important, singing it, by pressing and relaxing the long notes, while the eighth notes should be relaxed or slightly tensioned, depending upon the increase or decrease of tone.

The Importance of the Bass

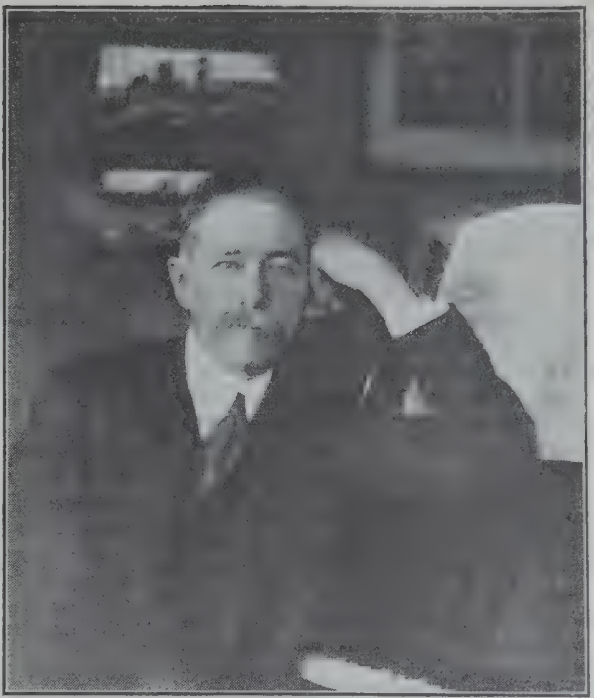
After the melody the bass is next in importance; therefore the bass in the first measure should have an uncommonly good tune as a foundation. The second beat of measure two begins with a grace note, but it must sound like a real bass note and be caught by the pedal; the rest of the chord should be relaxed and "rolled up" to the d, then pressed down. The first two measures of the bass are sufficient to give an idea of the rest of the piece. The inner voices should be more subdued than the melody and bass, excepting for the imitative measures, where each voice is given a chance to speak for itself. Be sure not to accent too strongly the chords in the right and left hands on the second beat of measure; and in similar measures give an extra pressure to them with a syncopated effect, but remember that they are harmonic, not melodic.

Thinking of phrase divisions: The first four measures are in the key of F. On the second beat of measure 4, the chord is *on* the fifth degree of the I case, not *in* the dominant. With measure 5, beginning with the second phrase, it repeats measure 1; but with the second beat of measure 6, a distinct modulation occurs, which adds a new interest, taking the first phrase *out* of the key and landing it on, and in, the dominant, measure 8. The next eight measures are exactly like the first eight measures. With the first beat of measure 16, by reclaiming the b natural on the first beat, the b flat on the fourth beat returns to the original key F. Measure 17 sharts again, hand in hand, like measure 1, but parts company immediately, springing into another key, entirely new, second beat of measure 18. This second beat is so inquisitive, it demands a solution of measure 18 and then, on the first beat of measure 19, it completely resolves itself, landing in a new key, G minor, wherein, measure 19-20, it remains until measure 20. The second half of the fourth beat of measure 20 leads to a still newer key, measure 21.

Measure 21 is like measure 1, only in a different key. With the second beat of measure 22, it becomes "curiouser and curiouser" (inquisitiver and inquisitiver) as "Alice" would say, but by resolving down again to the fourth beat, it begins to have an inkling of a return to the original key F. As measures 23 and 24 are in the relative union of F, but in spite of the C♯, the C♮ brings it back to the tonic measure 25. From there on nothing happens until the second beat of measure 30, where after taking a long breath and refraining by a 6/4 chord (a most restful chord) on beat one, measure 31, it prepares through the fourth beat of measure 31 and the first beat of measure 32 for the final cadence on the second and third beats of measure 32.

Observe how much stronger the final cadence is compared to the other cadences, which are not conclusive, only leading up to something else which follows, while the final cadence leaves nothing more to be said.

Looking, again, over the whole piece. See how different the phrases are? The first four measures are melodic and harmonic, while in the second phrase of four measures 5 to 8, they are partly melodic and partly contrapuntal. The seventh and eighth measures are imitative; each figure of six notes must stand out above the harmony. Like many imitative phrases they are often in "threes." When Germany was a happy land there was



CLAYTON JOHNS

an old German proverb which said, "All good things are in threes." This may or may not have anything to do with the case, but as a matter of fact most sequential phrases are in "threes." The next phrase, 17 to 20, is again partly melodic-harmonic and partly contrapuntal, also it is entirely melodically and harmonically progressive. The next phrase, 21 to 24, is still more progressive, that is, the melody and harmony must advance until it decides to return to the original key. All *good* music must be either progressive or retrogressive; never remaining in the musical doldrums. Having returned on the fourth beat of measure 24 the last eight measures are almost like the first eight measures excepting that the last four are more conclusive.

No Real Accent

It is difficult to give definite instructions about accent, as this little piece has no real accent; there is, of course, much rhythmic pressure and much relaxation, but accent in the ordinary sense of the term would ruin any feeling of dreaminess; therefore press and immediately relax the long notes and relax or gradually tension the eighth notes depending upon the slight crescendos and diminuendos. The given marks, < and >, must be the general guide, but all printed marks are only suggestive and relative—never literal. In measures 3 to 4 follow the directions for the short horizontal lines in the first and third beats of measure 3, and the first beat of measure 4. All the rest of the measures similarly marked should be treated in the same way. "Horizontal lines" mean a little more pressure.

There is little left to be said, beyond a word or two about fingering and pedaling. Finger according to the phrases and follow the phrase marks of Clara Schumann; doing that the student cannot go wrong. Over-edited pieces are usually misleading. Too many marks confuse the student. Instead of thinking of each mark, try to get at the heart of the piece, weighing it in the balance, then nothing will be found wanting.

Pedaling is a more difficult problem. The fundamental rules of pedaling are simple, but artistic pedaling is of a much higher grade, depending upon a wire spring, so to speak, in the ankle, wobbling it as it were, bringing out tones and overtones, and listening to each vibration, making the effect of a kaleidoscope. For the simple purposes of *Träumerei*, the "barmonic pedal," added to the use of the "soft pedal," will be sufficient for the average student, if he will strictly follow the oblique pedal marks given for a few measures, as a sample. It goes without saying that a student must pedal harmonically, neither blur the notes nor begin nor end the phrase with a ragged edge.

It is too bad to have laid bare the bones and sinews of this beautiful little piece. It seems more or less like a musical vivisection. We are told that the suffering of a certain number of animate beings have to be endured for the general good. Let us have the suffering of this acute analysis of *Träumerei* may lead some students to a clearer understanding of it. *Träumerei* is a sort of a "multum in parvo," like a perfect poem of two short stanzas by Heinrich Heine.

After all is said and done, unless the student considers the suggestions given above and applies them to his other studies the result will be hardly worth while. Once more: Remember the well known admonition, "Mark, learn and inwardly digest." That done the student will be ready to take up a "new piece" for study and, we hope, play it well.

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

A PORTRAIT OF ROSSINI

In a study of Rossini appearing in the *Musical Quarterly,* Edgar Istel quotes a delightful passage from Ferdinand Hiller's "Briefe Ungenannte" (Cologne, 1877) in which we are given a vivid pen-portrait of the composer of "William Tell."

"Gradually grown to the full height of a European celebrity, in contact with the most refined society, he remoulded himself into a highly cultured man of the world; and without restraining his propensity for smiling mockery, or, at least, smiling irony, he could play, when he pleased, the part of a reserved gentleman without doing violence to his natural disposition. Although he rarely opened a book, he had acquired a perfectly pure French, his voice and whole intonation being of a most melting suavity. His well-formed head, his finely cut features, with their continual play of astuteness and charm, acuteness and kindliness, tenderness and mockery, lent him an irresistible attraction, and one could often hardly tell whether one took greater pleasure in what he said of the way he expressed it. At that time in Paris he was excessively corpulent, the consequence of much macaroni and much sleep, for he had a passionate fondness for his bed, and had written many of his loveliest numbers while recumbent between waking and sleeping. It was at a dinner at the Rothschild mansion that I was introduced to him; at table I very likely made a rather serious face and had very little to say. '*Vous-etez l'homme le plus gai que j'ai jamais connu, c'est-à-dire, aprés le pape!*' ('You are the liveliest man I ever met—after the pope!'), he said afterward."

"Music is dual in its nature; it is material as well as spiritual. Its material side we apprehend through the sense of hearing, and comprehend through the intellect; its spiritual side reaches us through the fancy (or imagination, so be it music of the highest class) and the emotional part of us."—Krehbiel.

THE ATTIC OF RUBINSTEIN

"In Vienna I gave lessons mostly at cheap rates," confesses Anton Rubinstein, one of the greatest pianist and composers of all time, in his Autobiography. "I lived in the attic of a large house and often for two or three days in succession I had not money enough to pay for a dinner at the nearest restaurant, and so I went without. The room I had hired was fairly bare, but soon I had crowded every corner of it and literally carpeted the floor with my writings. And what did I not write in those days of hunger! Every sort of composition, not only in the department of music, operas, oratorios, symphonies and songs, but articles, philosophic, literary and critical as well. In my 'attic' I even wrote a paper for the benefit of a single reader—myself. And how I suffered from hunger. . . . It was now two months since I had called on Liszt. He took it into his head to pay me a visit, and one day he made his way up to my attic accompanied by his usual retinue—a certain prince, a count, a doctor, and artist; all ardent admirers of the master. The first sight of my quarters seemed to shock the whole party, more especially Liszt himself, who, during his sojourn in Moscow had visited my family and knew our style of living. He showed, however, much tact and delicacy, and in the most friendly manner asked me to dine with him on the same day—a most welcome invitation since the pangs of hunger had been gnawing me for several days. After this I was always on good terms with Liszt until the time of his death."

GLINKA'S HONEYMOON OPERA

The first truly Russian opera was Glinka's "A Life for the Tsar." Possibly his extraordinary success with it was due to the fact that its inception and composition coincided with his courtship and marriage, according to M. Montagu-Nathan's little biography of Glinka. From this we learn of the bride: "Her sister was the wife of his friend, Stuneyef, at whose house in Petrograd Glinka met the young woman. . . . In May, 1835, Maria Petrovna Ivanovna became his wife. During the courtship he came in touch with a circle of intellectuals who were accustomed to meet at the house of the poet, Joukovsky, then holding a position in the royal family. Among them were Pushkin, Viazemsky, Odoievsky, Vielhorsky and Gogol, who on one occasion read his play, *The Matchmaker,* afterward used by Moussorgsky as the foundation of his unfinished opera of that name.

"At one of their gatherings, Joukovsky suggested a plot, offering to write the book of the proposed opera and actually completing some verses. . . . Joukovsky's reason for abandoning the promised work was that he had no leisure for additional labors. He was able, however, to procure the services of the Tsarevich's secretary, Baron Rosen, an erudite German littérateur. . . .

"Having settled the plan of his opera, Glinka took the steps which, as may be gleaned from his correspondence at the time, he hoped would bring him life-long happiness. This hope, as we shall see, was not to be realized. . . .

"Early in May he betook himself with his bride to Novospasskoi, and lost no time in setting to work on his opera. During a journey to Novgorod, he composed its famous nuptial chorus in 5-4 time.

"Conjugal felicity seemed now to the young husband to be the one thing needful to inspire him. 'The work progressed splendidly,' runs the autobiographical account; '. . . Every morning I sat at my table and wrote about six pages in small score. . . . In the evening, sitting on the sofa, surrounded by the whole family, and occasionally by a few intimate friends as well, I was for the most part oblivious of what was going on around me. I was wholly absorbed in my work.'"

RUSKIN'S SINCERITY

John Ruskin, an authority on painting, sculpture and architecture, was no musician, but at least he admitted it candidly. From the life of Sir Charles Hallé (a once great pianist, afterward conductor of the Hallé Orchester in Manchester, England) by his son and daughter, we learn the following: "Some years ago, in 1864, Professor Ruskin asked him to come and play to a school of young girls in whom he was greatly interested. My father readily consented, and as the professor was there himself, and it was the first time he had played to him, he was careful to select what was most great and most beautiful, and played his very best. When it was all over and my father was about to leave, one of the girls told me she had been practicing Thalberg's arrangement of *Home, Sweet Home,* and would very much like to hear my father play it......

"To his chagrin, Ruskin, who had been politely appreciative, now became enthusiastic and told him *that* was the piece he liked best far and away. Of course my father said nothing at the time but it got to the ears of the Professor how disappointed my father had been, so he wrote him the following letter:

"'Dear Mr. Hallé,..My "children" tell me you were sorry because I liked that "Home, Sweet Home" better than Beethoven—having expected better sympathy from me but how could you—with all your knowledge of art, and of men's minds? Believe me, you *cannot* have sympathy from any untaught person respecting the higher *noblenesses* of composition. If I were with you a year, you could make me feel them. I am quite capable of doing so were I taught—but the utmost you ought *ever* to hope from a musically-illiterate person is honesty and modesty. I do not, should not, expect you to sympathize with *me* about a bit of Titian, but I know that you would never tell me you liked it, or *fancy* you liked it to please me.'"

We learn, with amusement, that Hallé resented the suggestion that he could not appreciate Titian without a year with Ruskin!

MUSIC AND UMBRELLAS

Needing to have his umbrella repaired in Portland, Main, Mr. Winthrop P. Tryon wandered into the establishment of a tailor, umbrella maker and all-around craftsman who, it appeared, also made violins. The fact led Mr. Tryon to write as follows in *The Christian Science Monitor*: "To note about the umbrella mender that he practices the craft of violin making and belongs to the Violin Makers' Association of Maine, which holds annual competitions and crowns the best instruments built by a member within the year, is as far as I purpose to go. Finding a connection between music and umbrellas is what interested me. Did not thousands of men and women once on a time stand under umbrellas in the arena of Mexico City to hear Caruso sing?

"But the relation of music to umbrellas in Portland is one of the heritages of the town. In the thirties, Jacob S. Paine, father of John Knowles Paine, ran an umbrella manufactory on Middle Street; in the forties he traded in hats, caps, umbrellas and musical instruments at the corner of Temple and Middle Streets, and in the fifties his stock included, according to the advertisements of the time, umbrellas, parasols and Chickering pianos.

"Young Paine, then, may be said to have begun his musical education under an umbrella."

WHAT STRADIVARI GOT FOR HIS VIOLINS

Such huge sums are now paid for genuine Stradivari violins that it is interesting to learn what the great Cremona violin-maker himself got for the instruments he shaped during his long life of ninety-three years. The extract is from his biography by the famous London dealers, W. Henry Hill, Arthur F. Hill, F. S. A., and Alfred E. Hill, who, discussing certain transactions, write as follows: "If we now return to the statement of Fétis, and similarly multiply the purchasing power of four louis d'or, we get two hundred and forty francs—let us say £10, and as we do not believe any decided rise in the value of Stradivari instruments had taken place within thirty-five years of his death . . since their superiority was still keenly contested by those of the Amati and of Stainer, we may with considerable probability of being correct, conclude that the sum Stradivari charged for a violin or viola was approximately equivalent to from £10 to £15 of our money today; for violoncellos, £25 to £35, the variation between the lower and the higher figures depending upon the individual merits of a given instrument. For such exceptional specimens as those forming the inlaid quintet an exceptional price was paid. Any question as to the master having been but poorly remunerated can, we think, be dismissed without further discussion. No better proof to the contrary can be forthcoming than that given us by Arisi, who writes under date 1702: 'Stradivari made a complete set of bow instruments which he intended to present to Philip V of Spain on the occasion of the King's passage through Cremona, and he had prepared a memorial to that effect, but he was dissuaded and the instruments are still in his possession.' The making of such a set of instruments represented the work of several months, and a poorly paid worker would hardly contemplate such a costly present."

BELLINI'S CURIOUS ROMANCE

Rupert Hughes, famous novelist and dramatist, once a composer and music critic, gives the following account of a romance in the life of Bellini in his book *The Love Affairs of Great Musicians.*

"Of Bellini, that great treasure for the hand-organists (this is unkind, Mr Hughes, Bellini wrote some fine melodies!) a story has been told as to his first romance. According to this, when he was conservatory student at Naples he calle upon a fellow-student and took up a pai of opera-glasses, proceeding to take tha interest in his neighbors that one is pron to take with a telescope. On the balcon of the opposite house he saw a beautifu girl; the opera-glasses seemed to bring he very near, but not near enough to reac So after much elaborate management h became her teacher of singing and man aged to teach her at least to love hi But the family, growing suspicious th Bellini was instructing her in certain ele tive studies outside the regular music curriculum, his school was closed.

"Then a little opera of his had some su cess, and he asked for her hand. His pr posal was received with Neapolitan ice, an the lovers were separated, to their de gloom. When he was twenty-four anoth opera of his made a great local triump and he applied again, only to be told th 'the daughter of Judge Fumaroli will nev be allowed to marry a poor cymbal playe Later his success grew beyond the boun of Italy, and now the composer of " Somnambula" and "Norma" was worthy the daughter of even a judge; so t parents, it is said, reminded him that could now have the honor of marrying i the family. But he was by this time ca enough to reply that he was wedded to art."

IN THE CAVE

In characteristic vein; a good study in *staccato*; from a new set of pieces by a popular writer. Grade 3.

IVERS & POND PIANOS

Five Foot Colonial Grand

To Music Teachers

More than other buyers musicians and teachers recognize and require quality in a piano. With them it is the musical instrument which counts. For it is their dependence in earning a livelihood and inspiring their best artistic achievements.

Over 500 leading Musical and Educational Institutions and thousands of teachers have bought the *Ivers & Pond* for their own use. These intelligent buyers have cheerfully paid the price the *Ivers & Pond* necessarily costs to secure the

Highest Quality Known

to the art. Experience has shown them that not only will they thus have the satisfaction of owning the best, but that ultimately it will prove the cheapest. A new catalogue picturing and describing our complete line of grands, uprights and players will be mailed free on request.

Our Unique Selling Plan

If we have no dealer near you, we can supply you from our factory as safely and as satisfactorily as if you lived near by. We make expert selection and guarantee the piano to please, or it returns at our expense for freight. Liberal allowance for old pianos in exchange. Attractive easy payment plans. For catalogue, price and full information *write us today.*

Ivers & Pond Piano Co.

141 Boylston Street Boston, Mass.

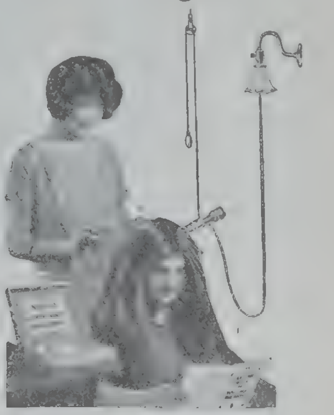
Lovely Photos Prove Nestle Invention A Marvelous Success

Dainty Home Outfit Safely Transforms Straightest Hair Into Charming Permanent Waves, Curls and Ringlets

Sent Everywhere on 30 Days' Free Trial

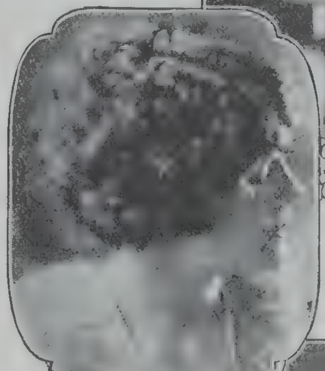
Photo Taken Six Months After Waving

"My hair was very fine, straight and dry. The waving was a success from the very beginning. In rainy or damp weather it curls around my face just as though it were naturally curly," writes MISS MARJORIE MACDONALD, 1049 Goodrich Ave., St. Paul, Minn.



The Nestle LANOIL Home Outfit in Use

A single application gives you naturally curly hair. No breakage, frizz or harshness is possible. The waving is comfortable and quick, the results are permanent and lovely. Illustrated booklet sent on request.



Water Beautifies Her LANOIL-Wave

"There simply isn't enough can be said in praise of the Home Outfit," writes MRS. L. C. FRINK, 1951 Division St., Portland, Ore. "It is such a joy to have naturally curly hair."

"So Simple and Easy"

"My husband waved my bob without a bit of trouble," writes MRS. G. A. BRIGHTWELL, 828 Norfolk St., Ft. Worth, Tex. "I think it is one of the most wonderful inventions in history."

"My Hair Turned Out Lovely"

writes MISS CORINNE MUNSON, 1211 E. John St., Seattle, Wn., "I love it because it looks *naturally* curly—not 'put up'."

Our fully illustrated explanatory booklet sent free on request.

IN RESPONSE to Mr. Nestle's recent invitation to his delighted customers to substantiate their enthusiastic, voluntary testimonials with photographs, actually showing what his wonderful Home Outfit invention had done for their straight, dull hair, we have been deluged with hundreds of curly-headed photos, illustrating fully the radiant happiness the Home Outfit gives everywhere it goes.

Even Salt-Sea Water Cannot Spoil LANOIL-Waves

Although this invention has been on the market less than 2 years, and is sent everywhere on 30 days' free trial, already you will find it in over 190,000 homes, where entire families and their friends get naturally curly hair *through a single application.* Nearly a million waves have been given with this dainty apparatus of the eminent New York hair genius. Letters are brimful of ecstasy with our customers' new freedom from nightly curling pins, irons and fluids, of joy with their *luxuriant* lasting waviness.

Gentle—Safe—Quick

In Mr. Nestle's two renowned New York establishments, over 300 women of fashion are LANOIL-waved every day. The best beauty shops everywhere use his LANOIL discovery exclusively. This process has made permanent waving so simple, safe and comfortable that you can realize the dream of your lifetime even in your own home. And not just you alone. One joyful mother writes, "My *sister, children* and *myself* enjoyed our lake camp last summer *more* than ever before, because our water sports only made our LANOIL-waves curl up more prettily."

Send for Your Home Outfit on 30 Days' Free Trial

Are you going to go on struggling forever with your straight hair, when it will cost you nothing to *try* the Outfit? If you prefer, we will send you our free booklet first, but you will enjoy the same success as the other 190,000 owners, so why not write *directly* for your Outfit *on 30 days' free trial?* Wave your hair, with the free trial materials. Then wait. Wash, brush, comb, test your lovely, soft, silky-bright waves and curls in every way you see fit, and if they do not look and act like naturally curly hair, if they fall short in any way of your expectations, return the Outfit within 30 days, and every cent of its cost of $15, deposited with us or with your postman will be refunded *immediately.*

Send the coupon or a letter or a postal for your Home Outfit today, *now,* and enjoy the blessing of charming, bright, naturally curly and wavy hair through rain and shine, day and night, *through all the summer months to come.*

The Singer's Etude

Edited by Vocal Experts

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

The Church Singer's Musical Opportunity

By Frederick W. Wodell

TWO professional singers of wide experience were talking shop. Said the elder, "You have only to hold fast to your present ideas and practices with regard to singing without rigidity of the tongue, jaw and neck, and with a determination that your tone shall always be of a musical quality, to be certain of a long career. You will sing well until you are sixty or over. Look at Battistini, the Italian baritone, singing at sixty-four this year, in Berlin and London, with the severest critics giving him high praise for his beauty of tone, wide compass and artistic expressiveness. But you must be careful that your church work does not upset your voice. Church singing is dangerous for a young singer; he is so likely to get into a vocal ditch; to fix upon his voice and style one tone color and one general type of expression."

"Is not that true?" returned the younger. "We have one rehearsal weekly for our two services on Sunday; and, to tell you the truth, we do not half work when we do rehearse. We are singing the same old selections in the same way, year after year. I am tired of it. I cannot get anything out of it."

"And your quartet choir is one of the most highly placed and paid in your section of the country?"

"Yes, and that is the shame of it; but, of course, I am not the director of the choir, as you know."

"You must certainly guard your voice and your style against a 'churchy' monotony. Keep up your work on a concert and operatic repertoire. That is the practical thing to do."

Operatic Antidotes

"I have committed to memory five operas of the modern school within the last two years. And some day I intend to go to Europe, where I hope to get an opportunity in one of their Municipal Opera Companies, to appear in them. Meantime, as you have suggested, I am using them as an 'antidote' to my church singing."

The above is a truthful report, in substance, of a conversation between two American musicians.

The points made are worthy of careful consideration by professional singers, choir directors and also by the Church Music Committees, if only such could be induced to take an interest in them. It would be worth a great deal to chairmen of Church Music Committees throughout the country, were they to read regularly THE ETUDE'S Voice and Organ and Choir Departments.

Meantime, let the professional solo singer consider the real responsibility in connection with the subject under discussion. Church music is worthy of the serious attention of the church singer, or it is not. On what ground does a professional choir singer accept anywhere from ten to fifty dollars a week for singing at Sunday services, and give to the rehearsals for such services the "fag end" of his week's time, often just before service on Sunday morning, and what is left of his strength and interest, after a strenuous week's travel and employment in other forms of professional singing?

Why should a Music Committee pay one member of the choir more than the other members receive, to hold the position of "Director," when he does not "direct" with intelligence, skill, and, above all, with interest and industry. Is it, in fact, "honest" to accept a salary for "directing" and at the same time do the director's work in a more or less indifferent and slipshod manner? It may be said, "That is up to the Music Committee." No, no. It is first "up" to the director who accepts the position, and calls himself an "artist." Now let the singing member of the choir who is paid for his services read "soloist" for "Director," and consider seriously where he stands today in the light of that which he has done in church singing for the last few years.

An "artist" who appears upon the concert or operatic stage without the fullest possible preparation, and the determination always to do his very best, is foolish. The same holds good with regard to church singing. There is always, in every congregation, some persons who "know," persons who have knowledge and experience as to good singing, and the correct manner of setting forth the truths of religion in song. And it is the part of wisdom for the professional singer always to prepare to satisfy first his own artistic and religious standards, and second to satisfy the "knowledgeable" persons of the group listening to him.

The truly "great" ones in Grand Opera, as for instance Gigli, the Metropolitan tenor, make a deep and comprehensive study of the rôles they are to take. See the article regarding Gigli's method of operatic study in the July ETUDE, Vocal Department, for the present year. In the same way, the professional singer who claims to be an artist should prepare his part in his church work. And this not only for solo singing, but for quartet or ensemble singing as well.

Presupposing that the singer has a good vocal technic, such as will make it possible for him to depend upon it in the interpretation of varied styles of music, it is his business then to dig into the meaning of the verbal of the church compositions he is to sing, and into the musical content of the solo or ensemble piece, and then so to sing as to bring out the meaning of both text and music.

The Inner Meaning

The "Anthem" in the church service may be a solo, duet, trio, quartet, or piece in which any desired number of voices may be used; but the duty remains upon director and singers to get at the inner meaning of text and music, and to bring it out in the singing, as much when twenty singers are engaged as when there is but one.

Church singers are sometimes willing to take much trouble with a "solo," but will not take the same trouble with their part in an ensemble piece. Why? As "artists" and as conscientious singers, the duty is as obvious in the one case as in the other.

Given the necessary vocal technic, as stated, the church singer owes it to himself and to his congregation to "interpret" truthfully and as adequately as possible the message of the words and the music used.

To accomplish this it is necessary to study and so to discover what the words mean. It must be evident to even the least intelligent among church singers that "Bless the Lord, Oh My Soul" means one thing, and "Comfort Ye My People," something quite different. Yet there are many so-called trained church singers who sing everything they undertake with the one type of tone, the so-called "church music" voice. Some imagine they have done all that is possible in the way of "expression," when they have modified the strength and volume of the tone used, as did a certain quartet, upon every occasion, in an anthem, when the phrase "the Holy Spirit" occurred. Not at all. Back of all the accentuation, shading, and all the rest of the mechanics of expression in singing, comes the subtle, yet true, "expression" or "giving out" of the actual spirit of words and music which arises when the singer knows and feels what is the full content thereof and sincerely desires that those who hear shall come to understand and feel in like manner with himself.

The Spirit of Appeal

What is the well-known quartet by Pflueger, "Consider and Hear Me, O Lord, My God?" Is it that which so many singers and quartet choirs think it to be, as they indicate by their rendition of it, namely, a show piece for a deep contralto solo voice, and for a choir which has learned to shade so as to sing an effective obbligato? By no means. It is a genuine prayer; a particular prayer. It should be sung in the spirit of appeal to the Almighty. With that spirit animating all the singers, given the vocal control already referred to, and sufficient training in the mechanics of good singing, whether solo or ensemble, there will be a giving out in this selection which will take hold of the hearts of most of those who listen.

In other words, beautiful voices, sufficient vocal technic, training in all the mechanics of ensemble choir singing—all good—nevertheless are nothing without the informing spirit of song which comes from a deep knowledge of the real content of the words and music and a sincere desire to make that content known to the auditors.

In preparing an opera, one naturally studies the times and manners in which the "story" is set, the particular character to be taken, the relation of that character to other characters in the play, and so on. Would it be asking too much of the singer of anthems that he also should study the words of the selections, do collateral reading and try to understand the "situation" in which they were uttered, or something of the circumstances under which they were written, and so on?

This sort of comprehensive preparation for the Sunday services, by singers as well as by choir directors, is that which they in reality owe to themselves as artists, and to their congregations, as honest men. And if it could be obtained, generally, throughout this country, there would be such a change for the better in the character of choir services as would amaze and delight many a hard-pushed minister and tired congregation. And without doubt many a solo and anthem now in use would be consigned to the rubbish heap as unworthy.

Those Who Sing Off Key

By Charles Tamme

THE only persons who sing off key, and who cannot correct themselves, are those who lack a sense of pitch. These are never singers, for they cannot carry a tune; and they are comparatively rare, like persons who are color blind.

However, many persons with normal pitch sense still sing off key; and among them are even professional vocalists. Singing off key is a fault which may or may not be difficult to correct. All depends upon the cause. If the trouble lies in a faulty method, the right one must be learned and applied before singing off key will yield permanently to correction.

Sometimes the cause is purely psychological. This must be carefully studied and understood before the singer can be taught to remain on key. A vocal student was of a highly sensitive disposition. When a child, somebody ridiculed him for singing; and his subconscious mind set up a complex which told him he could not sing. Now that he is mature, his conscious intelligence tells him that he can sing; but the wrong complex which was started far back in his childhood, keeps trying to prove itself by making him sing off key. Not until this singer's mature intelligence was guided down into his subconscious, and there supplanted the wrong complex entirely, was he able to sing correctly on pitch.

Among mechanical causes, excessive breath pressure is one of the most frequent for singing off key. Corresponding with the amount of breath used in setting the vocal chords into vibration, a tension is set up above and about the vocal chords to keep them from being forced apart. Excessive breath calls for excessive tension and strain, which in turn, tends to close the throat. Those who sing with excessive breath pressure have a tendency to sing flat, although, occasionally, the result is sharpness. They must learn to sing freely and with a nicety of the balance of breath pressure, before they can be certain of singing on exact pitch.

The wrong formation of vowel sounds is another frequent cause for singing off key. When vowels are improperly sung, they disturb the resonance or the overtones of the voice, and cause what is spoken of as poor intonation. When poor intonation is carried to extreme it is a case of singing off key.

Those who sing sharp usually do so because of extreme anxiety or nervousness. Some of this may be due to inadequate practice or study, the singer, therefore, not being sure of himself. More time to his art and more thorough work are the recommendations here. Or nervousness and consequent sharp singing may come from various other sources. Whatever these are, they must be traced and removed before the singing off key can be corrected permanently.

Lowered vitality often brings flat notes in its wake. A singer should never attempt to render a program unless physically up to the mark.

Many singers lack the ability of coördination between mind and vocal mechanism. This is usually due to having learned an improper method of singing. When a singer becomes aware that the voice refuses to carry out the wishes and direction of his mind, he must change his method until the voice will obey the mind. Perhaps, too, it will be necessary to revise some of the ideas of his mind. But, whichever way it is brought about, perfect coördination between mind and voice must be established before the singer can trust himself to sing correctly and on key.

If singers would only listen to themselves, much singing off key would never occur. The mind readily conceives correct pitch, and singers should train the ear to stand guard, insisting upon correct pitch from the voice. By this simple solution of the problem of singing off key, many mechanical faults and difficulties would clear up automatically.

The writer has never known a person whose ear proved defective and became the offender in producing notes off key. Unless absolutely lacking the pitch sense which is in the brain, nobody need sing out of tune. If a person can sing a phrase of reasonable length, carrying the melody, and thereby proving his faculty of normal pitch, he can be taught to sing all the phrases, in all songs, exactly in tune. There should be no flat notes or sharp notes either in the ascent or the descent of the scale.

Kinetics and Feeling in the Vocal Art

By Charles Tamme

ALTHOUGH its importance is often exaggerated, the kinetic sense, or the sense of movement, does hold a place of considerable importance in singing.

A knowledge of kinetic sense is valuable, especially, in the teaching of singing. For, by whatever method a pupil has been taught to sing, his teacher can always check up results through the kinetic sense, if not by any other means. There is a definite movement for the tongue, the teeth or the lips, in the articulation of every consonant, and in the enunciation of every vowel sound; there is a definitely correct shape that the mouth should assume for every note which is sung; and even the larynx can be partially controlled by the kinetic sense.

The consonants P, B, W, M are articulated by the action of both lips; F and V, by the lower lip and upper teeth; TH, by the tip of the tongue and the teeth; T, D, L, N, initial R, by the tip of the tongue and the upper gums; S, CH, Z, ZH, final R, by the front of the tongue and upper gums; K, G, NG, by the back of the tongue and the soft palate.

For the vowels E (eve), I (it), A (ate), E (end), A (at), A (ask), the front of the tongue is raised; for the vowels OO (ooze), U (book), O (oak), U (up), O (orb) the back of the tongue is raised; and for the vowels A (arm), U (urn), the middle of the tongue is raised. In accordance with the various vowel sounds, too, the different parts of the tongue are raised high, medium or low, whether the front, back or middle.

Another phase of the kinetics of singing is the change of movement which takes place when the singer goes from one vowel to another. For instance, in going from Ah to EE a distinct change in the position of the mouth and tongue takes place—or should take place. Ah requires an open mouth; for EE the mouth should be nearly closed; the tongue's position, too, is changed from the middle, medium position for Ah to the front, high position for EE.

It is the kinetic sense which must teach the beginner to change the tongue, the mouth, the lips and sometimes the throat for the various sounds in even the simplest songs. This is far different, however, from facial contortions which should be avoided like a pest; only those changes in the muscles of the vocal mechanism should be permitted which have been learned as absolutely necessary to convey the difference in sounds.

The kinetic sense is often a great help in teaching high notes. Personally, I prefer to teach the singing of high notes entirely through the use of the imagination, most pupils gaining confidence and freedom rapidly by this means. But there are some pupils whose imagination refuses to help them with their high notes; and they usually respond to instructions to "drop the larynx" in ascending the scale or "retain the vowel sound" or "sing the vowel" as the case may be.

The logical way to teach singing is by instilling correct mental conceptions and then insisting that these correct conceptions are carried into actualities by the voice. However, in addition to this it is usually necessary to teach the kinetics of singing. In the first place, most pupils expect it and would, therefore, feel as though something in their vocal career were missing without it. Then, too, the teacher's own work is greatly facilitated by sharing with the pupil his means of checking the pupil's results.

The kinetics of singing are taught best by persistence, patience and the mirror. Not only during vocalizes and exercises must the mirror be in constant use in the studio, but also in songs, especially in those passages which give trouble. And the pupil should be often and earnestly enjoined to practice at home with the mirror.

The sense of feeling, too, like kinetics, is excellent; but likewise its importance is often overestimated. It is good, especially for the beginner, to feel consonants, to feel that they are all crisp and clean, to feel that all vowels are as vitalized as possible. It is also excellent for the beginner to obtain resonance by feeling it through the anterior portion of the nose. And, by the way of review, the advanced singer cannot but benefit by consciously feeling, too, every now and again, his consonants, his vowels and his resonance.

Both the kinetic sense and the sense of feeling are truly important in gaining as well as in teaching vocal knowledge; and they should be granted their place of importance. But unless both these phases of vocal study pass into the subconscious, later on, as the pupil advances, they will make for selfconsciousness and mediocrity. Their importance, therefore, should remain in correct proportion; it should never be exaggerated into super-importance.

Diagnosis and the Vocal Teacher

By Harry Hill

THIS age is of the specialist. Most of the professions have divided and subdivided into various branches. And the same influence is operating in music. The teacher who used to teach piano, organ, violin, banjo, mandolin, guitar, theory and singing, is being replaced by the specialist.

In the larger cities we have the specialist in piano technics, the specialist in theory, and the specialist in voice culture. This latter branch is sometimes divided, as one teacher will teach voice production alone, and another the interpretation and rendition of songs. Another only coaches for stage work.

This article is for the vocal teacher who teaches both tone production, or the mechanical or technical part of singing, and also the application of this to the singing of songs. To draw an analogy between the medical and vocal profession, the medical specialist when approaching a case makes first of all a diagnosis. Why not a diagnosis by the vocal specialist of each new pupil? The diagnosis of the medical specialist determines the treatment that

"Really, Mother, our piano is impossible. And some of the other girls have such nice pianos. I wish we had."

"Well, Betty, I'll talk it over with your father. It's too bad that piano has literally gone to pieces. Let's ask him about it to-night."

Mother, why can't we have a good piano?

What genuine pleasure and enjoyment there is in owning a good piano, and the Weaver Piano can give it to such a marked degree! For the Weaver is a really fine piano. Its beautiful tone and perfect action distinguish it throughout years of continuous use.

Reinald Werrenrath, the brilliant baritone, says of the Weaver: "It gives me much pleasure to express my genuine admiration for the Weaver Piano........ The piano has tremendous power and charming brilliancy. I consider the Weaver Piano artistic in the superlative degree."

Buy a Weaver Piano. Convenient terms are easily arranged and a liberal allowance made on your former piano. Write us for the name of the Weaver dealer in your locality, and ask for the Weaver catalog. Weaver Piano Co., Inc., Factory and General Offices: York, Pa. Weaver, York and Livingston Pianos and Player Pianos.

WEAVER PIANOS

Oily skin

How you can correct it

An oily, shiny skin is not only unattractive in itself—it is especially liable to infection from dust.

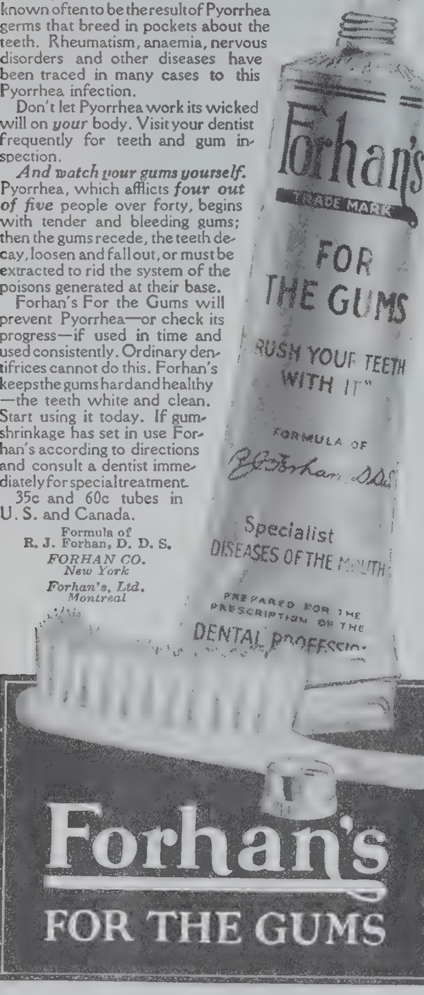
You can overcome this condition by using, *each night*, the following treatment:

FIRST cleanse your skin by washing in your usual way with Woodbury's Facial Soap and luke-warm water. Wipe off the surplus moisture, but leave the skin slightly damp. Now with warm water work up a heavy lather of Woodbury's Facial Soap in your hands. Apply it to your face and rub it into the pores thoroughly. Rinse with warm water, then with cold. Then rub your face for a few seconds with a piece of ice.

Within a week or ten days this treatment will bring about a marked improvement.

Get a cake of Woodbury's today, at any drug store or toilet goods counter. A 25-cent cake lasts a month or six weeks. *Or send six cents for sample cake.* Address The Andrew Jergens Co., 51 Spring Grove Ave., Cincinnati, Ohio.

Copyright, 1923, by The Andrew Jergens Co.



The dread Pyorrhea begins with bleeding gums

PYORRHEA'S infecting germs cause many ills. Medical science has proved this.

Many diseased conditions are now known often to be the result of Pyorrhea germs that breed in pockets about the teeth. Rheumatism, anaemia, nervous disorders and other diseases have been traced in many cases to this Pyorrhea infection.

Don't let Pyorrhea work its wicked will on *your* body. Visit your dentist frequently for teeth and gum inspection.

And watch your gums yourself. Pyorrhea, which afflicts *four out of five* people over forty, begins with tender and bleeding gums; then the gums recede, the teeth decay, loosen and fall out, or must be extracted to rid the system of the poisons generated at their base.

Forhan's For the Gums will prevent Pyorrhea—or check its progress—if used in time and used consistently. Ordinary dentifrices cannot do this. Forhan's keeps the gums hard and healthy—the teeth white and clean. Start using it today. If gum-shrinkage has set in use Forhan's according to directions and consult a dentist immediately for special treatment.

Employ This Method

The Secret of Correct Italian Phonetic Pronunciation as used by these Great Vocal Artists is presented in

DI CIO'S COURSE
IN PHONETIC ITALIAN

Singers everywhere are given an opportunity for this first time, to learn the true secret of correct Italian pronunciation, through this course. The plan is as old as Rome itself, but with this presentation of it Americans may gain the equivalent in articulation and pronunciation of one year's study abroad.

The Di Cio Course is practical, concise and reveals the proper method in an amazingly simple form enabling anyone to master it in less than seven days. This course is fully protected by the United States Copyright laws and is guaranteed by the author to improve your articulation and pronunciation one hundred per cent. It contains the secret of "Bel Canto".

Here Is Your Opportunity!

One Dollar will bring to you a complete copy of Di Cio's Course in Phonetic Italian. This is a limited offer and only FIVE THOUSAND SINGERS will receive this $15 course for $1, during this month only.

Hundreds of testimonials have been received. (Copies on request)

REMEMBER! This course cannot be purchased after this month anywhere for less than $15.

JOHN J. DI CIO
Room 226
1713 Sansom Street, Philadelphia, Pa.

should be prescribed for that particular case. No doctor who valued his reputation would prescribe the same treatment for a case with bronchial trouble and a case with stomach trouble. Then why should the vocal specialist prescribe the same treatment, *i. e.*, scales, exercises, and vocalizes for all cases?

The medical specialist takes note of the general physical condition of the patient and knows that very often two cases of the same kind must receive quite a different course of treatment. What would help one may harm another. The old saying, "One man's meat is another man's poison," is true in more ways than one.

So the vocal specialist should know that an exercise that will have a certain result with one pupil may have the opposite effect on another.

When the vocal specialist has a new case he should be able on hearing the voice to diagnose the trouble with that voice. Mind you, I did not say classify the voice. Some so-called altos are sopranos, and some so-called sopranos are contraltos, some baritones are tenors and some so-called tenors are high baritones.

Very few people who take vocal lessons produce the tone freely and naturally at first, and it is the interference or fault in production which the vocal specialist must learn to diagnose correctly.

One voice may be white and thin, that is, produced too far forward in the mouth; another may be thick and because produced too far back in the mouth may be sombre. There we have two common faults which demand different treatment.

Then again we have the nasal voice and the throaty voice, each demanding different treatment. Of course there are fundamental principles which apply to all good singing; but the application of these principles must be varied to suit the case in hand. Then again the physical build and the age must be taken into account. Some people are naturally deep chested and breathe well while others are narrow chested and need special exercises to set up the chest and develop the breathing capacity.

The day of the vocal teacher who expected all pupils to sing according to their own pet theories is past or rather is passing; and the vocal teachers and singers of prominence are recognizing that any method must be elastic enough to adjust itself to the individual. Unfortunately, we still have with us those teachers who use the Italian syllables in a blind way, hoping that because they are Italian they will place the voice and in some mysterious way develop a good voice. With a correct diagnosis of the voice of the individual and applying a remedy to eliminate the faults, many months of hard and useless work may be saved, and the voice will be found to gradually unfold so that there will be no doubt as to the class of voice to which it belongs, whether soprano or contralto, tenor, baritone or bass.

New Musical Books

The Choir-Boy in the Making. By Charles H. Moody. Paper bound; 43 pages. Oxford University Press, American Branch; at 85 cents.

Written by a man who not only has had long experience, but also has been one of the most successful trainers of Choir-boys of England, this book should be of the greatest interest and value to others engaged in the same work. With no attempt to pad it out to a pretentious size, the author has given tersely about all that would seem necessary as a guide to the selection of singers and the development of their voices for a Boys' Choir.

Love Affairs of Great Musicians. By Rupert Hughes. Published by the St. Bodolph Society. 610 pages bound in cloth. Numerous excellent half tones. Price, $4.00

This very entertaining musical work was formerly issued in two volumes at a much larger price. Mr. Hughes, since the days when he was a musician and composer by calling, has won great fame as a novelist, dramatist and producer of moving pictures. All of his literary charm can be traced at the beginning in this very delightful portrayal of the heart affairs of the famous musicians of the past.

A Handbook of American Private Schools. By Porter Sargent. Published by the Compiler. 980 pages. Bound in cloth. Price $7.00.

The eighth edition of this most useful handbook contains lists of schools and excellent articles upon the development of the summer camp, recent educational books, comparative tables. The book is invaluable for those who require a comprehensive grasp of the needed, concise information of the better class of schools (including Music and Art Schools) in America.

William Byrd. By Edmund H. Fellows. Bound in cloth. 123 pages. The Oxford University Press, at $2.00 per copy.

A short account of the life and work of one of the real musical lights of the Elizabethan period of English music. Chapters on the Personal History of the composer, Latin Church Music, English Church Music, and Mardigals and Songs will furnish interesting reading to all students of music who have a bent for knowing the ins and outs of the development of the art. Careful research has brought to light materials well worth the knowing; while Byrd's will as well as his printer's license from Queen Elizabeth will especially attract the antiquarian.

A Dictionary of Old English Music. By Jeffrey Pulver. Cloth bound. 247 pages. Published by E. P. Dutton & Co., at $5.00 per copy.

The author has produced a book rich in the lore of the earlier period of English music, than which no other national music has more interesting annals. Profuse illustrations give the reader, through the eye, a vivid picture of the development of many of our present-day instruments as well as those which have become obsolete. The history of notation is also clearly portrayed. In all, the book is a ready compendium of many bits of knowledge that are often a puzzle in their finding.

A Century of Welsh Music. By John Graham. Cloth bound. 147 pages. Published by E. P. Dutton & Co., at $1.25 per copy.

An interesting and compact history of the musical activities of the "Singing Welsh." Starting with the foundations of the nation's music in its folk-songs, throughout the pages of the modest book there is a continuous thread of the growth of the singing spirit of the little nation till its choral societies have become one of the wonders of the world of tone. A book well worth the perusal of the student of musical history.

The Working of the Mind in Piano Teaching. By Hans Schneider. Cloth bound; eighty pages. Published by Schroeder and Gunther, at $1.50 per copy.

This little volume is of value to those who are interested in the study of the fundamental principles of piano teaching. "Physiology of Piano Playing," "The Central Nervous System," "The Senses," and other physical and esthetic properties involved in piano playing are analyzed and made clear to the earnest inquirer. It should be especially welcome to teachers.

Vocal Study of Fundamental Harmony. By Lena Steibler. Paper bound; twelve pages. Published by Peabody Conservatory Preparatory Department, at 50 cents per copy.

An interesting and instructive booklet dealing with the development of the harmonic sense in connection with singing as usually employed in ear-training, sight-singing or in the public schools. Any teacher engaged in either type of this work will find valuable help herein.

The Master-Operas

As a means of contributing to the development of interest in opera, for many years Mr. James Francis Cooke, editor of "The Etude," has prepared, gratuitously, program notes for the production given in Philadelphia by The Metropolitan Opera Company of New York. These have been reprinted extensively in programs and periodicals at home and abroad. Believing that our readers may have a desire to be refreshed or informed upon certain aspects of the popular grand operas, these historical and interpretative notes on several of them will be reproduced in "The Etude." The opera stories have been written by Edward Ellsworth Hipsher, assistant editor.

Meyerbeer's "L'Africaine"

THE spectacular talent of Meyerbeer found in "L'Africaine" an exceedingly fine vehicle. The opera was not produced until 1865, one year after the death of the composer. It is thus contemporary with Wagner's "Tristan and Isolde," which was first given in Munich in that year.

The rivalry between these two composers was for a time intense. Both of German birth and cosmopolitan tendencies, they came together in Paris, but at a time when the character of Meyerbeer's music and the books he selected met with amazing favor, while Wagner received a shower of insults and cat-calls at the few performances he was able to secure in the "city of light."

That Meyerbeer thought "L'Africaine" his greatest work was not concealed from his friends. He saw the rising tide of Wagner and perhaps realized that the more or less cycloramic canvases he employed for his compositions would not meet with as permanent favor as those of his rival, whom he once feared but slightly. Wagner, on the other hand, with his intense Jew hatred, was unforgivably rude and ungrateful to Meyerbeer, who had very generously gone out of his way to help the younger composer.

Meyerbeer was born Jakob Liebmann Beer, in Berlin, in 1791. A wealthy relative made him an heir, provided the musician would annex the name of Meyer. Giacomo is Italian for Jacob and thus we have Giacomo Meyerbeer. Zelter and Anselm Weber were his teachers, and among his fellow-pupils was the great von Weber. He was a brilliant pianist, but he decided to devote his life to composition. After the failure of his early works in severe style, he craved success, and felt that it laid along the lines of Italian melody. Therefore, he went to live in Italy and produced some works in the Rossinian style. In 1826 he went to Paris, where he immediately commenced an exhaustive study of French opera. His first opera in French style, "Robert le Diable," was given in Paris in 1831. It became the sensation of the hour and Meyerbeer found himself the hero of Paris.

"Les Huguenots" was produced in 1836 and was instantly identified as an advance upon his former achievement. Almost immediately Meyerbeer got in touch with the dramatist, Scribe, and began work upon what he expected would become his magnum opus, "L'Africaine." Scribe, however, was constantly annoyed by the changes that Meyerbeer elected to make in the libretto and wanted to drop the work. Meanwhile, Meyerbeer wrote "Le Prophete." In 1842, Meyerbeer was called to Berlin as General Music Director and produced the "Feldlager in Schlesien." This opera was a great success, with Jenny Lind in the title rôle. In 1854 came "Star of the North" ("L'Etoile du Nord"); and later, in 1859, the charming "Dinorah."

The first American performance of "L'Africaine" was given in the same year as its premiere at the Opera in Paris. In all, Meyerbeer was engaged upon the opera some twenty-two years. At its original performances Faure was the only singer in the cast now known to fame. The early productions of the opera must have been a peculiar ethnological hodgepodge, inasmuch as the leading characters were Portuguese and African, the scenes laid in Portugal, the high seas and India, while the contemporary pictures indicate that the costumes of the Indians were modeled after the American Indian natives and not after the East Indian types. This, however, was a slight matter in the opera of yesterday.

Story of "L'Africaine"

The text is by Scribe, and the action occurs in Portugal, at sea, and in India.

Act I—Council Chamber of the King of Portugal. *Vasco di Gama,* a Portuguese naval officer and explorer, is before the Royal Council to tell them of his discoveries and to solicit aid for their prosecution. As proof of his claims he produces two slaves, *Selika* and *Nelusko. Don Pedro,* President of the Council and rival of *Vasco* for *Inez,* influences the Council to throw the explorer and his slaves into prison.

Act II—Prison of the Inquisition. *Selika* reveals to *Vasco* the location of a land he seeks to discover. He embraces *Selika* in gratitude, to be surprised by *Inez* who has brought his pardon. *Vasco* convinces *Inez* of his fidelity, is released, but *Don Pedro* has already sailed with *Vasco's* private papers, maps, Inez and the two slaves. *Nelusko,* who loves *Selika,* and knows her love of *di Gama,* offers to guide *Don Pedro* to his country.

Act III—Deck of *Don Pedro's* Ship. In a threatening storm *di Gama's* ship approaches. *Di Gama* comes aboard, is seized by *Don Pedro* and about to be executed when *Selika* draws her dagger and threatens to kill *Inez* unless her lover is released. *Don Pedro* yields but orders *Selika* flogged; the storm breaks and the ship is boarded by *Nelusko's* countrymen who either kill or imprison the ship's entire company.

Act IV—A Temple of Brahma. The Priests crown *Selika* and announce the immediate execution of all prisoners but *di Gama* who is to die on the morrow. Soldiers arrive to kill *di Gama* who is saved by *Selika, Nelusko* being forced to silence by *Selika's* threat of self-destruction. *Vasco* and the *Queen* are wedded.

Act V. Scene I—The *Queen's* Gardens. *Inez,* who has escaped from prison, is brought before the *Queen,* who generously assists the lovers to escape.

Scene II—A Promontory. *Selika* watches the ship bearing *Vasco* and *Inez* to Portugal. She approaches the deadly mancanilla tree, gathers its fatal flowers, breathes their perfume, sings "Farewell, my *Vasco,* I forgive thee!" and sinks senseless. *Nelusko,* seeking *Selika,* finds her dying, inhales of the deadly blooms and falls lifeless at her side.

You can learn what only Beauty Specialists know

Ingram's Dermascope will show you Beauty's Only Secret

How can you expect to gain or preserve an attractive youthful complexion unless you understand your skin and know the real danger signs that you must heed? *Discover the Secret of Beauty Yourself.*

Mr. Ingram has devised a fascinating test you should make in your own boudoir. It will show you the causes of unhealthy skin conditions, and how to scientifically remove and correct them. Most important of all you can instantly see in a convincing way *how* and *why* Ingram's Milkweed Cream develops the firm, clear, youthful complexion that you rightfully deserve.

The One Cream Perfect for Every Use

Ingram's Mikweed Cream is a real beauty cream, used over thirty years and the only one you need use to develop and keep a clear, soft, smooth skin. It is heavy enough to be a thorough cleanser and yet light enough in body to form a comfortable and effective protection and foundation for powder. But it has an exclusive feature—certain *remedial* properties that relieve redness, roughness, tan, blotches and slight imperfections. *No other cream is like it.* No matter whether you use it as a cleanser, a protection or a powder base—its nourishing and healing properties will bring fresh beauty and new life to your skin.

Buy a jar today and see the immediate improvement it brings. $1.00 and 50c jars at all drug and department stores—the dollar size contains three times the quantity.

KIMBALL

"The Instrument of Yesterday, Today and Tomorrow"

MYRNA SHARLOW, American Soprano, whose roles with the Chicago Civic Opera Company are highly praised for the rich beauty of her singing, is a competent judge of musical worth. In outspoken terms she declares: "The Kimball is beautiful and dependable, and a piano to make the opera singer rejoice."

MARCELLA SEMBRICH, the celebrated Polish prima donna, when at the height of her operatic career, said of the Kimball: "Ranks with the best instruments before the world."

Thus the years voice the praise of those who are eminently fitted to appreciate the merit of the Kimball—the piano of imperishable fame.

The Organist's Etude

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Magazine Complete in Itself"

Edited by Well-Known Specialists

Music and the Other Fine Arts in Worship

By H. Augustine Smith

Director of the Fine Arts in Religion, Boston University; Director of Music and Pageantry, Chautauqua, N. Y.

The following excellent address was delivered at the Sixteenth Annual Convention of the National Association of Organists in Rochester. It provides the Organist with excellent material wherewith to interest those members of his congregation who fail to realize the importance of music in the service of the church. Progressive church leaders need this article.

WE are entering a new day in the use of the fine arts in church and church school. Once organ playing, choir music and hymn singing constituted the total music program of the church. This new day demands much more: A minister of the arts rather than choirmaster, a musical statesman plus the simon-pure organist. Where once the Ph.D. signified impeccable learning within restricted areas, a mastery of minutiæ incontrovertible, it now means breadth as well as depth of learning, extensive research quite as much as microscopic findings. The choirmaster who goes to his task without mastery of poetry, drama, liturgics, hymnology and the principles of pedagogy is poorly prepared for his task. He may know pure music, interpretation and expression, voice production, and the history of music, but this is not enough, nor will engaging personality make up for deficiencies in general education.

Conservatories of music, organ schools, fail to note the handwriting on the wall and continue to turn out graduates who are performers but not pedagogues, singers and players but not citizens of the world. Surely there ought to be a breed of church musicians—sure footed in applied music and underpinned, equipped, eloquent in the history and science of worship and hymnody, English literature and poetry, Biblical drama, poetry and song, church history, art and architecture, and psychology. The graduate of the average conservatory is as illy equipped for his task in the church as is the minister graduating from the seminary without music appreciation, hymnody, liturgics and the organization and administration of the fine arts programs through a cycle of three to five years. Not less training in specialized fields, but more training in correlated fields is the immediate demand.

If the prophet's dream comes true that twenty-five years from to-day it will be impossible to find an American without the equivalent of a high-school education, will it not be likewise true, then, that every musician of standing must be college or university trained and master of music?

Organist Should Be Bible Student

No organist or choirmaster is fitted for his task unless he be a thoroughgoing student of the Bible. Can he teach the Psalms, the canticles, Psalmody, without a thorough knowledge of singing in David's time, and the antiphonal use of choirs and orchestras at the dedication of Solomon's temple? The temple service, the processionals, the instrumental flourishes and interludes such as the Storm Selah, the War Selah, the parallelism of choir with choir, and soloists with choir, the magnificent marching strophes in Cantata-Psalms 95 to 100 or Cantata-Psalms 145 to 150. This is knowledge that makes us more than conquerors. Poor Elijah must suffer, as also Mendelssohn's music, in the hands of a chorister who knows nothing about the rugged prophet or Baal worship, or Jezebel, or the outdoor wanderings in those far-off days. Jeremiah, most neglected of prophets, most stirring and gripping of all, awaits the composer, the dramatist, to build the greatest Biblical music. Do you composers count Jeremiah a good text?

How are our choirs to enter, open eyed and wondering, into the Sanctus or the Gloria in Excelsis unless the early church, the high mass, the holy communion through 1500 years are sketched with telling strokes? Fill in the backgrounds, the correlation—and the Te Deum will live forever and be sung 60 per cent. better than usual on a certain Sunday because the all of each choir singer has been galvanized into action—body, mind, imagination, emotions, spirit, superman, through wonder stories (true) of this ancient hymn.

The church of the living age is once more to become the workshop for musician, dramatist, ritualist, artist, architect. Churches are hungry for this new leadership back to the arts, back to beautiful music, pictures and drama, back to worshiping the Lord in the beauty of holiness, not in the ugliness of penny collections, hip-hurrah procedure, whitewashed walls and little red chairs. Religious education is bringing the fine arts back into church and church school.

The childless church has no future—without children, without a healthy growing Sunday-school. Without mid-week activities and the church plant as a community center, without choirs and dramatic club and visualization equipment the church of tomorrow is requiem in æternam. We might as well recognize at the start that an inch of boy is worth more than a million yards of carpet, that a flapper as against a mahogany communion table—there is no comparison! Save the girl! Yet adult Christianity goes blindly on its death march. Some fair day children and youth, keen, bright, ofttimes wild and reckless, will crowd the churches and find here light and love, a New Jerusalem set down from above, the city beautiful undimmed by human tears—for religious education will have worked her miracles.

Repopulating the Churches

For the repopulating of the churches Sunday nights, for the strengthening of the church as a community center, for the enrichment of Christmas, Easter, children's week, Armistice Day and other festivals and commemorations, for the educational and spiritual growth of Sunday-schools, for the redemption of childhood and youth, let me introduce to you at this time five wonder workers, five agencies of transformation—not more preaching, not more church suppers, not more grand opera stars nor symphony players, not more forums, not more tabloid young people's socials—but these five fine arts in a series of master church programs:

1. The fine art of congregational singing and hymn interpretation. Many churches are trained to sing with the blood of beasts, yelling, jazzing along like a band of circus riders, hitting the high notes with the crack of doom, sliding up and down like a roller coaster in its giddiest flights. We sing black notes, white notes, notes with stems, notes without appendages, and sometimes we sing rests, missing thereby the meaning of every word—nouns, verbs, adjectives, pronouns, prayer and praise, noble English lyrics! When will the American public stop shouting notes and take gracefully to singing thoughts? Vandals are we in the use of this tender, sensitive, quivering material, racking it out, cutting and clipping, smothering hymns. There ought to be a prison for hymn snippers and contortionists who omit stanzas without thought or conscience, who roar out "O Cross that Liftest Up My Head" and tinkle, ukulele-like, such mighty sweeping lines as "Ancient of Days" or "Faith of Our Fathers, Living Still." Paul admonished the excitable Corinthians to sing not only with spirit, but to sing also with understanding. Our singing with understanding is pretty much with shoe leather and the up and downness of college cheer leaders. Many organists are woefully at fault in not encouraging congregations to sing and to sing with appreciation of the meaning of the hymn. Every hymn has its own tempo, stresses and niceties of expression, but we are more likely to grind out all hymns at the same dying rate or at a breathless hop, step and jump.

The Church That Has Sold Itself

Many an American church has sold itself to cheap evangelistic song; drivel, doggerel, saccharine melody with loving fifths and octaves, sparsely settled with thought (nothing beyond the first line or the first stanza). Gospel songs have to do with adult sin and the need of a Savior. There is little here but introspection, a stock-taking of sins, a morbid self-analysis—no growth in Christian living, no social service, no world-wide kingdom of brotherhood and peace. Every Tom, Dick and Harry (boys of 10, 12 and 14 years of age) must sing from this book "Sinking Deep in Sin," or "O Think of the Home Over There," or "His Blood Cleanseth Me from All Sin." Now everyone knows that if boys sing such hymns with evident relish, something is the matter with them.

We have thus far analyzed two types of hymn-singing churches—the church with good hymnals but no knowledge of the hymns within—no interpretation, no judicious selection, no conscientious fitting together of worship. The other church is the yellow jazz song church that lives by pep rather than poise, that worships jargon rather than Jehovah, that makes of the evangelistic song a competing tournament—men against women, girls against all over 80. The lack of decency, coherence, reverence is evident in all that is here sung. There is a third type of church that sings not at all—that glories in its hired technicians—the ushers seat ye good people, the preacher harangues them, the choir sings for them, the Sunday-school teacher rears their children for them—this is the church of the 365-day sleeping sickness. This type of church buys all its expert service and pays well for it. Worship here is entirely by the hierarchy; the voice of the people is not heard in the land. There is no self-expression on the part of the worshipers, no real hymn singing, no deep-voiced Psalm unisons, no up-springing Glorias or Doxologies. Hymn books in the pew racks are for ornamentation and the binding and gilt lettering are part and parcel of the interior decorating. It is alarming how the American people have stopped singing. It is so much easier to buy music all prepared and put up in rolls and records, to engage an hour of it through the box office, to clap it on and off the stage, but as for the purchasers, please do not disturb these darling auditors; don't ask them to create music, to enter the production end of it, to sing off and play off any pent-up emotions. I do not hear America singing nor playing. Organists, what are we going to do about it? Is it our responsibility to arouse wartime interest and enthusiasm for community, mass, congregational singing?

Volunteer Choirs

2. Volunteer choirs, orchestras, glee clubs, quartets within the church and church school is our second fine art. Let us challenge the church to hearten the young people through a volunteer chorus choir in the church service and an orchestra at Sunday-school and church socials. Let us go farther and advocate the use of children—a boy choir of unchanged voices in the Sunday night services, a choir of junior girls. Let there be a glee club for those changing voices of the adolescent boys, thus holding them to music and the choir and the church during these difficult years. We challenge every organist-chorister to become a master in the field of the volunteer choir. Can he gather together the best singers in the parish, enough tenors and basses, hold them week after week through fascinating rehearsal hours, through choral plans reaching far ahead, through varied appeals of anthem, cantata, oratorio, through plenty of secular singing at week-night festivals, through dramatizations, through visual art with the choirs furnishing music in the gloaming? Intensive organization, limited membership, close corporation, adequate equipment novelty and surprise at rehearsals, adequate social life, scouting all the time for new singers? Need I add that vestments, processionals, summer camp, yells, badges awards, dues (not weekly stipends) wil all build up the esprit de corps. The singing church must come through congregational singing and the masses of children and young life organized into singing unit around the Sunday night service in particular.

Ritual and Worship

3. May we now enter the unoccupied field of ritual and worship—a third fine art of inestimable value in restoring strength and beauty to the sanctuary. We have had enough of sacerdotal monologues of priestly chants, of pagan wailings an vain repetitions in the imprecatory Psalms There should be new readings to take the place of some of the old. Extra-Biblical material should be introduced; not all the prophets died with Malachi and John the Baptist. We need new prayers, new call to worship, new antiphons, new ceremonials. The old forms have been to long venerated for their icy skin-tightnes not for their historic values. Creeds, doctrines are still needed, but let them be expressed in the most forceful and eloquen English possible. I would call on certai prophets—Jeremiah, more of Isaiah, Micah Consider well John Wright Buckram Psalms, and Edward Everett Hale's 101

AUSTIN ORGANS

NEW YORK, Philadelphia, San Francisco, Chicago, Detroit, Los Angeles, Richmond, Atlanta, Charleston, Minneapolis, Cincinnati, Seattle, Troy, Worcester, Baltimore, and many other large centers are possessors of notable Austin organs.

Over twelve hundred are now in use, representing an average output, since active operations a quarter-century ago, of about one organ a week.

The list of Austin owned patents runs into scores.

Psalm. Scan the poets of nature, state documents and addresses. What better can be found for Christian patriotism than Washington's second inaugural address and Lincoln's Gettysburg address?

I would ceremonialize everything worth while and run counter to adult blindness which cries out in its selfishness for a simple service with nothing ornate. What is such a service? No flow of line, no surge of feeling, no peak of sublimity. It is more often the simpleton's service—angular, rattling with words, cold, a thousand miles from the zone of imagination. This is the blind pedagogy of the theological professor and the schoolmaster, of convention chairman and university chaplain—masters in the field of teaching and eloquent discourse and exegesis, but hopelessly stuttering in the field of the training of the emotions through worship and ceremonial.

Pageantry and Drama

4. Another unoccupied area in church and church worship is the field of pageantry and drama. Drama is but one of the five fine arts in the service of religion and in ranking should come fourth in order of importance, for congregational hymn singing, special music of organ, choirs, orchestra, soloists, and the use of worship, ritual and ceremonial precede drama in bodies of material available, in appeal to emotions, in universality of use. Yet many a religious body has done nothing else in the fine arts but drama. It is unfortunate to become intoxicated on drama and thus be incoherent in music, in visualization, in worship. Pageantry has been known again and again to overrun choirs, stifle art appreciation, break up periods of worship. It is, in some centers, digging its own grave, because of its pretense, its illogical procedure, its entire lack of spiritual dynamics. Beware of any church or community center that plays up drama, and only drama, in the field of the fine arts.

When correlated with the other arts, however, drama and pageantry become genuine pedagogic and liturgic helps in church and church school. Will the organists not receive the pageant queen kindly? You can help make her musical settings more chaste and appropriate. You can build into drama's upper curve the cope-stone of musical climax that will "curl the hair." Certain seasons of the year lend themselves to pageantry, such as Christmas, patriots' days, Thanksgiving. May I call your attention to the box office resources of pageantry. It brings the crowds, it pays the bills, it challenges the "movies" as a drawing card. Drama will repopulate the churches with youth.

Moving Pictures

5. Let us now look at the last unoccupied area of art in the church—that of still and moving pictures. The non-theatrical world of 40,000 machines in church, educational institutions, industrial plants and welfare organizations is larger than the organized "movie" business under Will Hays. No, not actively, but potentially. Church machines remain unused because there is no film program, no reels, no synchronized music. It is this lack of understanding how to interpret a feature film, how to build spiritual atmosphere through music and picture, that has made the "movies" of questionable worth as a Sunday night asset. There are immense possibilities in religious films and religious music, preceded by the explanation and appeal of the minister. Many churches are unquestionably successful in drawing crowds and preaching the Gospel at the same time.

The still picture or stereopticon slide is another popular church asset, provided the technic is as smooth and unerring as a Burton Holmes travelog—perfect machine, perfect operation, finest slides in color, backgrounds of music intermingling with ex tempore speech. With hymns thrown on the screen, prayers, verse, etc., the congregation enters into delightful and spontaneous self-expression.

Visualization has come to stay; it is sound educationally; it is also evangelistic. May I urge every pedagog to know pictures. No true teacher is fully equipped for his task unless he uses the graph or picture method.

SPECIAL NOTICES AND ANNOUNCEMENTS

PERSONAL, FOR SALE or WANTED

Rate 10c per word

FOR SALE—One complete Sherwood Music School Course of Piano Music at one-third original price. Valuable material for any teacher or serious student of piano. Write to or call at Miss Frieda Goetz, 3121 Homer St., Chicago, Ills.

Wonderful Volumes!

More appealing or useful collections we have never published. One fills a genuine and perpetual need in the musical home; the other is a veritable mine of musical delight not only for motion-picture pianists and organists but for performers in general.

Family Music Book

Re-Issued by Great Popular Demand

252 Pieces of Vocal and Instrumental Music, 790 Pages; Stiff Cloth Ornamental Cover.

TWO years ago prohibitive manufacturing costs compelled us to cease publishing this huge book. However, insistent demands came from all quarters for copies and we were compelled to heed them. We offer this volume again in its old form with contents exactly as formerly at but slightly increased cost. The Family Music Book is absolutely the largest, choicest and most comprehensive collection of instrumental and vocal music ever assembled in one volume. There are twenty-four different classifications, and the composers, all of whom are classical or standard, indicate the caliber of the music. The contents were chosen and edited by musicians of the highest standing. It is printed in the most approved manner from beautifully engraved plates. It is durably bound in cloth.

Motion Picture Moods

FOR PIANISTS AND ORGANISTS

By ERNO RAPÉE

Just Published

A Rapid-Reference Collection of 200 Pieces, Selected and Arranged to be Adapted to 52 Moods and Situations on the Screen.

THE importance of which Mr. Rapée explains in the following paragraph:

> **"In preparing this Motion Picture Manual for Piano and Organ, I tried to create the necessary bridge between the screen and the audience which is created in the larger motion picture houses by the orchestra. If we consider that the theatres of the size and standard of the Capitol Theatre in New York have a half a dozen or so musical experts under the direction of the Musical Director working out the music to fit the action on the screen, we realize what a very hard task it must be for any single individual, either at the piano or at the organ, to go through with music selected at random and generally at very short notice, and supply good musical accompaniment to pictures."**

This excellent volume supplies a highly desirable library in itself, containing two hundred pieces of all kinds and descriptions, including folk-songs, patriotic songs, operatic airs, snatches from great symphonies, melody pieces of the day, immortal short gems from the masters, old songs, new songs, dances, descriptive pieces, characteristic numbers, and other groups distinct in themselves but impossible to enumerate; composers grading from Beethoven to certain of our contemporary popular writers; and the music of such moderate difficulty as to place the majority of the pieces at the disposal of the average motion picture performer.

One of the chief features of the book is an original marginal index on every page which permits of instant jumps from any part of the book to any other so the user may follow continuously with perfectly suitable music any mood or action taking place on the screen.

Mrs. H. H. A. Beach Sets an Example

EVERYBODY realizes the great work done by musical clubs in America. The need for activity in the musical club field is not nearly so much with the adult who employs the music club at times as a kind of social pasture in which to get away from the problems of business or the home, as it is for the child who is just beginning to get an acquaintance with music. Mrs. H. H. A. Beach, who doubtless ranks as the greatest living composer of her sex and is certainly one of the comparatively few "great" American composers, has found time and enthusiasm to assist in many ways a club formed in her honor in her home, at Hillsboro, N. H. THE ETUDE has made it a more or less strict rule not to publish pictures of clubs, because we have so many hundreds of applications to do so that we can not accommodate all. But the instance of an extremely busy woman, standing at the top of her profession, finding time to promote the interests of a children's club is so noteworthy that we desire to call Mrs. Beach's example to the attention of others. Do not say that you are "too busy to form a children's music club." If you really want to do it you will find a way. The following report of the activities of the club coming from one of its supporters will be interesting to our readers:

TO THE ETUDE:

Here we are! The Beach Club, of Hillsboro, New Hampshire, and the happiest group of children in the whole State. We had this picture of ourselves taken on purpose to give to our dear Mrs. Beach, for a Christmas present.

We are very proud of our Beach Club, and think we have reason to be, for we are the only Federated Juvenile Music Club in New Hampshire. And then, as Mrs. H. H. A. Beach, the most noted woman composer in America, lives in Hillsboro, we have her present at all our meetings.

We all love Mrs. Beach; she is so jolly and kind to us; we are not a bit afraid to play before her. She seems to enjoy it and then she always plays for us.

As we are too young and do not play well enough to belong to the grown-up Music Club, our piano teachers helped us to organize the Beach Club. There are nearly thirty members in all; and most of us are under twelve years of age. We have one drummer, a violinist, and a singer; all the rest play the piano.

We have officers just like the grown-up club. When we elected our first president by ballot, some of the boys voted for themselves. They said afterwards, they really wanted Marguerite, but did not know how to spell her name. The president we have now can not talk plain, but she is very dignified and we never think of whispering.

After the business part of the meeting is over, the president announces our names and each one tells the name of his piece and its composer. Some of the names are hard to pronounce, but we have to learn to say them correctly. We do not sit in the room with the piano; but when Mrs. Beach plays she lets us all stand around her.

One day we had a Bach and Beach program and one of the boys, knowing that Mrs. Beach would be at the meeting, asked his mother if Bach would be there, too. He knows better, now, for in December we gave a Bach play and learned many things about him. We played some of Bach's music and Mrs. Beach played two pieces of his she learned when just a little girl. There is a whole book of these plays written by Mr. James Francis Cooke. We are glad, for we think it is more fun to act plays than to read about the composers.

We wish all children could have a Beach Club, and of course they can, but there is only one Mrs. Beach and she belongs to us.

LISABEL GAY

THE BEACH CLUB

If Mrs. H. H. A. Beach, the most distinguished woman in American music and also one of the busiest, can take time to foster a musical club, should not others follow her example and fine initiative? There are hundreds of clubs like this in various parts of the country. Unfortunately this one picture must remain as the prototype of many, many similar pictures simply because THE ETUDE has not room to print such pictures regularly. The Young Folk's Musical Clubs are the real foundation of all American musical club activity. Why not follow Mrs. Beach's example and found a club?

Question and Answer Department

Conducted by ARTHUR DE GUICHARD

Always send your full name and address. No questions will be answered when this has been neglected.

Only your initials or a chosen nom de plume will be printed.

Make your questions short and to the point.

Questions regarding particular pieces, metronomic markings, etc., not likely to be of interest to the greater number of ETUDE readers will not be considered.

Musical Inspiration or "Rule-of-Thumb" for a Composer?

Q. *Just* HOW *is music composed? Can a piece be composed without inspiration? Does one have to be advanced in Harmony, Counterpoint, Canon, Fugue and Composition, in order to compose? If so, can one study these subjects successfully by oneself?*—L. P.—19, Amarillo, Texas.

A. Music is composed in just the same manner that literature is written, or any other language, for that matter. For music is a language, universal as speech, having differences of styles, scales and idioms, as practiced by different nations. It has its scales or alphabet, its laws of Syntax, Prosody, and so forth. Before attempting composition, a fundamental working knowledge of Melody, Harmony and Counterpoint must be acquired—Canon, Fugue, Instrumentation and the higher forms of composition can be studied later, but upon that foundation. These subjects form a Grammar of the musical language, without which the musician's language cannot be correctly conveyed, any more than can the story-teller's anecdote be related in grammatical and attractive style, without a thorough knowledge of the working principles of grammar and rhetoric. A species of piece can be constructed without inspiration—the species described by a pupil as "a sort-of-a-kind-of-a-piece that tells you nothing!" To compose a "piece," or a story, there must be a story to tell—original for choice; and originality means inspiration. By a specially gifted intellect, the subjects named may be studied successfully by oneself. But experienced advice and example are of the greatest assistance and will shorten the novice's initiation materially.

Sonata—Concerto.

Q. *(i) What is the chief form of classical composition? (ii) What is a Concerto, and for how many instruments should it be written?*—BERTHA, Kalamazoo, Mich.

A. (i) The chief form of instrumental (classical) music is the sonata form; the sonata, string quartet, quintet, sextet, septet, classical overture, concert overture, concerto and symphony all belong to the Sonata form. (ii) A concerto (in concert with) is a composition in sonata form for one or more solo instruments with an orchestral accompaniment.

Pitch—How Determined—Various Kinds.

Q. *What is it that determines the pitch of a note? Are there various kinds of pitch to-day, or is there one universal pitch? How does the pitch now in use compare with that of the time of Handel and Bach?*—A. C. D., Providence, R. I.

A. The pitch of any given note is determined by the number of vibrations per second necessary to produce the note, and as related to the accepted standard of pitch. The different pitches in use are: For the note C (third space, G clef): English (or Concert), 540 vibrations; German, 528 vibrations; French, or International (generally adopted in this country), 517 3-10; Classical (as used by the classical composers, Haydn, Mozart, Beethoven, Schubert, &c.), 512.

Different rhythms combined simultaneously.

Q. *Does it ever occur that two different times, or rhythms—such as duple and triple measures—are combined and heard simultaneously? Will you kindly mention some composition as an example?*—EAST KEARSLEY ST., Flint, Mich.

A. About the best example of this clever witticism is to be found in Mozart's "Don Giovanni," first act finale, consisting of a *Minuet* in 3-4 time, a *Gavotte* in 2-4 time, and a *Danza Tedesca* in 3-8 rhythm, all heard simultaneously.

The Ancient "Barytone" Instrument.

Q. *While reading some music of the seventeenth century, I have come across the word "Barytone." Is this meant for the voice or for an instrument, and, if the latter, does it refer to the brass instrument like the euphonium?*—ORCHESTRA, Hamilton, Ohio.

A. It could not refer to the last named, which is spelled "baritone," because this belongs to the althorn or Saxhorn family and Sax, the inventor of the instruments bearing his name, belongs to the first part of the nineteenth century. Nor does it refer to the voice. The instrument here meant is described by Grove as "a Viola da Gamba, having sympathetic strings of metal passing under the fingerboard." It dates from about the year 1620. Grove gives a picture of it. The following is a better description of the instrument: A Bass-Viol strung with six or seven strings played with a bow, and having a variable number of metal strings which pass under the others and through a double neck. These last mentioned vibrated sympathetically with the bowed strings, and they were also sometimes plucked with the left thumb. It was a very popular instrument.

B-fa—B-mi—Cliff—Clef.

Q. *What is the meaning of the terms "B-fa," "B-mi," and "Cliff"?*—Q., Jenkintown, Pa.

A. "Cliff" is an old name for "Clef." In an old work "On the Skill of Music," there occurs mention of a "B-Cliff." It was used as a key-signature is to-day. When employed to sharpen a note it was known as B-mi or B-sharp; when employed to flatten a note it was known as B-fa or B-flat. Used in this manner the word Cliff was the forerunner of the key-signature.

Some Obsolete Terms.

Q. *Will you please tell me the meaning of these terms which I am unable to find in my dictionaries? "Triplex," "Tut," "Regal"?*—M. R., Denver, Colo.

A. "Triplex" is an old term for triple time. Shakespeare uses it in "Twelfth Night": "the triplex, Sir, is a good tripping measure." "Tut," in lute playing, was the sudden deadening of a note just played, by damping or stopping the vibration of the string with the next finger. "Regal" was a small, portable organ, with a single set of pipes and, occasionally, with a double set, termed "a pair of Regals," producing its music by means of reed-pipes set in vibration by air from bellows at the back of the instrument.

Saint Cecilia, Patroness of Music.

Q. *Who was Saint Cecilia? Why is she considered as the Saint-Patroness of music? When did she live? Any particulars about her will be welcomed.*—CORA W., Boston, Mass.

A. Saint Cecilia was a noble Roman woman martyrized as a Christian about the year 230 A. D. Her house in Rome was converted into a church where, after many years, her remains and those of her family were placed (821 A. D.). Her history is so obscured by legends that it is impossible to give any positive information concerning her. Tradition has it that the charm of her singing attracted an angel to earth; but nothing further is known as to the reason for making her the patroness of music. The first known authentic mention of her as such was in 1502, when a musical society at Louvain (Netherlands) was given her name and placed under her saintly protection. Thereafter followed a musical association at Evreux (Normandy), in 1571; another in England, in 1683, and so forth. It is still the custom in the cathedrals and churches, notably of France and England, to hold musical festivals in honor of the Saint, on her day, November 21-22. Odes and Masses have been written for these occasions by the most celebrated composers and poets of the different periods, including Dryden, Purcell, Handel, Congreve, d'Urfey, Greene, Blow, Pepusch, Boyce, Addison, Adam, Niedermeyer, Gounod, Ambrose Thomas, and a host of lesser lights, poetical and musical.

Cebell or Gavotte—An Old English Dance.

Q *Was the "Cebell" only another name for the Gavotte, or was it a separate dance-form? Whence comes its name? Grove's Dictionary says, "It was a name . . . for the dance-form now generally known as the Gavotte." Was it French or English?*—VIOLINIST, Back Bay, Boston, Mass.

A. The dance was English, very similar to the Gavotte; but the name appears to be of French origin, although its derivation is unknown. It may have been a variation of the French Gavotte, or an independent invention. Then, again, while its musical construction was similar, its dance form and steps may have been different. It was danced quicker than the Gavotte. It is worthy of note that Lully, the court musician to Louis XIV, the French King, contributed some compositions both for the Cebell and the Gavotte, to an English book of "Lessons for the Harpsichord and Spinet," both compositions similar in style. In passing, it may be said that the name "Gavotte" is derived from the natives (*Gavots*) of the Gap country (Dauphiné, France). The origin of this dance dates back to the sixteenth century.

A Biographer of Wagner.

Q. *Can you inform me as to the Chamberlain who has written extensively about Richard Wagner? Who was he? Was he a musician?*—L. M. N., Troy, N. Y.

A. Why the past tense? Mouston Stewart Chamberlain is the son of an English admiral, educated in England, France and Germany; intended for an army career, but prevented by a long illness; he then studied natural science, medicine and the theory of music. His knowledge of the last-named subject in conjunction with special critical work in philosophy and art equipped him for his special investigations and notices of Wagner and his compositions. Since his marriage, in 1909, to Wagner's daughter, Eva, he lives in Bayreuth, Germany.

A GUIDE TO MEMORIZING MUSIC
By A. J. Goodrich

If you play the piano well—or fairly well—and have difficulty memorizing what you play, here is a book that will help you. The author illustrates various means by which intelligent students may in a short time become fully acquainted with any musical composition they may care to learn to play without notes. It is unnecessary to read every note in a piece of music in order to memorize it.

SPECIAL INTRODUCTORY PRICE CASH WITH ORDER 40 CENTS, POSTPAID

"FROM HOLLYWOOD" by Chas. Wakefield Cadman

The beauty and romance of Hollywood in four musical pictures entitled:

"June on the Boulevard"—"To a Comedian"—"Twilight at Sycamore Nook"—"Easter Dawn in Hollywood Bowl"

The first edition entirely sold out simply upon an announcement of "In Press." Third edition now being printed.

"Musical Courier" Says:

"This Suite Is a Notable Achievement." "From beginning to end it is *fine music.* It is *pianistic,* not excessively difficult, *picturesque, beautiful,* and it will most certainly be one of Cadman's most successful works."

Plenty of Strads

A WELL-KNOWN American firm dealing in old violins recently acquired an historic collection of old violins, made by the Italian masters. The violins were purchased in Europe, and among the number was a very fine Stradivarius—one of the most famous the master ever made. The purchase of this collection attracted much attention, and the press associations sent accounts of it to all the newspapers of the United States. No sooner did these articles appear than the firm which bought the violins was simply deluged with letters from all parts of the country, from people who announced, "Yes, we have some Strads, too," and evincing a willingness to part with the same at prices ranging from $10,000 to $50,000.

The letters came not only from butchers and bakers and candlestick-makers, but from bankers, lawyers, clergymen, hard-headed farmers, business men, and people who might be supposed to have more common sense. The reason for all this outpouring of correspondence was that the owners of the violins had looked into the left hand sound-holes of their violins and had caught sight of a label printed on dirty, faded yellow paper, inscribed with the well known magic words "Antonious Stradivarius, Cremonensis Faciebat, Anno, 17." That settled it. If the label said so, the violin must undoubtedly be a genuine Strad and worth a fortune. This is only another evidence of the child-like confidence which people put in labels pasted in violins.

It never occurs to the owners of violins who find labels in their violins that these labels may be counterfeits. The fact is that the label in a violin is the last thing a real violin expert looks at. He knows too well that well-executed counterfeit labels of any of the great violin makers can be obtained for a few cents and pasted in any violin. The general public is very slow in learning this fact and it is probable that people will continue to make these valuable "finds" of genuine (?) Cremonas until the last Cremona has crumbled into dust.

U. S. Army Has Music School

FEW people know that since 1911 the U. S. Army has had a flourishing music school, formerly located at Governor's Island, New York, but now situated in Washington, D. C, under the direction of William C. White. This school is the technical advisory head of all musical activities of the U. S. Army. Its function is to train bandmasters, soloists and bandsmen for the army. For a time the school was under the supervision of Dr. Frank Damrosch, Director of the Institute of Musical Art of New York. At present the school has two hundred students, one hundred and sixty-five of whom are preparing to be bandsmen. The faculty consists of picked men from the best bandleaders in the army. The curriculum is very complete and the courses are thorough. The motto is "Not how much but how well." The only way to enter the school is by enlistment in the army; then the student receives his education and his keep absolutely free. In three years he may, if his talents permit, become a soloist or a leader. He could not possibly do this in less time. Even if the young man looks upon music as merely a means to an end, it is well known that the man with the ability to play a band instrument well or lead a band can always secure preference in employment in industrial institutions maintaining bands.

"DURING each minute of practice the brain should be as active as the fingers."

—AUER.

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Soloist or Orchestra Violinist

WHAT amount of injury does orchestra playing do to the chances of a violin student who hopes to become a solo violinist, and conversely how much does exclusive solo playing detract from the chances of the student who wishes to follow the profession of orchestral violinist? There is a wide diversity of opinion on this subject.

This problem interests thousands of young violinists, and a discussion of the following letter to the violin department may be of interest. A gentleman writes from New York city:

"I have been reading your interesting and valuable answers to questions asked by your violinist readers. I hope you will find no trouble to give your opinion in regard to a boy who came to me for advice, which I would not like to give on my own opinion alone.

"At a younger age, this boy was a very promising and talented violinist, in a large western city. His parents could not afford to give him the advantages of an education in New York, so he got a job, saved his money and came to New York. He played in a New York theater orchestra for over a year, and saved enough to provide for a year of study, when he would not be hindered by the destructive orchestra work. He had tried to study while playing in the theater, but found it both difficult and useless, as the work more than nullified his practice.

"He then studied a year, in which time he made up for the loss in the orchestra, and made some progress. At the end of the year he was confronted by this problem; he felt that he could never accomplish anything by alternating between making funds and studying. He is very talented and would become a good violin soloist if he could study three or four years without interruptions of theater playing.

"He has only one hope; to work for two years steadily, at the end of which time he will have enough money to cover a period of three or four years study. He is at present a good professional violinist, and can also do credit to fine solo work. He is now 18 years old. By the time he will have enough money he will be over 20, when it will be pretty late to start real solid work on the violin, and by which time the orchestra work will have done much damage.

"What he wants to know is whether there is another plan by which he could save those two valuable years, and if there is not a better plan, what chances of success can he expect to have with his plan?"

There is a great deal of nonsense written and talked concerning this, "destructive influence of orchestral violin playing on solo work." The point hinges on how much orchestral playing the student has to do. If a student plays in a jazz orchestra which does six hours solid playing a day, it would no doubt seriously interfere with his serious studies, as it would lead to bad style, and would exhaust the student's vitality. In a theater orchestra where dramas are produced there is usually very little to do, and this would hurt no one. In movie theaters the hours are longer, and dance orchestras are the worst of all. There is an immense amount of hotel work in New York and the larger cities, and in these hotel and café orchestras the amount of work is not excessive, unless the orchestra has to play for dances, which run very late.

That the directors of conservatories and colleges of music all over the world do not consider a certain amount of orchestra work an injury to their violin students (many of whom are studying for violin solo work) is proved by the fact that there is hardly a conservatory of any importance that does not maintain its students' orchestra, in which all the violin students play, except a few finicky individuals, who profess to believe that work in the orchestra class will spoil their solo playing. Of course in these orchestral classes music of the highest type is studied.

Musical history is full of examples of where violinists rose to eminence from the ranks of dance, theater, café, and hotel orchestras. Take the example of Jacques Thibaud, the greatest solo violinist of France. After some years of violin study he found it necessary to play in the *Café Rouge* in Paris, as his funds were running low. One day the great orchestra director, Colonne, visited the café and was struck by Thibaud's remarkable violin playing. He lost no time in making his acquaintance and offered him a position as violinist in his orchestra. He soon after gave him opportunities for solo violin work in which Thibaud made a tremendous hit. His rise since that time has been steady, and he is now one of the world's greatest violinists. Many similar examples could be given.

We may also take the case of our own symphony orchestras in America. The concert-meisters of the orchestras and many of the violinists in the ranks are able to fill solo engagements successfully.

Our advice to the young man in the example given above, would be to study with a good teacher and to try to find some orchestra and café work or hoted playing which only occupies two or three hours a day. If the job took five hours a day, he could no doubt find another student similarly situated, who could divide up the work with him. This would leave him plenty of time for his serious studies, and would injure his chances of success in solo work very little. Two or three hours work a day, where the orchestra rested between pieces, would interfere with his serious studies very slightly. All this time he would be saving his money, and as soon as he had accumulated enough he could drop his orchestra work for a year or two of exclusive study, going back to the orchestra work when his funds ran out.

Where injury is done it is by a heart-breaking grind of six or seven hours of almost solid playing, in dance and movie orchestras. This saps the vitality of the player and destroys to a certain extent the temperament and individuality required for solo work. A comparatively small amount of orchestra playing need not injure the future soloist. If our young friend could get into the ranks of a good symphony orchestra, this would be a great advantage and a liberal education in music.

In our large cities many of the students on the violin and other instruments mak either a part or all their living expense by playing in hotel and café orchestra and this does not prevent many of ther from rising to future eminence. The poir is *not to do too many hours of it.*

Conversely, the violinist who has don nothing but solo work all his life, and n orchestra work whatever, lacks routine an often has a hard time subordinating himself to the beat of the conductor. Whe the Boston Juiblee was held nearly half century ago, an orchestra of several hundred members was gotten together for th occasion. At that time Ole Bull, the Norwegian violinist, was at the height of hi fame and was a popular musical hero i the United States. To give *eclat* to th occasion, Ole Bull was engaged as concert-meister of the orchestra. When rehearsa time came it was found that the grea violinist could not fill the post of leadin first violinist at all, for he forgot all abou the conductor's beat and took all kinds o liberties with the first violin parts. He a once recognized his deficiency for orchestra work, and asked to be relieved. Another man, an experienced orchestra player was put in his place and everything wen smoothly.

Summing up, a violinist who spends hi entire life in exclusive orchestra work, an never does any solo work, cannot expect t blossom out all at once into a solo player but the student who is making solo playing his goal, and spends almost all his tim in serious violin playing, need not fear tha this is all to be nullified because he does couple of hours of orchestra playin daily.

The Junior Orchestra

A Factor in Musical Education

By S. M. E.

Is the junior orchestra worth while The hours of individual drilling, the day and weeks of practice at each differen part and on each instrument separatel the incessant labor of weekly rehearsal with the entire orchestra—is all this wort while? Undoubtedly the scientist woul call the junior orchestra an ideal machin with an efficiency of 100%; for the splendid results obtained far outweigh the effor put in, and so the junior orchestra cann be too highly recommended nor too strongly encouraged. If the practice of duet an trio playing is so valuable an asset to th pupil, it is obvious that a larger unit offer equal, if not greater advantages. Beside developing the very essentials of music requirements, it proves a valuable aid i the formation of the pupil's character, an promotes a desirable sociability.

Among the many advantages it afford there are several that stand out preëm nently.

First: The child's ear is developed. Pupils who could not detect even a marke difference in pitch, and with whom four c five months of patient drilling had brougl about but little improvement, join the orchestra, although they were not at all capable. In a sort time their intonation wa remarkably improved, and within a yea they had developed an accurate sense o musical hearing.

Second: A sense of rhythm is cultivate The child unconsciously overcomes th difficulty of playing dotted notes and othe rhythmical combinations simple in themselves, yet difficult for pupils not gifte with a natural rhythmic swing. Th rhythm of the other members of the orchestra seems to pass into her very sou and fingers, and she feels for the first tim the irresistible influence of association.

Third: Carelessness in bowing is overcome. The pupil cannot help observing th uniform drawing up and down of all bow and, faithfully imitating her young idea

IT'S REALLY SURPRISING
HOW

Stuber's "Instrumental Music Course" has met with the warm approval of supervisors and teachers.

The coming school year will find this course forming the backbone of public school instrumental music in many of the more advanced cities. Its practicability has been proven by four years' use in public schools. Constant revision keeps it up to date in every particular.

We would appreciate the opportunity of sending complete copies on approval to supervisors and teachers.

will fashion her own likewise. Other difficulties, such as the correct vibrato, will be mastered more easily and quickly than could otherwise be learned by months of individual practice and teaching.

Fourth: The junior orchestra demands of the pupil a due consideration and regard for her co-worker. Her freedom of expression and too marked individuality must merge into a more comprehensive unity of thought and feeling; and yet this strict conformity or giving way does not bar personal appreciation or individual skill.

Fifth: It stimulates interest and arouses ambition. Its power as a stimulator of interest is not equalled by anything else in the whole system of education. Three years ago I started a junior orchestra with only three pupils. The children were so attracted by it that in a short time the number increased to fifteen. The desire to become a member makes it a successful advertisement, and in consequence it is productive of much good from a commercial standpoint.

Sixth: It teaches self-reliance, confidence and perseverance. Each child must at the time of rehearsal devote her entire mind, heart and ability to her part. Each pupil is made to understand that for a successful rendition, not merely the efforts of two or three individuals are required, but also her own most careful attention and best effort, as though she alone carried the whole responsibility. By repeated appearances before an audience stage fright is overcome, and the pupils' playing gains a certain sureness not otherwise easily obtainable.

The weary repetition for the sake of some who do not know their parts, the constant thwarting of the gifted pupil by the stolid ones, develops patience and endurance. The following little incident might be used to illustrate how it develops self-reliance:

It was at the annual junior play and the junior orchestra gave its usual contributions of two numbers to the program. The applause they received for the first piece was so great that, contrary to rule, the school directress sent the children back to give an encore. But the little ones had already gone behind the scenes and had scattered in all directions; she succeeded in sending out only a few second violinists. The poor little ones, knowing they had no first violinists among them, were excited and confused. But not at all daunted at the situation, they quickly replaced the stands, redistributed the music, and shifted the parts about giving the most capable among them the first violin part. All this required quick thought and spontaneous action, for within a few seconds they were ready to begin. The rendition of this encore was by no means artistic; in fact it had a rather weird effect. But the audience was pleased and satisfied, realizing and appreciating the efforts of the children in having to wait on themselves.

Seventh: The pupils enjoying the advantage of belonging to an orchestra also have the privilege and opportunity of taking part in the various social activities, and of furnishing the music for children's entertainments. Thus they become a source of pride to their parents and contributors to the happiness of their friends and associates.

All teachers, in general, realize these facts, but only those who have organized a junior orchestra or ensemble club can truly appreciate their just merit and worth.

It is not necessary for the solo violinist to sway his body about during his performance, nor to shuffle with his feet, nor to swing his violin from side to side. All these mannerisms distract the attention from the music and disturb the audience. The player who would be successful as a soloist must efface himself as far as possible; his violin alone must interpret the music. The best soloists do not sway about; the audience does not notice the player until afterwards. The music is too much in evidence. In fact it is not too much to say that the finest soloists unconsciously efface themselves. Their affection for their art is above all other considerations; and by this high standard are they enabled to produce the thoughts and inspirations of the composers of their solos.

Study and technic are necessary; but more than all of these is high-souled standard of life of the true genius. And this standard is not beyond the range of anyone. It is entirely within the compass of his own will. But he must be prepared to live the right, to scorn all forms of deceit and sham, and to order his life as becomes not only a man, but also a great musician. And so surely will the reward be great.

SUMMY'S CORNER

WHAT TWO EMINENT MUSICIANS SAY OF
HARMONIC MATERIAL AND ITS USES
by ADOLF WEIDIG

FREDERICK STOCK
Conductor Chicago Symphony Orchestra
says:—

"I find Mr. Weidig's textbook a veritable mine of useful information, a book which should be in the possession of everyone interested in the study of harmony. A work sure to appeal to musicians and laymen alike. I believe it will prove a lasting success."

THEODORE SPIERING
Violinist, Conductor, Educator
says:—

"I have always looked upon Weidig as one of the most competent and progressive teachers of harmony, and this textbook corroborates this opinion. I know of no similar work that goes into the subject so thoroughly, and the explanations are imbued with new and illuminating thought."

Price of Book, $3.00 Plus Postage

Send for descriptive circular of Harmonic Material and Its Uses, by Adolf Weidig, which gives full details of the plan of the book, its methods and purposes.

POSITION AS TEACHER

IN ONE OF THE

Sixteen Chicago
Neighborhood Branch Studios
we shall open next year

These pictures show a few of the young men and women chosen from our student body to fill positions as Junior Teachers on our Chicago Faculty while they are themselves working for advanced credits.

Our chain of Neighborhood Branch Studios in Chicago makes similar opportunities possible for a great number of young teacher-students.

More than 1,000 pupils are now taught in these Chicago Branch Studios.

During the past year we have opened twelve new Neighborhood Branch Studios, and have made provision for opening sixteen more during the school year 1924-25. Teachers trained in our plan of teaching will be needed in these Branch Studios.

These teachers will be selected from the advanced students who come to Chicago and register on or before June 30, 1924, the beginning of the Summer Term.

NORMAL CLASSES FOR TEACHERS OF PIANO

AND

TEACHERS' TRAINING CLASSES

FOR

PIANO STUDENTS WHO WISH TO BECOME TEACHERS

CONDUCTED BY

John M. Williams

Author of: "Child's First Music Book", "Nothing Easier" or "Adventures of Ten Little Fingers in Mother Goose Land" G. Schirmer; "First Lessons in Piano Playing" (in press), Presser; "Tunes for Tiny Tots", Presser. Mr. Williams' series of articles entitled "What to Teach at the Very First Lessons" began in the January issue of "The Etude".

ITINERARY

CHICAGO	June 16 to June 28.
NEW YORK CITY	June 30 to July 12.
SEATTLE	July 21 to August 2.
SAN FRANCISCO	August 4 to August 16.
SAN DIEGO	August 18 to August 30.
LOS ANGELES	September 1 to September 13.
SALT LAKE CITY	September 15 to September 27.
DENVER	September 29 to October 11.
TUCSON	October 13 to October 25.
EL PASO	October 27 to November 8.
SAN ANTONIO	November 10 to November 22.
DALLAS	November 24 to December 6.
HOUSTON	December 8 to December 20.
NEW ORLEANS	January 12 to January 26.

Each Class will be of two weeks duration (daily class lessons of two hours each). Early enrollment is urged as the size of classes will be limited.

NORMAL TRAINING

Only recently has attention been directed to the important matter of preparing musicians for their work as teachers. The JOHN M. WILLIAMS SYSTEM OF FUNDAMENTAL TRAINING is devoted SOLELY and EXCLUSIVELY to the TRAINING of TEACHERS of PIANO PLAYING, and prepares music teachers for the work of giving fundamental training to music students through the first four years' work.

This system shows the teacher how to plan a SYSTEMATIC AND CONTINUOUS COURSE OF STUDY FOR EACH PUPIL and provides teaching material for the first four years' work and suggests methods of presenting it.

Many teachers using this system are earning from $400 to $600 monthly.

Booklet describing the Course in detail sent upon request. Address JOHN M. WILLIAMS SYSTEM OF FUNDAMENTAL TRAINING, 449 West 123d Street, Suite 32, New York City

FLETCHER-COPP MUSIC METHOD NORMAL SCHOOL

Two Summer Sessions

THE first under the management of the NEW YORK PIANO CONSERVATORY AND SCHOOL OF AFFILIATED ARTS—(address Carnegie Hall)—June 16th in beautiful Nyack-on-Hudson, N. Y. In connection with this there will be a Summer Camp for beginners or boys and girls who are advanced in Fletcher Method and wish to "carry on" in the Fletcher Method Advanced Harmony—modern Chords, Scales and Technique with Mrs. Fletcher-Copp and Dr. Westlake. Riding, swimming and the usual Camp opportunities and pleasures included.

The Second School will be under the management—as last Summer, of the KING-SMITH STUDIO SCHOOL, 1751 New Hampshire Ave., in historic Washington, opening August 12th. Other artistic advantages will be available at the King-Smith School.

Both courses cover 200 hours of instruction in the Fletcher Method of Self-expression, and the teacher gains, besides the most famous system for children, a firm foundation for herself in the fundamental principles of Music, ear-training, harmonizing, modulation, memorizing, etc., etc., and a set of apparatus worth $100.

THIS SYSTEM IS RECOGNIZED IN AMERICA AND EUROPE AS THE MOST PRACTICAL AND THE MOST IDEAL AND THERE IS AN EVER-INCREASING DEMAND FOR TEACHERS.

For full information apply to either of the above addresses or directly to

The Best Service To Music Buyers

The most important activity of the Theodore Presser Co. is the constant endeavor to maintain a service that is the most satisfactory and the most helpful to music buyers everywhere. Frequently individuals high in musical circles, when visiting this establishment, are amazed at the tremendous volume of business and the careful individual handling of each order, whether large or small. When one stops to realize that various quantities of several hundred thousand music publications must be stocked to give prompt service on orders received, it can be understood readily that a large corps of experienced clerks is necessary to fill the orders with the desired music. Even after experienced clerks have placed the music with the orders, there is a checking system insuring accuracy before the music is shipped. Thousands of music buyers are familiar with the liberal examination privileges, generous professional discounts and convenient charge accounts granted by the Theodore Presser Co. Any music buyer who has not taken advantage of these is invited to send for information upon our service, and helpful classified and graded catalogs covering any branch of publications will be supplied upon request. No matter where the individual desiring to purchase is located, the mail order service of the Theodore Presser Co. brings to that individual's very door a convenient service that cannot be surpassed by personal service over the counters of the best metropolitan music stores. There is no need for any teacher anywhere to be inconvenienced in securing proper material for teaching purposes as long as the mails will reach the locality in which the teacher is situated. The Theodore Presser Co. not only serves the teacher, but saves the teacher time and money through liberal professional discounts and service direct to the studio.

Dreaming of My Old Home Sweet Home On Victor Record

Among the new Victor releases, there is a very excellent presentation of Geoffrey O'Hara's beautiful song, *Dreaming of My Old Home Sweet Home.* This is a song that is distinctly of the better popular type, and it is very pleasant, indeed, to sit back and listen to the singing of it by the favorite soprano, Helen Clark, and the popular tenor, Lewis James. Just as many of the sentimental songs of several generations back still have an appeal to many, so does *Dreaming of My Old Home Sweet Home* stay with those who hear it, and the delightful sentiment and beautiful melody of this song will keep it popular long after so-called popular songs of the day are forgotten. The price of this record is 75 cents.

This is but one of the many records that the Theodore Presser Co. Talking Machine Department is ready to supply record buyers anywhere. Theodore Presser Co. maintains a large and always up-to-date stock of Victor and Brunswick records and safe shipment is guaranteed to purchasers at any point. Shipments of records are continually going to patrons in all parts of the world. Anyone interested in the purchase of a talking machine is invited to write for catalogs, giving the various styles and prices of Victrolas and Brunswick phonographs. Those who are particularly interested in the mention of *Dreaming of My Old Home Sweet Home* may be glad to know that this is procurable as a vocal solo in sheet music, and is also published for men's quartette, mixed quartette, women's trio and orchestra.

Rhythms For Young People By Blanche Fox Steenman

We take pleasure in announcing for the first time a new and important work on musical appreciation. The purpose of this book is to develop, right from the beginning, a sense of appreciation for the great works of the old masters in music. This is accomplished by adopting the rhythmic music of the masters to the physical activities of young students and by providing, during moments of rest and quietude, music that is uplifting and idealistic in character. Many of the compositions are given in their original forms while others are arranged or simplified. All of the pieces are within the range of the average performer. Special annotations or analytical remarks are given throughout and copious indices are supplied. The book will contain an astonishing amount of musical material.

The special introductory price in advance of publication is 50 cents per copy, postpaid.

New Recital Album For the Pianoforte

This new collection will be made up from the special large plates and it will contain an unusual number of recital pieces of the very best type, pieces such as will appeal to all. In point of difficulty, Grades Three, Four and Five will be covered. Standard, modern and contemporary writers will be represented. The book will be made up of pieces which are not found in other volumes. The work is now nearly ready and this will probably be the last month of the special offer.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Commencement Program Suggestions

Music supervisors will find a wealth of new material in our catalogs, suitable for commencement programs. Many excellent numbers are listed in the advertisement on the inside back cover page of this issue.

Copies of any of these choruses will be sent for inspection on our "On Sale" plan. We would also call attention to our *orchestra collections suitable for school use.*

Presser's Popular Orchestra Book and
Crown Orchestra Book

These collections are published for 21 parts and piano, affording excellent material for almost any combination of instruments.

The Amateur Musician By Russell Snively Gilbert

This little work by Mr. Gilbert, who is himself an experienced teacher, is so planned as to fit in after the kindergarten stage in music teaching or after any beginners' book. It develops hand-in-hand a knowledge of notation and of keyboard execution. Further than this, it provides opportunity for original creative work of an elementary character by furnishing little bits of melody which are to be completed by the student. This tends to develop taste and imagination.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Basic Principles in Pianoforte Playing

By Josef Lhévinne

Mr. Lhévinne's conferences upon pianoforte playing are the result of actual experience of a highly successful virtuoso and teacher in the prime of life. They reflect the latest views upon pianoforte playing and everything is so clear, so simple and so direct that any student or any teacher can not fail to realize the value of this book as a source of reference. If Liszt, Chopin or Henselt had taken similar measures to preserve the secrets of their art, while they were active pianists, musical literature would be that much richer. The pianist is not to be developed by lessons with one or two or three masters alone but by hearing the interpretations of as many pianists as possible and by reading everything possible from the great performers of the past or the present. The advance of publication price of this work is 30 cents, postpaid.

What to Play—What to Teach By Harriette Brower

Of course if you are in the class of piano teachers who are perfectly satisfied that you know all about the "teaching repertoire" ancient and modern this unusual book, which tells what pieces are most desirable and which may be used in program order, will not be of special service to you. Not one teacher or student in one hundred can fail to be benefited by reading Miss Brower's book. As a teacher and as a critic in New York City, she has attended literally thousands of concerts. In these she has noted those pieces which are the most effective with audiences and has noted their relationship in programs. It is fine to know of these so that you may map out your own study programs. Miss Brower gives a large collection of veritable programs and comments upon the compositions as educational material. The advance of publication price is 75 cents, postpaid.

Standard Vocal Repertoire

A selected number of our best secular and sacred songs have been most carefully chosen for this book. All voices are given consideration so the collection will be of general usefulness. There will be about forty songs bound together and our advance of publication price is but 35 cents although the list price when issued will be 75 cents. All music lovers should avail themselves of this opportunity.

Diplomas and Medals For Commencement

Schools of music, colleges, conservatories and private teachers now making preparations for graduating exercises will be interested in the complete line of diplomas and medals we offer at exceptionally moderate prices. Diploma and certificate forms, some with suitable wording for presentation to students who have completed courses in music, are obtainable in several designs and sizes. Special wording on diplomas and certificates will be supplied at cost. A solid gold 10-K medal, of attractive design, is a particularly appropriate award for honor students. There is space on this medal for engraving the recipient's name, and the date on which the award is made. If special engrossing is desired on diplomas and certificates, or engraving on medals, we advise our patrons to place their orders early, at least two weeks before the date of the graduating exercises. This is a very busy season for the artists and engravers doing this work and delays are sometimes unavoidable if orders are not placed in time. Illustrations, descriptions and prices of these awards are given in the "Music Teacher's Hand Book," a copy of which will be sent gratis to anyone interested.

Jolly Jingles For Little Fingers By Helen L. Cramm

This is a set of seven first grade pieces by one of the most popular writers of piano music for young players. These pieces are in Miss Cramm's best vein and as implied by the title of the book, they are all of lively character. They are engraved in large size notation and each number has an appropriate text. The pieces are named as follows: *Calling Kitty, The Silly Duck, Ting-a-ling-ling, The Sick Mamma Doll, The Traffic Man, The Thoughtful Little Mother, Good Night, Dearie.* Young students will be sure to like these pieces.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

What the Vocal Student Should Know By Nicholas Douty

Mr. Douty is what the advertising writer would describe as a "different" kind of a vocal teacher. Apart from his long experience in church and on the concert and oratorio platform, he is a very fine pianist and organist. The voice teacher who can take the orchestral score of "Parsifal" and play it at sight is rare even in these days of fine equipment. The unusual ability that enabled Mr. Douty to attain his own high standing in his profession has been applied by him to stating just those things which the Vocal Student Should Know. In telling about these things he does not stop with the telling. The student gets the information which enabled him to work out his problems; but most of all Mr. Douty has given at the end of the work a series of daily exercises, or really six series of exercises, for the voice, which we have already humorously called "Douty's Daily Dozen." We know that they will be very widely used as a kind of vocal "daily bread" by students. The book is now set up in plate form and is being printed. The advance of publication price is 50 cents, postpaid.

Album of Compositions For the Pianoforte By M. L. Preston

The special introductory offer on this new volume will be continued during the current month. The volume is nearly ready. The contents, made up of the most successful pieces by Mrs. Preston, include drawing-room numbers, teaching pieces, characteristic pieces and idealized dance forms. There are also some very popular pieces by the same writer published under the name M. Loeb-Evans. The pieces are chiefly of intermediate grade.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Hymn of Praise—Cantata For Mixed Voices
By Frederick Wick

A sacred Cantata for use at any season of the year. All choir directors will welcome this work by Mr. Frederick Wick, not only because of the musicianship but on account of the fact that there are so few sacred cantatas except for Christmas or Easter. This work is worthy of careful study. It is not easy to render, but grateful to the singers and interesting to hear. The solo voices are Soprano, Tenor and Baritone. It requires about forty minutes in rendition and should be done by a large chorus. Our advance of publication offer is one copy for 30 cents, postpaid.

Little Folks' Music Story Book
By James Francis Cooke

Frankly, this is another history of music, but a very different history from any one previously related. It is intended for very much younger children than *The Standard History of Music* by the same author. It is told with an intimate touch that makes it really a story book. The pictures will be printed upon separate sheets to be cut out and inserted as in the case of the famous Tapper biographies. In addition there will be other features that delight children. The advance of publication price is only 50 cents, postpaid, and we feel certain that every teacher of young students who procures a copy of this book will be more than pleased with the interesting, helpful material it contains.

The Castaways—Operetta For Women's Voices
By Fay Foster

A tropical island setting with native women doing a ceremonial dance and the arrival of a party of modern American women who have been shipwrecked—this is the basis of the plot. Many clever thrusts at present-day foibles are in the dialogue while the music is charming throughout. Some of the solos are worthy of the attention of our best singers while the choruses have all the snap and swing of the inspired work of Fay Foster. The costumes are very easily made and as the stage setting is not changed during the two acts, the cost of production may be reduced to a minimun. The special introductory price for one copy only is 40 cents, postpaid.

Album of Scales For the Pianoforte

This volume is planned along lines similar to the *Album of Trills*, recently issued. The pieces are chiefly of the third grade or a little easier. In this particular volume all are based upon scale passages and some very popular writers are represented. The pieces are all interesting enough to be played for their musical value alone, but they have the additional advantage of a definite technical object, and this is to make the study of scales interesting. The *Album of Trills* is already a success. This new album should prove not less so. It will be followed in due time by an *Album of Arpeggios.*

The special introductory price in advance of publication is 30 cents per copy, postpaid.

New Theory Book
By Preston Ware Orem

There is nothing that so thoroughly induces a knowledge on the subject as the actual working out of it. The way to learn to write is to write. In theoretical studies, after the foundation is once laid, the rest comes largely through experience. After a knowledge of harmony which reaches as far as the dominant seventh chord has been attained, the student should begin attempts at original work, and through these attempts the way is paved for a knowledge of the remaining chords, of elementary form, and of modulation. Beginning with the structure of melody, it is the object of this book to lead the student along the lines mentioned above.

The special introductory price in advance of publication is 60 cents per copy, postpaid.

Principles of Expression in Pianoforte Playing
By Adolph F. Christiani

When this book came into the hands of the writer of these notes some years ago he was so fascinated and helped by it that it was his companion every day for months and months. Now that it is to appear in a new edition from the offices of the Theo. Presser Company, he realizes again what it was that made it so wonderfully attractive. It is much more than a mere treatise on expression. The author tells what is behind the art of pianoforte playing and does it with concrete examples that the student can put into immediate employment. It gets to the bottom of phrasing, of metre, of analysis, of tone painting, and does it in a thoroughly practical way. The advance of publication price for the new edition is $1.50, postpaid.

In Foreign Lands—Cantata For Two-Part Chorus of Women's Voices
By Richard Kieserling

Seldom indeed will directors find such excellent material as this new work from the pen of Mr. Kieserling. Colleges, seminaries and schools for girls will welcome this fascinating series of four scenes. No. 1, "On to Spain," has all the atmosphere of the Spanish Music; No. 2, "Egyptian Moonlight," takes us to the languorous tropics; No. 3, "A Japanese Tea Party," pictures the Orient; while No. 4, "Romany Life," thrills with the Gypsy rhythms and affords a splendid climax. Our advance of publication price for one copy only is 30 cents, postpaid.

New Instruction Book
By John M. Williams

The preparation of this new work is progressing very satisfactorily and the book will be on the press very soon. The idea of developing all notation from "Middle C" and beginning at once with both Clefs is finding much favor among modern teachers. Mr. Williams' new book is based entirely upon his own long teaching experience. Every scrap of the material has been tried out in actual teaching and all that has not proven satisfactory, both to teacher and pupil, has been discarded. This is an eminently practical way of making a book of this kind and it should guarantee the success of the work from the very start.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

Young Folks' Opera Gems

The entrancing melodies of the favorite operas, *Faust, Lohengrin, Martha, Tannhäuser, Bohemian Girl*, etc., have appeared in many piano transcriptions, most of them too difficult for the player of moderate attainments. The selections in this interesting album are arranged in an easy, playable manner, none going beyond Grade 3 in point of difficulty, some are only Grade 2. No variations are introduced; the original melodies and harmonies have been adhered to as closely as possible. This book is now ready for publication and patrons who desire a copy should take advantage of this opportunity to obtain one while it is being offered at the special advance of publication price, 35 cents a copy, postpaid.

Holberg—Suite for Piano
By E. Grieg, Op. 40

Grieg's Op. 40 seems destined to a continuing popularity with teachers and players. It is an admirable blending of the classic with the modern: classic in form and atmosphere but modern in harmonies and admirably adapted to the technic of the pianoforte. This Suite would be graded about five. The several numbers are: *Prelude, Sarabande, Gavotte, Air; Rigaudon.* This will be a new volume in the *Presser Collection.* The work has been prepared with the utmost care.

The special introductory price in advance of publication is 25 cents per copy, postpaid.

Four Melodies For Violin Alone or With Piano Accompaniment
By Frederick MacMurray

There are certain violinists who continually crave something "different." They have a particular liking for the novelty. For such as these we recommend the Four Melodies by MacMurray. They are written entirely in double stops and may be played by the violin alone or with the very effective piano accompaniment. Two of the melodies are original compositions, while the other two are transcriptions of well-known favorite old songs. They are treated in a highly ingenious manner and the result is a very attractive addition to our violin catalog. These melodies can not be classed as easy, by any means, and they offer an opportunity to the wide-awake violinist to put new life in his repertoire. They are sure to please every audience. The special price of the Four Melodies is 50 cents a copy, postpaid.

Thirty-Six Studies or Caprices For Violin
By F. Fiorillo

The value of these studies for the development of advanced violin technic has been acknowledged by the foremost teachers for over one hundred years and numerous editions both in this country and abroad have appeared from time to time. In our desire to maintain the high standard of the *Presser Collection,* we have engaged a most competent musician to edit this work, and we feel certain that advance subscribers will be more than satisfied when the splendid new edition is delivered in the very near future. An opportunity is still afforded during the current month for securing a copy at the special introductory rate of 35 cents, postpaid, and as the retail price will be $1.00, the advantage in ordering now is plainly apparent.

Reverie Album For The Piano

By a *Reverie Album,* we mean a collection of pieces of the more quiet and melodious type. This will include pieces which are somewhat ornate as well as songs without words, nocturnes, etc. None of these pieces will go beyond the fourth grade in point of difficulty and yet they will be numbers of such musical worth that more advanced performers will find them decidedly interesting and attractive. The church pianist obtains in this volume many numbers adapted for his purposes and the book will also be just right for home playing on Sundays.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Music-Writing Book
By Anna Heuermann Hamilton

This is one of the best and most comprehensive writing-books ever published. At the same time it is so clear and practical that it may be used to good advantage with students who are not very far past the elementary stage. It has more explanatory text than most writing-books and each step is explained thoroughly. In this manner the theoretical side keeps pace with the practical side. The author is a very successful teacher and educational writer.

The special introductory price in advance of publication is 20 cents per copy, postpaid.

First Lessons in Bach
By Walter Carroll

This is one of the standard teaching works used as a preparation for Polyphonic playing and particularly as an introduction to the *Little Preludes* and *Inventions of Bach.* It contains the best and most attractive of all of Bach's easy pieces. While there are other collections that contain some of these numbers, there is no other collection that contains them all. Our new edition of this work has been very carefully re-edited. It will be found superior in all respects.

The special introductory price in advance of publication is 20 cents per copy, postpaid.

(*Publisher's Notes continued on Page 286.*)

Etude Cover Design Contest

$250.00 Prize

THE ETUDE Herewith Announces a Prize Contest Open to All for Cover Designs Suitable for Our Publication.

REGULATIONS

1. The designs must have distinct musical significance with an appeal to as large a section of THE ETUDE'S widespread body of readers as possible.

   The design should be attractive from the News Stand (the selling standpoint), but must also make an effective cover for the music lover's home.

   Designs with a historical, educational or humorous trend will be considered with interest. Designs that are merely allegorical, purely idealistic with Grecian, Roman, or essentially antique grounds are not solicited. THE ETUDE is a practical paper for music-lovers, teachers and students of to-day.
2. Designs may be for two- or three-color reproduction.
3. Designs must be drawn in proportion to reduce to the standard size of THE ETUDE, 10½ inches wide by 13½ inches high.
4. The design must not bear wording or lettering.
5. Avoid the introduction of lyres, pan-pipes, lutes, antique instruments, banjo, guitar, etc. If an instrument is used employ the piano, organ or the instruments of the symphony orchestra.
6. Any contestant may submit as many designs as desired.
7. The ownership of the copyright of the winning design will rest with THE ETUDE.
8. All designs submitted must bear upon the back the full name and the address of the artist.
9. Postage to insure return must be sent with every design.
10. THE ETUDE assumes no responsibility for loss of or damage to any design, but every possible care will be taken of the designs while in our offices.
11. The contest will close Sept. 1st, 1924

Address all designs to

ETUDE COVER DESIGN CONTEST

1712 Chestnut Street, Philadelphia. Pa.

ETUDE friends everywhere are requested to notify their artist friends of this contest. Big names do not mean anything to us in comparison with effective, attractive, beautiful cover designs. Art Schools and Art Departments of Colleges everywhere are invited to co-operate with us in this contest.

Twenty-Five Selected Studies For Violin By H. E. Kayser

Arranged and edited by Charles Levenson.

A new violin study work which we are sure will have a wide appeal. Mr. Charles Levenson has selected twenty-five of the best of the Kayser Studies, opus 20, and has added a very effective second violin part, in score. It is very beneficial to the student to have the teacher play along with him, and it adds greatly to the interest to have otherwise possibly dry exercises made into very interesting duets. This book could also be adapted for class work, having part of the class play the second violin. Up-to-date teachers who recognize the value of the Kayser studies will welcome this new edition, and will not neglect the opportunity to secure a copy at the advance of publication price of 40 cents a copy, postpaid.

Concerto No. 1 Violin and Piano By J. B. Accolay

This Concerto has come to be considered a sort of introduction, as it were, to the study of the concerto literature of the violin. It is somewhat of a task to take the pupil from the field of teaching and concert pieces to that larger and more worthwhile sphere, the concerto. It is almost staggering to a pupil, especially if he be young, to think of mastering all the difficulties of the well-known concertos. But with a melodious, attractive number such as this by Accolay to serve as the stepping stone, the task becomes less formidable. This concerto contains real technical difficulties, and is built along the regular form, but in such an attractive style as to appeal to pupils. We are giving our edition careful editing and it will soon be ready; the advance of publication cash price being 35 cents.

Scene de Ballet Violin and Piano By Chas. de Beriot

The *Presser Collection,* recognized by musicians as a superior edition of standard music, is soon to be augmented by the addition of this violin masterpiece. Featured on many concert and recital programs and used by many teachers for advanced technical study, its advent in a new edition by Dr. Thaddeus Rich, Concertmaster of the Philadelphia Symphony Orchestra, and recognized authority on violin literature, is eagerly awaited. Previous to publication we are offering this work at a special price of 30 cents a copy.

Vocal Studies For Low Voice By George Whelpton

There are certain elementary vocal studies and exercises which have become pretty well standardized. Having them collated and arranged in a systematic, practical manner in one volume is a great convenience for the busy teacher, as it saves writing them out. The author, who is experienced both as a teacher and writer, has drawn upon his own comprehensive knowledge of the vocal literature for those exercises and studies which are best suited for the development of low voices.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Songs For Girls

Many teachers write us asking for a selection of songs from which to make up a program for girls or young ladies, and state clearly that they do not want, nor will they use, texts treating of romance or religion. We have made such a selection and bound these songs in one volume, a copy of which may be ordered in advance of publication at the price of 40 cents, postpaid.

Only the best songs by good composers are in this book and the subjects of the texts are flowers, birds, nature in her many moods, humorous and dialect songs as well as many which may be used as musical recitations.

Album of Piano Pieces For Six Hands By A. Sartorio

This volume is now ready but we will afford our readers one more opportunity to secure copies at the special low price. It is the very best Six-hand Collection ever published. While the pieces are chiefly of intermediate difficulty, many of the parts for the Third Player may be played by students of the Second Grade. There are original pieces by Mr. Sartorio besides his arrangements from some of the standard writers. There are also some original pieces by other popular composers.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Advance of Publication Offers Withdrawn

There are some exceptionally fine works in this group of publications on which the Advance Offer price is now withdrawn. Reasonable retail prices have been placed upon them and the usual liberal discounts upon Presser Co. publications to the profession are allowed upon these prices. A copy of any or all of the works may be secured for examination according to our "On Sale" plan.

Favorite Musical Readings and Pianologues of Coyla May Spring, written and compiled by Clay Smith. Clever and entertaining numbers that are from the successful repertoire of one of the foremost Lyceum and Chautauqua artists. Price, $1.00

From My Youth—12 Character Pictures for the Pianoforte, by R. Krentzlin. A set of elementary teaching pieces with real educational value giving special attention to the development of style, rhythm and technic. Teachers requiring material in grades 2 and 2½, should know these pieces; 75 cents.

Lemare Organ Album. A very interesting pipe organ collection. Contains transcriptions and original compositions selected, arranged and composed by Edwin H. Lemare. Mr. Lemare has beautifully enhanced folk song, hymn, operatic and other favorite melodies. Price, $1.50.

Rainbow's End—An Operetta for Children, by Cynthia Dodge. A charming and entertaining musical play for juveniles. Easy to produce and costume. Price, 60 cents.

Knight of Dreams. A musical comedy in three acts by May Hewes Dodge and John Wilson Dodge. Just the type of a musical play for amateurs. It has been sub-titled "A Modern Pygmalion and Galatea," and is melodious and no dull spots exist. Full vocal score. Price, $1.00. Stage manager's guide, price $1.00. Orchestral parts may be rented.

The Dawn. An Easter Cantata for two-part treble voices, by Wm. Baines. May be used by a women's choir or a choir of young voices. Not difficult but melodious, and of decided merit. Price, 50 cents.

Four Seasons. Cantata for three-part chorus of treble voices, by R. Kieserling. This is in reality a cycle of four choruses for three-part singing furnishing ideal program material for singing organizations of women. Price, 60 cents.

Stories Notes Can Tell. Six piano compositions by Frances Terry. These delightful characteristic easy second grade pieces will delight young players. The keys C, G, F and A minor are employed. Price, 75 cents.

Watch the Expiration Date On Your Etude Wrapper

Many of our friends tear off the wrapper without noting the expiration date opposite the name. If your wrapper shows the following, "March '23," it means your paid for subscription expired with the March issue. Read the note in the upper left-hand corner of the third page of every ETUDE relative to discontinuances. This is important. Remember the price of THE ETUDE is $2.00 for one year, $3.50 for two years. Make it a point to subscribe for two years in advance and save 50 cents, which is quite an item in these days of high prices.

We Are Sorry, But

Many new subscribers, and those who did not send in their renewals promptly, failed to receive a January copy of THE ETUDE. We ordered several thousand in excess of previous issues, but the demand was heavy and we did not have enough. Some hundreds of subscriptions were started with the February issue, which will account for what no doubt appeared to our friends to be neglect on our part. We again increased the issue for February but that was also sold out before the first of that month. We were sorry to disappoint so many of our friends, but we are gratified and we know that our friends will be gratified to know that ETUDE circulation is going forward by leaps and bounds.

From now on we will endeavor to anticipate all demands by greater printings, but the surest way of securing each and every issue is to order in advance from your dealer or better still place a subscription that will insure your receiving each and every copy.

JUNIOR ETUDE

CONDUCTED BY ELIZABETH A. GEST

Joseph Haydn

ow many of you have played Haydn's onatas?

nd have you ever heard him called he "Father of the Symphony"? He vrote 125 symphonies.

u remember he wrote many oratorios, oo.

o you remember the names of any? 'Creation" and "The Seasons" are the est known.

ear Vienna he was born and in Vienna ie is buried.

Birthday, April 1, (1732)

Play one of his pieces on that day.

Letter Box List

AR JUNIOR ETUDE:

was surprised not to find any letters from as, the "Lone Star" State. I have been dying music for five years and have taken E ETUDE all that time, but strange to say. ad never noticed the JUNIOR ETUDE until other day, when one of my friends showed to me. Now I eagerly await its coming h month. With best wishes, I remain,

Your friend,
BILLIE BURNETTE (Age 12),
Texas.

. B.—The JUNIOR ETUDE certainly hopes t there are not many readers who have n reading THE ETUDE for five years and er discovered the JUNIOR pages! Perhaps, vever, some of your friends are like Billie, l if so, you should be the one to tell m about the JUNIOR ETUDE. Sometimes it away at the back of the book, and some might easily overlook it if they did not w about it.

Puzzle Corner

By Selma B. Albrecht

musical term is hidden in each sen- ce:

. Hitch the bronco until we return this ning, if you can.

. Crimea surely is far away and is a y interesting place.

. Please be at the studio early tomorrow rning for your lesson.

. The balloon became too inflated and away from boys who were trying to d it.

. She was a most affectionate sort of a son.

. Around Thanksgiving and Christmas keys are always on the market.

. He did not dare state the reason be- use he knew it was not a good one.

. It was so sudden it seemed like a racle from on high.

. The cab arrived after we had started go on foot.

0. He sent his little son a tame rabbit his birthday.

1. They had to combat only harmless kes in the long grass.

2. It was so dark they could not even the road.

3. Please do not waste it. I'm eventu- going to use it.

4. He always smokes Royal Tobacco ause he likes it the best.

5 He is going to take a trip to Nevada l Wyoming in the spring.

Dolly and the Music Fairies

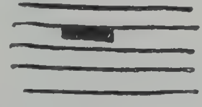
By Mrs. Olga C. Moore

At night, when every one has gone to bed and the house has become quiet, that is the time that the Music Fairies quite often do things that seem queer to mortals like us; but they usually have very good reasons for their actions.

One night the Music Fairies gave a tiny speaking voice to every note that was printed on Dolly's piece of music, left open on the piano.

First a slow, drawling voice said, "To think that the Recital is so near at hand and Dolly's piece is still so rough. And her counting, oh, it is awful! My friends call me 'Father Whole-Note,' but I might as well be a half-note or a quarter-note for all she cares. Here I am all dressed up in my nice white suit and Dolly will not even give me the four counts that I need."

"You are not the only one whose counts are slighted," exclaimed the half-rest, "Dolly goes by us as though we did not exist."



Then another voice spoke up, "I am B Flat, and am supposed to sing out from the black key. Instead of that, Dolly ignores me and plays the B natural, on my right. What shall we do?"

Just then a Good-Music Fairy, who had been silent all this time, lifted her voice above the others and said, "Friends, I have heard your complaints and have decided that we must get together and teach Dolly a lesson. We cannot let her be a failure at the Recital, for her mother will be so disappointed. I have a plan. In her practice, from now on, every time Dolly plays a wrong note or fails to count out the time properly, each one of you shall let out a really wailing, sorrowful tone, that will surely make Dolly *think* of what she is doing, for her music will sound all wrong. You must keep this up until the child learns to be careful."

"A fine plan," cried all the notes together, "we will help Dolly learn her piece."

The house became silent again. Next day at the usual practice time Dolly began playing her Recital piece. Oh horrors, such music! What was wrong? Some tones seemed to be weeping, some screaming fitfully, others fairly shrieking as if in great pain. Dolly's mother heard that something was decidedly wrong with the music coming from the other room, so she hurried in to investigate.

"Oh, Mother, I hear it, I know something is wrong. What makes it?" cried the little girl really alarmed.

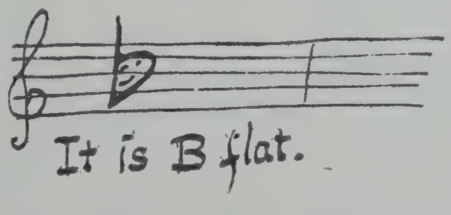
"It sounds to me as if the Music Fairies have begun to punish you for your carelessness," answered her mother, "I have heard that they sometimes take things into their own hands, when children simply will not be careful. For one thing you are not keeping good time. Hold that whole note out its full time."

"I'll fix that one thing first," said Dolly, very much excited. Striking the whole note she held it down, while she counted 1-2-3-4.

"That is right," said her mother. "Now play evenly and give each of these quarter notes one whole count. You are playing them twice as fast as you should and are really making them sound like eighth notes."

"Then I'll mend that place, too," she said, counting carefully. "That does make me keep better time." "Certainly," answered her mother. "Now I am sure I heard a false note. Have you a sharp or flat that you did not play correctly?"

Looking over the music Dolly discovered an accidental B Flat which she had not seen before. "Oh, Mother," she exclaimed, "here's where that awful shriek came in and no wonder! I have been striking B Natural. Aren't there an awful lot of little things to watch, when you play?"



"Yes," answered Dolly's mother, who was very glad her child now realized that one must be careful of the little things. "It is these little things that help make the music sound pretty as a whole. Now play your piece again. Play slowly and look ahead."

Dolly went over her piece carefully, really fearing to hear the wild sounds as before—but oh, joy! no such thing any longer; only lovely singing tones. The Music Fairies evidently were satisfied that they had cured one little girl of making mistakes. Now I hope the next person they go after, is not going to be YOU!

The season is nearly over. Are you working hard for your spring recital?

Musical Terms (No. 4)

Have you copied the previous lists of terms in your note-books? It is important to know the meaning of these words, as you will find them frequently in your music. These are only the important ones. You will find many more in your dictionary.

Da Capo—Repeat from the beginning. Often abbreviated to D. C.

Decrescendo—Gradually decreasing in tone; "getting softer."

Delicato—Delicately.

Diatonic—Progressing in the tones of the major or minor scale.

Diminuendo—Decreasing gradually in tone. Abbreviated to "dim."

Dissonance—A discord, or interval that must progress or be "resolved."

Dolce—Sweetly.

Duet—A composition for two voices, or two instruments.

Dynamics—The power or intensity, or "loudness and softness" of musical tones.

Doloroso—Sadly.

DEAR JUNIOR ETUDE:

I am writing to tell you about the orchestra in our high school. We have twenty-four members and I am the pianist. Our leader is a composer, but not of very great renown. We are practicing one of his pieces now and it is very pretty. We practice every Wednesday and Friday afternoons and we play in all our school affairs and for many other occasions.

From your friend,
DOROTHY BUER (Age 13),
Colo.

A person who played the violin
Got a terrible pain in his chin.
"That's not the right way,"
His teacher would say;
"Now hold it up right and begin."

Prize Winning

To Win or Not to Win

So often contestants write to ask why they did not receive a prize, as they sent in the correct answer to the puzzle. We have mentioned this before; but it seems necessary to do so again. Remember, only *three* can receive prizes and, naturally, they are the three *best* and *neatest* (which includes general appearance, arrangement and many other details).

One letter received this week says, "I have been entering the contests for over a year and never get beyond honorable mention. I would like to know the secret of prize winning. Is it because mine are not as neat as the others?"

There, she has answered her own question. There is no secret of prize winning, except to send in better work than any one else. Only those who have actually seen the contributions can know how very neat and carefully done some of them are, and how unreasonably and inexcusably careless most of them are. You would be surprised to see them, so blame no one but yourselves if you do not receive prizes.

What Are Your Earning Possibilities in Music?

ARE you satisfied with your outlook in the profession—don't you feel that you could establish yourself in a position of greater responsibility and incidentally enjoy a better financial future if you spent a little time on brushing up your own knowledge?

An ounce of proof is worth a pound of promise. Making claims is easy—"making good" is the real test of merit. Many readers of THE ETUDE—teachers and students, have been greatly benefited by our courses—others have seen our announcement in this publication for years, but as yet have no direct personal knowledge of the

Paderewski and Other Great Artists Endorse Our Lessons

Sherwood Piano Lessons for Students

Contain complete, explicit instruction on every phase of piano playing. No stone has been left unturned to make this absolutely perfect. It would surprise you to know that Sherwood devoted to each lesson enough time to earn at least $100.00 in teaching. It is possible for you to get all this time and energy for almost nothing, compared to what it cost. The lessons are illustrated with life-like photographs of Sherwood at the piano. They are given with weekly examination papers.

Sherwood Normal Lessons for Piano Teachers

Contain the fundamental principles of successful teaching—the vital principles—the big things in touch, technic, melody, phrasing, rhythm, tone production, interpretation and expression—a complete set of physical exercises for developing, strengthening and training the muscles of the fingers, hands, wrists, arms and body, fully explained, illustrated and made clear by photographs, diagrams and drawings.

Harmony

A knowledge of Harmony is necessary for every student and teacher. You can study the Harmony Course prepared especially for us by Adolph Rosenbecker, former Soloist and Conductor, pupil of Richter, and Dr. Daniel Protheroe, Eminent Composer, Choral Conductor and Teacher. You need Harmony and this is your chance to study the subject thoroughly.

Music is a universal language and like the language of speech it has its own grammar. The *grammar* of music is Harmony. Our course starts with the rudiments; it takes up Counterpoint, Composition, Orchestration, Canon, Fugue, etc.

No matter where you live, what your previous musical training has been, whether you are an established teacher or one just preparing to teach, you can't afford to fail to get the benefit of our special terms to ETUDE readers.

JUNIOR ETUDE—Continued

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original essay or story and answers to puzzles.

Subject for essay or story this month, "Music and the Radio." Must contain not over one hundred and fifty words. Any boy or girl may compete whether a subscriber or not.

All contributions must be received at the JUNIOR ETUDE Office, 1712 Chestnut St., Philadelphia, Pa., before April 15. Names of prize-winners and their contributions will be published in the July issue.

Put your name and age on upper left corner of paper, and address on upper right corner of paper. If your contribution takes more than one sheet of paper do this on each sheet.

Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

(When schools or clubs are competing, please have a preliminary contest first, and send only the five best to the JUNIOR ETUDE contest.)

DO ANIMALS LIKE MUSIC?

(Prize Winner)

Do animals like music? This I think is hard to answer, but I think it would depend partly on the animal, partly on the kind of music, and partly on the mood the animal was in. For instance, our Airedale comes up to the door and howls pitifully when I play my clarinet, but he never howls when I play the piano. In this case I think it is the tone of the clarinet that makes him howl.

My father remembers distinctly a mule they had, which, whenever the organ was played, would come up from the field and stand very close to the house. When the music ceased, the mule "Sampson" would return to the field. I think that, in this case, the "noise" or tone of the organ was pleasing to him.

RICHARD HAWKINS
(Age 14), Missouri.

DO ANIMALS LIKE MUSIC?

(Prize Winner)

I THINK animals, to a great extent, like music, because in my observation some animals have seemed to stay near a place where there is music. We have a dog that will lie down at the pedals of the piano and stay there until my sister has finished playing. Sometimes she brings her friend in to play the violin, and the dog will stand beside the piano until they stop playing.

In a grass field across the way from our house are a number of snakes. Every afternoon when the piano was used a big snake would come to that side of our house and lie there curled up until the music ceased. None of our neighbors were troubled with snakes and we could not account for it. Once our pianist was away for two weeks and the piano was not used, and the snake never appeared. As soon as she returned and resumed her music the snake also returned.

MARY KRAMER
(Age 12), Iowa.

If everybody that I know,
Whether young or old,
Took a lesson every day
And practiced "good as gold,"
There would not be a house then
Where music was not played,
And think of all the many homes
That happy would be made.

DO ANIMALS LIKE MUSIC?

(Prize Winner)

IN some ways animals are like peop they like gentle voices and soft, pre music.

My father is a lover of dogs. Wheney we get a new puppy it shows an inter in phonograph music by walking arou and getting acquainted with the instrume and usually lies down close to it.

Last summer an old hermit in the mou tains played his grind-organ. His snakes would lie peacefully in their ca while he played slow soft tunes, but wh he played "Hot Time in the Old Tow they writhed around and almost stood

When we drove down the mountain s the mules traveled quieter when we sa pretty songs, but when there was no sin ing they seemed to travel more roughly.

All the circus animals seem to do th acts more gracefully when the bands pla so I am sure animals like music.

BARBARA DELL SIMMONS
(Age 9), Ark.

For Walls

INSTEAD OF KALSOMINE OR WALL PAPER

FOR homes, schools, churches, auditoriums, studios, offices and public buildings of all kinds, Alabastine is the correct wall coating. It is artistic, sanitary, durable and economical.

A wide range of standard colors which intermix perfectly to form others permits perfect harmony with rugs and furnishings, provides the exact color most becoming to your personality, forms a suitable background expressive of your taste and proper setting for your appearance.

Alabastine is quickly and easily applied to all interior surfaces over plaster, wallboard, paint, burlap or canvas. It may be self-applied with satisfactory results where decorators are not available.

The Alabastine *Opaline* Process

Let us send you samples showing the interior decorating possibilities of the Alabastine Opaline Process. Richly mottled walls in pleasing tones all harmoniously blending Alabastine colors give tiffanized effects which must be seen to be appreciated. Let us send samples and show you how to secure at little cost wall treatments heretofore only within the reach of the wealthy.

Price 25 cents **MAY, 1924** **$2.00 a Year**

Etude Cover Design Contest

$250.00 Prize

THE ETUDE Herewith Announces a Prize Contest Open to All for Cover Designs Suitable for Our Publication.

REGULATIONS

1. The designs must have distinct musical significance with an appeal to as large a section of THE ETUDE'S widespread body of readers as possible.

   The design should be attractive from the News Stand (the selling standpoint), but must also make an effective cover for the music lover's home.

   Designs with a historical, educational or humorous trend will be considered with interest. Designs that are merely allegorical, purely idealistic with Grecian, Roman, or essentially antique grounds are not solicited. THE ETUDE is a practical paper for music-lovers, teachers and students of to-day.
2. Designs may be for two- or three-color reproduction.
3. Designs must be drawn in proportion to reduce to the standard size of THE ETUDE, 10½ inches wide by 13½ inches high.
4. The design must not bear wording or lettering.
5. Avoid the introduction of lyres, pan-pipes, lutes, antique instruments, banjo, guitar, etc. If an instrument is used employ the piano, organ or the instruments of the symphony orchestra.
6. Any contestant may submit as many designs as desired.
7. The ownership of the copyright of the winning design will rest with THE ETUDE.
8. All designs submitted must bear upon the back the full name and the address of the artist.
9. Postage to insure return must be sent with every design.
10. THE ETUDE assumes no responsibility for loss of or damage to any design, but every possible care will be taken of the designs while in our offices.
11. The contest will close Sept. 1st, 1924

Address all designs to

ETUDE COVER DESIGN CONTEST

1712 Chestnut Street, Philadelphia, Pa.

ETUDE friends everywhere are requested to notify their artist friends of this contest. Big names do not mean anything to us in comparison with effective, attractive, beautiful cover designs. Art Schools and Art Departments of Colleges everywhere are invited to co-operate with us in this contest.

The World of Music

Bedrich Smetana's Centenary fell on the second of March. His "Bartered Bride" laid the foundation of the Bohemian national school of musical composition of which Dvořák has been the brightest light.

Roberto Moranzoni, who has been with the Metropolitan Opera Company as Conductor for seven years, and who has prepared many of their novelties for presentation, will sever his connection with that organization at the close of the present season.

Mary Kempe, has completed seventy years of continuous service as a church organist. She was appointed to St. Andrew's, Bigglesdale (England), in 1853, where she remained till in 1862 she took up her present post as organist of St. Swithin's, Sanby.

A State Supervisor of Music has been appointed by five states: Ohio, Pennsylvania, New York, Maryland, with Kentucky as the last to join in the forward work.

Bryn Mawr College has added a Department of Music to its equipment and has made plans for a drive for three hundred and twenty-five thousand dollars to establish this department and erect an additional building for students. Only a few years ago music received a cold shoulder in this famous Quaker institution.

The Apollo Musical Club of Chicago, organized fifty-one years ago and brought to such singing perfection by W. L. Tomlins, will, in May of 1925, make a tour of the Pacific states. With its two hundred singers, soloists and orchestra, of which Harrison M. Wild will be conductor, this will be the largest choral body ever to make such an extended tour. Mendelssohn's "Elijah," Handel's "Messiah" and Bach's "Mass in B Minor" will be their repertoire.

The Louisiana Music Teachers' Association, Mrs. Lilian Gerow McCook, of Natchitoches, Secretary, held their Thirteenth Annual Convention at Natchitoches, March 28-29.

The Annual Conference of Eastern Music Supervisors met in Rochester, New York, during the week of March 3. "Music in the Activities of the Community" was the chief theme of discussion, Albert Coates prophesying a chain of municipal opera houses throughout the United States. (Why not include Canada and Mexico in the enterprise?)

Sir Charles Villiers Stanford passed away on the 29th of March, thus removing one of the most prominent personages in modern English music. Born at Dublin, September 30, 1852, he began musical studies and composition as a child, a march written at eight having been used in the patomime "Puss in Boots," at the Theatre Royal, Dublin, in 1863. He entered Queen's College at Cambridge in 1870 as a choral scholar, and in 1873 was appointed to the important post of organist to Trinity College, to which he transferred his matriculation. From here he graduated with classical honors in 1874. His rise was rapid. In 1885 he succeeded Otto Goldschmidt as conductor of the Bach Choir, and in 1887 was elected Professor of Music in the University of Cambridge. At the founding of the Royal College of Music, London, he became professor of composition, conductor of the orchestra and of the operatic performances, which positions he held at the time of his going. A prolific composer of meritorious works, many with distinct Irish characteristics, his four operas, several symphonies and numerous smaller forms, have enriched British musical treasures.

Melvena Passmore, the American coloratura soprano, has been winning much popularity in the opera houses of Holland and Berlin, especially as *Gilda*.

The Bayreuth Festival, after a lapse of ten years, will be revived this summer, the inaugural performance being a presentation of "Die Meistersinger" on June 22. Seven performances of "Parsifal" and two complete renderings of the "Ring" will be included in the month of the Festival. Karl Muck will be the official conductor; and of the singers, Sigrid Onegin and Barbara Kemp only, are much known in America.

Mr. Lionel Monckton, well-known music critic and composer of musical comedies, and so long associated with the successes of the Gaiety Theatre of London under the management of George Edwardes, died at his home in Bloomsbury on February 15. His compositions are particularly characterized by graceful melody, of which "The Quaker Girl" was his one conspicuous success.

The Honolulu "Morning Music Club" has voted a scholarship of one thousand dollars a year for four years to William Hughes, a young student of the University of Hawaii, who will go "East" to continue his studies.

"Hochzeit im Fasching" ("Wedding in Carnival Time"), an opera by Eduard Poldini, has been given with great success in Budapest. Departing from the usual sentimental and melancholy spirit of the Hungarian music, this work is characterized by great gaiety and lightness.

The 400-Year-Old Organ of the Church of St. Gervaise has been restored after six years of silence. It was much damaged by a German shell which crashed among the worshippers on Good Friday of 1918. It is reported that the repairs were so skillfully done that only the bellows will be new.

A Four-Handed Organ has been installed in the Balaban and Katz Chicago Theatre and was recently inaugurated by Mr. and Mrs. Jesse Crawford, when the ensemble work on this double instrument made possible a more pretentious program than has hitherto been possible in organ music.

Giulio Gatti-Casazza, general manager of the Metropolitan Opera Company, has been notified by the Chairman of the Board of Directors that his contract is renewed for an additional five years, till the end of May, 1929.

The Birthday of Frank L. Stanton, author of the verses of Nevin's "Mighty Lak' a Rose" and Carrie Jacobs Bond's "Just a-Wearyin' for You," as well as many other successful songs, was recently celebrated by the Woman's Club of Atlanta, Georgia, by a program of his poems and songs, at which prominent personages of the city were in attendance.

Organization of the "Associated Glee Clubs of America" was effected after a concert in Carnegie Hall, New York, on March 10, in which six hundred members of twelve glee clubs sang together. Representatives of forty-two glee clubs attended the conference.

Sir Frederick Bridge, eminent English organist, composer and lecturer, passed away on March 18. Born at Oldbury, December 5, 1844, he entered the choir of Rochester Cathedral at the age of six, remaining fourteen years, after which he was articled to John Hopkins, the organist. After filling several minor posts he was appointed to Holy Trinity Church, Windsor, becoming the pupil of Sir John Goss. He took the bachelor's degree at Oxford in 1868, and from 1869 to 1875 he was organist of Manchester Cathedral. In 1874 he took his doctor's degree from Oxford and composed his oratorio of "Mount Moriah." In 1875 he was appointed deputy organist of Westminster Abbey, becoming the principal organist in 1882, which position he held till his recent retirement. His fame in connection with the organ of the Abbey became so familiar that he was widely known as "Westminster Bridge." He was knighted in 1897 at the Diamond Jubilee of Queen Victoria. He officiated at the Queen Victoria Jubilee ceremonies and the Coronation of Edward VII and of the reigning King George, among other notable occasions.

The Music Teachers' National Association announces the following officers recently elected: President, Leon B. Marshall, Newcomb College, New Orleans, Louisiana; Vice-President, William Benbow, Buffalo, New York; Secretary, Donald M. Swarthout, Lawrence, Kansas; Treasurer, Waldo S. Pratt, Hartford, Connecticut; Editor, Karl W. Gehrkens, Oberlin, Ohio.

The Fourteenth Annual Eisteddfod will be held in the Academy of Music in Philadelphia on May 17, as a part of the local celebration of Music Week.

Victor Capoul, the most distinguished tenor of his generation, whom many critics agree has never been excelled for "beauty of his tones and the perfection of his art," passed away in February. He created the rôle of *Wilhelm Meister* and was particularly successful as the hero of Thomas' "Mignon."

"The White Bird," a new American opera by Ernest T. Carter, had its first public performance at Chicago on March 6, under the auspices of the David Bispham Memorial Fund for American Opera. The libretto is by Brian Hooker, author of the librettos of "Mona" and "Fairyland" to which Horatio W. Parker wrote the music, the first winning a $10,000 prize offered by the Metropolitan Opera, and the other winning the $10,000 prize offered by the National Federation of Music Clubs in 1915. The music of "The White Bird" is said to make "free use of melody but frequently employs twentieth century highlights."

A "Contest for Boy's Bands" within a radius of fifty miles of New York, is to be held on August 1 in connection with the twelve weeks' season of concerts presented to the people of the city by Messrs. and Mesdames Daniel and Murry Guggenheim, and to be under the baton of Edwin Franko Goldman. Particulars of the contest from Edwin Franko Goldman, 202 Riverside Drive, New York.

The Oratorio Society of New York celebrated the close of its Jubilee Year by a performance of Beethoven's "Missa Solemnis" in Carnegie Hall on April 9. It also celebrated the Centenary of the first performance of this famous sacred work which was first heard in Russia in 1824.

Arnold Schönberg, best known of the ultra-modern composers, is reported to have promised a visit to America about the middle of next winter.

Constantin von Sternberg, eminent teacher, composer and writer on musical subjects, died at his home in Philadelphia on the evening of March 31. Mr. von Sternberg was born in St. Petersburg (now Petrograd), July 9, 1852. After graduating at both Leipsig and Berlin he studied with Kullak and Liszt. At twenty-five he became conductor of opera at Bruhl's in Leipsig, which led to similar positions at Wurtzburg, Kissingen and the Court Opera in Neu-Strelitz till 1875. He then entered upon a career as concert pianist, making two world tours, and, after six seasons in America, he established the Sternberg Conservatory at Atlanta, Georgia, where he remained four years. He then removed to Philadelphia where he was a leader in musical activities till the time of his demise. Mr. von Sternberg knew about every prominent musician of his time and counted Joseph Hofmann and Leopold Godowsky among his best musical friends. Olga Samaroff, Agnes Clune Quinlan and Cecile de Horvath were among his pupils.

The Entire Collection of Holograph Scores, which have been gathered for the Berkshire Festivals, has been presented by Mrs. Frederick Shurtleff Coolidge to the Library of Congress.

Tests for the Organ Scholarships at the Fontainebleau School, offered by the Estey Organ Company through the American Guild of Organists, are set for May 15-16. Details from Frank Wright, 48 Grace Court, Brooklyn, New York.

Massenet's "Le Roi de Lahore" had a brilliant Metropolitan premiere in New York on February 29. It was first presented in Paris in 1877.

Blanche Scandina, a native of Boston and protege of Melba, recently made her operatic debut at the historic Covent Garden Theatre, London, with the British National Opera Company as *Queen of the Night* in Mozart's "Magic Flute."

J. Warren Andrews celebrated, on February 15, the twenty-fifth anniversary of his services as organist and choirmaster of the Church of the Divine Paternity of New York. During his incumbency he has given nearly six hundred recitals.

C. W. Perkins, after thirty-five years of distinguished service as organist of Birmingham Town Hall (England), has retired because of having reached the age limit. This is one of the few similar posts to which a pension is attached.

Trouble and Music

Never was there an anodyne for trouble that could compare with music. There seems to come a time when this dear angel of relief touches the world-tired brow of the soul in grief, saying:

> "*Look up. To-morrow the sun shines once more. Joy shall come again. Listen, I am singing of the beauties of life here and hereafter.*"

If music had no other office than this its value to mankind would be infinite. Blessed is he who can sing when the darkening clouds seem to smother the joy of life.

The ability to play an instrument has been a god-send to many a man where trouble has come so fast that there seemed no way out. Music cleans the brain of sorrow and worry and fits one to take up the load of responsibility with renewed vigor.

Minneapolis Noon-Day Concert Plan

Free noon-day concerts, given in the heart of the city by eager groups of representative musicians, is the outcome of the initiative of Mr. Walter L. Scott and G. T. Lindsten, Minneapolis. The distinctive thing about the work is that the concerts are not paid for from the taxpayers' funds; neither are they supported by solicited private subscriptions of money. They are sustained by that wonderful thing called community spirit, which has induced the musical organizations of Minneapolis to compete for an opportunity to appear at these concerts.

The concerts are given in the lobby of the magnificent Municipal Building, or City Hall, of Minneapolis. This imposing white marble lobby is five stories high. Audiences of 2,000 to 5,000 citizens have attended the concerts which commence promptly at 12.20 and end at 12.50. In the first two series forty-four concerts were given before audiences aggregating 140,000 people. The series for this year was opened by the excellent Minneapolis Symphony Orchestra under the baton of Henri Verbrugghen.

The secret of the success of this unusually fine community enterprise, now sponsored by the Civic Music League, can probably be sifted down to the enthusiasm of a handful of altruists able to provide spiritual spectacles for the people of the municipality so that they can see beyond the humdrum of the counter and the desk. Say what one will, this is always the case. Such people are the sociological leaven of every age. They have given something very big and fine to their fellow men and women and given it with infectious ideals so rapidly communicated to the whole city. Blessings on the splendid inspirations of these workers for the betterment of mankind.

The wonderful thing is that with such altruism there always seems to come the inspiration to help. Out in Minneapolis everybody interested in music helped. The newspapers printed the programs gratis. Then the florists came in for their share and sent baskets of flowers for each concert. The blossoms were distributed at the end to all the elderly ladies in the audience. Dealers furnished pianos gratis.

The influence upon the music of the city is said to have been immense, particularly in public school work, where the boys and girls eagerly competed for posts upon the school glee clubs. The public schools of Minneapolis now have over ninety glee clubs as well as forty-eight bands and orchestras.

The prize contest upon the ten great masterpieces symposium closes September first. Full particulars were given in the April Etude.

"One Man's Poison"

An explorer in New Guinea, an island just northeast of Australia, inhabited by natives of the most savage type, has recently been describing his adventures, in *McClure's Magazine*. This intrepid gentleman, Captain Frank Hurley, found that the aborigines had little difficulty in eating food so badly tainted that any civilized person would have died from the effects in a very short time. Cans of putrid preserved meat and vegetables which would be rank poison to us, they devoured with great relish and without any apparent harm. "What's one man's poison, Signor, is another's meat or drink," sang Shakespeare's famous contemporaries, in "Love's Cure."

When we hear all the hue and cry about certain kinds of music, and when we witness at the same time thousands and thousands of perfectly good people enjoying it to their hearts' content, we can not help thinking of those immortal lines.

If Grandma sings with joy uncontrolled some old-fashioned Gospel Hymn, who are we to demand that she should from every standpoint of musical morals hate it and turn her affections towards a Brahms *Intermezzo*. Let her enjoy it, Lord bless her. It is our part to try to cultivate the taste of the coming generation; but that does not mean that we should make kill-joys of ourselves when the hired man finds his chief delight in squeezing "The Arkansas Traveler" out of an accordion in the last stages of bronchitis.

Setting Musical Jewels

A melody, a tune is often a precious jewel which may be recut and reset in a multitude of ways. The musical lapidaries are either good or bad. It used to be the custom to take certain accepted melodies, subject them to stereotyped variations and present them as Fantasies, Paraphrases, and so forth.

Much of the music of the cornet that one hears in band concerts is a type of this. These arrangements are designed to show off the technic of the player rather than the beauty of the composition.

It remains for the real master to take a tune and give it the setting most likely to reveal its real beauties. Mr. Willy Burmester has proved a genius at this and his arrangements of many classic themes have revived them and given them the currency they have long deserved. Fritz Kreisler, likewise, has gone a step further, and by judicious and careful editing of many of the songs of the day has made them sound like masterpieces.

Liszt's arrangements of the songs of Schumann, Chopin and Schubert as well as of the operas, are not conventional arrangements, but rather wonderfully well-balanced musical compositions in which the genius of the great pianist has employed the resources of the instrument to develop the artistic idea rather than load it down with alien ornaments.

Moszkowski and Schütt have in recent years greatly enriched the literature of the piano by their ingenious and highly artistic arrangements. In comparison with their productions, the arrangements made by Dorn and Sidney Smith are ludicrous. Dorn and Smith merely transcribed the orchestral and vocal scores for the piano and literally stuck in a few keyboard roman candles and skyrockets. In the artistic transcriptions of Moszkowski and Schütt, on the other hand, these composers have handled the melodic material so that there is the charm of real individuality.

Godowsky's immensely difficult transcriptions of Chopin, his combinations of Chopin Etudes, etc., have won him the greatest admiration of his fellow pianists.

Possibly the finest arrangements of olden melodies for the organ are those made by Mr. E. H. Lemare. Lemare's genius for this work is nothing short of astonishing. He works so rapidly and so easily that when he takes such a theme as "Love's Old Sweet Song" by Molloy and transmutes it through his musical alchemy, the result is an organ composition which a great organist would readily put upon his program. In other words, he merely takes the theme as though it were his own and develops it like an original composition. This is something quite different from the process of decorating a melody with hackneyed arabesques which at best produced a composition of the Zopf or Rococo type.

None of the great masters have failed to see that real melodies are so rare that one need make no apologies for preserving them with arrangements. Haydn, Mozart, Beethoven, Schubert, all employed melodic material in this manner. Beethoven was particularly dependent upon folk themes. In his *Ecossaise* there is, for instance, a theme which Humperdinck in later years introduced by suggestion into his "Haensel and Gretel." This same theme developed along a little different line was introduced into a Broadway show this year and became one of the hits of the great White Way.

Melody is one thing—what one does with it is another; and who can say the great popularity of Burmester and Kreisler is not due in some large measure to the skillful and artistic manner in which they have replayed loved melodies that the public would far rather hear than the complicated artificialities of highly trained but tuneless composers? Brahms in the *Hungarian Dances,* and Sarasate in his four books of transcriptions of Spanish Dances for Violin, have done the art of music an immense service. Without such transcriptions much of the beautiful music of the world would be lost.

The Triumph Spirit and Adam Geibel

ADAM GEIBEL has just celebrated his fiftieth anniversary as a composer. During these five decades he has written some three thousand songs, piano pieces, organ pieces, anthems and hymns. He has conducted large choirs, served as an organist, managed a successful publishing business of his own, lectured, sung, and, incidentally reached thousands as an evangelist. His compositions are not symphonies, concertos and operas; but he has skillfully written music with decided melodic and harmonic worth, which has reached out to multitudes. One of his compositions, for instance, a valse named "Sleep" (written under the nom de plume of Earl Lebig) is now one of the most popular pieces of its kind in America.

These unusual accomplishments make a record of which any one might be proud. The fact that he has done so much without the use of his eyes does not seem unusual to this remarkable man. He considers his blindness, since childhood, a blessing to him in many ways. It has developed his character, his determination, his fortitude, his concentration.

The lesson of Adam Geibel should be a source of infinite inspiration and encouragement to thousands of young men and young women. Here is the greatest axiom of youth. Obstacles are the strong draft on the furnace of ambition, character and success.

Many of the greatest achievements of man have been attained in spite of "insurmountable" obstacles. We would have no difficulty in naming great numbers of men and women of immortal fame who have triumphed over "unbelievable" obstacles.

Indeed, if we were asked to define the essential element of immortality we should first say that it was the irresistible spirit that permits nothing to stand in the way of attaining the ultimate goal. Your success, great or small, must depend upon the degree of this divine determination this triumph spirit which you have cultivated.

Chopin, Beethoven, Weber, Schumann, Wolf, made masterpieces when they were in conditions which would have sent the average man to a sanitarium. They did not stop for a moment because of failing health.

Prescott, sightless from childhood, wrote his "Conquest of Mexico" and his "Conquest of Peru," despite the fact that his teachers told him that it was quite impossible for a blind man to become a historian. Scores of blind men and women have ridiculed that word "IMPOSSIBLE."

The masterly attainments of Darwin, Spinoza, Spencer, Voltaire, Kant, Francis Parkman, Pope, Heine, and countless others, have been reached over mountains of pain and invalidism. Masterpieces are made of the spirit and not of the body.

Because you are weak or hemmed in by poverty do not accept these barriers as insurmountable. Most of the rich men of America to-day were companions of poverty in their youth. Many a weakling, such as Roosevelt, has by dint of the triumph spirit made himself a giant. Behold this great President, in his last years, with only one eye and with a bullet wound in his throat, gloriously battling ahead. Think of Admiral Nelson, "the Lion of Trafalgar," going into that epochal battle with only one arm and one eye, fearless and triumphant notwithstanding infirmities which would have stopped the career of anyone without the triumphant spirit.

The triumph spirit which has enabled such men as Adam Geibel, Edward Baxter Perry, David Wood, and other musicians without sight, to do more in this field than most men with sight, is momentous. The triumph spirit fairly shines out of Dr. Geibel's smiling face.

The triumph spirit is the opposite of the tin-cup spirit. Most people are in trouble because they sit whimpering at the street corners of life with a tin-cup in their hands and a painful "Lord, how I suffer!" look on their faces. They are in trouble because they have formed the habit of inviting sympathy instead of laughing at obstacles. Most trouble is home-made, largely imaginary. Success in music never comes until one has learned the secret of banishing the habit of making trouble.

If you happen to be discouraged, disheartened, "cheated by fate" may not this editorial, inspired by the career of Adam Geibel, rekindle that spirit of triumph over the material that leads to greater achievement, greater prosperity, greater usefulness and greater happiness.

International Fellowship

"PEACE. Peace. Peace!" cries a lacerated world. The tragic farce of war and everything that has to do with war was never better known to us than now. Just as great States in this country are trying to make the purchase of firearms impossible, so should the world strive to annihilate the tools of war as soon as the minds of men can come to see that war is the most hideous and useless form of waste.

Danile Batchelor, one of THE ETUDE's oldest and firmest friends and contributors, believes that music, the common language, will have a great part in bringing about a world peace. We think likewise. He has called our attention to the fact that all the churches have set aside May 18th to further the cause of International Sunday Fellowship. Perhaps you can help your church in preparing special music for that day.

The World Do Move

Two decades ago we heard a business man deprecating the "business of music teaching." We have just been putting down some figures for our own amusement, relating to a number of teachers we have. Of the men, only two did not possess automobiles; some, very fine cars; the others, excellent cars of more reasonable price.

The automobile is our present-day national thermometer of prosperity. Several of these teachers found the automobile absolutely indispensable in their calling. Many of them would be justified in checking off the entire expense of their cars from their income taxes, as the machines were used almost entirely for professional purposes. The musician of to-day is infinitely more prosperous than the man of twenty years ago.

Music is now looked upon in an entirely different manner, thanks to the hard labors of those who have been fighting for it until the American people have come to think enough of it to pay for it at the rate of two million dollars a day.

"Souvenirs" of Famous Musicians

By the Noted Violinist-Composer

FRANZ DRDLA

Biographical

Of the millions of people who have heard the immensely popular "Souvenir," of Franz Drdla, few know even how to pronounce his name. He pronounces it Durd-la. (Durd pronounced with the "r" rolled.) He was born at Saar, Moravia. His father was very musical and gave him his first lessons on the violin and piano when the boy was eight years old. He studied for two years at the Prague Conservatory, under Anton Benowitz, when his marked talent urged his father to send the boy to Vienna, where he entered the Imperial Conservatory, under the famous Joseph Helmesberger, violin virtuoso, conductor and director of the conservatory. Joseph Helmesberger was the son of Georg Helmesberger, the teacher of Joachim, Auer, Ernst and many other masters. At the conservatory Drdla also studied with Anton Bruckner, and with Franz Krenn, who in turn had been the pupil of Salieri and became the teacher of such famous masters as Wolf, Richter, Mahler and Mottl. Upon his graduation Drdla won the first prize for violin playing and for composition, and the medal of the Gesellschafft für Müsikfreunde. He made many successful tours of Europe as a violinist, and for many years played in the Imperial Orchestra, and also for four years in the orchestra of the Festspielhaus, at Bayreuth. Although he had written a Symphony in his student days, his great melodic gifts were not discovered until the new century. In 1904 he appeared as a composer. Although best known through his "Souvenir," and his "Serenade," his compositons are numerous and include two operettas, "Das Goldene Netz," and "Die Ladenkomtesse," which have been very popular in his native land, now a part of Czecho-Slovakia. On his arrival in America this year he received a very enticing offer from the Keith Vaudeville interests and has appeared already before thousands of admiring Americans, with tremendous success. His acquaintance with famous musicians of his time has been both extensive and intimate, and his memories of them make very interesting reading. THE ETUDE *has in preparation numerous similar articles.*

"The Queen of Roumania once said to me, 'Professor, how does one compose? Does one go to one's study and wait for inspiration? Does one go about it at an appointed time in an appointed way? Is there a method that one pursues?'

"This seems a very human inquiry, because so many, many people seem to want to know the *modus operandi.* As a matter of fact composition seems to me translated memory. It seems a memory of some very delightful experience that expresses itself in music. The machinery of composition is quite a different thing, when one knows how any melody may be treated and developed in hundreds of different ways. The main thing however, is the melody, the inspiration. The melody is a translated souvenir. Just where it comes from, how it comes and why it comes, I am only too glad to leave to the psychologists to explain.

Craftsmanship vs. Inspiration

"My master in composition was Franz Krenn. Krenn was learned, skillful in the extreme, painstaking and hard working. He could sit down and write to order any kind of a composition. He would cover the paper with notes, and then, if he saw any bald spots, he would put in a few more notes. His idea of composition was to put notes upon paper they must be correct, they must follow the laws. This done, he was done with the composition. But who in this day ever hears of any of Krenn's compositions. Not that he belittled inspiration, but that he was incapable of putting in his work that thing which makes people want to hear of it or which might give it that spirit without which no musical composition can survive.

"This seems somewhat odd, for Krenn lived in Vienna where also lived Franz Schubert. Krenn was a boy of twelve when Schubert died in 1828. He must have realized that what gave immortality to Schubert were his inspirations—those soul souvenirs of some delightful or impressive past experiences—and not his technic. Schubert, indeed, realized his own lack of schooling, and just before his premature death is said to have been preparing to advance his own studies. Technic is a very important thing, but, in the case of the composer, by no means the most important. One should have as fine a technic as possible, but technic merely means knowing how to do a thing, how to use materials. Technic does not, cannot, provide the materials. Whither they come only the Almighty knows. Schubert knew this and wrote his melodies anywhere, anyhow, at any time. The back of a bill-of-fare, a torn piece of paper—anything sufficed for him to use in writing down the immortal melodies.

"Schubert's way is the only way, to my mind. One cannot sit down and say 'Now I am going to compose.' One must, however, always keep one's self susceptible to melodic inspiration. Many of my most successful works have come to me when I least expected them. I have hundreds of scrips of paper, old cards, anything, with melodies scribbled over them. Not all of them are good. I discard the bad ones.

How the Famous Souvenir Was Written

"You may be interested in learning how the *Souvenir* came to me. As I have said, my theory of composition is that a beautiful memory, a souvenir of some very unusual and edifying experience, translates itself into tone. I was in Vienna, riding on an electric car. I was going to visit a friend in Hietzing. The car was passing through the same street where the great Schubert died. Suddenly I experienced a very pleasant memory. I found myself humming a little melody. I had no paper except the transfer ticket in my hand. Instantly I jotted down the outline of the main notes of the melody upon the ticket. When I reached home I expanded it from my hastily written notes. It seemed a pleasing melody to me; but I hardly realized that it would literally sell by the million. My fellow countryman, Kubelik, played it in America, and it also immediately became popular in Europe. Now all the great violinists play it in concert and on the talking machine.

"Anyone who aspires to compose should get as good a technic, acquire as fine a degree of craftsmanship as possible, but should at the same time listen for the still, small voice of inspiration. The composer whose life has been rich in experience, whose mind has been fed upon the beautiful things of the world, whose soul is exalted above mundane things, is the one whose works must endure, whether he be merely the writer of folks songs or whether he be a Beethoven. I have known many master musicians, and in my observation this has been their common experience.

Bruckner's Lessons in Harmony

"Bruckner, who was an infinitely greater composer than Krenn, was my master in harmony. His work as a teacher was perfunctory in the last degree, and literally a joke to the boys in the class. The great master was continually wandering off into the realms of fantasy. In fact, he would take up hours that were supposed to be devoted to Harmony instruction by playing the organ. The boys, who were often only too glad to get out of work, would sneak away from the class while the old man was playing; and he would never know the difference. It was significant that Bruckner, the great composer, was permitted to teach only Harmony, while his less inspired contemporary, Krenn, was given the classes in composition. Krenn was a pedgaog; Bruckner was not. In his dreams at the keyboard he may have been creating melodies.

FRANZ DRDLA

Dream Melodies

"Many of my finest melodies have come to me in dreams. Often I have heard them and have awakened with a start from a sound sleep and explored my room for paper to put the themes down. It would thus seem that melodies are a product of the subconscious mind. I have no doubt that many composers have dreamed melodies. When you force the conscious mind to produce, the melody may be perfectly correct on paper, but it will hardly live as long as winter snow in Maytime. The widow of Johann Strauss once told me that the melody of her husband's famous waltz *Simplicius* was conceived in a dream. It would be very interesting to find how many melodies of the past had been born in that way.

Dvořák and the Carpenter

"Master musicians always instinctively realize that music is something which cannot be created or even interpreted in a perfunctory way. I am reminded of a story of the famous Czecho-Slovak musician Dvořák, whom I had the joy to know for many years. Dvořák was asked to conduct an orchestra of amateurs in a town a short distance from Prague. He worked with them faithfully, but finally could stand it no longer when one of the violinists was producing a terribly scraping tone. 'Hey, there,' he exclaimed, 'what is your occupation?' 'I am the village carpenter,' replied the frightened man. 'Ah,' said Dvořák, 'Carpenter, eh? Well why do you persist in sawing on that poor violin when you could be so much more useful sawing wood?'

When Bruckner Conducted

"It is sometimes difficult to realize our limitations. Not everyone can be a carpenter, and not everyone can be a composer or a conductor. Bruckner, whose works were not recognized until late in his long life, always felt that this was due to the antipathy of Dr. Hanslick, the friend and champion of Brahms. This cut deeply into the soul of the old master. When recognition finally came he was very generously treated in some quarters. Bruckner's first Symphony was dedicated to the Emperor of Austria and he was asked to conduct the Imperial Orchestra (ordinarily conducted by the great Richter) when the Symphony was to be played upon an important occasion. Bruckner had never conducted a symphony. He, however, looked forward to the event as a great vindication. The rehearsal came, and Bruckner was as nervous as a damsel at her first dance. He mounted the conductor's stand, raised the baton high in the air, nodded his head vigorously many times and then exclaimed excitedly, 'In the name of goodness, why don't you commence?' In his excitement he had not realized that the orchestra could not play until he brought down his baton for the first beat. 'Here Richter,' he exclaimed, 'you do it; I'm no conductor.'

"Bruckner was largely self-taught. The son of a village schoolmaster and orphaned when a child, he led a somewhat forlorn and secluded life for many years. Indeed for twenty-one years he struggled along without a teacher. He used to tell his students at the conservatory that he had studied harmony for seven years, counterpoint for seven years and composition for seven years; but he did not always say that he had been his own master.

"Composers are, from the nature of things, sensitive, nervous organisms. The calm, staid, orderly, placid person, whose every action seems to be carefully and definitely thought out in advance, is hardly likely to become a composer. I remember that when Brahms was sixty years old, a great celebration of the event was arranged in Vienna. I had the honor of being invited to play with him his *D Minor Sonata for Violin and Piano.* I was somewhat apprehensive of the occasion, which was to be attended by the greatest musical authorities of the land. One could hardly be blamed for being a little nervous. When the night of the concert came I found that Brahms was far more nervous than I. He was so excited and so tense that he could hardly contain himself. His pedaling was one indication of this. He 'worked' the pedal constantly in an extremely nervous manner.

"Brahms had a reputation for extreme sanity. He was not like Hugo Wolf, who perished in an insane asylum. When I was a very young man I was selected by Krenn to transcribe for piano Wolf's Symphonic Poem *Pchtheselia.* The work occupied nearly two months, and I was associated with the master for most of the time. I shall never forget his nervousness and excitability. He was so intense and so anxious to have everything right, and I was very glad when the task was completed.

"One of the odd things about composition is that the composer rarely realizes when he has done anything unusual. He may be immensely fond of some work which may fail to please the public or may fail to survive. This is often the case. Everything is a matter of taste. The Queen of Roumania once asked me, 'Who is the greatest singer of the present time in your opinion?' I replied to her. 'Your majesty, in the art of music there are no champions as one may find in the prize ring, because there is no one who is capable of deciding which artist is the greatest. It all depends upon individual taste.'

Dvořák and the Doves

"Dvořák was once asked by a lady friend which was the favorite of a large flock of doves that he delighted in keeping. Just then his cook was approaching and he said, 'Marie, which symphony of mine do you like best?' The cook was amazed and answered she had no idea. He replied, 'It is the same with doves and symphonies. I don't know, myself.'

"Composers, on the whole, are very human. They have their fads and their animosities. Sometimes they carry these to an extreme. Poor Hugo Wolf in some way gained the enmity of Brahms. Brahms was very bitter toward the compositions of the younger man. Hugo Wolf, driven to retaliate, wrote in his paper, *Salon Blatt,* some very caustic criticisms of Brahms which Brahms resented in his own way. Every afternoon when he went to his favorite coffee house he was naturally observed by all. At the end of his meal he would call the waiter and tell him to bring a copy of a newspaper. By prearrangement the waiter brought Wolf's journal, the *Salon Blatt.* Then Brahms would rise in great disgust and denounce the paper, saying that he would have nothing to do with such an absolutely worthless publication. Wolf failed as a journalist, with such a powerful enemy. Brahms had his partisans, among whom was Hans Richter, who said when he saw a composition of Wolf, 'Thus wrote the man who writes against Brahms.'

"Richter was very proud of his position. Every two years he used to give a great festival performance of Beethoven's *Ninth Symphony.* Once one of his oboists, an almost unknown musician, had the audacity to start a rival festival in a suburb of Vienna. Richter met him and asked how he was getting along. 'Ah, Master,' said the oboist, 'it is not nearly so hard to direct as it is to play the oboe.' 'That's right, Strasky,' said Richter, 'I know it; but don't tell anybody.' A peculiar and delicious bit of scarcasm. The *Ninth Symphony* demands the best of the greatest conductors and in the hands of a novice becomes ridiculous.

"Simplicity in art is a great asset. The artist should be simple in all things. In this way the greatest results are attained. Once a violinist who was famed for his gestures, his grimaces and his extravagant performance played before my Master Helmsberger. The next day Helmsberger gave his criticism of the performance for the press. It read, 'Truly a remarkable violinist. He plays the very simplest things with the greatest imaginable difficulty.'"

Music Student, Prepare to Teach

By Mabel Madison Watson

What lies before may not be known. Fortunes fade; and the embryo Concert Artist too often finds fame with its elusive fortune a disappointing will-o'-the-wisp. Practically all the great soloists have taught, or do so now.

So, to the student we would say, learn to teach. Study with the idea of developing the ability of imparting what you know to others; and in the operation investigate the best methods of accomplishing this. Make yourself ready to accept pupils and, when the time or necessity arrives, they will accept you.

Supplement your special studies with a course in teaching methods, under a capable instructor who has a successful teaching record behind his work. Theorizing is the easiest thing in professional work.

When you have tried your powers and have made good in a small way, then make yourself known to your community by discreet advertising. "Display your wares;" but be sure that in every claim you make for them you shall be able to make them "ring true." No shoddy will stand the test of age.

In your work give the best that you have learned from your instructors, the best that you have found to be useful; but do not be afraid to launch out and try new ideas which will occasionally come to your mind. It is thus that you will grow.

Suggestions that come from trying to impart to others will only keep your own thought life and execution more fresh and vital. From seeing the fault of another you will instinctively learn to shun it in your own work. To be truly prepared for the work of the hour means that you must be in a state of continual progress.

Maxims for the Music Teacher

By Loie E. Brandon

Teaching is an art; and, like all subjects which pertain to art, it has certain maxims and rules which are a great help to the person ambitious to excel in it.

A principle which no teacher ought ever to forget is that there is no reception without reaction, and no impression without expression. The pupil must first be taught to think and then to produce.

Lead out each pupil acording to his individual needs and characteristics. This means that the teacher must know personally and intimately, not only her pupils but also the surroundings from which they come.

Be kind; and, radiating a cheerful influence, make pupils love you.

The teacher's watchword should be coöperation. The pupil learns only through his own activity; and the teacher who secures the greatest coöperation from the pupil will always attain the best results.

"No teacher can do more than free the pinions of the fettered eagle; would you fly—you must test your own powers of flight."—*Tegner.*

Sincere and carefully expressed encouragement, where deserved, is a good thing and should not be withheld.

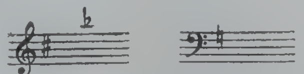
When discouragement and failure seem to stare you in the face, then is the time to be firm; put them to rout by an ever-boundless enthusiasm and a determination to find a way or make one.

Simplifying Accidentals

By Sylvia Weinstein

Beginners having difficulty in recognizing accidentals will simplify this subject with the following exercise.

In a music tablet, while the teacher names, for instance, C-sharp, B-flat, G-natural, and so forth, the pupil will write the named accidental on the correct line or space, but without the notes, as in the following example:



Change back and forth from the treble to the bass; also use the added lines above and below the staves. Then the pupil should name aloud and play what has been written.

"The root of all brilliant playing lies in one thing—accuracy. Without accuracy any attempt in brilliancy must result in mussiness."—Teresa Carreno.

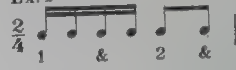
"I do consider that music is all the pleasure I live for in the world, and the greatest I can ever expect in the best of my life."—Samuel Pepys.

A Better Way to Count

By Earl S. Hilton

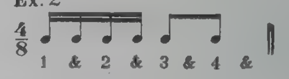
Instead of counting 1 and 2 and, in $\frac{2}{4}$ time, turn it into $\frac{4}{8}$ time and count in this manner: 1 and 2 and 3 and 4 and. For example, instead of this:

Ex. 1



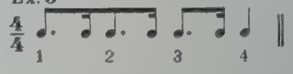
do this:

Ex. 2



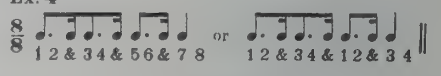
The former way of counting is correct, but it is not as clear to some pupils as the latter. The same idea will apply to the especially "tricky" schottisch. For example, instead of counting, 1, 2, 3, 4 in $\frac{4}{4}$ time thus:

Ex. 3



turn it into $\frac{8}{8}$ time and count thus:

Ex. 4



Pointers for Teaching the Bass Notes

By W. L. Clark

1. Be certain that the easier of the scales have been mastered. This gives freedom of finger action that will aid in playing the notes of the bass clef.
2. Give a short time each lesson to playing notes frequently found in any selection in the bass clef. Tell the student to play the G in the first octave below middle C; and so on, until he recognizes the keys that represent the notes of the bass clef.
3. Teach the notes on the lines of the bass clef in one lesson; and teach those in the spaces in another. This frequently prevents confusion.
4. In the first exercises in which the bass notes are to be played with the treble, put the greater part of the time for instruction on the notes of the bass clef.
5. Assign certain exercises where the bass notes are to be played five or ten times daily.
6. After the first assignments, select material in which the melody is in the bass. This will induce the pupil to seek for accurate tone and reading of the bass notes.
7. Some selections in which a great many of the bass notes are the same as those of the treble, except that they are written an octave or two lower, are valuable for practice because the student learns to play the bass and treble notes in harmony.
8. Assign a great deal of material written in the key of C before attempting sharps and flats in the bass.
9. Insist upon the notes of the bass clef being played accurately from the very beginning.
10. Appropriate a few minutes occasionally to having the pupil read aloud the bass notes in a particular exercise. Facility in reading is an essential to good playing.
11. Select material for the pupil in which the bass notes are more difficult than those of the treble.

Build Well

By Alfredo Trinchieri

For nearly two years I have been interested in watching the progress of the building of the great suspension bridge which is to link "The City of Brotherly Love" with "The City of Talking Machines." And what have they been doing nearly all of this time? *Laying foundations.* Going away down below the bed of the Delaware River to find a solid base on which to build the mountainous towers of cement and stone that are to support the enormous thirty-inch cables.

"And, what has bridge-building to do with music?" someone asks. Just this—that a successful musical education is the result of correct building. And correct building implies good foundations.

Impatience to do something that "seems advanced"—on the part of either teacher or student—has wrecked the future of many a promising talent. Plenty of time for the assimilation of the work as it is done is the only method that assures ultimate success. Any other will lead but to heartburns and future disappointments.

What Is the Purpose of Music?

What Is the Influence of the Tonal Art on Mankind?

By CONSTANTIN VON STERNBERG

(Mr. Von Sternberg died just as this issue was going to press. He felt that this was a very important article.)

THE word "music"—like many others—has in the course of time acquired a multiplicity of meanings. The visionary speaks of the "music of the spheres;" poets refer to the "music" of their verses, and so on; but in its most common use the word indicates a combination of melody, harmony and rhythm. So far we probably all agree, but this is not very far. A combination of brick and mortar may produce a house, but this house need not be "architecture." The essential question with the combination: What purpose does it serve? Is it for abject utility, or for amusement or for pleasure?

Strange as it may seem (in view of its intangible nature) music, too, admits of these three divisions. Its purely *utilitarian form* is that in which melody and harmony are irrelevant, while rhythm is the predominating feature. The drum corps of a marching regiment makes "music;" though it produces neither melody nor harmony, it has the power of regulating the soldiers' step, because rhythm—the animal inheritance of music—acts most directly upon our motoric nerve centers. If melody and harmony are added to mere rhythm in such a way as to still permit the rhythm to predominate, the result is a march or a piece of dance music of the lowest order, unless the two added elements are of such a high esthetic quality as to make an appeal to the imagination.

The first two composers who by this means raised dance music to a higher plane were Lanner (1801-1843) and Johann Strauss (1804-1849) the father of the composer of the *Blue Danube.* The son still further developed this idea of combining the action upon the motor centers with an appeal to the imagination, until it gained a place in classic music for many of his compositions.

This son, Johann Strauss, is sometimes designated as Johann Strauss II (1825-1899). For a considerable time he stood quite alone in this field, but later quite a number of composers in Germany and France followed his lead, until now no march or dance piece can hope for recognition unless it moves on this elevated plane. (The Gavottes, Courantes and other dances of the masters do not come under this head, because they were not written for the purpose of dancing but merely used the rhythmic form of these dances; they occurred mostly in the course of a Suite or Partita.)

The Amusement Phase

Before approaching the amusement phase of music it should be remembered that the word "amusement" denotes a pastime without any high or noble significance. The amusement phase of music has its place, undoubtedly; so has the amusement phase of literature and of painting. Moreover let it be acknowledged that this class of music does contain a certain appeal to the imagination; but this appeal—when not vulgar, as it often is—is so superficial as neither to require close attention nor to leave an impress on any mind that is inclined to be self-active. The average Fourth-of-July oration, the celluloid bric-a-brac, the humdrum newspaper novel, these belong to the same class of "amusement-art" as do also most of our so-called "comic operas" and the coon song; if, indeed, some of the coon songs are not to be preferred to most of the comic operas.

Phase of Pleasure

That phase in which music becomes "art" is the phase of pleasure. It may be well to remember at this point that Herbert Spencer defines pleasure as consisting of "the free exercise of our best faculties." If, then, the free exercise of our best faculties constitutes pleasure, it follows that something must *call forth* this exercise: something that stimulates our best faculties into activity. Now, the foregoing statements have acknowledged that any kind or class of music will excite some faculty in us, but—is it always one of our *best* faculties? The song that is advertised as the "hit of the season," the music of the short-skirted theatrical shows, they act undoubtedly upon our imagination; but the pictures these things conjure up in our minds either are not to be mentioned or are of so fleeting a nature as to be no other use to us than to help us to "kill time;" which implies that even for so mean and plebeian a purpose some people need outside help. Only when music stirs our soul to thoughts or feelings that in themselves are worthy and noble; only when it generates in us a view of life *higher* than that of the workaday world—only then it rises to the plane of "pleasure;" for only then it is "art." There is among all the branches of art none so emancipated from, and so independent of, the material world as music, which—perhaps for its non-corporeal nature—is called the art divine!

This, then, is *music!* This ought to be music to all humanity! And this class of music has its lighter, aye, even its humorous, vein, as well as it has its serious side. But when it jests and frolics it is *clean* and outspokenly honest in its moods and sentiments. What, for instance, could be more rollicking and gay than the *Scherzo* from Beethoven's *Sonata, Op. 28?* Or that vast movement of it? What could more strongly entice the mind to think of the poetry of bodily motion as in an artistic dance, than a *Valse* or a *Mazurka* by Chopin? Yet, to these pieces in dance form it is not our feet that respond, but our heart, our imagination. Has any love-ditty ever found better and more charming expression than Shakespeare's "Hark, hark" did through the immortal melody by Schubert?

Art Not Long Faced

Art is not a long-faced Puritan; it does not propose to spoil this earthly life in order to win the next. It deals with *us,* with *you,* with *me;* but it deals with what is *best* in us, it addresses our soul in its Sunday clothes. It deals with our moral health, with our noblest impulses, with our love in an individual as well as in a broad human sense. It deals with our sorrows and with our delights, with our grief and our joy, with trouble and with gaiety, with tears and with laughter; but, it must deal with *something which our soul has either directly or vicariously experienced,* or else it is not "art;" it is not really music!

Thus, and thus alone ought music to be understood by all the world; and there is hope that some day this conception of it will be general, provided that we, the teachers and the students of music, will bravely champion this conception and refuse to regard music in any other light.

Now, wherein lies the unnamable magic charm of music? What gives it its great redemptive power? Pythagoras explained the effect of music through "the pleasure of witnessing a succession of simple mathematical relations made audible." Aristoxenes believed in a direct relation between musical rhythms and the human pulse—blood relations as it were. (His tabulating of rhythms, by the way, has not been improved upon to this day.) Chladny and Helmholtz grappled with the mystery of music at its acoustic end and have undoubtedly achieved estimable scientific results which, however, led them to totally wrong conclusions. Hubert Parry (and the present writer is entirely with him) thought that acoustics are not more necessary to a musician than chemistry is to a painter. Beethoven said "Music reveals a deeper wisdom than any philosophy," but his dictum is intelligible only to the few that have delved deep enough into the mystery of music to grasp his meaning. Saint-Saëns called music an "architecture of sounds" —pretty, Frenchy and—meaningless. Combarieu opined that music means "thinking in tones." Gardiner went so far as to believe that music, like art altogether, is derived from nature; a palpable error, because whenever music resorts to an onomatopoetic imitation of the sounds of nature it descends to its very lowest level. He failed to realize that music is entirely a creation of the human mind and soul and that it tends, rather, to make us "forget" material nature once in a while.

Music and the Inner Life

This brief catalog shows that some of the attempts to define music contained an element of truth, which, however, did not concern music but only certain ones of its properties, whichever the respective author had in mind. Alas and alack, that the calculation of air vibrations and the doctrines of harmony and rhythm do not explain—"music."

(Since the learned men just quoted have failed to define more of music than some of its properties, it would be a piece of unpardonable rashness on the part of the present writer to offer the following as more than a very faint "suspicion;" not as a settled, formulated "opinion" but as mere dim surmise, a veiled hint as from the glimmer of a light too distant to be reached but just perceptible enough to give our straying feet something of a direction through the mazes of metaphysics.)

We have our being in the world of tangible realities. Objective nature and its derivatives constitute the sum and substance of our knowledge and experiences, almost entirely. Ah yes, almost but not entirely; for there is still that little residue of sentiment feeling, emotion, the affections, ardor, fervor, ecstacy; in short, all that constitutes our "inner life" which we can neither define nor prove but of which we feel as certain as we do of our body. This inner life of ours happens to manifest itself quite independent of the tangible realities. In fact, it pulsates most strongly when we are as far away from them as we can possibly be; when we are "lost" in thought in memories and are altogether out of touch with "tangible" things and are given up to the higher, *intangible* realities. This inner life craves expression as insistently as does the outer life, if, indeed, not more so; and it is not improbable that in this craving for expression lies the fount and origin of art in general, although it does not explain the particular power of *music.*

The art *instinct* is innate in the human race. The primitive art of savages proves that they, too, have sought for a means to convey to their fellow beings something for which their speech and gesture proved inadequate. Not through ratiocination, but by *instinct* they hit upon art. As we observe the mental and moral development of the human race, we notice that the arts develop in an equal degree until they reach that refined stage where, for example we look no longer for mere photographic likeness in a landscape but for the "feeling" which the scene roused in the artist who by expressing it in his picture conveys it to its beholder. Just so has the sculptor to express feeling in his work, for we do not relish the sight of a sculptured animal—however correct it may be anatomically—unless the animal is shown in a attitude which expresses a feeling with which the human soul can sympathize. Still, since painting and sculpture are compelled to tether their expression of feeling to some terrestrial object, these branches of art can never quite prevent our thoughts and feelings from being—somewhat intrusively—reminded of the world that surrounds us; they can never take us away from it as completely as it lies in the power of music to do, because music does (and should) not "depict" the *objects* of our feelings but "expresses" *the feelings themselves.* It does this directly, without resorting to any intermediary specimen of objective nature or human handiwork.

The Magic Power of Music

Is it not probable, or possible at least, that in this aloofness of tangible realities we may find a glimpse of the magic power of music? Could it not be that music, not needing the realities of this world for its messages, dispenses with them altogether and thus attains the freedom and power to speak to us in the secret and sacred code of our soul life? If music is sometimes called the "divine" art, it is perhaps because it does seem like a divine attribute that listening to good music makes us feel as if we were holding the key to the deepest secrets of our soul; secrets we thought to be known to Omniscience only.

We are, however, so bound up with the visible, tangible world we live in; our emotions are so inextricably interwoven with the occurences, surroundings, hopes, fears and aspirations of our daily life as to induce us to dress the feelings, aroused by music, in the garb of our personal experiences. This exegesis however, is merely a by-product; one which, unfortunately, causes many people to misunderstand the function and office of music and of art in general To listen to music with the hope of understanding it better by attaching a "story" to it is just as foolish as the attempt would be to gain a better appreciation of a painting by fastening a music box to the picture. Why should a painter make a picture of a statue? Why should a sculptor limn a landscape.

Of poetry, poetic prose, architecture, sculpture, painting and music (the creative arts) each has its own well-defined province and mission. Any attempt to go beyond the confines of this province and mission, any venture to intrude into the province of another art, any endeavor to express what lies in the province of one art through the medium of another art, is equivalent to an artist's confession that, in spite of the greatest skill he may display, he has not really *mastered* his art and that, therefore, he is at best but a skillful "artisan." (Governments, whenever they feel weak at home usually start a foreign war; it is an old expedient.)

The Redemption Power of Music

The difference between a scientific explorer and a spy lies in the circumstance that the explorer is a student while the spy is a thief. The one works for all humanity, the other for himself or for that division of the globe which he calls his country; the one aims at development, the other at subsequent destruction. Those who do not regard art from the high plane of ethical thought and feeling, that rather try to snatch some knowledge of it in the byways of charlatanism and for no better purpose than to amuse the ignorant or to gratify their own vanity or, worse still, to satisfy their greed of money, they are the spies in the camp of music; for they merely learn to imitate the externals of the art to use them for its ruination. They are, indeed, spies, traitors and common criminals to boot; for, they are taking an unfair advantage of ignorance and thereby counteract the working and influence of honest and sincere musicians. Contrary to these malefactors do the faithful believers in the redemptive power of music enter upon its study with enthusiasm, reverence and pure-minded love; and, unless they are interfered with by well-meaning but ignorant parents or guardians, they awaken and foster a similarly respectful and loving regard for music in their pupils and friends.

What a priceless boon music, good music, is to us mortals! Jewels are worn to dazzle the eyes of others, treasure must be spent to be enjoyed, but music makes no such demands. It is our faithful companion from our cradle to our grave; it is with us in our joys and it forsakes us not in our darkened hours, in our direst, most painful isolation. When those we love have passed away, when we are so misunderstood that relatives and friends turn away from us in merciless prejudice, when we are alone in our little abode, alone with our distress, alone with our God, music will softly spread its magic wings and fan away all earthly sorrow; it will cool our tear-smarting eyelids, console our heart, placate our soul, lead our thoughts heavenward for new hopes and resolutions and brace us for the morrow to face the world anew. How can we humans ever thank God enough for this sublimest and sweetest of His gifts!

The "Forcing" Habit

By Lynne Roche

I have just been listening to "the tale of woe" of an ambitious young girl who had just returned from her second lesson with a new teacher. Nearly everything she had been doing had been laid aside while neglected features of study were to be brought up to where she could progress satisfactorily.

Now one of the most disastrous things that can happen to a pupil is to be "forced" beyond the grade of work which she is able to comprehend; and this may be done either as regards technic, interpretation or general intelligence. In either case the result is equally bad, so far as the pupil's future is concerned. Some day she will come under the guidance of a real teacher who at once will sense the difficulty. Then must she be brought unpleasantly to see that it is necessary that she shall go back and bring up much work that she thought she had done—this, in order to create a foundation for any real musicianship she may hope to attain later.

No, do not "force!"

It is so easy, to "bump the nose against the wall of technic." Pupils are so ambitious to do the "big-sounding" thing—often irrespective of their capabilities and preparation—that to humor their desires would be humorous were it not so pathetic. And the same thing holds true of the teacher who sometimes, for the sake of a show of accomplishments as an instructor, shunts the student into a morass of difficulties which gradually submerge and stifle both her enthusiasm and progress.

Only the piece which it is possible to master in such a way that the technical difficulties became a matter of no concern to the executant, can be performed with any hope of bringing out its inner beauties. Therein lies the folly of any other course. If the student must grind for weeks, or even months, to acquire a passable mastery of its technical problems, by that time her sensibilities have been so dulled that all hope of her ever getting into sympathy with the inner spirit of a composition is gone.

And the same thing applies to studies. If they are to serve their purpose, they must be of a difficulty that, with a reasonable amount of study, may be prepared in a manner to allow them to be played with some speed and spirit. It is only when this last stage has been reached that these studies become really a medium of developing facility of both physical and mental technic.

No, these things cannot be done by leaps and bounds. There must be a gradual and symmetrical development. And this can be accomplished without restraining the students' impulses to the degree that their rate of perceptible progress is depressing.

The Effective Method in Teaching

By L. E. Eubanks

It is regrettable that so many instructors think their work ends with the giving of knowledge. It only begins with this; a pupil really educates himself; what the teacher does is to teach him habits of work, the best methods of self-expression. The teacher of history impresses facts and dates on her class; mathematicians expound rules. A perfect echo of this "driven in" knowledge is all the best pupils can give. The competent teacher of music gives knowledge, and something more; he educates his pupil's subconscious mind, and this becomes the pupil's real teacher.

In music, or any other subject lending itself so perfectly to subconscious mentation, we learn between lessons. The teacher's work is to present and impress the lesson matter in such a way that the mind gets a good grasp on it. In other words, the acme of effective teaching is to develop the connection between conscious and subconscious thought, to train the conscious mind so that it passes important points on to the record-keeper, the subconscious treasurer. Paderewski appreciated this method of development; he habitually "put away" beautiful effects and during sleep hours recalled them for elaboration.

Concentration Not All

Concentration is ordinarily prescribed as the best developer of subconscious activity; but we cannot agree with this unqualifiedly. Many pupils concentrate intensely without making more than a shallow impression on the mind. Concentration may even defeat the purpose; for when driven determinedly it takes all the attention to itself; concentration on concentration gets us nowhere in music.

Attention based on interest gives us the proper degree of concentration. Reasonable interest may be pre-supposed; without it no one has a chance. The teacher's highest art is to develop what we may term a receptive attention. A pupil with a calm mind, giving the work his undivided attention, is the one who will "put away" the lesson. Don't give him too much at a time, and never more than he can thoroughly assimilate. Teach him practically that what he puts away is all that counts; show him simply the value of auto-suggestion, thus: Tell him to think of one particular point in the lesson six hours later, stating the time in connection with another action. "As I go to bed I will recall, etc." Or perhaps it would be more to the point to suggest, "As I begin my next practice-hour, I will recall, etc." Have him repeat this several times during the lesson and again before he leaves you. He may not succeed the first time, but he soon will, and this shows him the duality of mind.

Help of the Subconscious Mind

From this it is but a step to proof that the idea "comes back" with added clearness. Under the influence of a powerful suggestion given the conscious mind, or intense attentive study, the subconscious mind "works overtime." In its own sanctum, it may have a drill technically correct, but the "middle man," the conscious mind, is unable to present it until after rest. Periodical relaxation is a vital factor in the rationale of harnessing the subconscious mind.

Be careful to assign repetition its proper place. Pupils easily become weary and disgusted with it. Where the thing involved permits different modes of execution this will enable the teacher to postpone satiety; but it is more satisfactory to explain scientifically the virtues and limitation of repetition. Conscious repetition is the molder of habit, the road to facility in execution. Only a shallow thinker can deny this merely because there is such a thing as senseless mechanical rote.

"Music—the language of heaven that cannot be spoken in words."

VOTE YES OR NO ON JAZZ

IN OUR AUGUST ISSUE WE SHALL TAKE UP THE PROBLEM OF "JAZZ."

IS "JAZZ" OUR NATIONAL MUSICAL EVIL?

IS AMERICAN MUSICAL PROGRESS BEING HAMPERED BY JAZZ?

OR

IS JAZZ A NEW NOTE IN AMERICAN MUSICAL ENDEAVOR WHICH WILL IN TIME GIVE A NEW CHARACTER AND A NEW FLAVOR TO THE COMPOSITIONS OF OUR SERIOUS COMPOSERS OF THE FUTURE?

We know that the opinion of American musicians is divided upon this subject.

We want your vote. It will help in forming opinions of thousands when published with others in THE ETUDE.

Please do us the favor of sending us to-day on a penny postal your personal opinion on the following. Just copy the sentence following which expresses your mind:

1. ***I AM OPPOSED TO JAZZ OF ALL KINDS.***
2. ***I AM IN FAVOR OF THE BETTER CLASS OF JAZZ AND FEEL THAT IT WILL IN TIME INFLUENCE AMERICAN MUSICAL COMPOSITION IN A CHARACTERISTIC AND ORIGINAL MANNER.***

SEND YOUR POSTAL CARD VOTE
with or without your name and
address so that it will reach
THE ETUDE office

Before June 15th, 1924

(Address Postal — Jazz Problem, THE ETUDE, Philadelphia, Pa.)

Read what the eminent composer,

PERCY GRAINGER,

has to say on "THE GENESIS OF JAZZ."

The August ETUDE will contain articles for and against Jazz by prominent musicians, among these will be one from

PAUL WHITEMAN,

often called the "Emperor of Jazz," who in eight years has revolutionized the old-fashioned ideas of Jazz and incidentally jumped his income from four figures to six figures. In this article he will tell why he pays his leading saxophonist ten times as much as the player in a great symphony orchestra receives.

Memory Work and Public Performance

By *HAZEL GERTRUDE KINSCELLA*

ALL, at various times in our lives wish that we might own this thing or that. Some one has said that "memory is ownership in mind." Whatever we are able to remember is our own mental property which no one can take from us. To be useful, this property of ours must be so classified that we can easily call it mind; and, in the case of memorized music, the pianist should be able to see its location upon the keys of the piano.

There are several kinds of memory; and in the order of their importance, these are:

1. *Mental Memory,* in which one learns the real make-up of the composition. One should be able to visualize anything memorized; that is, one should be able to see it, mentally, exactly as it looks upon the printed page; just as one recalls a picture seen in a book or one thrown upon a screen. To secure this ability, a pupil should usually learn but a small section of the composition at a time, the size of this section to be determined by the age and experience of the pupil.

Phrase at a Time

The pupil may take only a phrase at a time, learning first one hand and then the other, fixing every detail in the memory, and then putting both hands together. Gradually he will be able to add the phrases to each other, in pairs, in threes, in fours, until he can play a whole page. All this work should be done at a very slow *tempo,* and gradually the phrases will come to sound, to the pupil, like familiar voices. One should analyze all difficult passages. A very young student, just beginning his memorizing, should analyze his little piece, the same as the more advanced student. The word "analyze" worries or frightens some, or is not clearly understood; so it is often well not to mention the word, but to go through the piece, a page at a time, with the pupil, having him really analyze, unconsciously.

Take as an example, the "Golden Wedding" (also called "La Cinquantaine") by Gabriel-Marie. First memorize its key signature, the key (whether major or minor), the time signature, and the general style of the piece. The student may divide the first sixteen measures into phrases of four each, numbering them I, II, III and IV. Then he shall find for himself, the likenesses and differences in the different divisions. This is one of the secrets of ready memorizing. He will find that Division I is made up of two distinct parts of two measures each, the last one an exact repetition of the other. That greatly simplifies matters, for now he need only memorize the first two measures and repeat them exactly. The next four measures, Division II, are altogether different, and must be memorized separately. They end in an extended trill with an upward inflection. Now comes Division III, four measures exactly like Division I—so that is simple, no extra work needed here. Then in Division IV, the four measures are the same as those of Division II, with one exception—instead of the upward inflection, the trill comes to a close by dropping to the A, the keynote of this section of the "Golden Wedding." What seemed a big task, was comparatively simple, after all. One may go on through this piece and through others, and find the same features in evidence. Sometimes repetitions are more hidden, the theme repeated in a different key, or with different accompaniment, or with additional embellishments.

Guide Posts

In learning a piece, one should learn, not only the exact notes and rests, but also, *especially,* the beginning notes —left and right hands—for each section of the piece. Have these ready as guide posts or "finger boards;" for in actual performance of the piece one must think, largely, in sections—the mind constantly looking a little in advance of the actual playing, and thinking—"What next?"

Analysis of special features of a composition, as cadenzas, and long runs, should be to find out what they are really made of. Many seemingly obscure things are very simple when closely observed. Are the cadenzas really scales, or are they little "finger patterns," repeated over and over, up and down the keyboard?

2. *Musical Memory,* the second type of memory work, must always play its part in the performance of any composition. Almost every composition, whether it be a Beethoven Sonata, or a piece of descriptive music like the *Mill in the Black Forest,* by Eilenberg, creates in the mind a certain definite picture or story, which is recalled by each repetition of the music. Possibly no two people imagine the same "story" for the same piece. Each has a right to his own, and the teacher should always encourage the pupil to create his own. Children should memorize all their little pieces, as early memorizing creates the right habit, and the work becomes easy, as in anything much practiced.

To illustrate *musical memory,* take briefly the "story" or "program" of the Liszt "Gondolier." The introduction is meant to illustrate or depict the incoming tide, each wave coming a little nearer along the beach than the one which preceded it. Then is heard the simple melody—an old gondolier's song—one, we are told, which has been sung by the gondoliers of Venice as they have pushed their picturesque barques about, for many centuries. This melody is repeated several times, with varied accompaniments and embellishments, and with varieties of force, making the singers seem now near, now far away. Then toward the close, the great bell in the tower of St. Mark's Cathedral tolls the hour of midnight. Each of the strokes, played by the left hand, far down in the bass, is held over by the pedal and gradually dies away as a bell's tolling naturally would, while between them we hear fragments of the beautiful gondolier's song, which becomes fainter and fainter as the singers drift far out to sea in the soft, quiet moonlight. One observant little girl, on hearing this played after having been told the "story," astonished the player by saying—"The bell struck sixteen times instead of twelve!" It really does in the piano version, but the last four strokes are very faint and are intended to sound like echoes, wafted over the water. Anyone, knowing their "notes" at all, will find the following of the "story" a great mental aid in public performance.

3. *Muscular Memory,* the third type of memory work, is that in which the fingers automatically go through certain movements, playing a piece automatically because, by repetition, they have acquired a certain habit. This form of memory work is of the least value and is not to be sought after but it has this in its favor—that when one has rightly memorized a composition one cannot, especially when playing at a very fast *tempo,* consciously think of each and every separate note, but must allow the automatic memory to carry things along. Automatic memory alone is never dependable—one may, or may not, "get through" the piece—but as a help *after* the memory work is correctly done, it is not to be despised.

HAZEL GERTRUDE KINSCELLA

Of helps to memory work one might mention many. One of the greatest is the practice from memory of all scales and arpeggios, as with these and their fingering so mastered that they are automatic, the player is saved many hours of extra work. Another help is that children should memorize *something,* each lesson, from the very beginning of their studies. Another great advantage to be used by the more advanced student, is to memorize things first while they seem fresh and interesting and the mental image is clear, and then do most of the mechanical work without notes, only referring to them for an occasional "setting straight" of any mistakes which may have crept in. And finally, listen to what is being played.

Technic and Habit

The technic of any art grows from habit. In memory work, habitually correct practice teaches one of the structure of the piece, also its emotional message. The thorough knowledge of both these sides of the construction of a composition is invaluable, when it is played before others, whether from printed music or not. And just as a pupil learns the technic of scale, arpeggio, or octave playing, so the same pupil learns to play in public with confidence—by practice.

It is best that a pupil should learn to play, even during the first year's study, before others, and without notes. The playing without notes may be carried to an extreme—be made a fad—but it is nevertheless true that many a pupil could easily have had success in public playing if only he had been urged and encouraged to play from the very first.

Fine, thorough preparation must always precede public performance; and a student should play with as much thoughtful care when he plays for only one person as when he plays for a hundred or more. A splendid way for a young student—especially a timid one—to make his first public appearance is by playing a duet, for in this he has the inspiring companionship of the other player, and still has all the thrills of "being before the public."

When he must play alone the teacher should be very sure that he is really prepared before he is allowed to appear. Having studied his piece from the three different angles—how the notes *look,* how the notes *sound,* how the notes *feel*—he should be submitted to the following tests. Before a pupil can appear at a public recital, he may be given an opportunity to play semi-publicly, either before a number of other students, as in a studio recital, or before any other informal group of people. Before he plays even there, however, he should be able to play his piece in any or all of the following ways, without the music:

Tests for Memory

1. He should be able to play the melody alone.
2. He should be able to play the bass alone.
3. He should be able to play the right hand alone; and in this, as when playing the bass alone, it will give the player a very safe and sure sensation, to play each part, both slowly and up to the required *tempo,* with all the proper *crescendos* and *diminuendos.*
4. He should be able to play from any starting point in the piece which the teacher may suggest. One should be able to play "backwards"—that is, play the last page, then the one before that, and so on. Many people well started at the first of a piece can go bravely through it, who do not really know it at all. Especially helpful is it to play "backwards" in suites, as in "Papillons," by Schumann, or other similar compositions, playing from the last division to the first.
5. He should be able to tell the key of the piece, and its first notes in each hand.
6. He should be able to describe accurately the entire piece orally, recalling every change of key, rhythm, or general style. For instance, when studying such a piece as the 32 variations in C minor, by Beethoven, or similar compositions, one should be able to describe as well, the general style of each variation, in its order.
7. He should be able to play either hand alone while the teacher supplies the other part, at his own, or at a second piano.
8. He should be able to play it all *very* slowly. In this way one finds at once the weak or uncertain passages. It should also be played without the aid of the pedals.
9. He should be able to play it with absolute accuracy at the required or suggested rate of speed.
10. He should be able to *think* through the entire piece,

with all of its progressions. Then when he plays, he should really "say something" with his playing, really suggest some idea or mood by his playing.

When a teacher succeeds in getting some one piece learned in these different ways, he will discover that the pupil has a very firm grasp upon it. Some one may say that "it is only a little piece—surely it is not necessary to do *it* in so many ways." It may not be absolutely necessary, but it is certainly wise, for anything that adds to an accurate and artistic performance of even the simplest piece is not wasted effort.

Should there be varieties of force used—from *pp* to *ff*—the teacher should hear the student play in the hall where the recital is to be held, for one must always take somewhat into account the size of the hall and the effect of the acoustics upon the sound or effect of the performance.

Characteristic Appeal

In preparing a rather brilliant piece for public performance, it is sometimes wise to practice, at the same time, studies or etudes of the same general style as the piece, as this will help to perfect that particular type of technical development, while resting the ears and nerves from continuous practice upon the same melody. One can, after a period or such practice, go back, refreshed, to the work on the piece. For the cultivation of a brilliant technic of a general character nothing is better than to work on Czerny, Clementi, Henselt, or Liszt Etudes. Work on any of Bach's compositions will cause the student to concentrate his attention upon the work in hand, give him a polished technic, and develop in him a fine sense of phrase limits and general form. Three ever-interesting sources of pianistic technic are scales, arpeggios and Bach.

When a student is preparing a number for public performance, he must also think out and decide upon the characteristic feature or appeal of the work of the composer. The writers of the old classics, as Bach, Scarlatti, Pergolesi, and others, delighted in formal balance, and to this, the player should give prominence. The Schubert works are intensely melodic, while the writings of Debussy, and of many modern writers, are notable for their atmospheric charm. Then the student should always have some very simple exercises suitable for daily use, which, in a concentrated form, are useful in keeping the hands and fingers flexible.

The wise teacher will know that one of the surest elements in the successful public appearance of her pupils, taking for granted, of course, perfect preparation, is in the choice of the work to be presented. Many pupils are very ambitious, and wish to play in recital, pieces which their general state of advancement makes them unable to play to the best advantage.

An experienced teacher will know that a pupil should play in public a piece which does not tax his playing ability to the extreme—he will then have reserve force. It is often advisable, in the case of the recital appearances of young children, to use some of the regular study material on which the pupil has been working, and which he has brought to a high degree of perfection. In many cases, much pleasure may be given by the *musical* performance of little *etudes* or studies taken from the instruction book.

Suggested Self-Help Questions on Miss Kinscella's Article

1. ***What is the first step in memorizing difficult passages?***
2. ***What are the "guide posts" in musical memorizing?***
3. ***Should children memorize?***
4. ***What is a good kind of piece to use for the first public performance of a pupil?***
5. ***Should the pupil be able to play hands separately from memory?***

"The most encouraging sign in the musical world is the activity of the many women's clubs throughout the country. They form the vanguard in the advance of music appreciation, and it is the women who will play a large part in the organization and financing of the great opera houses which are bound to come in the near future."—Richard Hageman.

To know good music, real music, is to love it; and where there is love of music there is always promise of good morals, good citizenship; for love of the fine and beautiful makes for better men and women, and a better world in which to live.

—*Tacoma Ledger.*

A Table for Correct Fingering of Common-Chord Arpeggios

By Conrad Wirtz

Correct fingering is a most important element in arpeggio playing. Probably every pupil, practicing arpeggios, has been in doubt as to when to use the third finger and when the fourth. The table of fingering for the common-chord arpeggios, given below, has been found very useful in overcoming this difficulty.

This table is intended for those who study arpeggio playing as a technical exercise (not from printed notes), where the student is taught how to form the arpeggios from chords.

The manner of using this table is as follows:

First, find the key in which you are to play, in the left-hand column. Be sure to notice whether you want a Major or a Minor key. Then, take the fingering for the first position, R. H., marked opposite to this key and repeat the series of fingers up to the dash as many times as the number of octaves your arpeggio is to be. Use the figure marked after the dash for the top note only

In descending, begin with the figure after the dash and then repeat the remaining series, backwards, until you come back to the starting point.

Take the second, and then the third position in a similar manner.

The left hand starts with the figure marked before the dash, and then takes the remaining series, repeating them as often as needed.

For example, let us suppose our key to be F major. We will find this key in the upper left-hand box. The fingering marked opposite to this box is R.H. 1 2 3—5 for the first position. If our arpeggio is to be two octaves long, we will play

F A C F A C F
1 2 3 1 2 3—5

Downwards, we need only to reverse the order.

The second and third position will be, respectively

A C F A C F A
1 2 4 1 2 4—5

C F A C F A C
1 2 4 1 2 4—5

If our arpeggio is to be four octaves, we repeat the first three figures four times instead of two times.

For the L. H. we will find for the first position,

F A C F A C F
5—4 2 1 4 2 1

and so on with the other position.

A Time Tried Device

The writer has used this table in his teaching for a number of years and has had very little, if any, trouble about correct arpeggio fingering. Each pupil is given a type-written copy of this table for use during practice. The chord from which the arpeggio is to be formed is taught in its three positions and then the pupil practices the arpeggios through all keys, hands separately, taking one key for each lesson, until correct fingering habits are established.

Fingering for Seventh-chord (four-note) arpeggios needs no special table, since the fingering for these arpeggios is all uniform, with only such modifications as will be readily understood by any pupil having a well-founded habit of correct fingering for the common (three note) arpeggios.

KEYS		FIRST POSITION	SECOND POSITION	THIRD POSITION
C, G, F, F♯, G♭ Maj...... A, E, D, D♯, E♭ Min.......	R.H L.H	1 2 3—5 5—4 2 1	1 2 4—5 5—4 2 1	1 2 4—5 5—3 2 1
D, E, A Maj.............. G, C, F Min.............	R.H L.H	1 2 3—5 5—4 2 1	2—1 2 4 4 2 1—2	1 2 4—5 5—3 2 1
E♭, A♭, D♭ Maj.......... F♯, C♯, G♯ Min...........	R.H L.H	2—1 2 4 2—1 4 2	1 2 4—5 5—4 2 1	2 4 1—2 4 2 1—2
B Maj.....................	R.H L.H	1 2 3—5 5—3 2 1	2 3 1—2 3 2 1—2	2—1 2 3 2—1 3 2
B Min.....................	R.H L.H	1 2 3—5 5—4 2 1	1 2 4—5 5—4 2 1	2—1 2 3 4 2 1—2
B♭ Maj....................	R.H L.H	2—1 2 4 3 2 1—2	1 2 4—5 5—4 2 1	1 2 4—5 5—3 2 1
B♭ Min....................	R.H L.H	2 4 1—2 3 2 1—2	2—1 2 4 2—1 3 2	1 2 4—5 5—3 2 1

Walking Time

By Mrs. P. R. Turner

Experience teaches us that in the training of young children, imagination is a great factor.

Very few really comprehend the subject of Time in its relation to music. In using the following method, I have had wonderful results; first, by gaining the attention of the child, then the interest and experience of demonstration in its own body, feet and fingers.

Beginning with Quadruple Time, which I explain is quad (4) ruple (rhythm), I place on the blackboard

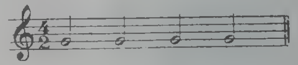
Ex. 1

Taking the child's hand—we walk across the studio, counting 1, 2, 3, 4, with a natural walking step, each foot marking a count. We call it the marching step.

The child then goes to the piano *feeling* the Time and plays the four notes as she walked them.

Next I write

Ex. 2



This I call church music walk. Very slowly we walk and count, 1—2—3—4; and again we go to the piano for that *long note* demonstration with the fingers.

Then comes

Ex. 3

This we have named the soldier's quickstep. At a lively gait we walk the measure counting 1—2—3—4; after which we have the piano demonstration.

In the same manner, we take up Triple and Duple Time, and their figurations, until these forms are thoroughly understood. Then I mark the accent. Strong accent we mark with △ and weak accent with —. My pupils are then ready for the study of Compound Time.

Composer or Performer

While practically all the composers of note have been passable performers upon some standard musical instrument yet few of them have shown brilliantly in this field. On the other hand, the eminent virtuoso performer has not risen to the greatest heights in composition.

Of the former condition read what Schumann said:

"Experience has proven that the composer is not usually the finest and most interesting performer of his own works, especially of his newest, last created, which he cannot yet view from an objective point. It is more difficult for a man to discover his ideal within his own heart than in that of another. And should the composer who needs rest at the conclusion of a work strive at once to concentrate his powers on its performance, his judgment—like over fatigued sight that tries to fix itself on one point—would become clouded. We have seen examples of this, when composers have wholly misinterpreted their own works by such a forced manner of procedure."

What to Teach at the Very First Lessons

By JOHN M. WILLIAMS

Section V.

This Series Began in The Etude for January

Grease Spots

WHEN taking music lessons the pupil should be taught from the very beginning "how to study." He should not be allowed to play his pieces straight through every time, vaguely expecting that by doing so he will eventually be able to play them. Most pieces and exercises have certain spots which are stumbling blocks, where practically all pupils stop, hesitate, or stumble and generally lose a few beats. Point these out at the very beginning. Illustrate by saying to the pupil: "If you have a nice silk dress and get a grease spot on it, would you wash the whole dress or would get some gasoline and apply it to the spot only?" The pupil generally sees how silly it would be to wash the whole dress—so explain that most pieces have grease spots in them and these must be removed "spot by spot," not by playing the entire piece through each time. I often use the simile of "A chain is as strong as its weakest link"—likewise a piece is as well learned as the spot in it.

Recitals

Successful teachers have frequent pupils' recitals. More benefit is to be derived from frequent small studio recitals than one annual big affair. The pieces should be played entirely from memory and with ease and freedom. In other words, the pieces should be well within their powers. Have the pieces played up to time—played joyfully. Make each phrase say something. Dramatize the playing. *Play* the piano: *do not work or wrestle with it.*

Before each piece is played the pupil should recite, for instance:

"The name of my piece is "A Curious Story," written by Stephen Heller. This piece is written in the key of F Major. The signature is one flat—B♭; the time is two-four (2-4), which means two counts to a measure and a quarter note, or its equal, to each count.

Boys like pieces such as "Jolly Darkies," Bechter; "Happy Farmer," Schumann; pieces with "lots of pep," as one remarked to me.

Summing Up

In the beginning of these articles I have spoken of lesson slips. My own lesson slip, which is a perforated pad, 10¼ inches long and 5¼ inches wide, looks like the illustration on this page.

Here is a technical slip of a child who has been studying about 10 months.

At each lesson write the name of the work to be practiced for the following lesson on the pad, tear it off and attach it with wire clips to the outside sheet of the pupil's music book. This keeps the salient points of the lesson before him during his practice time. I used to have a note book for each child, but I discovered that they very conveniently "forgot" the note book when they had not practiced sufficiently on a new scale or other exercise. If a teacher gets a big price for instruction, or small for that matter, the pupil's lesson period of thirty minutes should not be taken up by such remarks as, "What is the number of your Schmitt?" "Did you have transposition?" "What new scales today?" Half the lesson time is thus wasted in asking useless questions. The child should hand his or her music to the teacher. The teacher takes a quick look at the lesson slip, mentally noting where most of the lesson time will have to be spent—the weak spots. As a general rule, start at the beginning; but sometimes, if a piece or an Etude needs special attention, commence at the bottom of the slip and work up. The lesson slip in the illustration is from a regular pad and is filled out for a pupil who has been studying about ten months. Naturally a beginner would not be having the same items as an advanced one. At the end of nine months' lessons the average pupil's slip should embrace most of the items marked in the accompanying illustration.

We will begin at the top of the slip and explain exactly how to teach each item.

First: See that the pupil is seated at the correct height and the proper distance from the piano.

STANDARD PIANO SCHOOL

Phone M.4431 Date *June 3rd 1923*

Name:	*Bella Smith*
Schmitt No.:	*4-hands alone played wrist staccato* *3-hands together and legato–1/4–1/8–1/16 notes*
Transposition:	*No. 30 in First Book—transposed into twelve major keys* *Recite signature before playing*
Crossing Exercise:	*Intervals of seconds and thirds* *Overlap the crossing—quick thumb*
Wrist Exercise:	*Staccato 6ths–1/4–1/8 & triplets (repeated notes)*
Major Scales:	*12 major scales, 2 octaves, hands together* *Recite the signature before playing each scale*
Minor Scales:	*Natural* *Melodic A-E-B D-G-C Mi* *Harmonic*
Chords:	*F. use 3 touches. Tonic—down arm touch* *Dominant—up arm touch* *Sub-Dominant—wrist staccato*
Broken Chords:	*C-G-F Ma. D-A-E Mi* *Two octaves and back; Hands alone; 1/4–1/8 notes*
Chromatic Scale:	*Two octaves, hands together*
Etude:	*No. 60 in Book—new* *Nos. 55-56-57-58-59 Review five to ten times a day*
Piece:	*Happy Farmer—all by heart*
Remarks:	*In scales and transposition recite the signature rapidly. Make a game of it and see how fast you can repeat them. Recite the signature in the same way in regard to chords.*

Schmitt Five Finger Exercises

Yes, I use the old-fashioned Schmitt Five Finger exercises; but I use them in a modern way. Take No. 4, for instance. Have the pupil fall with dead weight of the entire arm on the first note *four times.* This relaxes the entire arm, gives practice in weight playing and induces freedom of the entire piano playing apparatus. Next play the exercise as written—legato—with high raised, pure finger stroke in quarter notes, eighth notes and sixteenth notes. Watch the wrist that it does not tighten. The pupil should practice each speed four times (total twelve times a day), though naturally you will not have time to hear that many at the lesson. Once or twice of each speed is sufficient. Next, play the same with wrist staccato. These exercises are so very simple that the pupil can concentrate on Correct Playing Conditions, on the "how" instead of the "what." No. 3 should have been practiced the week before, hands alone and will now be played hands together in the same manner as the first, four times each—legato and staccato. Be careful to play the fifth finger on the *end,* not on the *side.*

Transposition

The next item is transposition. If the teacher asks to have an exercise played in D major, for instance, the pupil should answer immediately: "Signature two sharps, F and C," and proceed to play it in D major. It is important that this be done quickly so as not to waste time. "Pulling teeth," some call it. The pupil knows it or he does not—one of the two. If he knows it he should recite it quickly; if he does not he should learn it. A pupil has to be taught "How to *take* a lesson" and should be encouraged to take pride in the quickness or perhaps "wide awakeness" would be the better word, of his answers. I would like to say a few words here in regard to the value of the pupil reciting, instead of the teacher.

Pupils Should Recite

For years I told my pupils things that I knew thoroughly and it generally went in one ear and out of the other. Now, I have the *pupils tell me.* In the beginning I was painfully surprised and shocked to discover that some of the things I had literally *told dozens of times* had not registered at all, But the new way works wonderfully; they enjoy "reciting" and I know exactly what they "Do not know." Give it a trial and see for yourself. You may get some jolts as I did, but it will do you both good.

Crossing Exercise

In the crossing exercise begin by falling twice with second finger on Middle C. This falling I stress because it gives practice in the "Attack" touch and concentrates the mind on *freedom* of the *upper arm*—a very desirable attribute if we are going to have *freedom in playing.*

Wrist Exercises

In playing the staccato sixths (the next item), keep a quiet forearm and have the hand "hinge" at the wrist. Play three ways: (1) repeated notes, single double and triplets; (2) the five tone scale with quarter, eighth and sixteenth notes; "impulse work," five tones played with one impulse.

The Scales

The pupil should recite before playing each scale. Thus: D major scale, signature two sharps F and C. Then have it played quarter and eighth notes. When you teach sixteenths try using the word "drom'edary," with the accent on the first syllable, to get the rhythm. The pupils enjoy it and the task thus becomes a pleasure.

Minor Scales

Before playing the minor scale the pupil should recite thus: A Minor Scale, relative to C Major Scale—Signature, no sharps nor flats. First play the natural minor one octave. Count *seven.* Next play the melodic minor, counting seven (raise six and seven ascending and cancel descending) and then the harmonic minor (raising seven both ascending and descending) *always counting seven.* The natural minor scale is played so the pupil will remember the sharps and flats from the major scale. Play it one octave. Use it to build the others from. If you teach the scales by tetrachords, try telling the youngsters that the minor scale is a monster with one body—the first tetrachord (the same in each form of the scale) and three tails, (the second tetrachord in the natural, melodic and harmonic forms). By counting seven when ascending (not descending) the pupil gets the correct idea of raising the sixth and seventh notes.

Chords

Next on the slip come the chords. First teach the tonic or common chord and its inversions in the keys of C major, followed by G major, and F major (ceg-gbd-fac). Each should take about one lesson. The pupil should recite thus as he plays: C major tonic chord—root position—first inversion—second inversion. Use the down arm touch (fingers placed over the correct keys, wrist rather high, then let the wrist sink suddenly, quite low, and play two octaves and back. Treat G minor and F major the same. Later study D, A and E scales, and so on. When these can be played easily, explain that there are three major chords in the key of C major—the Tonic on "one," the Dominant on "five" and the Subdominant on "four." From now on use three touches. Down arm touch for the tonic; up arm touch for the dominant, and the pure wrist staccato for the sub-dominant. Recite each chord as it is played.

Arpeggios and Broken Chords

A thorough drill in broken chords is desirable before beginning regular arpeggio practice. Use only those with white keys C-G and F major, D, A and E minor. Have them played in quarter and eighth notes. The pupil should memorize this rule for fingering: From the little finger (fifth) side of the hand, "an interval of a third takes the fourth finger and a fourth takes the third finger."

Chromatic Scale

When teaching the chromatic scale it is important that both the teacher and the pupil understand why it is given. The chromatic scale is invaluable as practice for lightening and giving agility to the thumb (a very bunglesome and awkward finger), and the pupil should begin its practice early in his career, as it facilitates the passing of the thumb under as nothing else does. Have it played with rather high wrists—all black keys played forte—white keys, piano. This preparatory way of playing does wonders to keep the thumb from being too heavy when playing fast later. It causes the "lump" to disappear.

The correct way to teach the exercise or piece has been thoroughly treated in the preceding articles. Generally speaking, save the piece until the last, it is the dessert.

Rewards

Besides gold stars, which are used as a reward for pieces and exercises when correctly learned, an excellent idea for helping to keep up the interest in technical practice is to invest in a string of beads for each small pupil (these can be bought at any ten cent store) and hang them up on the studio wall with the name and age of the pupil at the top. Marbles, in long net bags about an inch wide, may be used for boys. For each perfect item (100%) on the technic slip, (Schmitt, scales, arpeggios, and so forth) allow one bead or marble. Have a piece of thread for the pupil to tie off the number they win at each lesson. Eventually, when they have earned them all, they are allowed to take them home. Perhaps I should mention here that the children from wealthy homes are just as much interested in winning their ten cent string of "pearls" as the children from the poorer families. They frequently become so excited over "winning beads" that they neglect to practice their pieces and exercises. Then have a "bargain day," and allow six beads or marbles for a perfect piece or exercise! All the same as "green stamps!" Children are just like their elders, they love a bargain.

Self-Test Questions on Mr. Williams' Article

1. *What are the advantages of a "Lesson Slip" in teaching?*
2. *How may time be saved in the lesson period?*
3. *What is a very important feature for the pupil to know about "How to take a lesson?"*
4. *Name three ways of playing wrist exercises.*
5. *Write an outline for teaching scales.*

A Handel Shrine

In 1718 Handel became chapel-master to the Duke of Chandos, at his palace known as "Cannons," near Edgeware, hard by London. Dr. Pepusch, who had held the post since its establishment, retired gracefully in favor of the younger master. For the chapel, in Italian style, Handel wrote the *Chandos Anthems,* the *Chandos Te Deums,* and "Esther," the first of his English oratorios.

In 1720 Handel resigned from this position, to become director of Italian Opera for the society known as the Royal Academy of Music and began the most stormy part of his career as composer and impresario.

The "Grand Duke" died in 1744, and his palace was bought by a speculator who dismantled it, selling the marble staircase, the wonderful marble columns, and the equestrian statue of King George I, which still may be seen in various mansions of England. Although London has now encompassed the quiet village and country seat, still at this day, sitting far back from the surging street, the little chapel stands as when Handel played his last service there two hundred and three years ago.

Three Ways for Practicing the Scale

By Eutoka Hellier Nickelsen

I. *Adagio*—Very slowly.
   a. Count 1-2-3-4 to each scale tone.
   b. Use a "depth" of tone.
II. *Staccato*—Detached.
   a. 1. Count 1-2-3-4 to each scale tone.
      2. Release key after count "2."
   b. Moderato in both Tempo and production (volume) of tone.
III. *Presto e legato*—Very fast and smoothly.
   a. Gradually increase the tempo.
   b. Use a Leggiero Touch.

Sidelights on Human Nature

By Blanche Hamill

Those whose work takes them into various homes see many amusing and sometimes deplorable situations. As health conditions have made it advisable that I avoid too close confinement to the studio, a part of my pupils are taught in their homes. Some interesting episodes have been the result.

A young married woman sent notice that she had a new instrument and wished to begin lessons. Though absolutely ignorant of musical matters, she had purchased a copy of "The Trail of the Lonesome Pine" with which she wished to begin study. On being assured that it first would be necessary to know something of the notes and time and that the learning of music involved a certain amount of study she was greatly disappointed, and this first lesson became also her last.

Perhaps some reader has made the acquaintance of the pupil who takes her lessons regularly until her bill is due. Then she develops a sudden violent illness or an extremely busy spell of several weeks. At last, the agony over, she pays up and continues her lessons quite regularly again till the next pay day approaches. The pupil who prefers paying at each lesson often saves both herself and the teacher a deal of trouble.

Don't you feel like shaking the girl who drops down on the piano stool and launches into a voluble effusion on some subject entirely foreign to her studies! Each of us has met her; she does not know her lesson.

Two mothers asked me to give their little girls lessons at twenty-five cents an hour and allow them to practice on my piano. Generous mortals! "The children would progress faster under my daily supervision," they said. Fortunate it is that such people cannot read our thoughts.

One high school pupil had a mother who nagged her from the time she arrived at the front gate. By the time she was at the piano she was in such a nervous state that it required half the lesson time to get her sufficiently composed that she could benefit from the instructions given.

In one delightful (?) home, while I gave a child her lessons the lord and master strode up and down the adjoining room swearing at the wife about trivial details of housekeeping. One morning I arrived on time, only to have to wait while the family had breakfast. To the wife's remonstrance about keeping me waiting, he growled that I "got my pay for it." At the close of that lesson I pointedly reminded him that I was paid only for the time devoted to his daughter's lesson, not for the time they were at meals, and that I would return no more.

But with all these come many happy experiences, hours in homes that fill one full of inspiration and of confidence in the good at the bottom of human nature. And for these we can be thankful and especially that we can rise above and live in an atmosphere where the spirit of the beautiful, in which music has so great a part, predominates.

Teach First the Effect—the Method Afterward

By Ruth L. F. Barnett

Many piano students, even the conscientious ones who attempt to follow the printed directions for interpreting the music they study, fail to produce the desired effects because they are too much concerned with certain hand movements they have been taught to employ. For instance, in playing staccato notes they have learned that the hand must rebound from the key in a definite manner; so the hand dutifully follows the prescribed formula; and the result is indeed a shortened note, but too often with an unpleasant tone from which the light crispness of the true staccato is missing.

There is a way to guard against this defect; and it can be used to advantage even in teaching very young pupils. *Teach first the effect and afterward the manner of producing it.* Teach by illustration how staccato notes should sound; then ask your pupil to describe the effect as it appears to him. When you are sure that his impression is correct, let him try to produce the effect in his own way, without having seen what you did to accomplish it. If he is a beginner his performance may be clumsy; but he will have learned that staccato marks require him to make a particular kind of sound and not merely to perform a prescribed set of gymnastics. Once this idea has taken root, it will be easy to show him a simpler way of getting the desired result.

Virtuoso Pianists and Virtuoso Conductors

That the master of the keyboard does not always make a fine conductor and *vice versa* is fairly well known. Many great pianists might become greater conductors. Emil Paur, who used to appear on the same program as a violin virtuoso, a piano virtuoso and a conductor, was a far better conductor than performer. Safonoff was enjoyed more as a conductor than as a pianist. Gabrilowitsch and Ganz seem to be successful equally well in both rôles. Leopold Auer in his recently published "My Long Life in Music" (Stokes) gives his recollections of Von Bülow and Rubinstein in these dual rôles. Of Von Bülow he says, "As a virtuoso he did not reach the heights he scaled as a conductor, for in the latter capacity, aside from his technique as an orchestral leader, he was magnetic and carried the audience with him from the very first measure. As a pianist he never roused the same enthusiasm in the public; yet he was the first great piano virtuoso who was at the same time as great a musician as a conductor—and when he fronted the orchestra he could call forth effects hitherto unknown.

"With Anton Rubinstein the direct opposite was the case. When he played the piano he took the public by storm with his personality, as though he projected a wave of compelling magnetism; and he was applauded because his audience could not refrain from applause. Yet when he appeared upon the platform to lead the orchestra he never seemed at ease; and he conducted with his head bowed, as though trying to follow the score as closely as possible. At the piano, on the contrary, he played without notes and drew veritable orchestral effects from the instrument."

To the Earnest Pupil

By Harriet B. Pennell

Pupils so often do not realize their own shortsightedness, and even egotism, when they are either silent or assert that they understand some point in the lesson which perhaps is only half clear.

It is but human nature, of course, to shrink from a display of ignorance if one can avoid it; but the best way to escape further embarrassment is to acknowledge our deficiency and get at the root of the evil while it is at hand. The wise student will not be afraid of losing the teacher's respect by this course.

If pupils only could understand how eager real teachers are to have their confidence and frankly spoken opinions, much better results would be obtained, and many lessons would have an added interest.

Allow no point to slip by without a clear understanding of it from the teacher. Make capital out of ignorance instead of seeking to impress the teacher with your mental alertness.

A never-to-be-forgotten rebuke was administered by the late William H. Sherwood, after a lesson in which my disappointment at his criticism was quite apparent, when he said calmly, "You come to me to be criticised, not to be praised."

Quick Results

By George Boyer Ballard

1. The Best Possible Instruction. Make yourself clay in the hands of a master. Work with him. Do not resist him. Team work on the part of both teacher and pupil is what counts.
2. Do not fear obstacles nor evade them. The livelier you fight your way through them, the quicker your results.
3. Have good tools. The best workman in the world cannot get quick results with poor tools. Get the best piano or violin your means allow.
4. Do not expect your teacher to supply all the motive power. He is the starter and the chauffeur, but not the engine on the road to quick results.
5. Scales and Arpeggios are the finest kind of short cuts to quick results.
6. Master one thing at a time, if you want quick results. The pupil who strives to faster fingering, touch, rhythm, dynamics, velocity and nuance at one time is like an old woman running a race with her arms full of heavy bundles.
7. The Metronome is the meter of progress. Test your results by the metronome.

"No one can afford to do a piece of work negligently."

The Musical Genius of the American Negro

An Expert Paper upon "Negro Spirituals," "Plantation Songs" and the Achievements of Negro Musicians

By CLARENCE CAMERON WHITE

President of the National Association of Negro Musicians

It is generally conceded that achievement is measured not so much in terms of actual heights attained, as in the amount of progress made from the point of departure. If this be true, when one attempts to write of the musical attainments of the American Negro he must establish by way of statistics and cold facts something of an historical background. The American has well-known respect for facts and also a great desire for general information; therefore the writer thinks it will not be amiss to mention first of all, statistics and general information that will contribute to the interest of this article, although in the main they have only an indirect bearing on the subject matter.

In America today we have somewhere between ten and twelve million people of Negro or African descent. Reckoning back to the slavery period, the United States Census Bureau tells us that the increase of the Negro population was 120 per cent. in the fifty years between 1860 and 1910. The progress of any people will be greatest by those groups which are in closest contact with civilizing influences. It is also true that races are human first and racial afterwards; so it is reasonable to suppose that since the slavery period the Negro has made his greatest progress in America. Over half a century, however, has wrought profound changes.

To America the Negro could bring only his music; and with his freedom his music was one of his greatest possessions. It is only natural that, with even a limited opportunity for improvement, he turned with greatest zeal to the development of this gift. Says Dr. W. E. B. Dubois, "The Negro is primarily an artist. The usual way of putting this is to speak disdainfully of his sensuous nature. This means that the only race which has held at bay the life-destroying forces of the tropics has gained therefrom as some slight compensation a sense of beauty, particularly for sound and color, which characterizes the race." There is no more pathetic chapter in the history of human struggle than the smothered and suppressed ambition of the Negro race in its daring endeavor to meet the greatest social exigency, to supply the professional demand of the masses; and, immediately after his freedom, this was especially true in music. The opportunities for the study of music were nil. The stronger and more aggressive natures pushed themselves into high callings by sheer force of untutored energy and uncontrolled ambition.

The federal census of 1900 furnished the information that there were three thousand, nine hundred and fifteen Negro teachers of music in the United States. Since that time the profession has grown to approximately seven or eight thousand. At first the Negro music student refused to put confidence in the Negro music teacher, notwithstanding the closer intimacy of social conditions. But with greater preparedness on the part of the Negro teacher, and with a growing pride in racial achievement, this has to a large extent ceased to be; and we find today most of the Negro schools equipped with a musical faculty of their own teachers.

EDITORIAL

Mr. White, the author of this excellent article upon a subject about which "The Etude" receives frequent requests for information from Clubs, Colleges and various organizations, is an American Negro who has attained distinction as a violinist and as a composer. He was born in Clarkesville, Tennessee, but was brought up and educated in Oberlin, Ohio. He studied at the Oberlin Conservatory for five years. Later he went to Washington, where he taught in the Washington Conservatory and in the Washington Public Schools. In 1908 he went abroad and became the pupil in violin playing of M. Zacharewitsch, a noted Russian violinist, and also studied musical composition for three years with the late Coleridge-Taylor. Since his return to America he has made many concert tours as a violinist. He is now residing in Oberlin, where he devotes his time to composition. Some of his works have been played by several of the world's foremost violinists. The organization of which he is president comprises some nine hundred Negro musicians seriously interested in music.

The Slave Period

Returning for a moment to the music of the Negro of the slave period, it is well to consider briefly his contribution in labor and also in Art. Running through all will be found his original and natural gift of song—everywhere a song and that song so unlike any other, so full of the human element that touches and grips and stays, that artist and layman alike respond to its thrill. Many have essayed to analyze the peculiar quality that gives the Negro music its extraordinary charm; but, though they give various names, few have caught its deeper and nameless meaning. Percy Grainger says, "It is the most American music imaginable, breathing the spiritual fervor and abandonment and the fragrance of sentiment so strangely typical of this wondrous, this generous-souled continent; yet world wide in its applicability."

The so-called "Negro Spiritual" or "Plantation Song" is so well known today that it may be of interest to record that as far back as 1871 these songs were introduced to both America and Europe by the "Fisk Jubilee Singers," a band of Negro students from Fisk University at Nashville, Tennessee. These singers, after a successful tour of American cities, visited England and even essayed a tour of the principal cities of Germany in 1877. Everywhere they were received with the greatest enthusiasm; and funds collected on these tours were used to erect "Jubilee Hall," one of the largest buildings at Fisk University, which stands today as a monument to this little band of Negro singers and to the power of their music.

The Negro's rising standard of education, which carries a deeper appreciation of the esthetic, has also brought a racial consciousness and pride in his musical background. He knows and is proud of the Negro blood in Chevalier Saint-George, born in 1745 in the town of Basse-Terre, Guadeloupe, who was a pupil of Gossec. Saint-George wrote two concertos for violin and orchestra and numerous quartets. Lawrence declares that Gossec and Saint-George were the first French musicians to write string quartets. We find the manuscript of his "L' Amant Anonyme" in the library of the Paris Conservatoire. Saint-George died in Paris, June, 1799. There is a street in Basse-Terre, Guadeloupe, which since November, 1912, has borne the name St. George.

G. A. Bridgetower, Mus. Bac.

The Negro is also proud of the Negro blood of George Augustus Bridgetower, violinist, born about 1779 in Biola in Poland. Bridgetower was a friend and associate of Beethoven; and it was he who played the famous "Kreutzer" sonata with the composer at Vienna in 1805. In June, 1811, Bridgetower took the degree of Mus. B. at Cambridge. He died in England, about 1845. A complete account of his career may be found in Thayer's "Life of Beethoven."

Edmund Dede, a New Orleans Negro, born in 1829, entered the Paris Conservatoire in 1857 and took high rank as a violinist. He composed numerous orchestral works. Perhaps the best known was "Le Palmier Overture." He died at Bordeaux, France, where for many years, he was conductor of the Opera.

One other Negro who achieved lasting fame in Europe was Joseph White, born at Matanzas, Cuba, January 17, 1836. Upon the advice of Gottschalk he was sent to Paris, in 1855, where he became an honor pupil of Alard, winning the first prize in violin playing in 1856. He composed a violin concerto and numerous small works. White was appointed a teacher at the Paris Conservatoire in 1864; he visited America in 1876, playing in New York and Boston with great success. On his Boston program in March, 1876, he played the Mendelssohn Concerto, Op. 64, and the Bach Chaconne. He died in Paris in 1920.

CLARENCE CAMERON WHITE

The musical world at large knows full well of the Anglo-African composer, Samuel Coleridge-Taylor, born in London, August 15, 1875, and who achieved lasting fame in thirty-seven short years. He died in London, September 1, 1912. Herbert Antcliffe calls him "one of the most original thinkers among musicians of his generation."

The achievements of these five musicians of Negro blood are achievements of which any race might be proud; and the American Negro realizes that with proper training he may reflect a degree of credit upon American Art. On the whole here in America the musical output has been both large and creditable, although, of course, comparatively little known. Few names have appeared, and only here and there work that could be called really first class; but this is not a peculiarity of Negro music. The sum of accomplishment is but an imperfect indication of what the Negro race is capable of in America, with proper technical training. And this proper training is eagerly being obtained by the present day Negro musician. The Negro youth is acquiring a degree of confidence and pride in his race that is awakening in him a new spirit; and his true poet soul, which has found expression in a humble way through his Plantation melodies, begins to mount to sublimer heights of expression. The storehouse from which he may draw are filled with material, albeit most of these storehouses are the minds of his hoary-haired parents and grandparents who are fast disappearing from his midst.

Negro Spirituals

Many people in speaking of Negro music are inclined to think of it as consisting solely of Negro spirituals. They are possibly ignorant of the wealth of Negro compositions, both those based upon the spirituals and other Negro themes and music which is not Negroid in character or in any way connected with or expressive of racial feeling or idiom. For the past eight or ten years there has been a steady increase in the number of services for church choirs of other sacred compositions, and works of Negro composers for vocal solo, mixed choruses, pipe organ and violin solos. It is perhaps natural that the Negro singer has attracted attention first rather than the Negro composer. It is an accepted fact that even the untrained Negro voice has an appealing quality that arrests one's attention; but the Negro singer of today has not lost sight of the fact that proper training of the voice is essential to artistic singing; so we find most of them before the public today with highly trained voices.

Famous Negro Singers

Most American musicians are acquainted with the name of Harry T. Burleigh, baritone soloist at St. George Church of New York and at the Temple Emanuel in the same city. Mr. Burleigh was born in Erie, Pennsylvania, (1866) where he received his early education, graduating from High School in 1887. Later he was a scholarship pupil at the National Conservatory of Music, New York, and at one time a teacher of singing at this school. He has travelled extensively abroad and it has been his rare privilege to sing for the King and Queen of England, Prince Henry of Prussia, Prince Louis of Battenburg, the Crown Prince of Sweden, and many other members of royalty and nobility. A pioneer for the Negro's right to enter the field of serious art, Burleigh has worked for years in New York, never lowering his high standard, never doing anything that would compromise his dignity as a musician, and never allowing himself to be beaten back by prejudice. Quietly, unassumingly, but firmly, he has maintained his hard earned place among professional musicians.

Another Negro singer living in New York is Harry A. Williams, tenor, a native of Cleveland, Ohio, a one time pupil in Paris of Delle Sedie and Sbriglia. During his student days he became a great favorite in the drawing rooms of London and Paris. He became the friend of both Denza and Tosti whose songs he often sang accompanied by the composers. For several years before his return to America, Mr. Williams was a voice teacher at the London Academy of Music.

In Cleveland, Ohio is living Rachel Walker Turner, who for several years was a pupil of Madame Marchesi in Paris. Mrs. Turner was well known in musical circles in Paris and in London where she was introduced by the late Mrs. Ronald.

Musicians to-day are no doubt familiar with the achievement in London, Paris and Vienna of Roland Hayes, the Negro tenor, born in Georgia, and a product of the Hubbard Studio at Boston. Hayes was recently soloist with the Colonne Orchestra, in Paris, where he created a sensation by his artistic singing. Mr. Hayes is announced this season as one of the soloists of the Boston Symphony Orchestra.

During the past few years several Negro singers have graduated from America's best conservatories, winning high honors. Florence Cole Talbert, Antoinnette Garnes and one or two others have won medals from the Chicago Musical College. In instrumental music, where perhaps a greater mental effort had to be put forth to acquire a modern technic to become a successful performer, the American Negro has apparently had this mental qualification to surmount these great difficulties and has acquitted himself creditably. To mention a few who are not so well known as their qualifications warrant:

Negro Pianists

R. Augustus Lawson, twice piano soloist with the Hartford (Conn.) Symphony Orchestra; a one-time pupil of Gabrilowitsch, and whose playing was highly complimented by Leschetizky when Mr. Lawson played for him in Vienna. Mr. Lawson has been for several years a teacher of piano at Hartford; and quite recently one of his pupils, who happens to belong to the opposite race, was made a teacher in one of America's large conservatories where Negro students are not admitted. Quite a choice bit of irony!

Several seasons ago, Hazel Harrison, a young Negro pianiste of Laporte, Indiana, a pupil of Victor Heinze in Chicago, and later a pupil of Busoni in Berlin, made her debut in the latter city, playing two concertos with the Philharmonic Orchestra.

A few years back, Helen E. Hagan, a Negro girl of New Haven, Connecticut, graduated from the music department of Yale University, playing her own piano concerto with the New Haven Symphony Orchestra under Dr. Horatio Parker, and winning the Sanford prize of $2,000 for foreign study, later becoming a pupil in Paris of Blanche Selva and a pupil in composition under D'Indy.

During the past season Cornella Lampton, a one-time pupil of the Oberlin Conservatory of Music and later a private pupil of Percy Grainger, graduated with honors from the Glenn Dillard Gunn School of Chicago, winning high praise from the Chicago critics for her artistic playing of a concerto with orchestra.

At the Institute of Musical Art in New York, Sanoma Talley, a young Negro girl of Nashville, Tennessee, won the $500 prize for her piano playing, graduating with honors for high scholarship.

Negroes who have attempted to gain distinction as performers on the stringed instruments and other orchestral instruments have had very little opportunity for serious work. As yet the symphony orchestras have managed to get along without their services. A few who were capable have applied but were unable to get employment. Personally, I know two members of leading symphony orchestras here in America who are Negroes, but who for obvious reasons prefer to be known as *Spanish.*

Tragic Limitations

The picture of well-trained young Negro graduates is inspiring and tragic; inspiring in that each is a living proof that, when equality of opportunity is given, the line that indicates the "fittest to survive" cannot be drawn along racial differences; and tragic to think that these new beginners on account of their color will have to suffer greater handicaps to achieve success. This is the reason why some of the Negro graduates of our best conservatories pursue courses, not altogether by choice, which follow the lines of least resistance. There is today living in New York a Negro violinist who won the diamond medal upon his graduation from a well-known Western Conservatory, and who was later a pupil of Becker at the Leipsic Conservatory, who is now a member of a "Jazz" band in New York. Another, a 'cellist of really great ability, a pupil for many years of both Schroeder and Schultz, who is also a member of the same "Jazz" band. Still another Negro violinist, a graduate of the New England Conservatory of Music, under Winternitz, after having served in the American army during the World War, returned to France and studied there under one of the leading teachers. Returning home he has had to accept a place in the orchestra of a Negro moving picture theater in Washington, D. C. Any one of these mentioned is qualified to and would rather fill a more dignified place in some body of symphony players. These cases are cited, not to show that Negroes should be given places in symphony orchestras simply because they are Negroes, but that they might be accepted in spite of the fact, when they are really qualified.

A few years ago Will Marion Cook, the Negro violinist and composer, and a one-time pupil of Joachim in Berlin, formed an orchestra made up of a number of these talented Negro instrumentalists and took them to London where they created a great sensation, playing programs of good orchestral literature in a highly creditable manner. It might be that some philanthropist will yet endow a Negro symphony orchestra in America. It is well worth considering.

A Negro National Conservatory

We read that there has been established in Boston, by Minkowsky of Odessa, a Jewish National Conservatory to promote the study of Jewish music, especially of the liturgical type. The same sort of thing has been launched in New York by Harriet Gibbs Marshall, the first Negro graduate of Oberlin Conservatory for the establishment of a Negro National Conservatory for the study and development of Negro music. There are approximately a dozen Negro schools of music with complete faculties already established throughout the United States, and most of the Negro schools in the South have well-equipped music departments under the direction of well-trained Negro music teachers. A movement is now on foot to establish throughout the United States Community orchestras at the various Negro Community Centers, as a branch of the excellent work being done by Community Service among the Negro population of America. The "Boston Chronicle," a Negro publication, remarked editorially, after hearing one of these orchestras already established there:

"Community Service made a happy discovery of a practical way of social uplift by establishing an orchestra to give concerts in the South End. This project has from the first met with the hearty response of our people. They have listened gladly. Of all the different American groups, there is none who loves music more than ours. To guide this love in wise channels, making it contribute to our growth and development as American citizens, is the crux of our social problem. These concerts merely show the possibilities of music to awaken higher feeling and promote better good will. We believe that the salvation of the black man is just as possible with an orchestra as it is with a plough. May these orchestras increase! Then into our communities would come the Drama—in short all of the fine arts to minister to the higher life of our group, with a natural love for the Artistic."

Famous Composers of Negro Birth

In the field of composition several names are comparatively well known. First and foremost is Harry T. Burleigh, whose arrangements of Negro spirituals are to be found upon the programs of many celebrated singers. Quite apart from these excellent arrangements, Mr. Burleigh has written numerous compositions for voice, piano, chorus, and for violin and organ. During the World War his "The Young Warrior" was used extensively in Italy and aroused great enthusiasm wherever heard. Many of his art songs are well known and used by American and European musicians. Naming a few other songs by Mr. Burleigh: "Five Songs of Lawrence Hope," "Her Eyes Twin Pools," "The Grey Wolf," "Saracen Songs," "Little Mother of Mine," "Three Shadows," and for mixed voices, "Ethiopia's Paen of Exaltation," and "O, Southland;" and for violin and piano, "Southland Sketches."

R. Nathaniel Dett (born, Drummondville, Quebec, 1882), of Hampton Institute, has attracted attention by his piano compositions and choral writings. His "Chariot Jubilee" is used by numerous choral societies both in the United States and Canada. For several years Percy Grainger has featured his "Juba Dance" both in America and Europe. Mr. Dett has also written, among other things, "Enchantment Suite" for piano, which includes "Incantation," "Song of the Shrine," "Dance of Desire," "Beyond the Dream;" and for violin and piano, "Ramah."

J. Rosamond Johnson, a one-time pupil of the New England Conservatory of Music, has written numerous songs. His "Since You Went Away" was featured a few seasons ago by Amato, and his "Morning, Noon and Night" by Graveure. The late David Bispham sang for several seasons Will Marion Cook's "Exhortation;" and his "Swing Along" has been used extensively by numerous choral societies in Ame[illegible]

N. Clark Smith, a vocal pupil of Oscar Saenger, has composed numerous choral and orchestral numbers of real merit. His "Rhapsody on Negro Airs" has been highly commended by Rudolph Ganz, conductor of the St. Louis Symphony Orchestra.

Among composers for the organ, Carl R. Diton, of Philadelphia, a pupil of Constantin von Sternberg, and later a pupil at Munich, Germany, has attracted wide attention. One of his compositions has been extensively played by Clarence Eddy, the eminent American organist. Mr. Diton has also written in the larger forms for orchestra and already has his first symphony in manuscript.

Gerald Tyler of St. Louis, Missouri, was one of the three musicians of that State selected to write the music for the Centennial drama in commemoration of the one hundredth anniversary of Missouri's admission to the Union. The music was presented by the Morning Choral Club and the St. Louis Symphony Orchestra. One St. Louis paper says, "Yes, the most important musical feature in the celebration of the one hundredth anniversary of a former slave State was composed by the son of a former slave." Numerous compositions of Mr. Tyler's have been published by Schirmer, of New York. Among them, "Ships That Pass in the Night," "Syrian Lullaby," "Dirge for a Soldier" and "Heart O'Fancy." Three of these songs were mentioned recently in a leading music journal as among the most important songs published this season. Mr. Tyler is a graduate of Oberlin Conservatory and was later a vocal pupil of Herbert Witherspoon.

Maud Cuney Hare of Boston, who was perhaps the first to collect and bring to the attention of the American public the beauties of New Orleans Creole music, has appeared successfully in lecture-recitals with William H. Richardson, baritone, throughout America and more recently in Cuba.

Among young Negro composers who bid fair to attract attention are J. Harold Brown of Fisk University, Nashville, Tennessee, who is writing very original piano music, and a young African, Nicolas Taylor, who is a scholarship pupil at the Institute of Musical Art in New York. Taylor already has to his credit an attractive orchestral overture on African themes and a cantata for chorus and orchestra. Nora Douglass Holt Ray of Bethlehem, Pennsylvania, with the degree of Master of Music from one of the Chicago conservatories, has written attractive piano music and songs, not to mention four excellent string quartettes. Edmond T. Jenkins, a native of Charleston, South Carolina, at present a teacher of clarinet at the Royal Academy of Music (London) where for several years he was a student, has written charming piano music and has appeared in London as a conductor of orchestra. Edward Margetson, a native of St. Kits (B. W. I.) and a pupil at Columbia University, New York, is writing piano music and songs that are highly praised by his instructors there. Hall Johnson, a gifted violinist and pianist, and J. Harvey Hebron, student at the University of Pennsylvania, have written excellent music, the former a string quartet on Negro themes and the latter a sonata for violin and piano that won a prize in a contest of original compositions offered by the Manuscript Society of Philadelphia.

At the High School memory contest held in Chicago in March, 1923, the only American composition played by members of the Chicago Symphony Orchestra was one written by an American Negro.

A National Association

The National Association of Negro Musicians, organized in 1919 with Henry Lee Grant as president, is doing a splendid work in encouraging the serious study of music among Negroes. This organization has as its object: "To foster Negro talent and labor for economic and educational betterment of the music profession." During the past four years over fifty local organizations have been established throughout America, with a total membership of about nine hundred. Conventions have been held in various centers of the United States, and from these conferences the wholesome reactions outlined below followed in the wake of discussions, papers and inspiring musical numbers:

(*a*) *A stimulus to the feeling of personal duty in the cause of Negro music and the profession at large.*

(*b*) *Sensitiveness to need of personal improvement.*

(*c*) *Pride in the musical power of the Negro race.*

(*d*) *A new vision of possibilities of Negro Folk songs and Negro music in general as a means for establishing a Negro school of music in America as a direct contribution to American Art.*

In recent years, with the establishment of foreign scholarships by philanthropists and with the establishment of the Franco-American school at Fontainebleau, the Negro composer hopes for some kind of encouragement to contribute his bit to the glory of American art. He has peculiar gifts which merit all possible cultivation and which will some day add to the glory of the country. William Dean Howells once said, "I permit myself the imaginative prophecy that hostilities and prejudice which have so long constrained the Negro are destined to vanish in the Arts; that is to be the final proof that God has made of one blood all nations of men."

Help Your Fellow Musicians

By D. G. Woodruff

THE struggle in music is never light. Progress depends in a large measure upon:

1. The results of your work combined with your talent.
2. The appreciation of these results by the world in which you live.

Did it ever occur to you that you might injure the business and professional prospects of a fellow-worker through some ill-chosen word of criticism. "Her voice is very lovely, but everybody knows that her breathing is old-fashioned." "His technic is as hard as a stone." Such remarks do no good and may do much harm.

It is only in the company of little-minded people that such thrusts are current. The higher the musician has climbed the more he is likely to realize how hard it is to overcome certain weaknesses and the more liberal he is certain to be in his attitude toward others. It is usually the little dog that does the most barking.

Making Scale Playing Worth While

By FREDERICK CORDER, F. R. A. M.

Professor at the Royal Academy of Music, London

(Editor's Note—The Etude *is a free forum for vigorous and experienced musical minds of the entire world.* The Etude *has never been subsidized in the sense that an absolutely free expression of opinion is restricted by any outside influence. Mr. Corder, for instance, frankly condemns "dumb pianos," or "practice keyboards." We know that many musicians of standing have favored them, when used under certain conditions.* The Etude *expresses both sides of such problems, but never lends itself to any proprietary exploitation.*)

I would like every teacher and intending teacher of the pianoforte who sees this page, to pause and think for a few moments before reading it, to then write down in a few words his or her answer to the three following questions and to compare these answers with mine:

1. What is the good of scale practice?
2. If we practice scales how should we do it?
3. How much time should we devote to it?

1. What Is the Good of Scale Practice

To this question the true answer will only be given if we can detach our minds for a moment from the pianoforte and think of some other and simpler instrument, such as the Violin, Flute or Cornet. The fact that perhaps you know nothing of any of these is no drawback. Most children have tried to play a tin whistle and succeeded more or less well. What was the first step you had to take in order to produce music from this instrument? You covered the ventholes with your fingers and then uncovered them one by one, producing sounds higher and higher by steps of tone and semitone. In doing this you could not fail to notice the structure of the major scale—two whole steps and a half step, three whole steps and a half step—and how this differed from the minor, or any other form of scale.

Beyond remembering this fixed order of tones and semitones there was no greater difficulty in playing one scale than in playing another; and the same holds good of the violin, the harp or the human voice. Far otherwise is it with the pianoforte, where the matter is complicated by the fact that the human hand is possessed of four fingers and a thumb. The keyboard, being so constructed that one scale exactly fits the hand and the remaining 23 do not, explains why, in learning to play our instruments we have to accustom the fingers to make a lightning-swift decision in what order they shall follow one another. It is, of course, possible to play tunes and simple accompaniments on the piano, as on the zither or banjo without more than a theoretical acquaintance with scales and keys—there must be some—but to attain to any facility on the keyboard the hand requires, in addition to this, years and years of training, until every possible succession of fingers and thumb has become so familiar as to be intuitive and automatic. This is a fact which must be known to all, but which the thoughtless often fail to keep clearly before them.

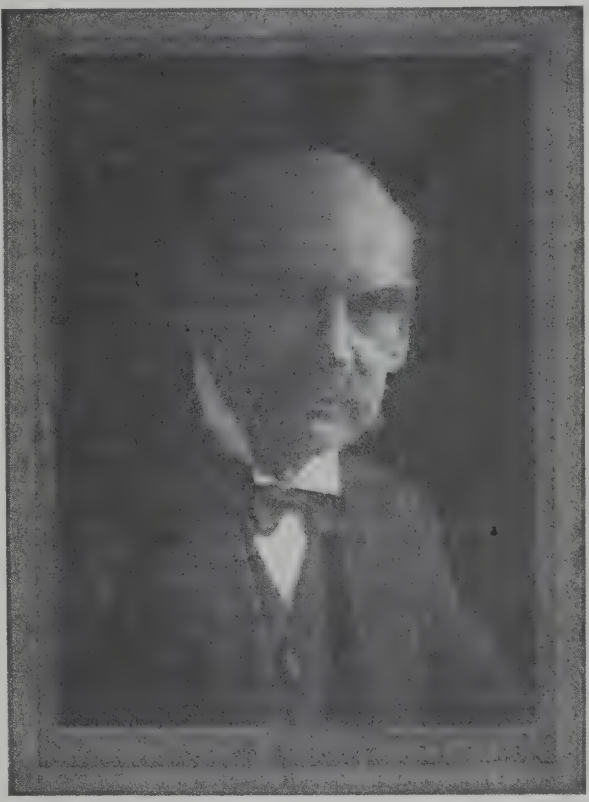
Indentifying the Keys

The realizing of what key we are in at the moment, and consequently what finger-succession is likely to be required, goes far to simplify this difficult task; and so, to great extent, a good technic is the measure of a player's musicality. But instances are not rare of persons who have attained to phenomenal dexterity while yet possessing little musical mentality. It is to be hoped that these reap more pleasure from their labor than they give to other people.

The good of scale practice, then, is to render the choice of a suitable fingering for any particular passage *subconscious* or instinctive.

2. How Should the Beginner Practice Scales?

Here we come to a very complex matter. Most people—with the old, old fault of using their eyes rather than their brains, take the plain array of white keys as their starting point, because it *looks* so simple. They forget that this ignores the important feature of a scale, the *two whole steps and a half step—three whole steps and a half step*, which is the first thing the fingers should learn. They forget that a serious obstacle confronts them in the fact of the two hands having their fingers in opposite order, so that unless we practice the hands separately or in contrary motion we are going a clumsy way at work. Surely we ought to learn the easiest scale first? Will you guess which that is? Which scale fits the hand like a glove, indicates its structure most clearly and has both thumbs coming at the same time?

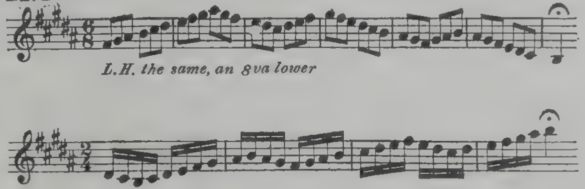


PROF. FREDERICK CORDER

Why, the Scale of B Major

Chopin is said to have been the discoverer of this simple fact; the pupil having been once shown this scale on the instrument—*not written down on paper*—can hardly fail to play it correctly. All that the teacher need point out is that while the white keys E and B are the nearest to you when ascending, they are farthest from you when descending. Then let the beginner play this scale smoothly with both hands at once, commencing anywhere, ascending and descending anyhow, but preserving the rhythm of three or four notes well marked. Thus, for instance:

Ex. 1



This can be easily done without the pupil knowing anything whatever about musical notation, the only requirement being that the exercise shall finish upon the white note called B and that this shall be the first of a group of 4 or 3. The pupil will find it quite amusing to career thus over the keyboard with hardly any possibility of a mistake. All through this exercise the hand is being unconsciously trained to assume the correct normal position and the fingers are being taught how to play in simple succession. The vital questions of touch are ignored for the time being, since it is hardly possible to let the fingers down improperly, to hold them too straight or stiff or, in fact, to commit any fault at all.

Just what shall follow this preliminary exercise, I do not here purpose to suggest. It does not make things easier to proceed to the next easier scales, F♯, E, D♭ and A, because the names of the notes form a cause of bewilderment. Musical notation is a terribly difficult matter, and the signs, ♯, ♭, ♮, take a long time to master.

How Should the Experienced Pupil Practice Scales?

This is another matter altogether and one in which intelligence in the learner is indispensable. The merely conscientious student is terribly apt to forget that a scale, study or piece once learned by rote quickly degenerates into an unmeaning succession of sounds, unless played with a definite intention. But what musical intention can there be, he will ask, in a mere finger exercise? Well, first of all you can vary the scale itself in a thousand ways, as I have indicated above with the scale of B. Thus, amongst other devices you can play a scale:

1. As softly as possible.
2. As loud as possible.
3. < up and > down.
4. > up and < down.
5. One hand in one of these ways and the other in another. (Excellent practice but very difficult.)
6. All these ways either legato or staccato.
7. Accent of two against three.
8. Similar and contrary motion

and other ways which you can invent for yourself.

Now if you take one scale (major and minor) every day and play it *never more than twice in the same way*, calling out aloud the way in which you are going to play it, you will be obliged to give your full musical intention to what you are doing, half an hour will pass like five minutes and your progress will be rapid, indeed. Whenever you suspect that you are failing to concentrate on what you are doing, whenever, that is, you find yourself getting stale and dull, invent yet untried methods of playing the scale.

Some people recommend putting on the piano desk a stack of cards, each inscribed with the name of a scale and the manner of its performance; but this is a great mistake. It substitutes for invention just that very mechanical routine we are seeking to avoid. People long ago discovered that the Digitorium, or dumb piano, was of no use, but I don't think half of them realized *why* this was so. When fingers are divorced from music you are not *learning* to play—you are not even acquiring strength.

Duet Scale Practicing

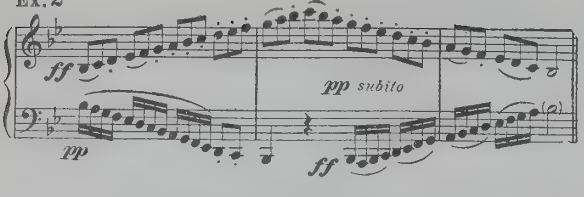
Of all interesting methods of practicing scales or other technical exercises, the best is for two students to play simultaneously on two pianos, each listening to the other and endeavoring to keep a complete ensemble not only as to notes but also in degree and quality of sound. Unfortunately this plan is not often feasible, few people having two instruments in the same room. The next best way is for two to practice at one piano, each with one hand at a time, changing over every now and then. There is the drawback that both have to be seated in an unusual and constrained position; therefore, this should be altered every few minutes. Such methods as these excite emulation and preserve interest in what we are doing. And they substitute a sense of adventure for the dull drudgery of a task.

Use your brains always; don't just do as you are bidden.

Millions of Miles of Scales

Students of music, the world over, have played literally millions of miles of scales. A great deal of this playing has produced results, but far more has produced very little, indeed. The miles have been run off on a treadmill of practice; and often when the pupil has conscientiously exhausted himself with work, he finds that he has not advanced one step, but is still turning the wheels of the musical treadmill. Professor Corder tells how this may be averted, in one of his characteristically profitable articles. Of course, in order to profit from them one must first of all have a thorough understanding of the entire subject of scales. One can not dabble in scales and succeed.

Ex. 2



For how long should one practice scales? Those well-meaning but dull-witted individuals who prefer mere drudgery to brain-work are apt to think that if they practice for four hours they will make twice as much progress as if they only practiced for two, and that if they work for eight hours they will quadruple their rate of improvement. Nothing can be more monstrously untrue. The brain when vigorously used soon tires; and, whether you are practicing scales or anything else, the moment you fail to listen and criticize—the moment your work becomes automatic—you are doing harm to yourself instead of good. That is why I advocate perpetual change in the manner of playing scales—to stave off mental fatigue.

Give Yourself a Lesson
